# GEN — GENERALITES (GEN)

*PART 1 - GENERAL (GEN)*

## GEN 0

## GEN 0.1 PREFACE

*PREFACE*

La PUBLICATION D'INFORMATION AÉRONAUTIQUE FRANCE contient les informations aéronautiques relatives au territoire de la France métropolitaine.

L'AIP FRANCE est publié sous l'autorité de la Direction Générale de l'Aviation Civile Française par le Service de l'Information Aéronautique.

*AERONAUTICAL INFORMATION PUBLICATION FRANCE contains aeronautical information concerning the territory of metropolitan France.*

*The AIP FRANCE is published under the authority of the French General Directorate of Civil Aviation by the Aeronautical Information Service.*

### 0.1.1 Documents OACI applicables

L'AIP FRANCE est publié en conformité avec les Normes et Pratiques Recommandées (SARPs) de l'annexe 15, de la Convention de l'Aviation Civile Internationale, et du Manuel des Services d'Information Aéronautique (ICAO - Doc 8126).

Les cartes contenues dans l'AIP FRANCE sont produites en conformité avec l'Annexe 4 de la Convention de l'Aviation Civile Internationale, et du Manuel des cartes aéronautiques (ICAO - Doc 8697).

Les différences entre les Normes et Pratiques recommandées de l'OACI et la Réglementation française sont décrites en GEN 1.7.

### *0.1.1 Applicable ICAO documents*

*The AIP FRANCE is prepared in accordance with the Standards And, Recommended Practises (SARPs) of Annex 15 to the Convention of International Civil Aviation and the Aeronautical Information Services Manual (ICAO Doc 8126).*

*The charts contained in the AIP FRANCE are produced in accordance with Annex 4 to the Convention on International Civil Aviation and the Aeronautical Chart Manual (ICAO Doc 8697).*

*Differences from ICAO Standards, Recommended Practises and French regulations are given in sub-section GEN 1.7.*

### 0.1.2 Structure de l'AIP

L'AIP FRANCE est un des éléments du Système Intégré d'Information Aéronautique (voir en GEN 0.1-3).

L'AIP FRANCE est constitué de trois parties, Généralités (GEN), En-route (ENR) et Aérodrome (AD) ; chacune est divisée en section et sous section, contenant les principaux éléments de l'Information Aéronautique. La partie AD est également constituée des atlas AIP, VAC et VAC Hélistations.

**1ère partie : Généralités (GEN)**

La première partie est divisée en 5 sections contenant les informations décrites ci-après.

**GEN 0**

Enregistrement des amendements AIP, enregistrement des suppléments AIP, liste de contrôle de l'AIP, liste des corrections manuscrites à l'AIP et la table des matières de la partie 1.

**GEN 1 - Règlements sur les renseignements et exigences nationaux**

Autorités désignées, entrée transit et sortie des aéronefs ; entrées transit et sortie des passager et membres d'équipage ; entrées transit et sortie du fret ; équipement des avions et documents de vol ; sommaire des règlements nationaux de navigation aérienne et conventions internationales ; différences entre les normes et pratiques recommandées et la réglementation française.

### *0.1.2 The AIP structure*

*The AIP FRANCE forms part of the Integrated Aeronautical Information Package (See graphic in GEN 0.1.3).*

*The AIP FRANCE is made up of three parts, General (GEN), En route (ENR) and Aerodrome (AD) ; each divided into sections and subsections, containing various types of aeronautical informations subjects. Part AD contains also AIP, VAC and VAC Hélistations.*

***Part 1 : General (GEN)***

*The first part is divided into 5 chapters containing the information described below.*

***GEN 0***

*Record of amendments to the API, record of API supplements, checklist of API pages, list of manuscript amendments to the API and the table of contents to part 1.*

***GEN 1 - National information regulations and requirements***

*Designated authorities, entry, transit and departure of aircraft ; entry, transit and departure of passengers and crew ; entry, transit and departure of cargo ; aircraft instruments equipment and flight documents ; summary of national regulations and international agreements ; differences between standards and recommended practices and French regulations.*

© Service de l'Information Aéronautique, France

**GEN 2 - Tableaux et codes**

Unités de mesure, système horaire, système géodésique de référence, marques de nationalité des aéronefs, fêtes légales, abréviations utilisées dans les publications, signes conventionnels cartographiques, indicateurs d'emplacements, liste alphabétique des indicatifs d'aides radio, tables de conversion, tableau des lever et coucher de soleil.

***GEN 2 - Tables and codes***

*Measuring system, time system, geodetic reference datum, aircraft markings, public holidays, abbreviations used in the publications, chart symbols, location indicators, alphabetic list of radio navigation aids, conversion tables, table of sunrise and sunset times.*

**GEN 3 - Services**

Service de l'information aéronautique, les cartes aéronautiques, services de la circulation aérienne, service de radiocommunication et de radionavigation, service météo, recherche et sauvetage.

***GEN 3 - Services***

*Aeronautical information service, aeronautical charts, air traffic services, radiocommunication and radionavigation services, meteorological services, search and rescue.*

**GEN 4 - Redevances d'aérodrome / d'hélistation et de services de navigation aérienne**

***GEN 4 - Charges for aerodromes / heliports and air navigation services***

**2ème partie : En-route (ENR)**

***2nd part : En-route (ENR)***

La deuxième partie est divisée en 7 sections contenant les informations décrites ci-après :

*The second part is divided into 7 sections containing the following information :*

**ENR 0**
**ENR 1 - Règles et procédures générales**
**ENR 2 - Espace aérien des services de la circulation aérienne**
**ENR 3 - Routes ATS**
**ENR 4 - Aides / Systèmes de radionavigation**
**ENR 5 - Avertissements à la navigation**
**ENR 6 - Cartes de croisière**

***ENR 0***
***ENR 1 - General rules and procedures***
***ENR 2 - Air traffic services airspace***
***ENR 3 - ATS routes***
***ENR 4 - Radionavigation aids / Systems***
***ENR 5 - Navigation warnings***
***ENR 6 - En-route charts***

**3ème partie : Aérodrome (AD)**

***3rd part : Aerodromes (AD)***

La troisième partie est divisée en 4 sections contenant les informations décrites ci-après :

*The third part is divided into 4 sections containing the following information :*

**AD 0**
**AD 1 - Aérodromes/hélistations - introduction**
**AD 2 - Aérodromes**
**AD 3 - Hélistations**

***AD 0***
***AD 1 - Aerodromes/heliports introduction***
***AD 2 - Aerodromes***
***AD 3 - Heliports***

### 0.1.3 Mise à jour de l'AIP

La mise à jour de ces publications s'effectue au moyen de bulletins de mise à jour (BMJ) contenant des pages ou cartes destinées à remplacer celles qui se trouvent périmées.

Les nouvelles informations sont identifiées par une rubrique corrections dans le bas de la carte ou par le symbole **|** dans la marge d'une page de texte.

L'utilisateur peut également assurer une mise à jour provisoire en consultant les suppléments en attendant que les pages ou cartes concernées soient rééditées. Ces suppléments font l'objet d'une diffusion hebdomadaire.

Cette publication est disponible en langue française accompagnée d'une traduction en anglais pour la commodité des usagers.

SEUL LE TEXTE PUBLIE EN FRANÇAIS A VALEUR OFFICIELLE.

Les informations concernant les pays étrangers sont extraites des documents d'origine, mais ne constituent pas en elles-mêmes une documentation officielle.

### *0.1.3 Amendment of the AIP*

*These publications are updated by amendments containing the new sheets or charts to be inserted in replacement of previous obsolete documents.*

*New information items are identified by a correction item at the bottom of the page or by this symbol **|** in the sheet margin, opposite the changed text.*

*Temporary updating may also be performed by the user, by reviewing the supplements pending the next issue of concerned documents. These supplements are issued each week as needed.*

*This publication is available in French language, with an English translation for convenience of users.*

*FRENCH TEXT IS THE ONLY OFFICIAL REFERENCE.*

*Information concerning foreign countries is taken from original documents but is not the official documentation.*

### 0.1.4 Erreurs ou omissions dans l'AIP

L'adresse E-mail du service à contacter pour signaler des erreurs ou omissions dans l'AIP est : sia-qualite@aviation-civile.gouv.fr

### *0.1.4 AIP errors or omissions*

*The e-mail adress of the service to contact in case of detected AIP errors or omissions is : sia-qualite@aviation-civile.gouv.fr*

*NATIONAL REGULATIONS AND REQUIREMENTS*

## GEN 1.1 ADMINISTRATIONS DESIGNEES

*DESIGNATED AUTHORITIES*

### 1.1.1 AUTORITE AERONAUTIQUE

a) L'administration chargée de l'aviation civile en France est la **DIRECTION GENERALE DE L'AVIATION CIVILE.** Cette Direction Générale relève du Ministère chargé des transports.

*1.1.1 AERONAUTICAL AUTHORITY*

*a) The administration in charge of civil aviation in France is the **DIRECTION GENERALE DE L'AVIATION CIVILE,** which is placed under the authority of the Ministry in charge of transports.*

Adresse postale : **DIRECTION GENERALE DE L'AVIATION CIVILE**
*Postal address :* **50, rue Henry FARMAN**
**75720 PARIS CEDEX 15**

**TEL : 01 58 09 43 21**
**Adresse SFA (AFS) : L F P S Y A Y D**
**FAX : 01 58 09 35 35**

b) Au sein de la DGAC, la **DIRECTION DU TRANSPORT AERIEN** regroupe l'ensemble des fonctions régaliennes de l'État dans le secteur aérien, en particulier pour ce qui concerne les aspects environnementaux, la sûreté, la défense, la gestion de l'espace aérien, la règlementation de la navigation aérienne, la régulation du secteur, le soutien à la construction aéronautique ainsi que la stratégie internationale et la coopération :

*b) Within DGAC, the **DIRECTION DU TRANSPORT AERIEN** is in charge of state functions in the air transport sector such as environment, security, defense, airspace management, air navigation regulation, control of the sector, aeronautical manufacturing support, international strategy and cooperation :*

Adresse postale : **DIRECTION DU TRANSPORT AERIEN**
*Postal address :* **50, rue Henry FARMAN**
**75720 PARIS CEDEX 15**

**TEL : 01 58 09 44 81**

c) La **DIRECTION DE LA SECURITE ET DE L'AVIATION CIVILE** est un service à compétence nationale créé par le décret n°2008-1299 du 11 décembre 2008 et rattaché au directeur général de l'aviation civile. Elle est chargée de veiller au respect des normes internationales, des réglementations européennes et nationales applicables au domaine de l'aviation civile en matière de sécurité, de sûreté et d'environnement. La DSAC est l'autorité compétente au sens de l'article 10 du règlement (CE) n°216/2008 du 20 février 2008 du Parlement européen et du Conseil et au sens des règlements pris pour son application. La DSAC se compose d'un échelon central et de 9 directions interrégionales réparties sur le territoire métropolitain, dans les départements d'outre-mer et dans les collectivités de Saint-Martin et de Saint-Barthélemy.

*c) Within DGAC, the DSAC « **DIRECTION DE LA SECURITE ET DE L'AVIATION CIVILE** » (civil aviation safety directorate) is a national competency service created by the 2008-1299 decree of 11 December 2008. DSAC is in charge of the oversight of the implementation of the safety, security and environmental aspects of the international standards and the European and national regulations applicable in the civil aviation domain. DSAC is the competent authority mentioned in article 10 of regulation (EC) n°216/2008 of 20 February 2008 and its implementing rules. DSAC consists in a central headquarters service and 9 regional offices located on the French metropolitan territory and on the following French overseas territories: La Reunion and Mayotte islands, French Guyana and French Indies.*

d) Cette direction générale comprend également la **DIRECTION DES SERVICES DE LA NAVIGATION AERIENNE,** chargée de fournir les services de la circulation aérienne, de communication, de navigation et de surveillance afférents, ainsi que les services d'information aéronautique.

*d) This "direction générale" includes as well the **DIRECTION DES SERVICES DE LA NAVIGATION AERIENNE,** in charge of supervision and service provision, communication, navigation and Aeronautical Information Services.*

Adresse postale : **DIRECTION DES SERVICES DE LA NAVIGATION AERIENNE**
*Postal address :* **50, rue Henry FARMAN**
**75720 PARIS CEDEX 15**

**TEL : 01 58 09 43 21**
**Adresse SFA (AFS) : L F P S Y A Y N**
**TELEX : AVIACIV 634 142**
**FAX : 01 58 09 49 03**

e ) Relevant de la Direction des Services de la Navigation Aérienne, la **DIRECTION DES OPERATIONS** est chargée d'assurer l'écoulement sûr et régulier du trafic aérien.

*e ) Within the Direction des Services de la Navigation Aérienne, the **DIRECTION DES OPERATIONS** is in charge of air navigation safety and efficiency.*

Adresse postale : **DIRECTION DES OPERATIONS**
*Postal address :* **9, rue Champagne**
**91200 ATHIS-MONS**

**TEL : 01 69 57 60 00**
**Adresse SFA (AFS) : L F FA Y A Y C**
**FAX : 01 69 57 73 73**

© Service de l'Information Aéronautique, France

f ) Relevant de la Direction des Opérations, le **SERVICE DE L'INFORMATION AERONAUTIQUE** est l'organisme central chargé de l'information aéronautique française.

*f ) Within the Direction des Opérations, the **SERVICE DE L'INFORMATION AERONAUTIQUE** is the central unit in charge of the French aeronautical information.*

Adresse postale : **SERVICE DE L'INFORMATION AERONAUTIQUE**
*Postal address :* **6, rue des avions ANTOINETTE - CS 90048**
**33693 MERIGNAC Cedex**

**TEL : 05 57 92 55 22**
**05 57 92 57 92 (BNI-NOF)**
**05 57 92 57 57 (AIP-documentation)**

**Adresse SFA (AFS) : L F F A Y N Y X**

**FAX : 05 57 92 57 99 (BNI-NOF)**

**E-Mail** : **sia-direction@aviation-civile.gouv.fr**

g ) Adresses et numéros téléphoniques des Directions de la Sécurité de l'Aviation Civile Inter-Régionales et des délégations.

**1.1.2 ADMINISTRATION METEOROLOGIQUE**

La direction générale de l'aviation civile (DGAC) est l'administration météorologique au sens OACI désignée par l'Etat français.

METEO-FRANCE est le prestataire de services météorologiques à la navigation aérienne dans les espaces aériens dans lesquels l'administration française rend des services de navigation aérienne ainsi que pour tout aérodrome situé sur le territoire français, à l'exception des aérodromes dont l'affectataire principal est le ministère de la défense et des anciens combattants.

***1.1.2 METEOROLOGICAL ADMINISTRATION***

*The direction générale de l'aviation civile (DGAC) is the meteorological administration of the French state as meant by ICAO.*

*METEO FRANCE is the meteorological services provider for air navigation in the airspace for which France provides air traffic services as well as for aerodromes located on French territory, except aerodromes affected to the ministry of defense.*

# GEN 1.2 ENTREE, TRANSIT ET SORTIE DES AERONEFS

*ENTRY, TRANSIT AND DEPARTURE OF AIRCRAFT*

## 1.2.1 REGLEMENT CONCERNANT LES AÉRONEFS CIVILS QUI EFFECTUENT DES VOLS INTERNATIONAUX

GENERALITES

Tout survol du territoire Français avec ou sans escale, doit être effectué conformément à la réglementation de l'Aviation Civile applicable dans ce territoire.

Tout aéronef en provenance de l'étranger qui pénètre sur le territoire français doit effectuer son premier atterrissage sur un aéroport disposant des contrôles de douane, de police et de santé. De même tout aéronef quittant le territoire français pour l'étranger doit accomplir sa dernière escale en territoire français sur un tel aéroport.

Même en régime de vol à vue, le dépôt d'un plan de vol est obligatoire pour tout vol devant franchir, en entrée ou en sortie, les frontières terrestres ou maritimes de la France métropolitaine.

**Note :** A GENEVE/Cointrin, par convention avec les autorités suisses, des bureaux de douane et de police français sont installés et les formalités d'entrée et de sortie de France doivent être effectuées auprès de ces services.

**a) Vols réguliers**

**Survol et escales techniques :**

Les aéronefs des compagnies ressortissant à des pays signataires de l'accord de transit ou bénéficiant des droits équivalents par accord bilatéral conclu avec la France peuvent survoler le territoire de la France dans les conditions prescrites par les dits accords.

Dans tous les autres cas, une demande d'autorisation doit être présentée par voie diplomatique au Ministère des Affaires Étrangères.

**Escales commerciales :**
L'exploitation à des fins commerciales d'un vol international régulier à destination ou en provenance du territoire français doit être effectuée sous couvert :

- soit des dispositions contenues dans les accords aériens passés entre la France et les pays étrangers desquels relèvent les compagnies exploitantes ;

- soit d'autorisations particulières délivrées par le Gouvernement français.

**Documents exigés à l'arrivée et au départ des aéronefs :**
- Manifeste de marchandises : 3 exemplaires.

- Liste sommaire des provisions de bord, sauf lorsque les provisions de bord restent à bord des appareils sous la surveillance de la douane.

- Mesures sanitaires applicables aux aéronefs :

Aucune mesure sanitaire n'est applicable aux aéronefs en période sanitaire normale.

**b) Vol non réguliers**

**Vols commerciaux** :
Sont considérés comme vols commerciaux les vols effectués en exécution d'un contrat de location ou d'affrètement en dehors des services aériens internationaux réguliers.

**REGIME GENERAL**

(Entreprises ou aéronefs ressortissant à un État non partie à l'accord multilatéral de 1956 sur les transports non réguliers en Europe).
Une demande d'autorisation préalable doit être déposée pour tout vol effectué par ces aéronefs ou entreprises.

Celle-ci doit parvenir à la Direction Générale de l'Aviation Civile - Service des Transports Aériens Bureau des Programmes d'exploitation et des vols non réguliers - 93, Boulevard du Montparnasse,75270 Paris Cedex 06, à l'aide de documents que l'administration tient à la disposition des entreprises, dans les délais suivants :

A - Vols isolés :

Deux jours ouvrables avant le jour prévu pour le commencement du vol envisagé, s'il s'agit d'un parcours dans la Zone Europe Méditerranée, 8 jours dans les autres cas.

Sont considérés comme vols isolés, les vols effectués dans la limite d'un vol par mois sur une même relation (avec le même affréteur).

## 1.2.1 REGULATION CONCERNING CIVIL AIRCRAFT WHICH CARRY OUT INTERNATIONAL FLIGHTS

GENERAL

Any overflight of the French territory with or without stop, should be performed in compliance with the Civil Aviation regulations applicable to this territory.

All aircraft arriving from abroad and entering the French territory should perform the first landing on an airport provided with Customs, Police and Sanitary controls. Also, all aircraft leaving the French territory abroad should have their last stop in the French territory on such type of airport.

Filing of a flight plan is mandatory for every flight crossing a maritime or land border into or out of Metropolitan France, even if flying according to visual flights rules.

**Remark :** By agreement with the Swiss authorities, French customs and immigration offices are installed at GENEVE/Cointrin; all formalities for entry into and exit from France must be carried out at these faclities.

**a) Scheduled flights**

**Overflight and technical stop:**

Aircraft from airlines belonging to countries which signed the bilateral transit agreement or possessing equivalent rights by a bilateral agreement signed with France, can overfly the French territory under the conditions prescribed in the said agreements.

In all other cases, a clearance request should be put up via the diplomatic channel to the Ministry of Foreign Affairs.

**Commercial stops:**
Commercial operation of a scheduled international flight to or from the French territory should be performed under:

- either the provisions contained in the air agreements signed between France and the foreign countries governing the operator airlines;

- or specific clearances delivered by the French Government.

**Documents required on arrival and departure of aircraft** :
- Goods manifest: in triplicate.

- Succint list of on board food stores, except when said stores remain on board the aircraft under customs surveillance.

- Health requirements applicable to aircrafts:

No health requirement applies to aircraft under normal health circumstances.

**b) Unscheduled flights**

**Commercial flights** :
Flights made in fulfillment of a rental or chartering contract, outside schedulled international flights, are deemed commercial flights.

**GENERAL CASE**

(Companies or aircraft coming under a country not being a party to the 1956 multilateral agreement on unscheduled transportation in Europe)
A previous authorization request must be submitted for any flight made by such aircraft or companies.

This request must be made to the General Directorate of Civil Aviation Air Transport Service Office of Operating Programmes and Unscheduled Flights 93 boulevard du Montparnasse, 75720 Paris Cedex 06, on forms available at the administration, with the following advance notice :

A - Isolated flights:

Two working days before the date planned for the start of the flight in case of travel within the Europe Mediterranean zone ; eight days in any other cases

Flights not exceeding one per month on a same link (with the same charterer) are deemed isolated flights.

© Service de l'Information Aéronautique, France

**Note :** Les aéronefs d'État tels qu'ils sont définis à l'article 3 de la Convention de Chicago sont exclus de l'application des présents règlements.

B - Séries systématiques de vols :

Deux mois avant le jour prévu pour le commencement des vols envisagés.

Sont appelés séries systématiques de vols :

- pour les vols effectués sur des parcours Europe Méditerranée, une succession d'un minimum de quatre vols par mois, pendant au moins deux mois consécutifs sur une même relation avec le même affréteur dans le cadre d'une période de douze mois à compter de la date de début des vols considérés ;

- pour les autres destinations une succession d'un minimum de deux vols par mois, pendant au moins deux mois consécutifs sur une même relation avec le même affréteur dans le cadre d'une période de douze mois à compter de la date de début des vols considérés.

C - Courtes séries de vols :

Huit jours avant le jour prévu pour le commencement des vols envisagés s'il s'agit de parcours dans la zone Europe - Méditerranée. 15 jours dans les autres cas.

Sont appelés courtes séries de vols, les vols dont les caractéristiques sont intermédiaires entre les vols isolés et les séries systématiques de vols.

**REGIME PARTICULIER**

Les dispositions suivantes sont applicables aux vols effectués par des aéronefs et entreprises ressortissant à un État Partie à l'Accord Multilatéral sur les transports non réguliers en Europe.

**A - Le vol est intra-européen, c'est à dire que toutes les escales du vol doivent être situées sur le territoire d'États membres de la Commission Européenne de l'Aviation Civile, et appartient à l'une des catégories libéralisées suivantes :**

- Transports effectués à des fins humanitaires ou en cas de nécessité impérieuse (cas de sinistre ou d'accident pour le secours des personnes en danger et l'évacuation des blessés, etc…)

- Transports à la demande par taxi aérien, à condition que l'aéronef ne comporte pas une capacité de plus de six sièges.

- Transports effectués par des aéronefs dont toute la capacité est louée par une entreprise commerciale pour son compte propre, à l'exclusion des affrètements effectués par des associations et des agences de voyages, pour le transport de son personnel ou de ses marchandises.

- Transports non réguliers de fret :

(à condition que la fréquence envisagée ne dépasse pas quatre vols tous les deux mois, entre, d'une part, un même pays européen, d'autre part, un même aéroport en territoire français faute de quoi les vols envisagés seraient assimilables à des services réguliers et devraient donner lieu à autorisation préalable).

- Transports isolés de passagers :

(étant entendu qu'aucun transporteur ne pourra effectuer, à ce titre plus d'un vol par mois entre son pays d'origine et le territoire français).

Dans cette hypothèse, et pour les liaisons effectuées en 3ème et 4ème libertés, le vol peut être effectué sur simple notification. Cette notification comporte les renseignements prévus dans les documents tenus à la disposition des compagnies. Elle doit parvenir au moins 2 jours avant le jour prévu pour le commencement du vol envisagé :

- pour vérification, au Directeur Général de l'Aviation Civile à l'adresse précitée au 1.3.1.1, pour les transports effectués par des aéronefs d'une capacité supérieure à 20 sièges ou au Directeur de Région Aéronautique compétent pour les aéronefs comportant une capacité de 6 à 20 sièges ;

- en outre, et dans tous les cas, au Commandant de l'aérodrome de destination.

**Remark:** Government owned aircraft such as defined in Article 3 of the Chicago Convention are exempted from these regulations.

B - Systematic groups of flights:

Two months before the planned date for the start of the flights.

The following are deemed systematic groups of flights:

- flights made within the Europe Mediterranean zone: a series of at least 4 flights per month, during at least two consecutive months, on a same link and with the same charterer within a 12 month period starting on the date of start of the flights concerned;

- other destinations a series of at least 2 flights per month, during at least two consecutive months, on a same link and with the same charterer within a 12 month period starting on the date of start of the flights concerned.

C- Short groups of flights:

Eight days before the planned date for the departure of the flights in case of travel within the Europe Mediterranean zone. 15 days in any other case.

Short groups of flights are flights whose characteristics fall between those of isolated flights and those of systematic groups of flights.

**SPECIAL CASE**

The following arrangements are applicable to flights made by aircraft and companies coming under a country which is a party to the multilateral agreement on unscheduled transportation in Europe.

**A - Intra European flight (i e all its stopovers are situated in the territory of member countries to the European Civil Aviation Commission) comes under one of the following categories:**

- Transport for humanitarian purposes or meeting an imperative need (help to persons in danger, evacuation of casualties in case of catastrophe or accident, etc.)

- Air taxi operations, carried out on request, provided the capacity of the aircraft does not exceed six seats.

- Transport made by aircraft the entire capacity of which is rented by a commercial company for its own account, for transportation of its personnel or goods, exclusive of chartering by travel agencies or associations.

- Unscheduled transport of freight:

(provided the frequency planned does not exceed four flights every two months between a same European country on the one hand and a same airport on French territory, on the other hand, failing which said flights would be deemed scheduled and would require previous authorization).

- Isolated transport of passengers:

(it being understood that no carrier may undertake more than one such flight per month between his country of origin and the French territory).

Assuming this and regarding links coming under the 3rd and 4th freedoms, flights may be made upon simple notification This notification must include the information required on the documents made available to the companies. It must reach the following authorities at least 2 days before the date planned for the departure of the flight concerned:

- for checking purposes, the General Director of Civil Aviation at the address given in para 1 3.1.1 above for Flights made by aircraft with a capacity in excess of 20 seats, or the relevant Aeronautical Region Director for flights made by aircrafts with a capacity of 6 to 20 seats;

- in addition and in any case, the manager of the destination aerodrome.

© Service de l'Information Aéronautique, France

B - Le vol est intra-européon mais n'appartient pas à une catégorie "libéralisée" :

Il doit donner lieu a autorisation préalable.

Cette autorisation est demandée à l'aide des documents fournis par l'Administration, à la Direction Générale de l'Aviation Civile, Service des Transports Aériens, au moins 2 jours ouvrables avant le jour prévu pour le commencement du vol envisagé, en ce qui concerne les vols isolés, 8 jours en ce qui concerne les courtes séries, 30 jours pour ce qui est des séries systématiques de vols.

**Vols non commerciaux**

Sont considérés comme vols non commerciaux les survols, escales techniques, vols privés et vols d'aéronefs d'Etat.

- Aéronefs immatriculés dans les Etats membres de l'OACI :

Les vols non commerciaux effectués par des aéronef civils immatriculés dans un État membre de l'OACI sont soumis à la seule obligation du dépôt d'un plan de vol auprès des organismes compétents chargés de la navigation aérienne.

Toutefois, cette procédure ne s'applique qu'aux aéronefs immatriculés dans un des Etats qui acceptent également sur simple dépôt d'un plan de vol les vols non commerciaux effectués par des aéronefs français.

Même en régime de vol à vue, le dépôt d'un plan de vol est obligatoire pour tout vol devant franchir, en entrée ou en sortie, les frontières terrestres ou maritimes de la France métropolitaine.

**- Autres cas**

Dans tous les autres cas, une autorisation devra être demandée dans les conditions prévues pour les vols commerciaux.

D'autre part, pour tous les vols non commerciaux, le premier atterrissage et le dernier décollage doivent avoir lieu sur un aéroport ouvert au trafic international.

Les vols non commerciaux effectués par des aéronefs civils immatriculés dans un Etat non membre de l'OACI ou par des aéronefs d'Etat sont soumis à autorisation préalable des départements ministériels concernés.

**Mesures sanitaires** :
Aucune mesure sanitaire spéciale n'est applicable aux aéronefs effectuant des vols non réguliers, en période sanitaire normale.

**Régime douanier des aéronefs assurant des services non réguliers**

Réglementation douanière applicable en matière d'admission temporaire des aéronefs :

Tout aéronef destiné à être utilisé temporairement, avant réexportation, sur le territoire douanier communautaire peut être placé sous le régime douanier de l'admission temporaire. Ce régime permet l'utilisation de l'aéronef en suspension des droits et taxes, sans que l'aéronef ne subisse de modifications. Il suppose que certaines conditions soient remplies.

- L'aéronef doit être immatriculé en dehors du territoire douanier communautaire, au nom d'une personne établie en dehors de ce territoire.

- En principe, il doit être également utilisé par une personne établie en dehors de ce territoire.

- En cas d'usage commercial, au sens du droit douanier communautaire (transport de personnes à titre onéreux, transport industriel ou commercial de marchandises à titre gratuit ou onéreux), l'aéronef doit être utilisé exclusivement pour un transport qui commence ou se termine en dehors du territoire douanier communautaire. Toutefois, il peut être utilisé en trafic interne, au sens du droit douanier communautaire (embarquement et débarquement de personnes ou chargement et déchargement de marchandises à l'intérieur du territoire douanier communautaire), dès lors que les dispositions en vigueur dans le domaine des transports, concernant notamment les conditions d'accès au territoire et d'exécution de ceux-ci, en prévoient la possibilité.

Formalités de placement :

Le placement de l'aéronef sous le régime de l'admission temporaire peut se faire de manière simplifiée.

L'aéronef est considéré comme présenté en douane lors du franchissement de la frontière. En l'absence d'intervention de la douane, la déclaration pour son placement sous le régime de l'admission temporaire est considérée comme acceptée et la mainlevée comme octroyée lors du franchissement de la frontière.

La demande d'autorisation peut également être constituée par une déclaration en douane verbale d'admission temporaire, sous réserve de la présentation d'un inventaire en deux exemplaires. L'autorisation d'admission temporaire est octroyée par le visa de l'inventaire par les autorités douanières qui vaut acceptation de la déclaration en douane.

B - Intra European flights not falling under one of the above mentioned categories:

Previous authorization is required.

This authorization is to be requested, using the forms provided by the administration, from the General Directorate of Civil Aviation Air Transport Service, at least 2 working days before the day planned for the departure of the flight concerned in case of isolated flights, 8 days in case of short groups of flights and 30 days in case of systematic groups of flights

**Non commercial flights**

Overflights, technical stops, private flights and flights by Government owned aircraft are deemed non commercial flights.

- Aircraft registered in ICAO member countries:

Non commercial flights made by civil aircraft registered in an ICAO member country are solely required to file a flight plan with the competent authority in charge of air traffic.

However, this procedure is applicable only to aircraft registered in countries which also accept non commercial flights by French aircraft simply upon filing of a flight plan.

Filing of a flight plan is mandatory for every flight crossing a maritime or land border into or out of Metropolitan France, even if flying according to visual flight rules.

**- Other cases**

In any other case, an authorization must be requested as indicated for commercial flights.

Moreover, the first landing and the last take off of any non commercial flights must be made at an airport open to international traffic.

Non commercial flights made by civil aircraft registered in a country not a member of ICAO, or by Government owned aircraft, are subjected to previous authorization by the ministerial departments concerned

**Health requirements** :
Under normal circumstances, no special health requirement is applicable to aircraft making scheduled flights.

**Customs procedures applicable to aircraft flying unscheduled flights**

Customs regulation applicable to temporary admission for aircraft:

Any aircraft destined to be temporarily used, before being re-exported, on the community customs territory can be placed under the temporary admission customs system. This system enables the use of the aircraft free of duties and taxes, without any modifications being made to the aircraft. Some conditions must be met.

- The aircraft must be registered outside the community customs territory, in the name of a person established outside this territory.

- On paper, it must also be used by a person established outside this territory.

- In the event of commercial use, according to community customs law (transportation of passengers in return for payment, industrial or commercial transport of goods free of charge or in return for payment), the aircraft must be used exclusively for transportation that starts or finishes outside the community customs territory. However, it can be used for internal flights, according to community customs law (boarding and disembarking of passengers or loading and unloading of goods inside the community customs territory), as long as the measures in effect in the field of transportation, notably those concerning the conditions of access to the territory and the implementation of these, allow this possibility.

Placement formalities:

The placement of the aircraft under the temporary admission system can be simplified.

The aircraft is considered as introduced to customs when the border is crossed. If there is no customs intervention, the declaration for its placement under the temporary admission system is considered as accepted and the release as granted when the border is crossed.

The authorization request can also be constituted by a verbal customs declaration of temporary admission, provided that two copies of an inventory are presented. The authorization for temporary admission is granted by the customs authority's signature of the inventory which acts as acceptance of the customs declaration.

© Service de l'Information Aéronautique, France

Toutefois, les autorités douanières peuvent exiger une déclaration en douane écrite lorsque le montant des droits à l'importation est élevé ou lorsqu'il existe un risque sérieux de non-respect des obligations découlant du placement sous le régime.

Hormis le cas dans lequel les autorités douanières exigent que le placement sous admission temporaire se fasse par une déclaration écrite, il n'y aura, en principe, pas de garantie à mettre en place.

Délais d'utilisation :

En cas d'usage commercial, au sens douanier de cette notion (cf. ci-dessus), le délai de séjour sous admission temporaire est limité à la durée nécessaire pour effectuer les opérations de transport.

En cas d'usage privé, c'est-à-dire à l'exclusion de tout usage commercial au sens précité de cette notion, le délai est de 6 mois.

However, the customs authority can demand a written customs declaration when the amount of import duties is high or when there is a serious possibility of non-compliance with the obligations resulting from the placement under the system.

Excluding the case in which the customs authority demands that the placement under temporary admission must be done through a written declaration, there will be, on paper, no warranty to give.

Period of use:

In the event of commercial use, according to the customs definition of this notion (ref. above), the allowed period of temporary admission is limited to the period needed to perform transportation operations.

In the event of private use, i.e. excluding all aforementioned commercial use, the period is fixed at 6 months.

2) To statutory refugees and stateless persons

FOREIGN MILITARY PERSONNEL - MERCHANT SEAMEN - MEMBERS OF THE EUROPEAN COUNCIL - U N CIVIL SERVANTS - E E C MEMBERS - PEOPLE TRAVELLING WITH A GROUP

© Service de l'Information Aéronautique, France

**D -** Garantie de rapatriement

Une garantie de rapatriement peut être exigée en plus des titres de voyages nécessaires pour certains visiteurs temporaires (séjour de 3 mois au maximum).

**TRANSIT DES PASSAGERS :**

Un passeport en cours de validité et un visa de transit sont en règle générale exigés des passagers.

Sont dispensés du visa de transit :

- les passagers de toutes nationalités en transit sans sortir de l'aéroport ;

- les passagers dispensés du visa d'entrée.

**SORTIE DES PASSAGERS :**

Français majeurs :

- passeport en cours de validité sans visa,
- dans les pays ou l'entrée des Français est admise au vu des mêmes documents,

- se reporter aux pays de destination, partie "entrée",

- soumis à l'obligation du visa pour :

AFRIQUE DU SUD - AUTRICHE - ÉTATS UNIS - PANAMA.

Français mineur :

- en France, un passeport ou une carte nationale d'identité peuvent être délivrés à un enfant, quelque soit son âge

- les mineurs doivent posséder un passeport individuel à partir de 15 ans.

- jusqu'à 15 ans, ils peuvent figurer sur le passeport d'une personne de nationalité française les accompagnant, même mineure (s'il s'agit d'un passeport autre que celui du représentant légal, ce passeport doit être en cours de validité ou non, éventuellement périmé depuis moins de cinq ans. Dans ce dernier cas, une autorisation Parentale serait nécessaire),

- si l'enfant à moins de 7 ans, une photo n'est pas nécessaire. S'il a plus de 7 ans, sa photo doit figurer sur le passeport sur lequel il est inscrit,

- au delà de l'âge de 7 ans, la photo est obligatoire.

- les enfants de moins de 15 ans peuvent sortir de France et entrer en : BELGIQUE - ITALIE - LUXEMBOURG - SUISSE avec un "laissezpasser pour mineur de moins de 15 ans" valable 3 mois (avec photo s'il a plus de 7 ans, sans photo s'il a moins de 7 ans).

**A -** Mineurs non accompagnés de leur représentant légal (personne détenant la puissance parentale)

- si le mineur voyage sous couvert d'un passeport individuel en cours de validité, d'un laissez-passer pour mineur de moins de 15 ans ou est inscrit sur le passeport de la personne qui l'accompagne (tel que défini plus haut) ou sur un passeport collectif, aucune autre pièce n'est nécessaire.

- dans le cas contraire, il doit être muni d'une "attestation d'autorisation de sortie" valable 5 ans au plus délivrée par la Mairie ou le Commissariat de Police de la résidence.

**B -** Mineurs accompagnés de leur représentant légal

- si le mineur n'a pas de passoport individuel, de laissez-passer pour mineur de moins de 15 ans et n'est pas inscrit sur le passeport d'une tierce personne (tel que défini plus haut) ou un passeport collectif, son représentant légal qui l'accompagne doit faire la preuve de sa qualité (livret de famille, jugement de divorce lui confiant la garde du mineur, etc).
- l'enfant de moins de 7 ans est dispensé de toute pièce d'identité, pour se rendre dans les D.O.M. (Départements francais d'Outre-Mer) lorsque ses parents sont munis d'un livret de famille ou de son bulletin de naissance.

**PASSEPORTS COLLECTIFS :**

Peuvent être établis :
a) pour les enfants de moins de 15 ans voyageant en groupe quelle que soit la durée du voyage, mais seulement en principe pour les pays mentionnés au paragraphe ci-dessous.

b) pour les Français quel que soit leur âge se rendant en groupe en ALLEMAGNE - GRANDE-BRETAGNE - AUTRICHE - BELGIQUE - CHYPRE - ESPAGNE - FINLANDE - GRÈCE - PAYS-BAS - IRLANDE - ISRAEL - ITALIE - LUXEMBOURG - PORTUGAL - SUISSE - TURQUIE - YOUGOS-
LAVIE, pour la durée et les motifs précisés dans les différents accords passés avec les pays interressés.

**D -** Repatriation guarantee

In addition to the necessary travel documents, a repatriation guarantee may be required From certain temporary visitors (maximum stay of 3 months).

**TRANSIT OF PASSENGERS:**

A valid passport and a transit visa are generally required from passengers.

The following are exempted from transit visa:

- passengers of any nationality, who are in transit without leaving the airport,

- passengers exempted from entry visa.

**EXIT OF PASSENGERS:**

Adult French nationals:

- valid passport without any visa,
- in countries where entry of French nationals is accepted with the same documents,

- refer to the destination countries in the "entry" section,

- visa is mandatory for:

SOUTH AFRICA - AUSTRIA - The UNITED STATES - PANAMA.

French minors:

- in France, a passport or a national identity card can be issued to a child what ever his age,

- minors aged 15 years and over must hold an individual passport

- minors up to the age of 15 can be registered on the passport of the French national accompanying them, even if the latter is a minor (if the bearer of this passport is not the legal guardian, this passport must be valid or not out of date by more than 5 years. In the latter case, an authorization by the parents is required),

- no photo is required if the child is under 7 years. Over 7 years, the passport on which the child is registered must bear the child's photograph,

- a photograph is mandatory for any child over 7 years.

- children up to the age of 15 years may leave France and enter BELGIUM ITALY - LUXEMBOURG - SWITZERLAND with a "pass for minor under 15" years valid 3 months (with photo if aged 7 years and over, without photo if under 7 years).

**A -** Minors not accompanied by their legal guardian (person holding parental authority)

- no other document is required if the minor holds a valid individual passport, a pass for minor under 15 years or is registered on the passport of the accompanying person (as defined above) or on a collective passport.

- in other cases the minor must hold an "exit authorization" valid 5 years at most issued by the Mayor or the Police of the place of residence.

**B -** Minors accompanied by their legal guardian

- if the minor does not hold an individual passport, a pass for minor under 15 years or is not registered on the passport of the accompanying person (as defined above) or on a collective passport the accompanying legal representative must be able to demonstrate his status (family registration book, divorce papers showing guardianship of the minor, etc).
- a child under the age of 7 years is exempted from all identification to travel to French Overseas Departements when his parents hold a family registration book or his birth certificate.

**COLLECTIVE PASSPORTS:**

These can be made for:
a) children under the age of 15 years travelling in group, whatever the duration of the trip but, in principle, only for the countries listed in para (b) below.

b) French nationals, whatever their age, going in group to: GERMANY - GREAT-BRITAIN - AUSTRIA - BELGIUM -CYPRUS - SPAIN - FINLAND - GREECE - NETHERLANDS - IRELAND - ISRAEL - ITALY LUXEMBOURG - PORTUGAL - SWITZERLAND - TURKEY - YUGOSLAVIA, for the duration and purpose indicated in the agreements entered into the countries concerned.

© Service de l'Information Aéronautique, France

**FRANÇAIS VERS ANDORRE :**

pour un séjour de moins de trois mois :
- passeport, même périmé depuis moins de 5 ans,

- carte nationale d'identité,

pour un séjour de plus de trois mois :
- passeport en cours de validité, revêtu d'une autorisation d'entrée délivrée par le Préfet du Département de résidence, après accord du Préfet des Pyrénées Orientales.

**ETRANGERS :**

Les passagers doivent présenter à la sortie de France les documents qui leur étaient nécessaires pour l'entrée.
En particulier, les étrangers de nationalité soumise au régime général pour entrer en France doivent obtenir un visa de sortie.

Exceptions : sont dispensés du visa de sortie bien que soumis à l'entrée au régime général :

- les Égyptiens, les Iraniens et les Tunisiens résidant en France,

- les Libanais et les Philippins porteurs de passeports diplomatiques ou de service, s'ils ont séjourné en France plus de trois mois.

Réfugiés statutaires : même formalités que pour l'entrée.

**ENTREE-TRANSIT-SORTIE DES MEMBRES D'EQUIPAGES :**

FORMALITES DOUANIERES – VOYAGEURS ENTREE :

BAGAGES PERSONNELS

a) En provenance d'un pays membre de l'Union européenne

b) En provenance d'un pays tiers ou d'un territoire fiscalement tiers

• Les affaires personnelles

Les objets à usage personnel sont admis sans formalité douanière ou fiscale en France. Leur nature et leur nombre ne doivent pas revêtir de caractère commercial ; en sont exclus les objets prohibés à l'importation.

Les douaniers peuvent demander aux voyageurs de justifier la situation régulière de certains objets (bijoux, appareils photos, caméscopes, téléphones portables, ordinateurs portables, …). Le voyageur doit être en mesure de prouver que ces objets ont été achetés dans l'Union européenne, toutes taxes comprises, ou, s'ils ont été achetés dans un pays tiers, qu'ils ont payés les droits et taxes éventuellement dus dans l'Union européenne, en fournissant les factures ou quittances douanières correspondantes.

Pour éviter d'emporter tous ces documents, la douane propose aux voyageurs de se munir de la carte de libre circulation. Il s'agit d'un document qui justifie de la régularité de la situation douanière et fiscale des objets personnels transportés par les voyageurs. Elle a un caractère personnel et incessible, facilite le passage en douane et a une durée de validité de dix ans. Elle ne remplace pas la quittance de droits et ne dispense pas de satisfaire aux conditions particulières exigées par les autres réglementations. Le voyageur peut la faire établir dans n'importe quel bureau de douane en présentant ses objets accompagnés des pièces justificatives (factures, quittances de douane, certificats de garantie, etc.). Par la suite, la carte pourra être complétée au fur et à mesure des acquisitions, en s'adressant au bureau qui l'a établie.

• Les marchandises achetées ou offertes

Sont exclus de ce dispositif les marchandises dont l'importation est prohibée.

* Seuils financiers :

Sont admises en franchise de droits et taxes, les marchandises dont la valeur totale ne dépasse pas 430 euros par personne, pour les voyageurs (âgés de 15 ans et plus) utilisant un mode de transport aérien (150 euros par personne, pour les voyageurs âgés de moins de 15 ans).

* Limites quantitatives :

La franchise de droits et taxes ne s'applique que lorsque la valeur d'une même marchandise est inférieur ou égale aux seuils suivants pour les voyageurs (de 17 ans et plus) :

- pour les produits du tabac : les voyageurs peuvent importer de pays tiers (hors Andorre) ou de territoires fiscalement tiers : 200 cigarettes ou 100 cigarillos (poids maximum de 3 grammes par pièce) ou 50 cigares (poids supérieur à 3 grammes par pièce) ou 250 grammes de tabac à fumer ou un assortiment proportionnel de ces différents produits ;

- pour les alcools et boissons alcooliques (autres que le vin tranquille et la bière) :

- 1 litre d'alcool et de boissons alcooliques ayant un titre alcoométrique de plus de 22 % volume, ou d'alcool éthylique non dénaturé de 80 % volume et plus ;

- ou 2 litres d'alcool et de boissons alcooliques ayant un titre alcoométrique n'excédant pas 22 % volume ;

**FRENCH NATIONALS TO ANDORRA:**

for a stay of less than 3 months:
- passport, even if expired by less than 5 years,

- national identity card.

for a stay of more than 3 months:
- valid passport bearing an entry authorization issued by the Prefect of the residence Departement after approval by the Prefect of Pyrénées Orientales.

**FOREIGNERS:**

When leaving France, aliens must produce the documents required for entry.
In particular, foreigners coming under the general case for entry into France and residing in France must obtain an exit visa.

Exceptions: the following are exempted from exit visa although comming under the general case:

- Egyptian, Iranian and Tunisian nationals residing in France,

- Lebanese and Philippine nationals holding a diplomatic or service passport if they resided in France for more than 3 months.

Statutory refugees: same requirements as for entry.

**ENTRY-TRANSIT-EXIT OF FLIGHT CREW MEMBERS:**

CUSTOMS FORMALITIES - PASSENGER TRAFFIC ENTRY:

PERSONAL BAGGAGE

a) Inbound from a member state of the European Union

b) Inbound from a third country or fiscally third territory

• Personal belongings

Personal belongings are admitted in France without tax or customs formalities. Their type and number must not take on a commercial nature; objects prohibited from import are excluded.

Customs officers can ask travelers to justify the legality of certain objects (jewelry, digital cameras, camcorders, cellphones, laptops, etc.). Travelers must be able to prove that said objects have been bought within the European Union, all taxes included, or, if bought in a third country, that they have paid the rights and taxes that may be due in the European Union, by providing the corresponding invoices or customs bills.

To avoid taking all these documents, customs suggest that travelers get a free movement pass. A free movement pass is a document that justifies that the customs and tax situation of the personal belongings carried by travelers is in order. This pass is personal and non-transferable, facilitates passage through customs and has a 10-year validity period. It does not replace duty receipts and does not exempt travelers from meeting conditions required by the other regulations. Travelers can acquire this pass in any customs office by presenting their belongings along with the supporting documents (bills, customs bills, warranty certificates, etc.). In the future, this pass can be completed as goods are acquired, by addressing the office that granted the pass.

• Bought or given goods

Goods prohibited from import are excluded from this scheme.

* Financial thresholds:

Goods with a total value that does not exceed 430 euros per person, for travelers (aged 15 and over) using air transport, (150 euros per person, for travelers aged under 15), are admitted free of duties and taxes.

* Quantitative limits:

The duty-free and tax-free character of a good only applies when the value of the same good is less than or equal to the following thresholds for travelers (aged 17 and over):

- for tobacco-related goods: travelers can import from third countries (outside Andorra) or from fiscally third territories: 200 cigarettes or 100 cigarillos (maximum weight of 3 grams a piece) or 50 cigars (weighing more than 3 grams a piece) or 250 grams of rolling tobacco or a proportional distribution of these aforementioned products;

- for alcohols and alcoholic beverages (other than still wine and beer):

- 1 liter of alcohol and alcoholic beverages with an alcoholic strength of more than 22% by volume, or non denaturized ethyl alcohol with an alcoholic strength of 80% by volume and above;

- or 2 liters of alcohol and alcoholic beverages with an alcoholic strength not exceeding 22% by volume;

© Service de l'Information Aéronautique, France

- ou un assortiment proportionnel de ces différents alcools et boissons alcooliques ;

- pour le vin tranquille et la bière : 4 litres de vin tranquille et 16 litres de bière.

* Les franchises en valeur (seuils financiers) et les franchises quantitatives (limites quantitatives) sont cumulatives.

• Franchises réduites :

Certaines catégories de voyageurs bénéficient de franchises réduites : les personnes ayant leur résidence dans une zone frontalière, les travailleurs frontaliers et les personnels des moyens de transport, utilisés pour voyager à partir d'un pays tiers ou d'un territoire tiers (à l'occasion de l'exercice de leurs fonctions).

La franchise en valeur est de 75 euros pour les voyageurs de 15 ans et plus (40 euros pour les voyageurs de moins de 15 ans).

Les franchises quantitatives sont les suivantes pour les voyageurs (de 17 ans et plus) :

- pour les produits du tabac : les voyageurs peuvent importer de pays tiers (hors Andorre) ou de territoires fiscalement tiers : 40 cigarettes ou 20 cigarillos ou 10 cigares ou 50 grammes de tabac à fumer ou un assortiment proportionnel de ces différents produits ;

- pour les alcools et boissons alcooliques (autres que le vin tranquille et la bière) :

- 0,25 litre d'alcool et de boissons alcooliques ayant un titre alcoométrique de plus de 22 % volume, ou d'alcool éthylique non dénaturé de 80 % volume et plus ;

- ou 0,5 litre d'alcool et de boissons alcooliques ayant un titre alcoométrique n'excédant pas 22 % volume ;

- ou un assortiment proportionnel de ces différents alcools et boissons alcooliques ;

- pour le vin tranquille et la bière : 0,5 litres de vin tranquille et 4 litres de bière.

• Voyageurs en provenance des Canaries, des îles Anglo-Normandes, du Mont Athos et de l'île d'Aland

Ces territoires sont considérés sur le plan fiscal comme des territoires d'importation. La franchise porte donc seulement sur la TVA et les accises.

• Voyageurs en provenance de la principauté d'Andorre

Les franchises propres aux relations avec Andorre découlent de l'accord sous forme d'échange de lettre conclu entre la Communauté économique européenne et la principauté d'Andorre le 28 juin 1990.

Les franchises en valeur sont de 900 euros pour les voyageurs âgés de 15 ans et plus (450 euros pour les voyageurs âgés de moins de 15 ans).

Les franchises quantitatives pour les voyageurs âgés de 17 et plus sont les suivantes :

- pour les produits du tabac : les voyageurs peuvent importer de la principauté d'Andorre : 300 cigarettes ou 150 cigarillos ou 75 cigares ou 400 grammes de tabac à fumer ou un assortiment proportionnel de ces différents produits ;

- pour les alcools et boissons alcooliques (autres que le vin tranquille et la bière) :

- 1,5 litres d'alcool et de boissons alcooliques ayant un titre alcoométrique de plus de 22 % volume, ou d'alcool éthylique non dénaturé de 80 % volume et plus ;

- ou 3 litres d'alcool et de boissons alcooliques ayant un titre alcoométrique n'excédant pas 22 % volume ;

- ou un assortiment proportionnel de ces différents alcools et boissons alcooliques ;

- pour le vin tranquille et la bière : 5 litres de vin tranquille ;

- pour le parfum : 75 grammes de parfums et 3/8 litre d'eaux de toilette ;

- pour le café : 1000 grammes de café ou 400 grammes d'extrait et essence de café ;

- pour le thé : 200 grammes de thé ou 80 grammes d'extrait et essence de thé.

Il existe également des franchises sur les produits agro-alimentaires que l'on retrouve à l'article 13 de l'accord précité. La valeur de produits alimentaires est limitée à 150 euros pour les voyageurs de moins de 15 ans et à 300 euros pour les voyageurs âgés de 15 ans et plus.

Sont interdits :

- Stupéfiants, poudre et munitions chargées, contrefaçons en librairie, livres et gravures interdits par le Gouvernement français, certaines boisons (notamment les similaires d'absinthe) dont l'importation est prohibée à titre absolu.

- or a proportional distribution of the aforementioned alcohols and alcoholic beverages;

- for still wine and beer: 4 liters of still wine and 16 liters of beer.

* The value allowances (financial thresholds) and the quantitative allowances (quantitative limits) are cumulative.

• Reduced allowances:

Certain categories of travelers benefit from reduced allowances: people living near a border, workers who cross the border to go to work and personnel in transport services, used to travel from a third country or a third territory (during the course of their work).

The value allowance is 75 euros for travelers aged 15 and over (40 euros for travelers aged under 15).

The quantitative allowances are the following for travelers (aged 17 and over):

- for tobacco-related goods: travelers can import from third countries (outside Andorra) or from fiscally third territories: 40 cigarettes or 20 cigarillos or 10 cigars or 50 grams of rolling tobacco or a proportional distribution of the aforementioned products;

- for alcohols and alcoholic beverages (other than still wine and beer):

- 0.25 liters of alcohol and alcoholic beverages with an alcoholic strength of more than 22% by volume, or non denaturized ethyl alcohol with an alcoholic strength of 80% by volume and above;

- or 0.5 liters of alcohol and alcoholic beverages with an alcoholic strength not exceeding 22% by volume;

- or a proportional distribution of the aforementioned alcohols and alcoholic beverages;

- for still wine and beer: 0.5 liters of still wine and 4 liters of beer.

• Travelers arriving from the Canaries, the Channel Islands, Mount Athos and the Aland Island

These territories are fiscally considered as importing jurisdictions. The allowance therefore only applies to VAT and excises.

• Travelers inbound from the principality of Andorra

The allowances specific to the relations with Andorra ensue from the agreement settled between the European Economic Community and the principality of Andorra by means of an exchange of letters on 28th June 1990.

The value allowance is 900 euros for travelers aged 15 and over (450 euros for travelers aged under 15).

The quantitative allowances for travelers aged 17 and over are the following:

- for tobacco-related goods: travelers can import from the principality of Andorra: 300 cigarettes or 150 cigarillos or 75 cigars or 400 grams of rolling tobacco or a proportional distribution of the aforementioned products;

- for alcohols and alcoholic beverages (other than still wine and beer):

- 1.5 liters of alcohol and alcoholic beverages with an alcoholic strength of more than 22% by volume, or non denaturized ethyl alcohol with an alcoholic strength of 80% by volume and above;

- or 3 liters of alcohol and alcoholic beverages with an alcoholic strength not exceeding 22% by volume;

- or a proportional distribution of the aforementioned alcohols and alcoholic beverages;

- for still wine and beer: 5 liters of still wine;

- for fragrance: 75 grams of fragrance and 3/8 liters of eau de toilette;

- for coffee: 1000 grams of coffee or 400 grams of coffee extract and coffee essence;

- for tea: 200 grams of tea or 80 grams of tea extract and tea essence.

There are also allowances on agri-food products that we can find in article 13 of the aforementioned agreement. The value of food products is limited to 150 euros for travelers aged under 15 and to 300 euros for travelers aged 15 and over.

The following are prohibited:

- Import of narcotics, powder and loaded ammunition, counterfeit printed matter prohibited by the French Government, certain drinks (notably absinth equivalent) is strictly prohibited.

**CIRCULATION DES MOYENS DE PAIEMENT ET DES VALEURS MOBILIERES**

a) MOYENS DE PAIEMENT - IMPORTATION

L'importation de tous moyens de paiement (billets de banque français, billet étrangers, chèques, etc…) est libre.

b) MOYENS DE PAIEMENT - EXPORTATION

Voyageurs résidents - tourisme :
Allocation de 5000 F ou la contre valeur de cette somme en devises étrangères, par personne et par voyage.

Voyageurs résidents - affaires :

- en plus de l'allocation ci-dessus, allocation spéciale égale au maximum de la contre valeur de 1000 F par personne et par jour.

- présentation à la douane du "décompte" établi par une banque intermédiaire agréée.

Les voyageurs non résidents peuvent exporter :

sans justification :

- des billets de banque français ou étrangers dans la limite de 5000 F; ou de la contre valeur de 5000 F ;

- sans limitations de montant, les moyens de paiement établis à l'étranger et libellés à leur nom (lettres de crédit et chèques de voyage).

avec justification :

- des billets de banque étrangers excédant le plafond de 5000 F à condition de présenter au bureau de douane de sortie :

- soit une déclaration d'importation de billets de banque étrangers souscrite auprès du bureau de douane d'entrée ;

- soit dans certaines conditions des bordereaux de négociation établis par des banques françaises.

c) VALEURS MOBILIERES

Les résidents ou non résidents ne sont en aucun cas autorisés à importer ou exporter des valeurs mobilières. Les intermédiaires agréés sont autorisés à importer ou exporter des valeurs mobilières en vue de procéder aux opérations admises par la réglementation des changes ou ayant un caractère strictement conservatoire telles que le recouponnement, l'échange, l'estampillage.

d) OR

Sauf autorisation spéciale délivrée par la Banque de France, l'importation et l'exportation de l'or sont interdites.

**CIRCULATION OF MEANS OF PAYMENT AND STOCKS AND SHARES**

a) MEANS OF PAYMENT - IMPORT

Import of any means of payment (French bank notes, foreign notes, cheques, etc.) is not subjected to any restrictions.

b) MEANS OF PAYMENT - EXPORT

Residents travellers - tourism:
Allowance of 5000 F or the equivalent in foreign currency, per person and per trip.

Resident travellers - business:

- in the addition to the above mentioned allowance, a special allowance equivalent to 1000 F at most per person and per day.

- the statement drawn up by an approved bank shall be shown to the customs authorities.

Non resident travellers are allowed to export:

without any justification:

- french or foreign bank notes up to 5000 F or the equivalent of this sum;

- without any limit, means of payment made out oversea and to their own name (letter of credit and traveller cheques).

with justification:

- foreign bank notes in excess of the 5000 F limit provided the following documents are shown to the custom office on leaving the territory:

- a statement of import for foreign bank notes requested at the customs office on entering the territory;

- or under certain circumstances, statement of account drawn up by a French bank.

c) STOCKS AND SHARES

Residents or non residents are in no way allowed to import or export stocks and shares. Duty authorized agents are allowed to import or export stocks and shares in order to carry out operations authorized under the exchange regulation or having a strictly conservancy nature such as renewal of coupons, exchange or stamping.

d) GOLD

Unless specifically authorized by the Banque de France, import and export of gold are strictly forbidden.

© Service de l'Information Aéronautique, France

**FORMALITES SANITAIRES**

a) ENTREE :

Aucune exigence en matière de vaccination (antivariolique et anticholérique) pour les voyages internationaux.

Le certificat international de vaccination anticholérique n'est pas exigé en France des passagers en provenance des zones infectées de choléra.

Le certificat international de vaccination anticholérique n'est pas exigé en France des passagers en provenance des zones infectées de choléra.

Exigé à l'arrivée dans les départements français d'Outre-mer et les territoires d'Outre-mer, des voyageurs en provenance de zones infectées.

Exigé en outre à l'arrivée dans le département de la Guyane, des voyageurs de toutes provenances devant y séjourner plus de 15 jours.

Exception : les enfants de moins d'un an.

b) TRANSIT :

1) Sans sortie de l'aéroport :

- Pas de certificat exigé sauf pour les passagers en correspondance (avec changement d'appareil) vers un aéroport situé dans la Zone Sanitaire Franche Européenne (1).

2) Avec sortie de l'aéroport ou transbordement entre PARIS/ORLY, PARIS/LE BOURGET et PARIS/CHARLES DE GAULLE.

- Même formalités qu'à l'arrivée.

c) SORTIE :

Aucune formalité.

(1) Les pays faisant partie de la Zone Sanitaire Franche Européenne sont les suivants : Belgique, France, Grèce, Irlande, Italie, Luxembourg, Pays-Bas, Royaume-Uni, Espagne.

**HEALTH REQUIREMENTS**

a) ENTRY:

No specific vaccination is required (smallpox or cholera) for international travel.

France does not require the international cholera vaccination certificate from passengers coming from cholera infected areas.

The international yellow fever vaccination certificate is not required on arrival in metropolitan France.

It is however required on arrival in French overseas Departements and territories from passengers coming from infected areas.

This certificate is moreover required from all passengers intending to reside more than 15 days when arriving in the Departement of Guyane.

Exception: children under one year of age.

b) TRANSIT :

1) Without exit from the airport:

- No certificate required, except from passengers interconnecting (with change of aircraft) with an airport situated in the European Health Free Zone (1).

2) With exit from the airport or interchange between PARIS/ORLY, PARIS/LE BOURGET and PARIS/CHARLES DE GAULLE.

- Same requirements as at arrival.

c) EXIT:

No requirement.

(1) The following countries form the European Health Free Zone : Belgium, France, Greece, Ireland, Italy, Luxembourg, Netherlands, United Kingdom, Spain.

**1.3.2 REGLEMENT CONCERNANT LE FRANCHISSEMENT DES FRONTIERES SCHENGEN PAR LES PERSONNES ET LES MARCHANDISES**

En matière de franchissement des frontières extérieures de l'espace Schengen par les personnes, seuls les aérodromes ayant la qualité de point de passage frontalier sont autorisés à recevoir des vols extra-Schengen, selon les conditions et horaires publiés par la voie de l'information aéronautique.

Sur ces points de passage frontaliers, tous les passagers en partance vers ou en provenance de l'espace extra-Schengen doivent faire l'objet d'un contrôle transfrontières systématique, dont la nature varie selon qu'ils sont ou non ressortissants d'Etat membres. En France, ces contrôles sont assurés par deux services de gardes-frontières : la Police aux frontières (PAF) et la douane.

Les conditions de franchissement des frontières par les personnes et les marchandises sur les aérodromes sont définies dans l'arrêté du 24 octobre 2017 :

https://www.legifrance.gouv.fr/eli/arrete/2017/10/24/TRAA1723247A/jo/texte

← Actuellement, 78 PPF aériens métropolitains permanents et 2 saisonniers sont déclarés et publiés au Journal Officiel de l'Union Européenne et sont rappelés ci-après.

← La liste à jour est fixée par la décision du 11 août 2025 établissant la liste des points de passage frontaliers aériens français publiée au Journal officiel de la République française telle que dernièrement modifiée.

**1.3.2 *REGULATION ON SCHENGEN BORDER CROSSING BY PEOPLE AND GOODS***

*Only aerodromes listed as a border crossing- point (PPF) are authorized to receive extra-Schengen flights, under the conditions and flight schedules published by the aeronautical information publication (AIP), with regard to the movement of persons across borders (Schengen borders).*

All passengers traveling to or from the extra-Schengen area must be subject to systematic transboundary controls operated at these border crossing points. Controls vary according to passengers are nationals of Member States or third countries nationals. In France, these controls are carried out by two border guard services: the Air and Border Police (PAF) or the Customs Department.

Border crossing conditions for people and goods at aerodromes are covered by the ministerial order of 24 October 2017:

76 metropolitan permanent border crossing points and 2 seasonal ones are currently declared and published in the Official Journal of the European Union. These border crossing points are listed here below.

The updated list is set by decision of November 2nd, 2017 establishing the list of metropolitan permanent border crossing points as last amended and published at the Official Journal of the French Republic.

# GEN 1.4 ENTREE, TRANSIT ET SORTIE DES MARCHANDISES

*ENTRY, TRANSIT AND DEPARTURE OF CARGO*

## 1.4.1 REGLEMENT CONCERNANT L'IMPORTATION, LE TRANSIT ET L'EXPORTATION DES MARCHANDISES

### 1.4.1.1 IMPORTATIONS

**Certains produits peuvent être soumis à des restrictions spéciales d'importation.**

**A. Au titre des matériels de guerre, armes, munitions et matériels assimilés**

L'importation d'armes, munitions et leurs éléments est régie par les articles L. 2335-1 et suivants du code de la défense et R. 2335-1 et suivants du code de la défense. Au titre de l'article R. 2335-1, l'importation des armes, munitions et leurs éléments des catégories A, B, C et des 1° et a), b), c) du 2° de la catégorie D est soumise à Autorisation d'Importation de Matériels de Guerre (AIMG).

L'arrêté du 8 juillet 2015 relatif aux dérogations à l'obligation d'obtention d'une autorisation d'importation de matériels de guerre, armes, éléments d'arme, munitions ou éléments de munition prévoit des dérogations générales à la prohibition d'importation. Ces dérogations visent à dispenser d'AIMG l'importation des armes et matériels de guerre dans certaines conditions.

Pour plus d'information, consulter le site de la DGGDI à l'adresse suivante : http://www.douane.gouv.fr.

**B. Au titre des produits explosifs**

L'importation de produits explosifs civils et militaires et d'articles pyrotechniques est soumise à Autorisation d'Importation de Produits Explosifs (AIPE).

Pour plus d'information, consulter le site de la Direction générale des douanes et droits indirects (DGGDI) à l'adresse suivante : http://www.douane.gouv.fr.

**C. Au titre des produits susceptibles d'infliger la torture**

Le règlement (CE) n°1236/2005 modifié instaure une prohibition à l'importation pour certains biens utilisés à des fins de torture ou en vue d'infliger un traitement inhumain ou dégradant. Ces biens peuvent, sous couvert d'une autorisation, être importés à des fins exclusives de présentation dans le cadre d'une exposition publique à caractère culturel. Ces biens n'ayant aucune autre utilisation pratique que celle d'infliger la peine capitale ou la torture sont repris à l'annexe II du règlement.

### 1.4.1.2 EXPORTATIONS

**A. L'exportation des matériels de guerre**

L'exportation des armes et matériels repris à l'arrêté du 27 juin 2012 modifié relatif à la liste des matériels de guerre et matériels assimilés est soumise à Licence d'exportation de matériels de guerre (LEMG).

L'arrêté du 2 juin 2014 relatif aux dérogations à l'obligation d'obtention d'une licence d'exportation prévoit des dérogations générales à la prohibition d'exportation. Ces dérogations visent à dispenser de LEMG l'exportation des matériels de guerre dans certaines conditions.

Pour plus d'information, consulter le site de la DGGDI à l'adresse suivante : http://www.douane.gouv.fr.

**B. L'exportation d'armes à feu dites "civiles"**

Le règlement (UE) n° 258/2012 du 14 mars 2012, soumet l'exportation d'armes à feu dites « civiles » à licence d'exportation armes à feu. L'article 2 du décret n° 2014-62 du 28 janvier 2014 relatif aux exportations d'armes à feu, munitions et leurs éléments précise le type de matériels effectivement soumis à licence d'exportation d'armes à feu (LEAF).

L'article 3 du règlement pré-cité liste les exclusions du champ d'application du dispositif de LEAF.

L'article 9 du règlement pré-cité prévoit des dérogations générales à la prohibition d'exportation d'armes à feu civiles, de leurs munitions et leurs éléments. Ces dérogations visent à dispenser de LEAF l'exportation des armes à feu civiles dans certaines conditions.

**C. L'exportation des produits explosifs**

L'exportation des produits explosifs civils et militaires est soumise à Autorisation d'Exportation de Produits Explosifs (AEPE).

Pour plus d'information, consulter le site de la DGGDI à l'adresse suivante : http://www.douane.gouv.fr.

**D. L'exportation des biens à double usage**

Le règlement (CE) n° 428/2009 modifié définit la liste des biens considérés comme biens à double usage. L'exportation de ces biens est soumise à Licence d'exportation de biens à double usage (LBDU).

Pour plus d'information, consulter le site de la DGGDI à l'adresse suivante : http://www.douane.gouv.fr.

## 1.4.1 REGULATION REGARDING THE IMPORT, TRANSIT AND EXPORT OF GOODS

### 1.4.1.1 IMPORTS

**Some products can be subject to some special import restrictions.**

**A. Concerning war material, weapons, ammunition and assimilated items**

The import of weapons, ammunition and their constituents is governed by articles L. 2335-1 and subsequent articles, and articles R. 2335-1 and subsequent articles of the Defense Code. Concerning article R. 2335-1, the import of weapons, ammunition and their constituents, of categories A, B, C and the 1° and the a), b), c) of 2° of category D is subject to an Import Authorization for War Material.

The order of 8 July 2015 on the waivers to the obligation to obtain an import authorization for war material, weapons, parts of weapons, ammunition or parts of ammunition lays down general waivers to import prohibitions. These waivers aim to import weapons and war material without an import authorization for war material under specific conditions.

For more information, consult the DGGDI website at the following address: http://www.douane.gouv.fr.

**B. Regarding explosives**

The import of civil and military explosives and pyrotechnics is subject to an Import Authorization for Explosives.

For more information, consult the DGGDI website at the following address: http://www.douane.gouv.fr.

**C. Regarding objects which could be used to inflict torture**

The amended EC regulation no.1236/2005 prohibits the import of certain type of goods used to torture or to inflict inhuman or degrading treatment. These goods can, with the appropriate authorization, be imported solely for presentation purposes during public cultural exhibitions. These goods having no other purpose than inflicting capital punishment or torture are described in appendix II of the regulation.

### 1.4.1.2 EXPORTS

**A. Export of war material**

The export of weapons and material described in the amended order of 27 June 2012 on the list of war material and affiliated material is subject to a war material export license.

The order of 2 June 2014 on the waivers to the obligation to obtain an export license lays down general waivers to the export prohibition. These waivers aim to export war material without a war material export license under specific conditions.

For more information, consult the DGGDI website at the following address: http://www.douane.gouv.fr.

**B. Export of firearms for civil use**

EU regulation no.258/2012 of 14 March 2012 subjects the export of firearms destined for civil use to firearm export licenses. Article 2 of decree no.2014-62 of 28 January 2014 on the export of guns, ammunition and their constituents specifies the type of material effectively subject to a firearm export license.

Article 3 of the aforementioned regulation lists the exceptions to the field of application of this license.

Article 9 of the aforementioned regulation lays down general waivers to the export prohibition on civil firearms, their ammunition and their constituents. These waivers aim to export civil firearms without a firearm export license under specific conditions.

**C. Export of explosives**

The export of civil and military explosives and pyrotechnics is subject to an Export Authorization for Explosives.

For more information, consult the DGGDI website at the following address: http://www.douane.gouv.fr.

**D. Export of dual-purpose goods**

The amended EC regulation no.428/2009 defines the list of goods regarded as dual-purpose goods. The export of these goods is subject to an Export License for dual-purpose goods.

For more information, consult the DGGDI website at the following address: http://www.douane.gouv.fr.

© Service de l'Information Aéronautique, France

**E. L'exportation de biens susceptibles d'infliger la torture**

Le règlement (CE) n°1236/2005 modifié instaure une prohibition à l'exportation pour certains biens utilisés à des fins de torture ou en vue d'infliger un traitement inhumain ou dégradant. Ces biens peuvent, sous couvert d'une autorisation, être exportés à des fins exclusives de présentation dans le cadre d'une exposition publique à caractère culturel. Ces biens n'ayant aucune autre utilisation pratique que celle d'infliger la peine capitale ou la torture sont repris à l'annexe II du règlement.

Par ailleurs, les biens susceptibles d'infliger la torture peuvent être exportés sous couvert d'une autorisation d'exportation. Ces biens sont repris à l'annexe III du règlement.

L'article 5 du règlement pré-cité prévoit des dérogations générales à la prohibition d'exportation des biens susceptibles d'être utilisés en vue d'infliger la torture.

Des procédures particulières existent pour les cas suivants :

- Importations et exportations d'or.

**1.4.1.3 TRANSIT**

Le transit est un régime douanier suspensif qui permet, sous certaines garanties, de transporter des marchandises sous sujétion douanière en suspension de tous droits, taxes et autres mesures économiques, fiscales ou douanières.

Des exclusions / restrictions au placement de marchandises sous le régime de transit sont définies par les législations communautaires et nationales. Certaines autorisations (notamment l'autorisation d'importation de matériel de guerre) ne sont toutefois jointes qu'au moment du dépôt de la déclaration d'importation.

Les procédures de transit communautaire / commun, prévues par le Code des douanes communautaire (CDC) s'appliquent selon les conditions fixées par la réglementation communautaire.

Les formalités en matière de transit diffèrent selon le statut douanier des marchandises, et le mode de transport utilisé.
Ainsi, l'article 95 du CDC prévoit la dispense de garantie pour les parcours aériens au sein du territoire douanier communautaire.

De plus, des simplifications peuvent être accordées à un opérateur en fonction du mode de transport utilisé (air, mer) ou dans le cadre de la procédure de droit commun (fiabilité et expérience de l'opérateur).

Enfin, les règles générales en matière de transit (notamment le dépôt d'une déclaration de transit informatisée par l'application douanière NSTI) s'appliquent au fret aérien transporté par la voie routière (vol camionné).

**Attention :**

A l'importation, à l'exportation ou au transit, certaines marchandises sont soumises à des restrictions particulières, voire à prohibition relative ou absolue.

**L'importation, la détention et l'exportation de certaines marchandises, telles que les contrefaçons, par exemple, sont prohibées à titre absolu.**

**Pour plus d'informations sur les formalités douanières :**

• visiter le site internet de la douane française (DGDDI) : recherches par mots-clés

**http://www.douane.gouv.fr**

• contacter Douane Infos Services :
Téléphone : **0811 20 44 44** (coût d'un appel local depuis un poste fixe).
Hors métropole ou depuis l'étranger : **+33 1 72 40 78 50** ( coût de l'appel variable selon l'opérateur).

courriel : ids@douane.finances.gouv.fr

• contacter les Pôles d'action économiques de la DGDDI (cellules conseils aux entreprises)

adresses :
**http://www.douane.gouv.fr/articles/a11053-les-cellules-conseil-aux-entreprises**

**1.4.2 AEROPORTS INTERNATIONAUX DE L'UNION (AIU)**

En vertu des bases réglementaires en vigueur (1) , un « Aéroport International de l'Union » (AIU) est un aéroport situé sur le territoire douanier de l'Union (TDU) et habilité par les autorités douanières au trafic aérien avec des territoires situés en dehors du TDU. Tout aéroport qualifié d'AIU est habilité à recevoir des aéronefs transportant des marchandises d'un pays tiers à l'Union Européenne.

Seuls les aéroports figurant dans la liste des AIU publiée sur le site de la Commission européenne (https://taxation-customs.ec.europa.eu/business/customs-controls/travelling-air_fr) sont autorisés à recevoir des vols en transit, des vols entrant ou sortant du TDU, sous réserve de l'accomplissement des formalités douanières et fiscales requises pour les marchandises transportées.

**E. Export of objects which could be used to inflict torture.**

The amended EC regulation no.1236/2005 prohibits the export of certain types of goods used to torture or to inflict inhuman or degrading treatment. These goods can, with the appropriate authorization, be exported solely for presentation purposes during public cultural exhibitions. These goods having no other purpose than inflicting capital punishment or torture are described in appendix II of the regulation.

Furthermore, objects which could be used to inflict torture can be exported with an export authorization. These objects are listed in appendix III of the regulation.

Article 5 of the aforementioned regulation lays down general waivers to the export prohibition on objects that may be used to inflict torture.

There are special procedures for the following cases:

- Imports and exports of gold.

**1.4.1.3 TRANSIT**

Transit is a suspensive customs regime allowing, subject to certain guarantees, the transport of goods subject to customs requirements in suspension of all duties, taxes and other financial, tax or customs measures.

Exclusions / restrictions on the placement of goods under transit regime are defined by community and national legislation. Some authorisations (in particular authorisation for the import of war equipment), however, are only attached when lodging the import declaration.

The community / common transit procedures, provided for by the Community Customs Code (CC) apply according to the conditions laid down by community regulations.

Transit formalities vary depending on the customs status of the goods and the mode of transport used.
Article 95 of the CC provides for a guarantee waiver for flights within the community customs territory.

In addition, simplifications may be granted to an operator depending on the mode of transport used (air, sea) or in the framework of the common law procedure (reliability and experience of the operator).

Lastly the general rules concerning transit (in particular lodging an electronic transit declaration using the customs application NSTI) apply to air freight carried by road (trucking).

**Caution:**

During import, export or transit, some goods are subject to special restrictions, even relative or absolute prohibition.

**Import, possession and export of some goods such as counterfeits are absolutely prohibited.**

**For further information on customs formalities:**

• visit the French customs web site (DGDDI): search by key words

**http://www.douane.gouv.fr**

• contact Douane Infos Services:
Tel.: **0811 20 44 44** (cost of a local call from a fixed phone).
Calls from outside mainland France or abroad: **+33 1 72 40 78 50** (variable cost depending on the operator).

E-mail: ids@douane.finances.gouv.fr

• contact the DGDDI Economic Action Centres (Business Advisory Units)

addresses: **http://www.douane.gouv.fr/articles/a11053-les-cellules-conseil-aux-entreprises**

**1.4.2 INTERNATIONAL UNION AIRPORT (IUA)**

According to the current regulations (1) , an "International Union Airport" (IUA) means any airport located on Union territory which, having been so authorised by the customs authority, is approved for air traffic with territories outside of the customs territory of the Union. Any IUA qualified airport is authorised to receive ACFT carrying goods from third countries to the Union.

Only airports appearing in the list of IUA published on the website of European Commission (https://taxation-customs.ec.europa.eu/business/customs-controls/travelling-air_en) are authorized to receive transit flights, flights entering or leaving the customs territory of the EU, subject to the completion of the customs and tax formalities required for the goods transported.

© Service de l'Information Aéronautique, France

La qualification AIU est obligatoire pour le trafic de l'ensemble des marchandises tierces, pourvues d'un caractère commercial ou non, incluant le fret cargo, le fret express ainsi que les bagages à main accompagnés ou de soute, soumises à formalités douanières et fiscales.

La mise à jour de la liste des AIU est établie par la Direction Générale des Douanes et des Droits Indirects (DGDDI) en fonction des évolutions du trafic international. Tout aéroport civil ou militaire souhaitant développer sur sa plateforme un trafic de marchandises avec des pays tiers, que ce trafic soit régulier ou temporaire, qu'il s'agisse d'un trafic de fret (fret cargo, fret express) ou de personnes (bagages à main accompagnés ou de soute), doit prendre contact avec les services locaux des douanes afin de solliciter la qualification d'Aéroport International de l'Union (AIU) et de définir les modalités d'information du service concernant l'arrivée des vols.

The IUA qualification is mandatory for the traffic of all goods from third countries to the Union, whether they are commercial or not, including cargo freight, express freight as well as accompanied hand luggage or hold luggage subject to customs formalities and tax.

The list of IUAs is updated by the General Directorate of Customs according to the evolution of international traffic. Any civil or military airport wishing to develop goods traffic with third countries on its platform must contact local customs services in order to apply for International Union Airport (IUA) status and to define the terms and conditions for informing the service about the arrival of flights. This request is mandatory, whether the airport's traffic is regular or temporary, whether it is freight traffic (cargo freight, express freight) or people traffic (accompanied hand luggage or hold luggage).

# GEN 1.5 INSTRUMENTS DE BORD, EQUIPEMENT ET DOCUMENTS DE VOL DES AERONEFS

*AIRCRAFT INSTRUMENTS, EQUIPMENT AND FLIGHT DOCUMENTS*

## 1.5.1 EQUIPEMENTS DE COMMUNICATION, DE NAVIGATION, DE SURVEILLANCE ET D'ANTICOLLISION

### PRÉAMBULE

À la date de publication de l'arrêté du 5 juillet 2024 relatif aux équipements de communication, de navigation, de surveillance et d'anticollision installés à bord des aéronefs, les règlements européens applicables en matière d'obligations d'emport d'équipements de communication, de navigation, de surveillance et d'anticollision pour les besoins de l'utilisation de l'espace aérien sont les suivants :

- règlement (UE) n° 1332/2011 de la Commission du 16 décembre 2011 modifié établissant des exigences communes pour l'utilisation de l'espace aérien et des procédures d'exploitation communes pour l'évitement de collision en vol ;

- règlement d'exécution (UE) 2023/1770 de la Commission du 12 septembre 2023 établissant des dispositions relatives aux équipements d'aéronef nécessaires pour l'utilisation de l'espace aérien du ciel unique européen, ainsi que des règles d'exploitation relatives à l'utilisation de l'espace aérien du ciel unique européen.

Les obligations additionnelles d'emport des équipements de communication, de navigation, de surveillance et d'anticollision installés à bord des aéronefs sont fixées par l'annexe à l'arrêté du 5 juillet 2024 mentionné ci-dessus dont la présente section GEN 1.5.1 constitue une synthèse.

Lorsque l'emport d'un équipement embarqué de communication, de navigation, de surveillance et d'anti-abordage est imposé pour évoluer dans une portion d'espace aérien, il est entendu que ledit équipement est :

- utilisé s'il se trouve en état de marche ; et

- conforme aux normes en vigueur de l'Annexe 10 à la Convention relative à l'aviation civile internationale ainsi qu'aux spécifications de certification européennes qui lui sont applicables.

Enfin, des équipements additionnels peuvent être requis au titre de la règlementation relative aux opérations aériennes lorsque les activités envisagées y sont assujetties :

- le règlement (UE) n°965/2012 modifié de la Commission du 5 octobre 2012 déterminant les exigences techniques et les procédures administratives applicables aux opérations aériennes ;

- l'arrêté du 24 juillet 1991 modifié relatif aux conditions d'utilisation des aéronefs civils en aviation générale.

### 1 ÉQUIPEMENTS DE COMMUNICATION

#### 1.1. Obligations d'emport pour les aéronefs évoluant selon les règles de vol aux instruments, désignées ci-après par : « IFR »

##### 1.1.1. Obligations d'emport pour les aéronefs en IFR évoluant dans les régions d'information de vol (FIR) de la France métropolitaine (LFFF, LFMM, LFEE, LFRR et LFBB), ci-après désignées par : « l'espace aérien de la métropole »

Le règlement d'exécution (UE) 2023/1770 susmentionné fixe les obligations d'emport d'équipements de communication à très hautes fréquences (VHF) des aéronefs.
Pour tout aéronef à l'exception des aéronefs d'État, lorsque l'emport d'un équipement de communication VHF est obligatoire, cet équipement dispose de la capacité à utiliser un espacement entre canaux de 8,33 kHz.
Les équipements de communication VHF qui ne disposent que de la capacité à utiliser des espacements entre canaux de 25 kHz sont utilisés exclusivement pour établir des communications dans des assignations de fréquence qui demeurent dans cet espacement.

##### 1.1.2. Obligations d'emport pour les aéronefs en IFR évoluant dans l'espace aérien situés au-dessus du territoire français en outre-mer ainsi que dans les FIR de Guyane (SOOO), de Tahiti (NTTT) et dans le secteur Nouvelle-Calédonie de la FIR de Nandi (NFFF), ci-après désignés par : « l'espace aérien outre-mer »

Tout aéronef dispose de l'équipement de communication permettant d'assurer une liaison bilatérale permanente avec les organismes de la circulation aérienne désignés, capable d'utiliser toutes les fréquences radioélectriques, espacées de 25 kHz, dans la bande de fréquences du service mobile aéronautique (R).

## 1.5.1 COMMUNICATION, NAVIGATION, SURVEILLANCE, AND ANTI-COLLISION EQUIPMENT

### FOREWORD

On the publication date of the French national order "arrêté du 5 juillet 2024 relatif aux équipements de communication, de navigation, de surveillance et d'anticollision installés à bord des aéronefs" (https://www.legifrance.gouv.fr/), the applicable European regulations regarding the obligation to carry communication, navigation, surveillance, and anti-collision equipment as airpace usage requirements are:

- Commission Regulation (EU) No 1332/2011 of 16 December 2011 laying down common airspace usage requirements and operating procedures for airborne collision avoidance;

- Commission Implementing Regulation (EU) 2023/1770 of 12 September 2023 laying down provisions on aircraft equipment required for the use of the Single European Sky airspace and operating rules related to the use of the Single European Sky airspace.

The additional requirements for carrying communication, navigation, surveillance, and anti-collision equipment installed on board aircraft are set out in the appendix to the above-mentioned order of July 5, 2024, which is summarized in this section GEN 1.5.1.

When the carriage of on-board communication, navigation, surveillance, and anti-collision equipment is required in a portion of airspace, it is understood that such equipment is:

- Used, if in working order; and

- Compliant with the applicable standards of Annex 10 to the Convention on International Civil Aviation and the applicable European certification specifications.

Finally, additional equipment may be required by aviation regulation relating to air operations when the planned activities are subject to such regulations:

- Commission Implementing Regulation (EU) No 925/2012 of 8 October 2012 entering a name in the register of protected designations of origin and protected geographical indications;

- French order « arrêté du 24 juillet 1991 modifié relatif aux conditions d'utilisation des aéronefs civils en aviation générale ».

### 1 COMMUNICATION EQUIPEMENT

#### 1.1. Carriage requirements for aircraft operating under instrument flight rules, hereafter referred to as: "IFR"

##### 1.1.1. Carriage requirements for IFR aircraft operating in the flight information regions (FIR) of metropolitan France (LFFF, LFMM, LFEE, LFRR, and LFBB), hereinafter referred to as: "metropolitan airspace."

The aforementioned Implementing Regulation (EU) 2023/1770 sets out the requirements for aircraft to carry very high frequency (VHF) communication equipment.
For all aircraft except state aircraft, where the carriage of VHF communication equipment is mandatory, such equipment shall have the capability to use a channel spacing of 8.33 kHz.
VHF communication equipment that is only capable of using 25 kHz channel spacing shall be used exclusively to establish communications in frequency assignments that remain within this type of spacing.

##### 1.1.2. Carriage requirements for IFR aircraft operating in airspace above French overseas territory and in the FIR of French Guiana (SOOO), Tahiti (NTTT) and the New Caledonia sector of the Nandi FIR (NFFF), hereinafter referred to as: "overseas airspace."

All aircraft shall be equipped with communication equipment capable of ensuring permanent two-way communication with designated air traffic control units, capable of using all radio frequencies, spaced at 25 kHz, in the aeronautical mobile service (R) frequency band.

© Service de l'Information Aéronautique, France

**1.2. Obligations d'emport pour les aéronefs évoluant selon les règles de vol à vue, désignées ci-après par « VFR »**

**1.2.1. Dispositions générales applicables dans « l'espace aérien de la métropole » et dans « l'espace aérien outre-mer »**

Tout aéronef dispose de l'équipement de communication permettant d'assurer une liaison bilatérale permanente avec les organismes de la circulation aérienne désignés lorsqu'il :

- bénéficie du service du contrôle de la circulation aérienne ;
- évolue dans des portions d'espace aérien ou sur des itinéraires portés à la connaissance des usagers par la voie de l'information aéronautique ;

- utilise certains aérodromes portés à la connaissance des usagers par la voie de l'information aéronautique ;
- quitte la vue du sol ou de l'eau ;
- effectue un vol de nuit.

**1.2.2. Obligations d'emport pour les aéronefs en VFR dans « l'espace aérien de la métropole »**

En sus des obligations mentionnées au 1.2.1, le règlement d'exécution (UE) 2023/1770 fixe les obligations d'emport d'équipements de communication VHF des aéronefs.

Pour tout aéronef à l'exception des aéronefs d'État, lorsque l'emport d'un équipement de communication VHF est obligatoire, cet équipement dispose de la capacité à utiliser un espacement entre canaux de 8,33 kHz.

Les équipements de communication VHF qui ne disposent que de la capacité à utiliser des espacements entre canaux de 25 kHz sont utilisés exclusivement pour établir des communications dans des assignations de fréquence qui demeurent dans cet espacement.

**1.2.3. Obligations d'emport pour les aéronefs en VFR dans « l'espace aérien outre-mer »**

Lorsqu'il est obligatoire en application du paragraphe 1.2.1, tout équipement de communication VHF installé à bord d'un aéronef est capable d'utiliser toutes les fréquences radioélectriques, espacées de 25 kHz, dans la bande de fréquences du service mobile aéronautique (R

**1.3 Aéronefs d'État évoluant en IFR ou en VFR en métropole**

Les aéronefs d'Etat capables de communiquer sur des fréquences UHF qui ne sont pas équipés d'une radio 8,33 KHz doivent l'indiquer dans leur plan de vol. Ils se conforment alors aux procédures décrites ci-dessous à moins qu'ils n'aient établi des procédures particulières avec l'autorité compétente des services de la circulation aérienne ou qu'ils n'aient obtenu des autorisations spécifiques de la part des organismes ATS concernés.

A cet effet, les fréquences suivantes sont mises à leur disposition et ces aéronefs planifient leurs vols uniquement dans les zones couvertes par ces fréquences :

- en UIR, les fréquences UAC UHF figurant en GEN 3.4 ;
- en FIR, lorsqu'ils sont en contact avec les CRNA, les fréquences ACC UHF figurant en GEN 3.4 ;
- en FIR, lorsqu'ils sont en contact avec les organismes d'APP / SIV, les fréquences 25 KHz pertinentes figurant en ENR 2.2, ou en en AD 2.18.

Les aéronefs d'État en provenance ou à destination d'un aérodrome se conforment par ailleurs aux procédures décrites en AD 2.18 ou en AD 2.23.

## 2. ÉQUIPEMENTS DE NAVIGATION

**2.1. Équipements à bord des aéronefs**

Les équipements de navigation de surface embarqués sont conformes aux spécifications de navigation requises en fonction des procédures empruntées et des espaces aériens traversés, telles que définies par la version en vigueur du document 9613 de l'Organisation de l'aviation civile internationale – Manuel de la navigation fondée sur les performances.

**2.2. Obligations d'emport pour les aéronefs en IFR**

**2.2.1. Disposition générale**

Pour évoluer en espace aérien supérieur et dans certaines portions désignées de l'espace aérien inférieur et portées à la connaissance des usagers par la voie de l'information aéronautique, tout aéronef est équipé d'un dispositif de mesure de distance ultra haute fréquence (DME) ou de tout autre équipement disposant d'une précision longitudinale au moins équivalente.

**2.2.2. Navigation en route**

a) Équipement pour suivre des routes conventionnelles

Afin d'assurer une précision latérale suffisante, tout aéronef est équipé d'un système de navigation capable d'exploiter les informations fournies par les aides radioélectriques au sol balisant la route qu'il prévoit de suivre, ou d'un système de navigation équivalent, lui permettant, pendant plus de 95 % du temps, de suivre cette route sans s'en écarter au-delà d'une distance D.

**1.2. Carriage requirements for aircraft operating under visual flight rules, hereinafter referred to as "VFR"**

**1.2.1. General provisions applicable in "metropolitan airspace" and "overseas airspace"**

All aircraft shall be equipped with communication equipment capable of maintaining continuous two-way communication with designated air traffic control units when they:

- are provided with air traffic control services;
- are operating in portions of airspace or on routes made known to users through aeronautical information;
- use certain aerodromes brought to the attention of users through aeronautical information;
- lose sight of land or water;
- fly at night.

**1.2.2. Carriage requirements for aircraft flying under VFR in "metropolitan airspace"**

In addition to the obligations mentioned in 1.2.1, Implementing Regulation (EU) 2023/1770 sets out the obligations for aircraft to carry VHF communication equipment.

For all aircraft except state aircraft, where the carriage of VHF communication equipment is mandatory, such equipment shall have the capability to use 8.33 kHz channel spacing.

VHF communication equipment that is only capable of using 25 kHz channel spacing shall be used exclusively for communications in frequency assignments that remain within this spacing.

**1.2.3. Carriage requirements for aircraft flying under VFR in "overseas airspace"**

Where required under paragraph 1.2.1, any VHF communication equipment installed on board an aircraft shall be capable of using all radio frequencies, spaced at 25 kHz intervals, in the aeronautical mobile service (R) frequency band.

**1.3 State aircraft operating under IFR or VFR in metropolitan France**

State aircraft capable of communicating on UHF frequencies, and that are not equipped with an 8.33 KHz radio must indicate this in their flight plan. They shall then comply with the procedures described herebelow unless they have established specific procedures with the competent air traffic services authority or have obtained specific authorizations from the relevant ATS organizations.

To this end, the following frequencies are made available to them, and these aircraft shall plan their flights only in areas covered by these frequencies:

- in the UIR, the UAC UHF frequencies listed in GEN 3.4;
- in the FIR, when in contact with CRNAs, the ACC UHF frequencies listed in GEN 3.4;
- in the FIR, when in contact with APP/SIV units, the relevant 25 KHz frequencies listed in ENR 2.2, or in AD 2.18.

State aircraft arriving at or departing from an aerodrome shall also comply with the procedures described in AD 2.18 or AD 2.23.

## 2. NAVIGATION EQUIPMENT

**2.1. Onboard equipements**

Onboard area navigation equipment complies with the navigation specifications required for the procedures to be used and the airspace to be flow in, as defined by the current version of International Civil Aviation Organization document 9613 – Performance-Based Navigation Manual.

**2.2. Carriage requirements for IFR aircraft**

**2.2.1. General provision**

To fly in upper airspace and in certain designated portions of lower airspace, as communicated to users via aeronautical information, all aircraft must be equipped with a very high frequency distance measuring equipment (DME) or any other equipment with at least equivalent longitudinal accuracy.

**2.2.2. En-route navigation**

a) Equipment for conventional ATS routes

In order to ensure sufficient lateral accuracy, all aircraft are equipped with a navigation system capable of using information provided by ground-based radio aids marking the route it plans to follow, or an equivalent navigation system, enabling it to follow this route without deviating beyond a distance D more than 95% of the time.

© Service de l'Information Aéronautique, France

La distance D vaut :

- 5 milles marins (NM), pour les routes ou segments de route balisés par deux aides radioélectriques au sol distantes de moins de 100 NM ;

- 5 % de la longueur de la route, pour les routes ou segments de route balisés par deux aides radioélectriques au sol distantes de 100 NM ou plus.

b) Equipement de navigation de surface pour les aéronefs évoluant dans « l'espace aérien de la métropole »

Tout aéronef évoluant au-dessus du niveau de vol 115 est équipé d'un équipement de navigation conforme à la spécification de navigation RNAV 5.

Tout aéronef est équipé d'un équipement de navigation de surface conforme aux spécifications de navigation des routes déterminées destinées à canaliser la circulation pour permettre d'assurer les services de la circulation aérienne (ci-après désignées par les termes : « routes ATS ») empruntées indiquées à l'information aéronautique pour chacune d'elles.

c) Équipement pour suivre des routes de navigation de surface pour les aéronefs évoluant dans « l'espace aérien outre-mer »

Tout aéronef est équipé d'un système de navigation de surface permettant de suivre des routes ATS avec la qualité de navigation requise indiquée à l'information aéronautique.

d) Exemptions

Les aéronefs d'État sont exemptés des obligations mentionnées aux paragraphes b) et c). Ils se conforment alors aux procédures particulières établies, le cas échéant par l'autorité compétente des services de la circulation aérienne.

**2.2.3. Procédures de départ, d'arrivée, d'attente et d'approche aux instruments**

a) Navigation conventionnelle

Tout aéronef est équipé des équipements de bord lui permettant d'exploiter les informations fournies par les aides radioélectriques ou satellitaires sur lesquelles est établie la procédure suivie (départ normalisé aux instruments (SID), arrivée normalisée aux instruments (STAR), attente, approche aux instruments).

b) Navigation de surface

Pour suivre une procédure de navigation de surface, tout aéronef est équipé d'un système de navigation de surface conforme à la spécification de navigation requise telle que définie par le document 9613 de l'Organisation de l'aviation civile internationale – Manuel de la navigation fondée sur les performances.

**2.2.4. Minimum de séparation verticale réduit (RVSM)**

a) Obligations pour les aéronefs évoluant dans « l'espace aérien de la métropole »

Tout aéronef évoluant dans le volume d'espace aérien compris entre les niveaux de vol 290 et 410 inclusivement, à l'exception des zones de transition RVSM ou de portions d'espace portées à la connaissance des usagers par la voie de l'information aéronautique, est homologué RVSM.

b) Obligations pour les aéronefs évoluant en Polynésie française

Tout aéronef évoluant dans la région d'information de vol de Tahiti (NTTT) entre les niveaux de vol 290 et 410, inclusivement, est homologué RVSM.

Des dérogations à cette obligation peuvent être accordées à un exploitant d'aéronef par l'autorité compétente des services de la circulation aérienne sur demande motivée de l'intéressé. Une séparation verticale de 600 mètres (2 000 pieds) est alors appliquée entre cet aéronef et les autres.

Les modalités concernant les demandes de dérogation sont précisées dans la section ENR 1.8 de l'AIP PAC-P.

c) Obligations pour les aéronefs évoluant en Guyane

Tout aéronef évoluant dans le volume d'espace aérien compris entre les niveaux de vol 290 et 410, inclusivement, dans la région d'information de vol de Cayenne-Rochambeau (SOOO), est homologué RVSM.

Des dérogations à cette obligation peuvent être accordées à un exploitant d'aéronef par l'autorité compétente des services de la circulation aérienne sur demande motivée de l'intéressé. Une séparation verticale de 600 mètres (2 000 pieds) est alors appliquée entre cet aéronef et les autres.

Les modalités concernant les demandes de dérogation sont précisées dans la section ENR 1.8 de l'AIP CAR-SAM-NAM.

d) Obligations pour les aéronefs évoluant en Guadeloupe, en Martinique, à La Réunion, à Mayotte, à Saint-Barthélemy, à Saint-Martin, à Saint-Pierre-et-Miquelon, en Nouvelle-Calédonie et dans les îles de Wallis et Futuna

Sans objet.

e) Exemptions

The distance D is equal to:

- 5 nautical miles (NM) for routes or route segments marked by two ground-based radio aids less than 100 NM apart;

- 5% of the route length for routes or route segments marked by two ground-based radio aids 100 NM or more apart.

b) Area navigation equipment for aircraft operating in "metropolitan airspace"

All aircraft operating above flight level 115 shall be equipped with navigation equipment that complies with RNAV 5 navigation specification.

All aircraft shall be equipped with area navigation equipment that complies with the navigation specifications for specific routes designed to channel traffic in order to provide air traffic services (hereinafter referred to as "ATS routes") as indicated in the aeronautical information for each route.

c) Equipment for area navigation routes for aircraft operating in "overseas airspace"

All aircraft are equipped with an area navigation system that allows them to follow ATS routes with the required navigation quality specified in aeronautical information.

d) Exemptions

State aircraft are exempted from the obligations referred to in paragraphs (b) and (c). They shall then comply with the specific procedures established, where applicable, by the competent air traffic services authority.

**2.2.3. Procédures de départ, d'arrivée, d'attente et d'approche aux instruments**

a) Conventional navigation

All aircraft are equipped with onboard equipment enabling them to use information provided by radio or satellite aids on which the procedure to be flown is based (standard instrument departure (SID), standard instrument arrival (STAR), holding pattern, instrument approach).

b) Area navigation

In order to fly an area navigation procedure, all aircraft are equipped with an area navigation system that complies with the required navigation specification as defined by International Civil Aviation Organization document 9613 – Performance-Based Navigation Manual.

**2.2.4. Reduced vertical separation minima (RVSM)**

a) Requirements for aircraft operating in "metropolitan airspace"

All aircraft operating in the airspace between flight levels 290 and 410 inclusive, except for RVSM transition areas or portions of airspace brought to the attention of users through aeronautical information, are RVSM approved.

b) Requirements for aircraft operating in French Polynesia

All aircraft operating in the Tahiti Flight Information Region (NTTT) between flight levels 290 and 410, inclusive, are RVSM-compliant.

Exemptions to this requirement may be granted to an aircraft operator by the competent air traffic services authority upon reasoned request by the interested party. A vertical separation of 600 meters (2,000 feet) is then applied between this aircraft and others.

The procedures for requesting exemptions are specified in section ENR 1.8 of the AIP PAC-P.

c) Requirements for aircraft operating in French Guiana

All aircraft operating in the airspace between flight levels 290 and 410, inclusive, in the Cayenne-Rochambeau Flight Information Region (SOOO) are RVSM-compliant.

Exemptions to this requirement may be granted to an aircraft operator by the competent air traffic services authority upon reasoned request from the interested party. A vertical separation of 600 meters (2,000 feet) is then applied between this aircraft and others.

The procedures for requesting exemptions are specified in section ENR 1.8 of the AIP CAR-SAM-NAM.

d) Requirements for aircraft operating in Guadeloupe, Martinique, La Réunion, Mayotte, Saint Barthélemy, Saint Martin, Saint Pierre and Miquelon, New Caledonia, and the Wallis and Futuna Islands

Not applicable.

e) Exemptions

Les aéronefs d'État sont exemptés de l'application des dispositions du paragraphe 2.2.4 et appliquent, s'ils ne respectent pas ces dispositions, les procédures particulières établies, le cas échéant par l'autorité compétente des services de la circulation aérienne.

State aircraft are exempted from the provisions of paragraph 2.2.4 and, if they do not comply with these provisions, shall apply the specific procedures established, where applicable, by the competent air traffic services authority.

**2.3. Obligations d'emport pour les aéronefs en VFR évoluant dans « l'espace aérien de la métropole » et dans « l'espace aérien outre-mer »**

**2.3. Carriage requirements for aircraft operating under VFR in "metropolitan airspace" and "overseas airspace"**

Tout aéronef est équipé des moyens de navigation adaptés à la route empruntée :

- lorsqu'il quitte la vue du sol ou de l'eau ;
- lorsqu'il effectue un vol sur certains itinéraires ou dans certaines portions d'espace aérien portés à la connaissance des usagers par la voie de l'information aéronautique ;
- lorsqu'il effectue un vol de nuit quittant les abords de l'aérodrome au sens des dispositions SERA.5005 c) 1) du règlement d'exécution (UE) n° 923/2012 établissant les règles de l'air communes et des dispositions opérationnelles relatives aux services et procédures de navigation aérienne, et FRA.5005 c) de l'arrêté du 11 décembre 2014 modifié relatif à la mise en œuvre du règlement (UE) n° 923/2012.

All aircraft are equipped with navigation equipment appropriate for the route being flown:

- when they lose sight of land or water;
- when flying on certain routes or in certain portions of airspace brought to the attention of airspace through aeronautical information;
- when flying at night and leaving the vicinity of the aerodrome as defined in SERA.5005 c) 1) of Implementing Regulation (EU) No. 923/2012 laying down common rules of the air and operational provisions relating to air navigation services and procedures, and FRA.5005 c) of French order of December 11th, 2014 relating to the implementation of Regulation (EU) No. 923/2012 (arrêté du 11 décembre 2014 modifié relatif à la mise en œuvre du règlement (UE) n° 923/2012.).

**3. <u>ÉQUIPEMENTS DE SURVEILLANCE</u>**

**3. <u>SURVEILLANCE EQUIPMENT</u>**

**3.1. Obligations d'emport pour les aéronefs en IFR**

**3.1. Carriage requirements for aircraft flying under IFR**

**3.1.1. Obligations d'emport pour les aéronefs en IFR évoluant dans « l'espace aérien de la métropole »**

**3.1.1. Carriage requirements for IFR aircraft operating in "metropolitan airspace"**

Le règlement d'exécution (UE) 2023/1770 mentionné ci-dessus établit les obligations d'emport d'équipements de surveillance.

Les aéronefs appartenant à l'État, loués ou affrétés par lui ainsi que les aéronefs appartenant aux États étrangers ne sont pas soumis aux dispositions du règlement d'exécution (UE) 2023/1770 mentionné ci-dessus. Ces aéronefs sont équipés d'un transpondeur mode A+C avec alticodeur ou d'un transpondeur mode S.

The above-mentioned Implementing Regulation (EU) 2023/1770 establishes the obligations for carrying surveillance equipment.

Aircraft owned, leased, or chartered by the State, as well as aircraft owned by foreign States, are not subject to the provisions of Implementing Regulation (EU) 2023/1770. These aircraft are equipped with a Mode A+C transponder with altimeter or a Mode S transponder.

**3.1.2. Obligations d'emport pour les aéronefs en IFR évoluant en Polynésie française**

**3.1.2. Carriage requirements for IFR aircraft operating in French Polynesia**

Tout aéronef évoluant dans la région d'information de vol Tahiti (NTTT) est équipé des équipements permettant d'assurer une fonction de surveillance dépendante automatique en mode diffusion – émission (ADS-B out).

All aircraft operating in the Tahiti Flight Information Region (NTTT) are equipped with devices that enable automatic dependent surveillance in broadcast mode (ADS-B out).

**3.1.3. Obligations d'emport pour les aéronefs en IFR évoluant en Nouvelle-Calédonie**

**3.1.3. Carriage requirements for IFR aircraft operating in New Caledonia**

Tout aéronef évoluant dans les espaces aériens de classe A, C, D ou E du secteur Nouvelle-Calédonie de la région d'information de vol de Nandi (NFFF) est équipé des équipements permettant d'assurer une fonction de surveillance dépendante automatique en mode diffusion – émission (ADS-B out).

All aircraft operating in Class A, C, D, or E airspace in the New Caledonia sector of the Nandi Flight Information Region (NFFF) must be equipped with devices that enable automatic dependent surveillance in broadcast mode (ADS-B out).

**3.1.4. Obligations d'emport pour les aéronefs en IFR évoluant en Guadeloupe, en Guyane, en Martinique, à Saint-Barthélemy et à Saint-Martin**

**3.1.4. Carriage requirements for IFR aircraft operating in Guadeloupe, French Guiana, Martinique, Saint Barthélemy, and Saint Martin**

A l'intérieur de la région d'information de vol de Cayenne (SOOO) et dans l'espace aérien situé au-dessus du territoire, y compris la mer territoriale, de la Guadeloupe, de la Martinique, de Saint-Barthélemy et de Saint-Martin, tout aéronef est équipé d'un transpondeur mode A + C avec alticodeur ou un transpondeur mode S de niveau 2 au moins avec alticodeur.

Within the Cayenne Flight Information Region (SOOO) and in the airspace above the territory, including the territorial waters, of Guadeloupe, Martinique, Saint Barthélemy, and Saint Martin, all aircraft must be equipped with a Mode A + C transponder with altimeter or a Mode S transponder of at least Level 2 with altimeter.

**3.1.5. Obligations d'emport pour les aéronefs en IFR évoluant à La Réunion, à Mayotte et dans les îles de Wallis et Futuna**

**3.1.5. Carriage requirements for IFR aircraft operating in La Réunion, Mayotte, and the Wallis and Futuna Islands**

Tout aéronef évoluant dans l'espace aérien situé au-dessus de ces territoires, y compris la mer territoriale, est équipé d'un transpondeur mode A + C avec alticodeur ou d'un transpondeur mode S niveau 2 au moins avec alticodeur.

All aircraft operating in the airspace above these territories, including territorial waters, must be equipped with a Mode A + C transponder with altimeter or a Mode S Level 2 transponder with altimeter.

**3.1.6. Obligations d'emport pour les aéronefs évoluant à Saint-Pierre-et-Miquelon**

**3.1.6. Carriage requirements for aircraft operating in Saint Pierre and Miquelon**

Sans objet.

Not applicable.

**3.1.7. Exemptions**

**3.1.7. Exemptions**

Les obligations d'emport exigées aux paragraphes 3.1.2 et 3.1.3 ne s'appliquent pas :

- aux aéronefs appartenant à l'État, loués ou affrétés par lui ;
- aux aéronefs appartenant aux États étrangers ;
- aux aéronefs qui effectuent des évacuations sanitaires.

Les obligations d'emport exigées aux paragraphes 3.1.3 ne s'appliquent pas :

- aux aéronefs qui effectuent des missions de lutte contre les incendies, de recherche et de sauvetage, d'évacuation de personnes en détresse ou de transport d'équipes de secours et de matériels spécialisés ;
- aux aéronefs de collection (aéronefs à caractère historique ou présentant un intérêt historique manifeste) ;

Carriage requirements specified in paragraphs 3.1.2 and 3.1.3 do not apply to:

- aircraft owned, leased, or chartered by the French State;
- aircraft owned by foreign States;
- aircraft performing medical evacuations.

Carriage requirements specified in paragraphs 3.1.3 do not apply to:

- aircraft performing firefighting, search and rescue, evacuation of persons in distress, or transport of rescue teams and specialized equipment;
- to collection aircraft (aircraft of historical character or of obvious historical interest);

© Service de l'Information Aéronautique, France

- aux aéronefs orphelins (aéronefs classés dans la catégorie des aéronefs à certificat de navigabilité restreint).

**3.1.8. Dérogations**

Des dérogations aux dispositions des paragraphes 3.1.2 et 3.1.3 peuvent être accordées aux exploitants d'aéronefs par le directeur du service d'État de l'aviation civile en Polynésie française ou par le directeur de l'aviation civile de Nouvelle-Calédonie après accord des organismes de la circulation aérienne concernés.

Pour la Polynésie française, la demande est à adresser à :

seac-pf-dsurv-oa-ld@aviation-civile.gouv.fr

Pour la Nouvelle-Calédonie, les demandes doivent être adressées avec un préavis de 5 jours ouvrés minimum avant le vol à l'adresse suivante :

dac-nc-sna-de-ops@aviation-civile.gouv.fr

Le message électronique doit contenir les informations suivantes :

- l'objet du vol,
- la date ainsi que l'heure prévue du vol,
- le cheminement et les altitudes prévus,
- les raisons de la non-conformité de l'aéronef,
- et, le cas échéant, le plan d'action envisagé pour se mettre en conformité avec les dispositions de l'arrêté.

**3.2. Obligations d'emport pour les aéronefs en VFR**

**3.2.1. Obligations pour les aéronefs évoluant dans « l'espace aérien de la métropole »**

Tout aéronef est équipé d'un transpondeur mode A + C avec alticodeur ou d'un transpondeur mode S de niveau 2 au moins avec alticodeur :

- en espace aérien de classe A, B, C ou D ;
- pour suivre certains itinéraires ou pour pénétrer dans certains espaces aériens portés à la connaissance des usagers par la voie de l'information aéronautique ;
- pour effectuer un vol de nuit quittant les abords de l'aérodrome au sens des dispositions SERA.5005 c) 1) du règlement d'exécution (UE) n° 923/2012 mentionné ci-dessus et FRA.5005 c) de l'arrêté du 11 décembre 2014 mentionné ci-dessus.

**3.2.2. Obligations pour les aéronefs évoluant en Guadeloupe, en Guyane et en Martinique**

Tout aéronef évoluant à l'intérieur des zones de contrôle et des régions de contrôle terminales de Fort-de-France et Pointe-à-Pitre et à l'intérieur de la région d'information de vol de Cayenne-Rochambeau (SOOO) est équipé d'un transpondeur mode A + C avec alticodeur ou d'un transpondeur mode S niveau 2 au moins avec alticodeur, sauf sur les itinéraires ou portions d'espace aérien publiés par la voie de l'information aéronautique.

**3.2.3. Obligations pour les aéronefs évoluant en Polynésie française**

Tout aéronef évoluant à l'intérieur de la région d'information de vol de Tahiti (NTTT) est équipé des équipements permettant d'assurer une fonction de surveillance dépendante automatique en mode diffusion – émission (ADS-B out).

**3.2.4. Obligations pour les aéronefs évoluant en Nouvelle-Calédonie**

Tout aéronef évoluant dans les espaces aériens de classe A, C, D ou E du secteur Nouvelle-Calédonie de la région d'information de vol de Nandi (NFFF) est équipé d'un transpondeur mode A+C avec alticodeur ou d'un transpondeur mode S niveau 2 au moins avec alticodeur, sauf sur les itinéraires ou portions d'espace aérien publiés par la voie de l'information aéronautique.

**3.2.5. Obligations d'emport pour les aéronefs évoluant à La Réunion, à Mayotte, à Saint-Barthélemy, à Saint-Martin, à Saint-Pierre-et-Miquelon et dans les iles de Wallis et Futuna**

Sans objet.

- to orphan aircraft (aircraft classified in the category of aircraft with restricted airworthiness certificates).

**3.1.8. Derogations**

Derogations from the provisions of paragraphs 3.1.2 and 3.1.3 may be granted to aircraft operators by the Director of the Civil Aviation State Service in French Polynesia or by the Director of Civil Aviation in New Caledonia, subject to the agreement of the relevant air traffic services authorities.

For French Polynesia, requests should be addressed to:

seac-pf-dsurv-oa-ld@aviation-civile.gouv.fr

For New Caledonia, requests must be sent at least five working days before the flight to the following address:

dac-nc-sna-de-ops@aviation-civile.gouv.fr

The request shall contain the following information:

- the purpose of the flight,
- the date and scheduled time of the flight,
- the planned route and altitudes,
- the reasons for the aircraft non-compliance,
- and, where applicable, the action plan envisaged to comply with the provisions of the order.

**3.2. Carriage requirements for aircraft operating under VFR**

**3.2.1. Requirements for aircraft operating in "metropolitan airspace"**

All aircraft are equipped with a Mode A + C transponder with altimeter or a Mode S transponder of at least Level 2 with altimeter:

- in class A, B, C, or D airspace;
- to follow certain routes or to enter certain airspaces brought to the attention of users through aeronautical information;
- to perform a night flight departing from the vicinity of the aerodrome as determined by the provisions of SERA.5005 c) 1) of the above-mentioned Implementing Regulation (EU) No. 923/2012 and FRA.5005 c) of the above-mentioned French order of December 11, 2014.

**3.2.2. Requirements for aircraft operating in Guadeloupe, French Guiana, and Martinique**

All aircraft operating within the control areas and terminal control regions of Fort-de-France and Pointe-à-Pitre and within the Cayenne-Rochambeau flight information region (SOOO) shall be equipped with a Mode A + C transponder with altimeter or a Mode S Level 2 transponder with altimeter, except on routes or portions of airspace published by aeronautical information.

**3.2.3. Requirements for aircraft operating in French Polynesia**

All aircraft operating within the Tahiti Flight Information Region (NTTT) are equipped with devices that enable automatic dependent surveillance in broadcast mode (ADS-B out).

**3.2.4. Requirements for aircraft operating in New Caledonia**

All aircraft operating in Class A, C, D, or E in the New Caledonia sector of the Nandi Flight Information Region (NFFF) shall be equipped with a Mode A+C transponder with altimeter or a Mode S Level 2 transponder with altimeter, except on routes or portions of airspace published through aeronautical information.

**3.2.5. Carriage requirements for aircraft operating in La Réunion, Mayotte, Saint Barthélemy, Saint Martin, Saint Pierre and Miquelon, and the Wallis and Futuna Islands**

Not applicable.

© Service de l'Information Aéronautique, France

**3.2.6. Dérogations**

Des dérogations aux dispositions 3.2.1 à 3.2.4 ci-dessus peuvent être accordées aux exploitants d'aéronefs par le directeur de la sécurité de l'aviation civile, le directeur du service d'État de l'aviation civile territorialement compétent ou le directeur de l'aviation civile en Nouvelle-Calédonie après accord des organismes de la circulation aérienne concernés.

Pour la métropole, les Antilles, la Guyane, la Réunion et Mayotte, les contacts dans les DSAC-IR sont disponibles sur la page suivante du site internet de la DGAC :

- Répartition géographique :

o https://www.ecologie.gouv.fr/sites/default/files/documents/carte_dsac_interregionales.pdf

- Adresses électroniques : consulter les adresses par DSAC-IR pour les activités relatives à l'espace aérien

o https://www.ecologie.gouv.fr/direction-generale-laviation-civile-dgac-0

Pour la Polynésie française, la demande est à adresser à :

seac-pf-dsurv-oa-ld@aviation-civile.gouv.fr

Pour la Nouvelle-Calédonie, les demandes doivent être adressées avec un préavis de 5 jours ouvrés minimum avant le vol à l'adresse suivante :

dac-nc-sna-de-ops@aviation-civile.gouv.fr

Le message électronique doit contenir les informations suivantes :

- l'objet du vol,
- la date ainsi que l'heure prévue du vol,
- le cheminement et les altitudes prévus,
- les raisons de la non-conformité de l'aéronef,
- et, le cas échéant, le plan d'action envisagé pour se mettre en conformité avec les dispositions de l'arrêté.

**3.3. Aéronefs d'État**

Les aéronefs d'Etat, évoluant en régime de vol CAG IFR en métropole, ne répondant pas aux exigences de surveillance Mode S ELS, Mode S EHS ou ADS-B Out pour des raisons techniques ou opérationnelles, sont pris en compte par la DSNA à l'aide de procédures de surveillance utilisant les modes A+C ou S. Le plan de vol doit inclure en case 18 les indicateurs SUR/EUADSBX, SUR/EUEHSX, SUR/EUELSX ou une combinaison de ceux-ci (voir ENR 1.6.4.3 Procédures de surveillance pour les aéronefs d'Etat).

**4. SYSTÈMES ANTICOLLISION**

**4.1. Obligations d'emport pour les aéronefs évoluant dans « l'espace aérien de la métropole » ainsi qu'en Guadeloupe, en Guyane, en Martinique, à La Réunion, à Mayotte et à Saint-Martin.**

Les exigences applicables aux exploitants d'aéronefs en matière d'évitement de collision en vol sont celles du règlement (UE) n° 1332/2011 mentionné ci-dessus.

**4.2. Obligations d'emport pour les aéronefs évoluant à Saint-Barthélemy, en Nouvelle-Calédonie, en Polynésie française et dans les îles de Wallis-et-Futuna**

**4.2.1. *Equipement***

Tout aéronef civil à voilure fixe et à propulsion par turbine est équipé d'un système d'anticollision embarqué (ACAS) de type ACAS II version 7.1 au moins, lorsque la masse maximale certifiée au décollage est supérieure à 5 700 kg ou lorsque la configuration maximale approuvée en sièges passagers est supérieure à 19.

**4.2.2. Dérogations**

Des dérogations au paragraphe 4.2.1 peuvent être accordées aux exploitants d'aéronefs par le directeur de la sécurité de l'aviation civile, le directeur du service d'État de l'aviation civile territorialement compétent ou le directeur de l'aviation civile en Nouvelle-Calédonie, pour les vols non commerciaux suivants :

- vol de convoyage, en provenance ou à destination d'une région où l'équipement ACAS II n'est pas obligatoire ;
- vol pour maintenance, en provenance ou à destination d'une région où l'équipement ACAS II n'est pas obligatoire ;
- vol d'évacuation sanitaire en outre-mer ;
- vols d'aéronefs appartenant à l'État, loués ou affrétés par lui.

Pour Saint-Barthélemy les contacts en DSAC-AG pour les activités relatives à l'espace aérien figurent sur la page :

https://www.ecologie.gouv.fr/direction-generale-laviation-civile-dgac-0

Pour la Polynésie française, la demande est à adresser à :

seac-pf-dsurv-oa-ld@aviation-civile.gouv.fr

Pour la Nouvelle-Calédonie : safa.dacnc@aviation-civile.gouv.fr

**3.2.6. Derogations**

Derogations from provisions 3.2.1 to 3.2.4 above may be granted to aircraft operators by the Director of Civil Aviation Safety, the Director of the territorially competent civil aviation authority, or the Director of Civil Aviation in New Caledonia, subject to the agreement of the relevant air traffic services authorities.

For metropolitan France, the French Indies, French Guiana, La Réunion, and Mayotte, the contacts in the DSAC-IR are available on the following page of the DGAC website:

- Geographical competence:

o https://www.ecologie.gouv.fr/sites/default/files/documents/carte_dsac_interregionales.pdf

- Email addresses: consult the addresses by DSAC-IR for activities related to airspace

o https://www.ecologie.gouv.fr/direction-generale-laviation-civile-dgac-0

For French Polynesia, requests should be sent to :

seac-pf-dsurv-oa-ld@aviation-civile.gouv.fr

For New Caledonia, requests must be sent at least five working days before the flight to the following address:

dac-nc-sna-de-ops@aviation-civile.gouv.fr

The request shall contain the following information:

- the purpose of the flight,
- the date and scheduled time of the flight,
- the planned route and altitudes,
- the reasons for the aircraft non-compliance,
- and, where applicable, the action plan envisaged to comply with the provisions of the order.

**3.3. State aircraft**

State aircraft operating under CAG IFR in metropolitan France that do not meet Mode S ELS, Mode S EHS, or ADS-B Out surveillance requirements for technical or operational reasons are monitored by the DSNA using surveillance procedures that use mode A+C or mode S. The flight plan must include SUR/EUADSBX, SUR/EUEHSX, SUR/EUELSX or a combination thereof in field 18 (see ENR 1.6.4.3 Surveillance procedures for state aircraft).

**4. ANTICOLLISION SYSTEMS**

**4.1. Carriage requirements for aircraft operating in "metropolitan airspace" as well as in Guadeloupe, French Guiana, Martinique, La Réunion, Mayotte, and Saint Martin.**

The requirements applicable to aircraft operators with regard to collision avoidance are those set out in Regulation (EU) No. 1332/2011 mentioned above.

**4.2. Carriage requirements for aircraft operating in Saint Barthélemy, New Caledonia, French Polynesia, and the Wallis and Futuna Islands**

**4.2.1. *Equipement***

All civil fixed-wing aircraft powered by turbines shall be equipped with an airborne collision avoidance system (ACAS) of at least ACAS II version 7.1 when the maximum certified takeoff mass exceeds 5,700 kg or when the maximum approved passenger seating configuration exceeds 19.

**4.2.2. Derogations**

Exemptions from paragraph 4.2.1 may be granted to aircraft operators by the Director of Civil Aviation Safety, the Director of the territorially competent civil aviation authority, or the Director of Civil Aviation in New Caledonia, for the following non-commercial flights:

- ferry flights to or from a region where ACAS II equipment is not mandatory;
- maintenance flights to or from a region where ACAS II equipment is not mandatory;
- overseas medical evacuation flights;
- flights by aircraft owned, leased, or chartered by the State.

For Saint Barthélemy, the DSAC-AG contacts for activities related to airspace are listed on the page:

https://www.ecologie.gouv.fr/direction-generale-laviation-civile-dgac-0

For French Polynesia, requests should be sent to :

seac-pf-dsurv-oa-ld@aviation-civile.gouv.fr

New Caledonia: safa.dacnc@aviation-civile.gouv.fr

© Service de l'Information Aéronautique, France

Pour Wallis-et-Futuna : seac-wf-encadrement@aviation-civile.gouv.fr

*Note – Un vol de convoyage est un vol ne transportant pas de passagers, ni de marchandises, effectué pour convoyer un avion ou un hélicoptère à des fins de remise en état, de réparation, d'inspections, de livraison, d'exportation, ou à des fins similaires sous réserve que l'aéronef ne figure pas sur une déclaration d'opérateur aérien ou sur un certificat de transporteur aérien.*

**4.3. Obligations d'emport pour les aéronefs évoluant à Saint-Pierre-et-Miquelon**

Sans objet.

**1.5.2 DOCUMENTS DE VOL**

Les dispositions réglementaires relatives aux documents de vol figurent notamment dans :

- le règlement (UE) n°965/2012 modifié de la Commission du 5 octobre 2012 déterminant les exigences techniques et les procédures administratives applicables aux opérations aériennes ;
- l'arrêté du 24 juillet 1991 modifié relatif aux conditions d'utilisation des aéronefs civils en aviation générale ;
- l'arrêté du 28 juin 2011 modifié relatif aux conditions techniques d'exploitation d'avions par une entreprise de transport aérien public à Saint-Pierre-et-Miquelon, en Polynésie française, en Nouvelle-Calédonie et à Wallis-et-Futuna.

Ces dispositions transposent les dispositions relatives aux documents de vol de l'Annexe 6 à la convention relative à l'aviation civile internationale intitulée « exploitation technique des aéronefs ».

En outre, les aéronefs effectuant uniquement du trafic domestique en Nouvelle-Calédonie se conforment aux règlements locaux établis le cas échéant par le gouvernement de Nouvelle-Calédonie.

**1.5.3 ÉMETTEUR DE LOCALISATION D'URGENCE (ELT)**

Les exigences détaillées relatives aux dispositifs de signalisation aux fins de recherche et de sauvetage, ainsi que de suivi des aéronefs en détresse, figurent principalement dans :

- le règlement (UE) n°965/2012 modifié de la Commission du 5 octobre 2012 déterminant les exigences techniques et les procédures administratives applicables aux opérations aériennes ;
- l'arrêté du 24 juillet 1991 modifié relatif aux conditions d'utilisation des aéronefs civils en aviation générale ;
- l'arrêté du 26 mars 2008 modifié relatif à l'obligation d'emport, aux fins de recherche et sauvetage des aéronefs, d'une balise de détresse fonctionnant sur 406 MHz ;
- l'arrêté du 21 décembre 2018 modifié relatif au codage et à l'enregistrement, aux fins de recherche et sauvetage des aéronefs, des balises de détresse fonctionnant sur 406 MHz.

Toute balise de détresse (ELT ou PLB) doit être capable d'émettre simultanément sur les fréquences 121,5 MHz et 406 MHz et être enregistrée auprès de l'organisme national chargé de lancer les opérations de recherche et de sauvetage ou de tout autre organisme désigné (cf. GEN 3.6).

En outre, les aéronefs effectuant uniquement du trafic domestique en Nouvelle-Calédonie se conforment aux règlements locaux établis le cas échéant par le gouvernement de Nouvelle-Calédonie.

Wallis and Futuna: seac-wf-encadrement@aviation-civile.gouv.fr

*Note – A ferry flight is a flight that does not carry passengers or cargo, carried out to ferry an aircraft or helicopter for the purposes of refurbishment, repair, inspection, delivery, export, or similar purposes, provided that the aircraft is not listed on an air operator's declaration or air carrier certificate.*

**4.3. Carriage requirements for aircraft operating in Saint Pierre and Miquelon**

Not applicable.

**1.5.2 FLIGHT DOCUMENTS**

The regulatory provisions relating to flight documents are set out in particular in:

- European regulation n°965/2012;
- French order « arrêté du 24 juillet 1991 modifié relatif aux conditions d'utilisation des aéronefs civils en aviation générale » ;
- French order « arrêté du 28 juin 2011 modifié relatif aux conditions techniques d'exploitation d'avions par une entreprise de transport aérien public à Saint-Pierre-et-Miquelon, en Polynésie française, en Nouvelle-Calédonie et à Wallis-et-Futuna ».

These provisions transpose the provisions relating to flight documents in Annex 6 to the Convention on International Civil Aviation entitled "Technical Operation of Aircraft."

In addition, aircraft operating solely on domestic routes in New Caledonia shall comply with any local regulations established by the New Caledonian government.

**1.5.3 EMERGENCY LOCATOR TRANSMITTER (ELT)**

The detailed requirements for signaling devices for search and rescue purposes, as well as for tracking aircraft in distress, are mainly contained:

- European regulation n°965/2012;
- French order « arrêté du 24 juillet 1991 modifié relatif aux conditions d'utilisation des aéronefs civils en aviation générale » ;
- French order « arrêté du 26 mars 2008 modifié relatif à l'obligation d'emport, aux fins de recherche et sauvetage des aéronefs, d'une balise de détresse fonctionnant sur 406 MHz » ;
- French order « arrêté du 21 décembre 2018 modifié relatif au codage et à l'enregistrement, aux fins de recherche et sauvetage des aéronefs, des balises de détresse fonctionnant sur 406 MHz ».

All emergency locator transmitters (ELT or PLB) must be capable of transmitting simultaneously on the 121.5 MHz and 406 MHz frequencies and must be registered with the national entity responsible for initiating search and rescue operations or any other designated entity (see GEN 3.6).

In addition, aircraft operating solely in domestic traffic in New Caledonia shall comply with any local regulations established by the government of New Caledonia.

# GEN 1.6 RESUME DES REGLEMENTS NATIONAUX AINSI QUE DES ENTENTES ET CONVENTIONS INTERNATIONALES

*SUMMARY OF NATIONAL REGULATIONS AND INTERNATIONAL AGREEMENTS/CONVENTIONS*

## 1.6.1 ENTENTES ET CONVENTIONS INTERNATIONALES

Les ententes et conventions internationales adoptées par la France en rapport avec l'aviation civile sont listées ci-après :

- Convention relative à l'aviation civile internationale signée à Chicago le 7 décembre 1944, publiée par le décret n°47-974 du 31 mai 1947 (dite convention de Chicago) et disponible sur le site de l'OACI à l'adresse suivante :

https://www.icao.int/publications (rubrique « séries de documents »).

- Protocole coordonnant la convention internationale de coopération pour la sécurité de la navigation aérienne « EUROCONTROL » du 13 décembre 1960 suite aux différentes modifications intervenues, adopté à Bruxelles le 27 juin 1997 et ratifié par la France par la loi n°2003-379 du 24 avril 2003 :

https://www.legifrance.gouv.fr/affichTexte.do?cidTexte=JORFTEXT000000784867

- Règlement des radiocommunications annexé à la convention internationale des télécommunications signée à Montreux le 12 novembre 1965 publiée le 6 janvier 1968 au journal officiel de la République française et disponible à l'adresse suivante :

https://www.legifrance.gouv.fr/jo_pdf.do?id=JORFTEXT000000309101

## 1.6.2 LEGISLATION DE L'UNION EUROPEENNE

La législation de l'Union européenne (UE) est composée :

- des traités fondateurs, qui ont institué l'Union européenne et régissent son fonctionnement : traités sur l'Union européenne et sur le fonctionnement de l'Union européenne, disponibles en version consolidée sur le site internet EUR-LEX à l'adresse suivante :

https://eur-lex.europa.eu/legal-content/FR/TXT/?uri=celex%3A12012E%2FTXT

- des règlements, directives et décisions, qui ont un effet direct ou indirect sur les États membres de l'UE.

Les règlements européens concernant différents domaines de l'aviation civile sont des actes contraignants et directement applicables dans toute ou partie des territoires dans le périmètre du traité sur le fonctionnement de l'Union européenne, ainsi que dans les espaces aériens associés.

Ces règlements sont publiés au Journal officiel de l'Union européenne et sont consultables sur le site https://eur-lex.europa.eu. Un récapitulatif des textes intéressant plus particulièrement le domaine du transport aérien est publié dans l'onglet :

https://eur-lex.europa.eu/summary/chapter/transport/3205.html?root=3205

Eurocontrol publie un document interactif présentant les textes européens applicables dans les domaines de la gestion du trafic aérien, des services de navigation aérienne et des aérodromes :

https://trainingzone.eurocontrol.int/doc/seslex.htm.

En complément de ces règlements, l'Agence européenne de la sécurité aérienne (AESA) établit des moyens acceptables de conformité et des documents d'orientation qui sont disponibles sur le site :

https://www.easa.europa.eu.

## 1.6.3 TEXTES NATIONAUX EN VIGUEUR SUR LES TERRITOIRES DE LA REPUBLIQUE FRANÇAISE

Le gouvernement français diffuse officiellement les textes législatifs et réglementaires sur le site internet https://www.legifrance.gouv.fr. Les lois, décrets et arrêtés relatifs à l'aviation civile y sont consultables en version française au format électronique. On y trouve également diverses jurisprudences, les accords collectifs ainsi que des liens concernant le droit européen et international.

Certains textes de nature non règlementaire intéressant l'aviation civile sont publiés au bulletin officiel du ministère chargé de l'aviation civile :

https://www.bulletin-officiel.developpement-durable.gouv.fr

Certains domaines de l'aviation civile sont soumis à une règlementation conjointe européenne et nationale.

### 1.6.3.1 Textes législatifs et codes

Les principaux codes contenant des dispositions relatives à l'aviation civile sont les suivants :

- Code des transports (CdT) : partie 1 commune (articles L.1000-1 et suivants) et partie 6 relative à l'aviation civile (articles L.6000-1 et suivants).

## 1.6.1 INTERNATIONAL AGREEMENT AND CONVENTIONS

The international agreements and conventions adopted by France in relation to civil aviation are listed below:

- Convention on International Civil Aviation signed at Chicago on 7 December 1944, published by Decree No. 47-974 of May 31, 1947 (so called Chicago Convention) and available on the ICAO website at the following address:

https://www.icao.int/publications/Pages/default.aspx ("DOC Series" section)

- Protocol consolidating the EUROCONTROL International Convention relating to Cooperation for the safety of air navigation of 13th of December 1960, including its subsequent amendments, adopted in Brussels the 27th of June 1997 and ratified by France by law n° 2003-379 of 24th of April 2003:

https://www.legifrance.gouv.fr/affichTexte.do?cidTexte=JORFTEXT000000784867

- Radio Regulations annexed to the International Telecommunication Convention signed at Montreux on 12th of November 1965 published on 6th of January 1968 in the Official Journal of the French Republic and available at the following address:

https://www.legifrance.gouv.fr/jo_pdf.do?id=JORFTEXT000000309101

https://www.itu.int/en/history/Pages/ConstitutionAndConvention.aspx

## 1.6.2 EUROPEAN UNION LEGISLATION

European Union (EU) legislation is composed of:

- Founding Treaties, which established the European Union and govern its functioning: treaties on the European Union and the Functioning of the European Union, available in consolidated form on the EUR-LEX website at the following address:

https://eur-lex.europa.eu/legal-content/FR/TXT/?uri=celex%3A12012E%2FTXT

- Regulations, directives and decisions which have a direct or indirect effect on the EU Member States.

European regulations concerning different aspects of civil aviation are binding acts which are directly applicable in all or parts of the territories within the perimeter of the Treaty on the functioning of the European Union, as well as in associated airspace.

These regulations are published in the Official Journal of the European Union and can be consulted on https://eur-lex.europa.eu. A summary of texts of particular interest in the field of air transport is published in the tab:

https://eur-lex.europa.eu/summary/chapter/transport/3205.html?root=3205

Eurocontrol publishes an interactive document presenting European texts applicable in the fields of air traffic management, air navigation services and aerodromes:

https://trainingzone.eurocontrol.int/doc/seslex.htm

In addition to these regulations, the European Aviation Safety Agency (EASA) establishes acceptable means of compliance and guidance material which are available on the website:

https://www.easa.europa.eu.

## 1.6.3 NATIONAL TEXTS IN FORCE IN THE TERRITORIES OF THE FRENCH REPUBLIC

The French government formally publishes the laws and regulations on the website https://www.legifrance.gouv.fr. The laws, decrees and orders relating to civil aviation are available in French in electronic format. There are also various case laws (jurisprudence), collective agreements as well as links to European and international law.

Some non-regulatory texts useful for civil aviation are published in the official bulletin of the Ministry of Civil Aviation:

https://www.bulletin-officiel.developpement-durable.gouv.fr

Some areas of civil aviation are subject to joint European and national regulation.

### 1.6.3.1 Legislative texts and codes

The main codes including provisions relating to civil aviation are:

- Transports Code (CdT): common part 1 (articles L.1000-1 and following) and part 6 relating to civil aviation (articles L.6000-1 and following).

© Service de l'Information Aéronautique, France

- Code de l'aviation civile (CAC) : la partie législative a été abrogée (sauf pour certaines dispositions) par l'ordonnance n° 2010-1307 du 28 octobre 2010, ses dispositions étant reprises dans le code des transports depuis du 1er décembre 2010.Certaines dispositions de la partie législative n'entreront en vigueur que lorsque la partie réglementaire sera codifiée pour constituer la sixième partie réglementaire du code des transports. Cette partie réglementaire du code de l'aviation civile est donc maintenue provisoirement en vigueur et continue de faire l'objet de modifications.

- Le code des postes et des communications électroniques.

- Le code de l'environnement.

**1.6.3.2 Textes réglementaires**

Les textes règlementaires applicables à l'aviation civile se répartissent dans différents domaines listés ci-après. Ils sont publiés sur Légifrance et certains font l'objet d'onglets explicatifs sur le site internet du ministère chargé de l'aviation civile (https://www.ecologie.gouv.fr, rubrique « aviation civile »). Certaines de ces règlementations sont parfois abordées plus en détail dans d'autres parties de l'AIP qui leur sont dédiées.

- Circulation aérienne et règles de l'air :

https://www.ecologie.gouv.fr/reglementation-circulation-aerienne-en-france

- Opérations aériennes et exploitation technique des aéronefs :

https://www.ecologie.gouv.fr/politiques/operations-aeriennes

- Établissement des procédures de vols aux instruments (arrivée, départ, attente, approche) ainsi qu'à la détermination des minimums opérationnels :

https://www.ecologie.gouv.fr/procedures-aux-instruments

- Organisation et utilisation de l'espace aérien :

https://www.ecologie.gouv.fr/politiques/reglementation-navigation-aerienne-et-lespace-aerien

- Information aéronautique

Règlement d'exécution (UE) 2017/373 modifié de la Commission du 1er mars 2017 établissant des exigences communes relatives aux prestataires de services de gestion du trafic aérien et de services de navigation aérienne ainsi que des autres fonctions de réseau de la gestion du trafic aérien, et à leur supervision, publié sur le site : https://eur-lex.europa.eu.

Un arrêté national complémentaire publié sur le site : https://www.legifrance.gouv.fr.

- Exploitation des aérodromes :

https://www.ecologie.gouv.fr/certification-securite-et-reglementation-des-aerodromes

- Obligations d'emport d'équipements de communication, de navigation et de surveillance

Divers règlements européens publiés sur le site : https://eur-lex.europa.eu.

Des arrêtés nationaux complémentaires publiés sur le site : https://www.legifrance.gouv.fr.

- Assistance météorologique à la navigation aérienne, notamment :

• Convention cadre entre la Direction générale de l'aviation civile et Météo France (DGAC-MF) et protocole technique entre la Direction du transport aérien et MF (DTA-MF), publiés au BO du ministère chargé de l'aviation civile

https://www.bulletin-officiel.developpement-durable.gouv.fr/recherche

• Règlementation technique régissant les produits et les services météorologiques pour les besoins de la navigation aérienne.

Règlement d'exécution (UE) 2017/373 modifié de la Commission du 1er mars 2017 établissant des exigences communes relatives aux prestataires de services de gestion du trafic aérien et de services de navigation aérienne ainsi que des autres fonctions de réseau de la gestion du trafic aérien, et à leur supervision, publié sur le site : https://eur-lex.europa.eu.

Un arrêté national complémentaire publié sur le site : https://www.legifrance.gouv.fr.

- Sûreté du transport aérien :

https://www.ecologie.gouv.fr/reglements-et-guides-surete

- Facilitation :

La Facilitation, selon l'article 22 de la convention de Chicago, se définit comme les mesures visant à "faciliter et accélérer la navigation par aéronef entre les territoires des États contractants et éviter de retarder sans nécessité les aéronefs, équipages, passagers et cargaisons, particulièrement dans l'application des lois relatives à l'immigration, à la santé, à la douane et au congé."

Les principales références règlementaires se trouvent dans les codes de la santé publique (3 éme partie: lutte contre les maladies et dépendances/ livre 1er lutte contre les épidémies et certaines maladies transmissibles/ chapitre 5: lutte contre la propagation des maladies), le code rural (livre 2: santé publique vétérinaire et protection des végétaux) et le code de l'entrée et du séjour des étrangers du droit d'asile. Elles sont toutes accessibles sur le site Internet de Légifrance.

*- Civil Aviation Code (CAC) : the legislative part has been repealed (except for certain provisions) by Order No. 2010-1307 of 28th of October 2010, its provisions being included in the transports code since 1st of December 2010. Some provisions of the Legislative Part will not come into force until the regulatory part is codified to form the sixth regulatory part of the Transports Code. This regulatory part of the Civil Aviation Code is therefore tentatively maintained in force and continues to be amended.*

*- The Post and Electronic Communications Code.*

*- The environment code.*

***1.6.3.2 Regulatory texts***

*The regulatory texts relevant to civil aviation fall into the following areas. They are published on https://www.legifrance.gouv.fr and some subjects are explained on the website of the Ministry of Civil Aviation (https://www.ecologie.gouv.fr, category "civil aviation"). Some of these regulations are sometimes further detailed in other parts of the AIP dedicated to them.*

*- Air traffic and rules of the air :*

*https://www.ecologie.gouv.fr/reglementation-circulation-aerienne-en-france*

*- Flight operations and technical operation of aircraft :*

*https://www.ecologie.gouv.fr/politiques/operations-aeriennes*

*- Establishment of instrument flight procedures (arrival, departure, holding, approach) and the determination of operating minima :*

*https://www.ecologie.gouv.fr/procedures-aux-instruments*

*- Organization and use of airspace :*

*https://www.ecologie.gouv.fr/politiques/reglementation-navigation-aerienne-et-lespace-aerien*

*- Aeronautical Information*

*COMMISSION IMPLEMENTING REGULATION (EU) 2017/373 of 1 March 2017, as last amended, laying down common requirements for providers of air traffic management/air navigation services and other air traffic management network functions and their oversight, published on the website: https://eur-lex.europa.eu.*

*A national complementary order published on the web site: https://www.legifrance.gouv.fr.*

*- Operation of aerodromes :*

*https://www.ecologie.gouv.fr/certification-securite-et-reglementation-des-aerodromes*

*- Carriage obligations for communication, navigation and surveillance equipment*

Several European regulations published on: https://eur-lex.europa.eu.

National complementary orders published on the web site: https://www.legifrance.gouv.fr.

*- Meteorological assistance to air navigation, including :*

*• Framework agreement between the General Directorate of Civil Aviation and Météo France (DGAC-MF) and technical protocol between the Directorate of Air Transport and MF (DTA-MF), published in the official Bulletin of the Ministry of Civil Aviation*

*https://www.bulletin-officiel.developpement-durable.gouv.fr/recherche*

*• Technical regulation on meteorological products and services for air navigation.*

*COMMISSION IMPLEMENTING REGULATION (EU) 2017/373 of 1 March 2017, as last amended, laying down common requirements for providers of air traffic management/air navigation services and other air traffic management network functions and their oversight, published on the website: https://eur-lex.europa.eu.*

*A national complementary order published on the web site: https://www.legifrance.gouv.fr.*

*- Air transport security :*

*https://www.ecologie.gouv.fr/reglements-et-guides-surete*

*- Facilitation :*

*Facilitation, according to Article 22 of the Chicago Convention, is defined as measures to "facilitate and expedite navigation by aircraft between the territories of the Contracting States and avoid unnecessarily delaying of aircraft, crew, passengers and cargo, particularly in the enforcement of immigration, health, customs and leave laws."*

*The main regulatory references can be found in the public health codes (Part 3: fight against diseases and addictions / book 1 fight against epidemics and some communicable diseases / chapter 5 : fight against the spread of diseases), the rural code (book 2: veterinary public health and plant protection) and the code of entry and residence of foreigners of asylum. They are all accessible on the Légifrance website.*

**1.6.4 SPECIFICITES EN OUTRE-MER**

Les collectivités d'outre-mer de la République française sont soumises à des régimes juridiques différents selon que l'on se place dans le contexte du droit national ou européen.

A - Droit national

A.1 - Collectivités soumises au régime de la spécialité législative

Les lois et règlements nationaux (décrets, arrêtés) et lois ne s'appliquent pas de plein droit en Nouvelle-Calédonie, en Polynésie Française, à Wallis-et-Futuna, dans les Terres Antarctique et Australes et dans l'ile de Clipperton sauf s'il en est fait une mention explicite ou si un texte spécial le précise.

A.2 - Territoires soumis au régime de l'identité législative

Les lois et règlements nationaux (décrets, arrêtés) applicables en métropole s'appliquent de plein droit dans les collectivités suivantes : Guadeloupe, Guyane, Martinique, La Réunion, Mayotte, Saint-Pierre-et-Miquelon, Saint-Barthélemy et Saint-Martin, sauf mention contraire.

B - Droit européen

B.1 - Régions ultrapériphérique (RUP)

Le droit européen s'applique directement aux RUP qui constituent des territoires de l'Union européenne mais situés en dehors du continent européen. Il s'agit de la Guyane, de la Guadeloupe, de la Martinique, de la Réunion, de Saint Martin et de Mayotte.

B.2 - Pays et territoires d'outre-mer (PTOM)

A l'inverse, le droit européen ne s'applique pas aux pays et territoires d'outre-mer (PTOM) qui sont des territoires constitutionnellement liés à un État membre mais qui ne font pas partie de l'UE. Il s'agit de la Nouvelle-Calédonie, de la Polynésie Française, des Terres Antarctique et Australes, de Wallis-et-Futuna, de Saint Barthélémy, de Saint-Pierre-et-Miquelon. Toutefois, la législation française (code des transports) peut étendre l'application de certains règlements européens dans les PTOM.

***1.6.4 OVERSEAS TERRITORIES SPECIFICITIES***

*The overseas territories of the French Republic are subject to different legal regimes depending on the context of national or European law.*

*A - National law*

*A.1 - Territories subject to the legislative specialty regime*

*National laws and regulations (decrees, orders) do not apply directly to New Caledonia, French Polynesia, Wallis and Futuna, the Antarctic and Southern Territories and the island of Clipperton, unless an explicit mention or a dedicated text specifies it.*

*A.2 - Territories subject to the legislative identity regime*

*National laws and regulations (decrees, orders) applicable in metropolitan France apply by default in the following territories: Guadeloupe, French Guiana, Martinique, La Reunion, Mayotte, Saint-Pierre and Miquelon, Saint-Barthélemy and Saint-Martin unless otherwise stated.*

*B - European law*

*B.1 – Ultra peripheral regions (UR)*

*European law applies directly to the ultra-peripheral regions, which are territories of the European Union but located outside the European continent. These are French Guiana, Guadeloupe, Martinique, La Reunion, Saint Martin and Mayotte.*

*B.2 - Overseas countries and territories (OCTs)*

*Conversely, European law does not apply to Overseas Countries and Territories (OCTs) which are territories that are constitutionally linked to a Member State but are not part of the EU. These are New Caledonia, French Polynesia, Antarctic and Southern Territories, Wallis and Futuna, Saint Barthelemy, Saint Pierre and Miquelon. However, French legislation (transport code) may extend the application of certain European regulations in the OCTs.*

# GEN 1.7 DIFFERENCES ENTRE LA REGLEMENTATION FRANCAISE ET LES NORMES ET PRATIQUES RECOMMANDEES DE L'OACI

*DIFFERENCES FROM ICAO STANDARDS, RECOMMENDED PRACTICES AND PROCEDURES*

**ANNEXE 1**
**Licences du personnel**

**Douzième édition à jour de l'amendement N° 175 devenu applicable le 8 novembre 2018**
**Les pratiques recommandées sont signalées par des astérisques (*).**

| REGLEMENTATION O.A.C.I. | CAT | REGLEMENTATION FRANCAISE |
|---|---|---|
| **CHAPITRE 1**<br>**Définition et règles générales relatives à la délivrance des licences** | | |
| §1.1 Avionique de bord | C | Non défini dans les règles européennes. |
| §1.1 Aéronef devant être exploité avec un copilote | B | La définition dans la Part-FCL est limitée aux avions, alors que la définition OACI s'étend aux aéronefs. |
| §1.1 Dirigeable | B | Dans la Part FCL, la définition des dirigeables à air chaud tombe dans la catégorie "ballon". |
| §1.1 Règlement applicable de navigabilité | B | Non défini dans la règlementation. |
| §1.1 Service de surveillance ATS | C | Non défini dans les règles européennes. |
| §1.1 Système de surveillance ATS | C | Non défini dans les règles européennes. |
| §1.1 Certifier en état de navigabilité | C | Ce terme n'est pas mis en œuvre dans les règles AESA. |
| §1.1 Liaison de commande et de contrôle | B | Non défini dans la règlementation. |
| §1.1 Membre d'équipage de conduite | B | Non défini dans la règlementation européenne. |
| §1.1 Temps de vol – systèmes d'aéronefs télépilotés | B | Non défini dans la règlementation. La détermination du nombre d'heures de vol s'effectue sous la responsabilité du télépilote et sous le contrôle de l'opérateur (arrêté du 17 décembre 2015 relatif à la conception des aéronefs civils qui circulent sans personne à bord, aux conditions de leur emploi et aux capacités requises des personnes qui les utilisent et arrêté du 18 mai 2018 relatif aux exigences applicables aux télépilotes qui utilisent des aéronefs civils circulant sans personne à bord à des fins autres que le loisir). |
| §1.1 Susceptible | B | L'expression est utilisée sous la forme d''expressions telles que : "susceptible d'influer sur la sécurité des vols." |
| §1.1 Système qualité | C | Pas de définition en tant que telle - le terme "système de gestion" est utilisé dans le règlement (UE) n°1178/2011. |
| §1.1 Télépilote | B | La définition nationale prévoit également la possibilité d'opérations automatiques. Arrêté du 17 décembre 2015 relatif à la conception des aéronefs civils qui circulent sans personne à bord, aux conditions de leur emploi et aux capacités requises des personnes qui les utilisent : "Article 2 ... 2° Télépilote : personne contrôlant les évolutions d'un aéronef télépiloté, soit manuellement soit, lorsque l'aéronef évolue de manière automatique, en surveillant la trajectoire et en restant en mesure à tout instant d'intervenir sur cette trajectoire pour assurer la sécurité." |
| §1.1 Poste de télépilotage | B | Sans objet. |
| §1.1 Système d'aéronef télépiloté | B | Non défini dans la règlementation. |
| §1.1 Validation (d'une licence) | C | Non précisément défini dans les règles européennes. Non applicable pour les licences de maintenance d'aéronef. |
| §1.1 grave | B | Le terme est utilisé dans le règlement (EU) n°1178/2011 mais la définition associée est " impliquant une incapacité de travailler comme membre d'équipage." |
| § 1.2.2.1 | B | Les licences émises par un Etat membre de l'Union Européenne sont reconnues comme valides par tous les autres Etats membres sans délivrance administrative d'une autorisation additionnelle. |
| § 1.2.2.3.2 | B | La liste des Etats figure sur un document séparé. |
| § 1.2.4.2 | C | - Il n'existe pas de cartographie des risques pour évaluer l'aptitude physique et mentale des pilotes ;<br>- La base de données ECCAIRS recueille certaines incapacités subites en vol des équipages mais pas toutes. |
| § 1.2.4.7.1 | B | Le règlement prévoit que les AME informent les candidats des conséquences de fausses déclarations mais ne détaille pas ces conséquences. |
| § 1.2.4.11.2 | C | Non mentionné spécifiquement dans le règlement Européen. |
| § 1.2.5.2.4 | A | Disposition plus contraignante pour les contrôleurs aériens. |
| § 1.2.9.6 * | C | Les pilotes qui ont démontré une aptitude linguistique de niveau opérationnel sont ré-évalués tous les 4 ans. |
| | | |
| **CHAPITRE 2**<br>**Licences et qualifications des pilotes** | | |
| § 2.1.10 | C | Les pilotes de ballon et planeur peuvent agir en transport aérien commercial jusqu'à l'âge de 70 ans avec une licence Part-FCL. |
| § 2.3.3.1.1 | A | Les candidats à un PPL(A) doivent avoir fait au moins 45 heures d'instruction au vol dans des avions, dont 5 peuvent avoir été faites dans un FSTD. |
| § 2.3.4.1.1 | A | Les candidats à un PPL(H) doivent avoir fait au moins 45 heures d'instruction au vol dans des hélicoptères dont 5 peuvent avoir été faites dans un FNPT ou FFS. |
| § 2.3.4.2.1 | A | L'instruction totale en doubles commandes est de 20 heures OACI, mais 25 heures dans la Part-FCL. Voir aussi la différence générale au 2.3.4.1.1. |
| § 2.3.5.1.1* | A | La règlementation exige une licence CPL(A) ou (H) Part-FCL, ainsi que la conformité aux exigences figurant au FCL.720.PL. |
| § 2.3.5.1.2* | A | La règlementation exige une licence CPL(A) ou (H) Part-FCL, ainsi que la conformité aux exigences figurant au FCL.720.PL. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 2.3.5.1.3* | A | La règlementation exige une licence CPL(A) ou (H) Part-FCL, ainsi que la conformité aux exigences figurant au FCL.720.PL. |
| § 2.3.5.2* | A | La règlementation exige une licence CPL(A) ou (H) Part-FCL, ainsi que la conformité aux exigences figurant au FCL.720.PL. |
| § 2.3.6.1 | A | Le temps de vol total dans la part FCL est de 35 heures, contre 25 pour l'OACI. |
| § 2.4.4.1.1 | A | Le temps de vol total dans la Part FCL est de 185 heures, contre 150 pour l'OACI. |
| § 2.4.4.1.1.1 | A | Le temps de vol total dans la Part FCL est de 185 heures, contre 150 pour l'OACI. |
| § 2.4.5.1.1* | B | La règlementation exige une licence CPL(A) ou (H) Part-FCL, ainsi que la conformité aux exigences figurant au FCL.720.PL. |
| § 2.4.5.1.2* | B | La règlementation exige une licence CPL(A) ou (H) Part-FCL, ainsi que la conformité aux exigences figurant au FCL.720.PL. |
| § 2.4.6.1.1 | A | L'expérience totale dans la Part-FCL est de 250 heures, contre 200 pour l'OACI. |
| § 2.4.6.1.1.1 | B | La répartition des heures est différente. La Part-FCL prévoit 5 heures de vol en campagne et 5 heures de vol de nuit. |
| § 2.6.3.1.1.1 | A | La Part FCL prévoit en plus 500 heures en opérations multi-pilote sur avion. |
| § 2.6.4.1.1.1 | A | La Part FCL prévoit en plus 350 heures en hélicoptères multi-pilotes. Cette différence était déjà présente dans le JAR-FCL 2.280(a). De plus, l'OACI prévoit en a) une combinaison de 70 heures comme commandant de bord et le reste des 250 heures comme commandant de bord sous supervision. La répartition dans la Part-FCL est de 100 heures comme commandant de bord et 150 heures comme commandant de bord sous supervision. Le d) de l'OACI exige 50 heures de vol de nuit alors que la Part-FCL exige 100 heures de vol de nuit. |
| | | |
| **CHAPITRE 4** | | |
| § 4.2.1.4* | C | Pour la formation de base, la Part66.A.25 prévoit seulement que la connaissance est démontrée par un examen. Pour la formation au type d'aéronef, des cours de type d'aéronef approuvés ne sont requis que pour les aéronefs du groupe 1. Pour les deux autres groupes c'est optionnel. |
| § 4.2.1.5 | B | L'évaluation des habiletés n'est pas requise dans le cas d'une licence émise sur la base de l'examen théorique de base. Pour le personnel de certification dd la catégorie A l'évaluation est conduite dans des organismes Part-145. Pour les examens de type d'aéronefs du groupe 2 et 4 l'évaluation des habiletés n'est pas obligatoire. |
| § 4.2.2.2 | C | Les certificats de remise en service de composants ne nécessitent pas de licence de personnel de certification. L'aéronef entier peut être mis en service par des personnels de certification après la maintenance de base. |
| § 4.4.1.3 | B | La durée du cours de mention d'unité n'est pas fixée par la règlementation. |
| § 4.5.1 | B | La liste des qualifications diffère légèrement : a) contrôle d'aérodrome à vue, b) contrôle d'aérodrome aux instruments, c) contrôle d'approche aux procédures, d) contrôle d'approche de surveillance, e) contrôle régional aux procédures, f) contrôle régional de surveillance. |
| § 4.5.2.2.1 | C | La durée de supervison pour la formation intiale n'est pas fixée par le règlement. |
| § 4.5.2.2.2 | B | La validité de la mention d'unité, que ce soit pour la délivrance initiale ou le renouvellement, commence au plus tard 30 jours à compter de la date de l'évaluation satisfaisante. |
| § 4.5.3.1 | B | Certaines qualifications sont légèrement différentes, cependant le règlement européen les couvre toutes. |
| § 4.5.3.3 | A | Le détenteur d'une mention d'instructeur doit être autorisé à fournir la formation sur position et la supervision sur une position de travail dans les zones nécessitant une mention d'unité valide. |
| § 4.5.3.4 | C | Même si le concept d'"invalidation d'une qualification" n'existe pas en tant que tel, le titulaire d'une licence de contrôleur de la navigation aérienne n'est pas autorisé à exercer les privilèges de sa qualification après une période d'absence de plus de 90 jours ou si la prorogation de la mention d'unité n'est pas effectuée par suite du non respect du nombre minimum d'heures de service. |
| | | |
| **CHAPITRE 5** | | |
| § 5.1.2 | C | Pas de disposition équivalente relative au matériau s'agissant des licences Part-66. |
| § 5.1.3 | B | Pour le personnel de maintenance l'exigence est différente mais atteint le même but. En particulier lorsqu'une licence est émise dans la langue nationale et que le détenteur exerce dans l'Etat de délivrance, la règle dispense la licence d'une traduction en anglais. |
| | | |
| **CHAPITRE 6** | | |
| § 6.2.3.2* | C | Non défini dans la règlementation européenne. |
| § 6.2.4.2 | A | Pour les ATCO les exigences sont plus restrictives : les candidats doivent avoir une vision trichromate normale. |
| § 6.2.4.3 | A | Le règlement Aircrew prévoit que les candidats doivent passer le test Ishihara. Pour les ATCO les exigences sont plus restrictives : un test de plaques pseudoisochromatiques seul n'est pas suffisant. La vision des couleurs doit être évaluée en utilisant des moyens démontrant une vision trichromate normale. |
| § 6.2.4.4.1* | C | Non spécifié dans la règlementation européenne. |
| § 6.2.5.5* | C | Le test est conduit seulement lorsqu'une qualification de vol aux instruments est ajoutée à la licence. |
| § 6.3.2.9.1* | C | N'est requis que sur indication clinique ou épidémiologique. |
| § 6.3.2.21.1* | C | L'aptitude peut être accordée dès le début de la grossesse et jusqu'à la fin de la 26ème semaine (restreint aux opérations multi-pilotes). |
| § 6.3.3.2.3 | B | Les exigences relatives aux rapports ophtalmologiques dépendent des limites d'erreur de réfraction plutôt que des limites d'acuité visuelle. |
| § 6.4.2.6.2* | C | Non mis en œuvre. |
| § 6.4.3.2.3* | C | Non requis dans la règlementation européenne. |
| § 6.4.3.5 | B | L'AMC prévoit que le champ visuel doit être examiné mais n'exige pas que les champs soient normaux. |
| § 6.4.3.6 | B | L'AMC prévoit que les fonctions binoculaires doivent être examinées mais n'exige pas que la fonction binoculaire soit normale. |
| § 6.5.2.6.1 | A | Des électrocardiogrammes annuels sont requis après l'âge de 40 ans. |
| § 6.5.2.20 | A | Non autorisé pour la délivrance initiale d'un certificat de classe 3. |
| § 6.5.2.21.1* | C | Non mis en œuvre. |
| § 6.5.3.2 | A | Les candidats avec un hypermétropie excédant +5.0 dioptries, une myopie excédant -6 dioptries, une composante d'astygmatie excédant 3 dioptries ou une anisométropie excédant 3 dioptries devront démontrer une acuité visuelle corrigée de 6/6 (ou meilleure) pour chaque œil. |

**ANNEXE 2**
**Règles de l'Air**

**Onzième édition à jour de l'amendement N° 48 applicable à partir du 28 novembre 2024.**
**Les pratiques recommandées sont signalées par des astérisques (*).**

| REGLEMENTATION O.A.C.I. | CAT | RÉGLEMENTATION FRANÇAISE |
|---|---|---|
| **CHAPITRE 3** | | |
| § 3.1.2 | A | La règlementation française ajoute une obligation de ne pas voler en dessous de hauteurs fixées par arrêté pour le survol des villes ou autres agglomérations, des rassemblements de personnes ou d'animaux en plein air, de certaines installations ou établissements, ainsi que par décrets ou arrêtés pour le survol de parcs nationaux et autres réserves naturelles. |
| § 3.2.2 | A | SERA exige également une priorité de passage pour les aéronefs dont la manœuvrabilité est entravée. |
| § 3.2.2.4 | C | SERA autorise les planeurs à se dépasser par la droite également. |
| § 3.2.2.7.3 | A | SERA fait référence au point précédent, et exige donc également une autorisation explicite de la tour de contrôle d'aérodrome. |
| § 3.2.3.2 | C | SERA autorise l'application du point b) dans la mesure du possible ; de plus, la définition de la nuit y est différente |
| § 3.2.5 | C | SERA diffère des points 3.2.5(c) et 3.2.5(d) en ce qu'il précise que les sous-paragraphes (c) et (d) ne s'appliquent pas aux ballons |
| § 3.3.1.2 | A | SERA exige le dépôt d'un plan de vol pour les vols prévus de nuit, s'ils quittent les abords d'un aérodrome. |
| § 3.3.2 | A | SERA.4005(a)(14) exige explicitement l'inclusion d'informations concernant l'existence d'un parachute BRS dans le plan de vol, si ce système est installé sur l'aéronef. |
| § 3.3.5.3 | A | SERA prend également en compte les sites d'exploitation, pas uniquement les aérodromes. |
| § 3.3.5.4 | A | SERA prend également en compte les sites d'exploitation, pas uniquement les aérodromes. |
| § 3.3.5.5 | A | SERA prend également en compte les sites d'exploitation, pas uniquement les aérodromes. |
| § 3.6.5.2.1 | A | SERA.14083(c)(6) exige également que les vols IFR sélectionnent le code Mode A 7601 afin d'informer l'organisme ATS de leur intention de continuer à voler en conditions météorologiques de vol à vue (VMC) et d'atterrir sur l'aérodrome approprié le plus proche. Le point b) n'est pas mis en œuvre. |
| § 3.6.5.2.2 | B | SERA.14083 impose un délai commun de 20 minutes à respecter à la fois dans un environnement de contrôle aux procédures ou à l'aide d'un moyen de surveillance avant d'ajuster le niveau et la vitesse conformément au plan de vol déposé tel que modifié par des messages de retard et de modification. |
| § 3.8.1 | B | Les mots « en détresse » du Chapitre 3, partie 3.8 ne sont pas inclus dans le droit de l'Union, élargissant ainsi la portée des missions d'escorte à tout type de vol demandant ce service. De plus, les dispositions contenues dans l'Annexe 2, parties 1.1 à 1.3, ainsi que celles figurant dans l'Annexe A, ne sont pas reprises dans le droit de l'Union. |
| | | |
| **CHAPITRE 4** | | |
| § 4.6 | B | SERA exige, en plus des critères de dégagement d'obstacles de l'OACI au point (2), que les vols VFR soient réalisés à 150 m (500 ft) au-dessus du plus haut obstacle dans un rayon de 150 m (500 ft) autour de l'aéronef. La réglementation française ajoute l'obligation de ne pas voler en dessous de hauteurs minimales, définies par arrêté, lors du survol des villes ou autres agglomérations, des rassemblements en plein air de personnes ou d'animaux, de certaines installations ou établissements, et par décret ou arrêté lors du survol des parcs nationaux et autres réserves naturelles. En outre, les systèmes d'aéronefs sans pilote, les planeurs effectuant du vol de pente, les ballons et les planeurs ultralégers peuvent voler en dessous des hauteurs minimales du point 4.6 b) à condition de ne pas créer de danger pour les personnes ou les biens au sol. Pour les vols d'entraînement, la hauteur minimale du point 4.6 b) est réduite à 50 m (150 ft) pour les exercices d'atterrissage forcé. Les aéronefs habités susmentionnés maintiennent en tout temps une distance minimale de 150 m par rapport à toute personne, véhicule, navire ou obstacle artificiel. |
| **CHAPITRE 5** | | |
| § 5.3.3 | A | Les comptes-rendus de position sont requis pour les vols IFR dans l'espace aérien non contrôlé, même sans plan de vol déposé, lorsque le maintien des communications air-sol est requis. |

**ANNEXE 3**
**Assistance météorologique à la navigation aérienne**

**20ème édition à jour de l'amendement N° 81 devenu applicable le 28 novembre 2024**
**Les pratiques recommandées sont signalées par des astérisques (*).**

| REGLEMENTATION O.A.C.I. | CAT | REGLEMENTATION FRANCAISE |
|---|---|---|
| | | |
| **CHAPITRE 4** | | |
| § 4.5.1 | C | Sur les aérodromes de niveau de service N1 ne servant pas de desserte aux opérations de transport aérien commercial international, des messages d'observations régulières et spéciales « réduits » peuvent être fournis.<br>Le contenu de ces messages « réduits » est précisé dans la partie GEN 3.5 de l'AIP. |
| § 4.6.1.1 | B | Pour les aérodromes d'outre-mer, la direction du vent est exprimée par rapport au nord magnétique dans les messages d'observations régulières et spéciales locales. |
| § 4.6.4.1 | C | Le signalement d'activités orageuses en Polynésie française et dans les îles de Wallis et Futuna n'est pas effectué sur les sites automatisés dans l'environnement desquels il n'y a pas de capteur de détection de foudre. |
| § 4.6.4.3* | B | Seuls les orages (TS) sont indiqués dans les METAR provenant de systèmes d'observations météorologiques automatiques comme renseignement relatif au temps présent représentatif des conditions au voisinage de l'aérodrome. |
| § 4.6.8* | C | Les renseignements supplémentaires sont inclus dans les METAR des aérodromes où ces observations sont réalisées humainement. |
| | | |
| **CHAPITRE 6** | | |
| § 6.2.1 | B | Cette norme est appliquée à l'exception des aérodromes de Polynésie Française autres que Tahiti Faa'a (NTAA) et Bora Bora Motu Mute (NTTB), pour lesquels un service de prévision spécifique dénommé « Aperçu de Zone » couvrant plusieurs aérodromes peut être établi. |
| § 6.5.3 | B | Les prévisions de zone pour vols à basse altitude établies en France métropolitaine aux fins de la diffusion de renseignements. AIRMET sont produites sous forme de cartes toutes les 3 heures de 0600 TU à minuit TU. |
| | | |
| **CHAPITRE 7** | | |
| § 7.4.1 | C | A ce jour, le cisaillement est considéré comme un facteur à prendre en compte sur les aérodromes de Nice et Tahiti. Seul l'aérodrome de Nice dispose d'un capteur opérationnel. |
| | | |
| **PARTIE II** | | |
| | | |
| **APPENDICE 3** | | |
| § 2.1.1 | B | Les messages d'observations régulières et spéciales locales sont établis en langage clair abrégé, dans un format qui n'est pas strictement conforme au format du tableau A3-1. |
| | | |
| § 4.2.4.2 | C | Dans les messages d'observations régulières et spéciales locales, la visibilité le long des pistes n'est pas indiquée. Seule la visibilité dominante du site est transmise avec une indication des unités de mesure utilisées. |
| § 4.3.2.2* | B | Lorsque la portée visuelle de piste minimum à l'atterrissage publiée est égale ou supérieure à 800 mètres, la portée visuelle de piste peut être obtenue par conversion de la visibilité météorologique signalée. |
| § 4.3.5* | B | Dans les messages d'observations régulières et spéciales locales, l'intensité lumineuse du balisage utilisée pour le calcul de la RVR est l'intensité maximale disponible sur la piste considérée. |
| § 4.3.6.2* | B | La RVR maximale qui peut être mesurée et transmise est de 5 000 m (et non de seulement 2 000 m). |
| § 4.3.6.3 | B | Dans les messages d'observations régulières et spéciales locales et dans les messages d'observations météorologiques régulières d'aérodrome (METAR), les RVR supérieures à la valeur maximale qui peut être déterminée par le système sont indiquées par l'abréviation "P" suivie de la valeur maximale.<br>Lorsque les RVR sont inférieures à la valeur minimale qui peut être déterminée par le système, elles sont indiquées par l'abréviation "M" suivie de la valeur minimale. |
| § 4.3.6.5* | B | Dans les messages d'observations météorologiques régulières d'aérodrome, lorsque la portée visuelle de piste est mesurée aux deux extrémités de la piste, ces deux mesures sont transmises sans tenir compte du seuil en service. Ainsi, dans certains cas, un message d'observations météorologiques régulières d'aérodrome peut contenir plus de quatre valeurs pour la portée visuelle de piste. |
| § 4.4.2.6* | C | Les caractéristiques des phénomènes de temps présent mince (MI), partiel (PR), (chasse-…) basse (DR), (chasse-…) élevée (BL) ne sont pas indiquées dans les messages provenant de systèmes d'observation entièrement automatiques. |
| § 4.5.4.3* c) | C | La visibilité verticale n'est pas communiquée. |
| § 4.5.4.3* e) | A | En présence de nuages significatifs, des informations de nébulosité et de hauteur de base des nuages sont communiquées pour les couches nuageuses au-dessus de 1 500 m (5 000 ft) ou de l'altitude minimale de secteur la plus élevée, dans les messages d'observations régulières locales, les messages d'observations spéciales locales et les METAR. |
| § 4.5.4.6* b) | A | Dans les messages provenant de systèmes d'observation entièrement automatiques, si aucun nuage n'est détecté par le système :<br>- Les couches nuageuses sont codées NSC si le système n'a pas détecté de nuage convectif ;<br>- Les couches nuageuses sont codées NCD si le système ne dispose pas de la capacité de détection des nuages convectifs. |
| § 4.5.4.6* d) | C | Dans les messages d'observations régulières locales, les messages d'observations spéciales locales et les METAR automatisés lorsque le ciel est obscurci, la valeur de la visibilité verticale est remplacée par le symbole ///. |
| § 4.8.1.4* | C | Dans les messages provenant d'observations météorologiques régulières d'aérodrome (METAR) ne provenant pas de systèmes d'observation entièrement automatiques, les informations sur le cisaillement de vent sont ajoutées si ce phénomène a été rapporté par un pilote aux services de la circulation aérienne, ou si des capteurs de cisaillement de vent ont été installée. |
| **APPENDICE 5** | | |
| | | |
| § 1.2.4* | A | Lorsque des nuages significatifs sont prévus, des informations de nébulosité et de hauteur de base des nuages sont communiquées pour les couches nuageuses prévues au-dessus de 1 500 m (5 000 ft) ou de l'altitude minimale de secteur la plus élevée. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| **APPENDICE 6** | | |
| § 1.1.6* | C | La diffusion des SIGMET au format numérique est prévue fin 2022 au centre de veille météorologique de la région d'information de vol de Tahiti (NTTT).<br>Ces dispositions ne sont pas applicables en Nouvelle-Calédonie et dans les autres départements et collectivités d'outre-mer. |

**ANNEXE 4**
**Cartes aéronautiques**

**Onzième édition à jour de l'amendement N° 62 en vigueur depuis le 28 novembre 2024**

| REGLEMENTATION O.A.C.I. | CAT | REGLEMENTATION FRANÇAISE |
|---|---|---|
| **CHAPITRE 1 : Définitions, application et disponibilité** | | |
| 1.2.2 | C | Les cartes sont conformes aux normes de l'Annexe 4, à l'exception de celles pour lesquelles un «D» figure dans la marge de l'annexe à l'arrêté du 6 juillet 2018 modifié relatif aux cartes aéronautiques. |
| 1.2.2.1* | C | Les cartes sont conformes aux pratiques recommandées de l'Annexe 4, à l'exception de celles pour lesquelles un «D» figure dans la marge de l'annexe à l'arrêté du 6 juillet 2018 modifié relatif aux cartes aéronautiques. |
| | | |
| **CHAPITRE 2 : Spécifications Générales** | | |
| 2.4.1 | B | Certains signes conventionnels utilisés par la France ne sont pas conformes à ceux prescrits par l'Annexe 4. Ils sont identifiés par un « D » en préfixe dans l'appendice B de l'annexe à l'arrêté du 6 juillet 2018 modifié relatif aux cartes aéronautiques. |
| 2.4.4 | B | Les signes conventionnels de l'appendice B à l'annexe à l'arrêté du 6 juillet 2018 sont utilisés pour les cartes aéronautiques représentant des procédures de navigation fondée sur les performances. Ils sont également utilisés au fur et à mesure des révisions périodiques pour les autres cartes. |
| 2.5.7 | C | Les échelles de conversion (kilomètres/milles marins, mètres/pieds) ne figurent sur les cartes que lorsque cela est utile. Des tableaux de conversion sont fournis dans la partie GEN 2.6 de l'AIP. |
| 2.12.3.1 | C | Les points de cote de précision douteuse ne sont pas publiés. |
| 2.14.1 | C | La classe d'espace aérien peut ne pas être indiquée sur les cartes de croisière. |
| 2.14.2* | B | Sur les cartes utilisées pour le vol à vue, les parties du tableau de classes d'espaces aériens ATS (paragraphe SERA.6001 du Règlement d'exécution n°923/2012 modifié de la Commission européenne) qui s'appliquent à l'espace aérien représenté sur la carte peuvent ne pas apparaitre au recto ou au verso de chaque carte, le tableau étant publié dans l'AIP. |
| 2.15.1 | C | Le Nord vrai n'est pas systématiquement indiqué. La direction du Nord vrai est représentée par le bord gauche des cartes aéronautiques orienté vers le haut, sauf lorsque le symbole :  est porté sur la carte. Dans ce cas, le Nord vrai est indiqué par la direction de la flèche. |
| 2.15.3* | C | Les changements de déclinaison sont publiés dans un délai de six cycles AIRAC dans les sections AD 1.3 et AD 2.2 de la publication d'information aéronautique. La mise à jour des cartes est effectuée dans un délai n'excédant pas trois ans. |
| | | |
| **CHAPITRE 3 : Carte d'obstacles d'aérodrome – OACI type A (Application des limites d'emploi des avions)** | | |
| 3.2.1 | C | La carte d'obstacles d'aérodrome – type A n'est publiée que pour les aérodromes recevant du trafic commercial public et pour lesquels une procédure d'approche ou de départ aux instruments est publiée. |
| 3.8.2.1 | C | Seule une trajectoire de décollage rectiligne est prise en compte pour l'établissement de la carte. Dans le cas d'une trajectoire de départ normalisé aux instruments faisant un angle inférieur ou égal à 15°, il peut être établi une carte d'obstacles élargie du côté où s'effectue le virage. |
| **CHAPITRE 4 : Carte d'obstacles d'aérodrome – OACI Type B** | | |
| 4.2.1 | C | La publication de cartes d'obstacles d'aérodrome OACI type B n'est pas requise. Lorsqu'un exploitant d'aérodrome ou un prestataire de service décide de la fournir, elle est alors établie conformément aux normes et aux pratiques recommandées du chapitre IV de l'Annexe 4. |
| | | |
| **CHAPITRE 5 : Carte d'aérodrome de terrain et d'obstacle – OACI (électronique)** | | |
| 5.2.1 | C | Non fournie par la France. |
| **CHAPITRE 7 : Carte de croisière OACI** | | |
| 7.9.1 | C | Non appliqué en France. Tous les aérodromes utilisés par l'aviation civile internationale et sur lesquels une approche aux instruments peut être effectuée ne sont pas forcément indiqués. |
| 7.9.2 | C | Les zones P,R,D dont le plafond est inférieur à 1000 pieds ASFC ou 3000 pieds AMSL peuvent ne pas être représentées et les limites verticales de ces zones peuvent ne pas être indiquées. |
| 7.9.3.1.1 | C | 1. Les coordonnées géographiques des aides de radionavigation associées au dispositif des services de la circulation aérienne peuvent ne pas être indiquées sur la carte de croisière Espace Inférieur. Elles sont, dans ce cas, publiées dans un document séparé joint à la carte. Les noms en langage clair des aides de radionavigation peuvent ne pas être portés sur les cartes de croisière.<br>2. L'altitude de l'antenne des DME peut ne pas être indiquée. L'information est alors disponible dans l'AIP.<br>3. L'indication de tous les espaces aériens désignés; leurs limites latérales et verticales ainsi que les classes des espaces représentés peuvent ne pas être indiquées.<br>5. Les coordonnées géographiques des points significatifs qui définissent les routes ATS et ne correspondent pas à la position d'une aide de radionavigation peuvent ne pas être indiquées sur la carte auquel cas elles sont alors publiées dans un document séparé joint à la carte.<br>6.b). En ce qui concerne les points de cheminement qui définissent les routes à navigation de surface VOR/DME, le relèvement est arrondi au degré le plus proche. La distance par rapport au VOR/DME de référence, si le point de cheminement n'est pas co-implanté avec ce dernier, est arrondie au mille marin le plus proche.<br>10. Les altitudes minimales de zone sont arrondies aux 50 m ou aux 100 ft immédiatement supérieurs. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| **CHAPITRE 8 : Carte régionale - OACI** | | |
| 8.9.4.1.1 | B | 1. Les coordonnées géographiques des aides de radionavigation associées au dispositif des services de la circulation aérienne peuvent ne pas être indiquées sur la carte.<br>2. L'altitude de l'antenne émettrice des DME n'est pas indiquée.<br>7. Les coordonnées géographiques des points significatifs ne correspondant pas à la position d'une aide de radionavigation peuvent ne pas être indiquées sur la carte ; elles sont alors publiées dans l'AIP France, en En route 4.4;<br>6. Les circuits d'attente et les itinéraires de région terminale, sauf s'ils sont décrits sur des cartes SID ou STAR, avec les indicatifs de route, et la direction de la route, arrondie au degré le plus proche, le long de chaque tronçon des voies aériennes et itinéraires prescrits de région terminale.<br>8.b) En ce qui concerne les points de cheminement qui définissent les routes à navigation de surface VOR/DME, le relèvement arrondi au degré le plus proche, et la distance, arrondie au dixième de mille marin le plus proche par rapport au VOR/DME de référence, si le point de cheminement n'est pas co-implanté avec ce dernier.<br>11. Les points de transition ne sont pas représentés sur les cartes, et le cas échéant sont définis à l'AIP ENR 3.<br>13. Les altitudes minimales établies pour le guidage sont publiées séparément sur une carte intitulée «Altitude minimale de guidage». |
| | | |
| **CHAPITRE 9 : Carte de départ normalisé aux instruments (SID) – OACI** | | |
| 9.9.4.1.1 | B | b.1) i). Le nom en langage clair, sauf si l'aide n'est pas listée dans la partie GEN 2.5 de l'AIP, auquel cas le nom en langage clair peut ne pas être porté sur la carte.<br>b.1) v) Les coordonnées géographiques des aides de radionavigation ne sont pas indiquées.<br>b.1) vi) L'altitude de l'antenne du DME n'est pas indiquée.<br>b.2) i) Le nom en langage clair, sauf si l'aide n'est pas listée dans la partie GEN 2.5 de l'AIP, auquel cas le nom en langage claire peut ne pas être porté sur la carte.<br>c.1) ii) Les coordonnées géographiques peuvent ne pas être indiquées.<br>c.1) iii) Le relèvement, arrondi au degré le plus proche, par rapport à l'aide de radionavigation de référence.<br>f. Une note est incluse chaque fois qu'il existe des obstacles rapprochés qui ne sont pas pris en compte pour la pente de calcul de procédure publiée ; la position et la cote au sommet de ces obstacles sont publiées. Les renseignements sur les obstacles rapprochés sont fournis par le concepteur de procédures.<br>j.3) Le code transpondeur n'est pas mentionné. |
| | | |
| **CHAPITRE 10 : Carte d'arrivée normalisée aux instruments (STAR) – OACI** | | |
| 10.9.4.1.1 | B | a.4) Les distances entre points significatifs sont arrondies au mille marin ou au dixième de mille marin le plus proche<br>b.1) i) et b.2) i) Les noms en langage clair des aides à la radionavigation non listés en GEN 2.5 peuvent ne pas être portés sur ce type de carte.<br>b.1) v) Les coordonnées géographiques des aides de radionavigation peuvent ne pas être indiquées. Elles sont disponibles dans l'AIP.<br>b.1) vi) L'altitude de l'antenne DME n'est pas indiquée.<br>c. 1) ii) les coordonnées géographiques peuvent ne pas être indiquées.<br>c. 1) iii) le relèvement est arrondi au degré le plus proche.<br>i. 3) le code transpondeur n'est pas mentionné. |
| 10.9.4.2* | B | Les procédures pertinentes à utiliser en cas d'interruption des communications sont décrites chaque fois que cela est possible, sur la carte ou sur le verso de la feuille où figure la carte.<br>Lorsque cela est jugé nécessaire, un texte décrivant les itinéraires d'arrivée normalisée aux instruments (STAR) est également présenté. |
| | | |
| **CHAPITRE 11 : Carte d'approche aux instruments – OACI** | | |
| 11.2.3 | B | Les procédures ILS et LOC peuvent être représentées sur une seule carte, même si les segments d'approche finale ou interrompue ne sont pas identiques.<br>Les procédures de manoeuvre à vue imposée (VPT) sont représentées sur des cartes séparées. Les éléments de la manoeuvre à vue libre (MVL) – (base OCH et minimums) – sont publiés sur la carte d'approche aux instruments utilisée avant la MVL. |
| 11.10.1.4 | C | Seule l'altitude du seuil, arrondie au pied le plus proche est indiquée. La correspondance en hectopascals (arrondie à l'hectopascal entier supérieur) est donnée pour l'altitude prise comme référence pour la carte. |
| 11.10.2.5 | C | Le niveau de référence est l'altitude de l'aérodrome, excepté :<br>– pour les cartes d'approche de précision (ILS-SBAS CAT I-PAR) et d'approche avec guidage vertical (APV SBAS, APV Baro) ;<br>– pour les cartes d'approche classique, lorsque le seuil de la piste sur laquelle s'effectue l'approche aux instruments est à plus de 2 m (7 ft) au-dessous de l'altitude de l'aérodrome ;<br>dans ces deux cas, le niveau de référence est l'altitude du seuil de la piste. |
| 11.10.4.1 | B | Toutes les aides radioélectriques se trouvant dans le champ de la carte représentée sont indiquées avec leurs indicatifs et leurs fréquences. Les aides intervenant directement dans la procédure sont représentées en caractère gras. Pour les aérodromes ne faisant pas l'objet de publication de carte régionale OACI, les aides radioélectriques couramment utilisées, mais situées à l'extérieur des limites de la carte d'approche aux instruments, sont indiquées dans leur direction en mentionnant l'indicatif, la fréquence, le relèvement magnétique et la distance en milles marins par rapport à l'IAF. |
| 11.10.4.3 | B | Le repère d'approche finale (ou le point d'approche finale, dans le cas d'une procédure d'approche ILS) n'est pas identifié au moyen de ses coordonnées géographiques.<br>Un tableau est publié afin de communiquer les coordonnées géographiques des points/repères essentiels des procédures d'approche. |
| 11.10.6.1 | C | f) les limites des secteurs dans lesquels les manoeuvres à vue (approche indirecte) sont interdites ne sont pas représentées sur la vue en plan. |
| 11.10.6.2 | C | Non appliqué.<br>La vue en plan n'indique pas la distance entre l'aérodrome et les aides de radionavigation intervenant dans l'approche finale. |
| 11.10.6.3 | C | Une vue en profil est donnée sous la vue en plan et comporte les renseignements suivants:<br>a) La piste de l'aérodrome représenté par un trait gras au niveau de référence de la carte;<br>[…]<br>d) Non appliqué (le profil des segments supplémentaire, autres que ceux spécifiés aux alinéas b) et c), ne sont pas représenté par une ligne pointillée avec flèches) ; |
| 11.10.8.4 | C | Pour les approches classiques, sont indiquées : la distance, le temps de vol et la vitesse verticale entre le FAF et un repère ou le MAPT ; ces informations ne sont fournies que lorsque la procédure est protégée en considérant que le MAPT est défini par sa distance par rapport au FAF ou à un repère. |

| | | |
|---|---|---|
| **CHAPITRE 12 : Carte d'approche à vue – OACI –** | | |
| 12.2 | C | Une carte d'approche à vue est publiée pour les aérodromes ayant une zone de contrôle ou situés dans un environnement aéronautique complexe. |
| 12.10.3 | C | Zones interdites, réglementées et dangereuses.<br>Les espaces aériens sont indiqués uniquement de la surface au plus élevé des deux niveaux suivants :<br>- 5000 ft/AMSL<br>- 2000 ft/ASFC |
| 12.10.4 | C | Espace aérien désigné. Les espaces aériens sont indiqués uniquement de la surface au plus élevé des deux niveaux suivants :<br>- 5000 ft/AMSL<br>- 2000 ft/ASFC |
| | | |
| **CHAPITRE 13 : Carte d'aérodrome/d'hélistation – OACI** | | |
| 13.5 | C | La variation annuelle n'est pas indiquée.<br>Le Nord magnétique n'est pas représenté par une flèche.<br>Le Nord vrai n'est pas toujours représenté par une flèche.<br>La direction du Nord vrai est représentée par le bord gauche des cartes aéronautiques orienté vers le haut, sauf lorsque le symbole :<br>  <br>est porté sur la carte. Dans ce cas, le Nord vrai est indiqué par la direction de la flèche. |
| | | |
| **CHAPITRE 14 : Carte des mouvements à la surface de l'aérodrome (GMC) - OACI** | | |
| 14.5.1 | C | Une flèche indiquant le nord vrai est portée sur la carte, sauf si le bord gauche de la carte est orienté vers le nord vrai. |
| | | |
| **CHAPITRE 15 : Carte de stationnement et d'accostage d'aéronef (APDC) – OACI** | | |
| 15.5.1 | C | Une flèche indiquant le nord vrai est portée sur la carte, sauf si le bord gauche de la carte est orienté vers le nord vrai. |
| | | |
| **CHAPITRE 16 : Carte aéronautique du monde au 1/1000000 – OACI** | | |
| 16.8.1 | B | Les lignes isogones sont représentées dans un encart et non tracées sur la carte. |
| 16.9.2.1 | B | Les aérodromes ayant des activités IFR hors espace contrôlé sont considérés comme présentant un intérêt aéronautique et sont signalés par un symbole placé généralement dans l'axe de la piste utilisée pour les approches aux instruments. |
| 16.9.2.2 | C | Les renseignements se limitent à :<br>- l'altitude de l'aérodrome ;<br>- la fréquence à utiliser en circulation d'aérodrome (TWR, AFIS, A/A)<br>- la longueur de la piste la plus longue. |
| 16.9.3.1 | B | Seuls les obstacles d'une hauteur supérieure à 500 ft sont représentés. |
| 16.9.3.2 | C | Non appliqué. Les lignes de transport de force non défilées, les installations permanentes de téléphérique et les éoliennes qui constituent des obstacles ne sont pas forcément représentées. |
| | | |
| **CHAPITRE 17 : Carte aéronautique au 1/500000 - OACI** | | |
| 17.7.1 | B | Les agglomérations sont choisies d'après leur importance pour la navigation aérienne à vue et représentées en fonction de leur largeur moyenne. Les agglomérations d'une étendue suffisante sont représentées par une restitution simplifiée du contour des zones bâties. |
| 17.8.1 | B | Les lignes isogones sont représentées dans un encart, et non tracées sur la carte. |
| 17.9.3.1 | B | Les obstacles hors agglomérations qui s'élèvent à 100 m (300 ft) ou plus au-dessus du sol sont représentés. |
| **CHAPITRE 18 : Carte aéronautique de navigation à petite échelle – OACI** | | |
| | C | Il n'est pas publié de carte aéronautique de navigation à petite échelle OACI. |
| | | |
| **CHAPITRE 19 : Carte de tracé de navigation – OACI** | | |
| | C | Il n'est pas publié de carte de tracé de navigation OACI |
| | | |
| **CHAPITRE 20 : Système de visualisation des cartes aéronautiques électroniques – OACI** | | |
| | C | La fourniture d'un système de visualisation des cartes aéronautiques électroniques n'est pas requise. |
| | | |
| **CHAPITRE 21 : Carte d'altitude minimale pour le vol sous surveillance ATC – OACI** | | |
| | B | Les cartes d'altitude minimale pour le vol sous surveillance ATC sont appelées cartes d'altitudes minimales de guidage. |
| 21.1.2 | B | Les notes à caractère général sont placées en partie GEN 3.3. |
| 21.9.2 | C | Pour une question de lisibilité, les zones réglementées et dangereuses ne sont pas représentées sur ce type de carte. Les zones interdites sont représentées avec leur identification. |

**Unités de mesures à utiliser dans l'exploitation en vol et au sol**
**Cinquième édition intégrant tous les amendements jusqu'au N° 17 entré en vigueur le 18 novembre 2010**

| RÉGLEMENTATION O.A.C.I. | RÉGLEMENTATION FRANÇAISE |
|---|---|
| NIL | |

**ANNEXE 6 - 1ère partie**
**Exploitation des aéronefs**

**12ème édition à jour de l'amendement 49**

| RÉGLEMENTATION O.A.C.I. | CAT | REGLEMENTATION FRANCAISE |
|---|---|---|
| **CHAPITRE 3** | | |
| § 3.1.4 | B | La responsabilité du contrôle opérationnel incombe uniquement au commandant de bord. |
| § 3.3.1* | C | Requis uniquement pour les avions de plus de 27 000 kg. |
| § 3.3.2 | C | ORO.AOC.130 n'exige pas de programme d'analyse des données de vol pour les avions dont la masse maximale certifiée au décollage (MCTOM) est égale ou inférieure à 27 000 kg. Par conséquent, l'annexe 6, partie I, 3.3.2b) n'est pas mise en œuvre. |
| § 3.3.3 | C | ORO.AOC.130 n'exige pas de programme d'analyse des données de vol pour les avions dont la MCTOM est égale ou inférieure à 27 000 kg. Par conséquent, l'annexe 6, partie I, 3.3.3 n'est pas mise en œuvre pour les avions dont la MCTOM est comprise entre 15 000 kg et 27 000 kg. |
| § 3.3. 5 | A | La règle européenne exige en outre que le programme FDM soit non punitif, quelle que soit la date. |
| § 3.5.1 | C | Le champ d'application de CAT.GEN.MPA.205 est limité à certaines catégories d'avions lourds. |
| § 3.5.2* | C | CAT.GEN.MPA.205 est applicable uniquement aux avions qui sont équipés d'une capacité à fournir une position supplémentaire au transpondeur radar de surveillance secondaire ou qui ont reçu pour la première fois un CdN individuel le 16 décembre 2018 ou après cette date. |
| § 3.5.3 | B | CAT.GEN.MPA.205 est applicable uniquement aux avions qui sont équipés d'une capacité à fournir une position supplémentaire au transpondeur radar de surveillance secondaire ou qui ont reçu pour la première fois un CdN individuel le 16 décembre 2018 ou après cette date. |
| § 3.5.4 | B | Autres moyens de conformité.<br>Les allègements et flexibilité sont fournis par AMC1 CAT.GEN.MPA.205, et peuvent être utilisés par tous les exploitants sans avoir à fournir une évaluation des risques. |
| | | |
| **CHAPITRE 4** | | |
| § 4.1.2 | C | Partiellement mise en œuvre.<br>La règle de mise en oeuvre traite de l'évaluation des risques pour la sécurité sans être aussi spécifique. |
| §4.2.1.3.1 | B | L'exploitant demeure responsable de la conformité des services contractuels aux exigences applicables et du fait que les risques pour la sécurité aérienne associés aux services ou produits sous-traités sont pris en compte par le système de gestion de l'exploitant. Toutefois, il n'est pas précisé que l'exploitant doit élaborer des politiques et des procédures pour les tiers. |
| § 4.2.1.5 | B | Le CTA n'a pas de date d'expiration.<br>Le CTA est délivré pour une durée illimitée, mais sa validité est confirmée conformément à ORO.GEN.135. Plusieurs autres rubriques nécessitant une approbation préalable de l'autorité compétente ont été ajoutées. |
| § 4.2.1.7 | B | Plusieurs autres items nécessitant une approbation préalable de l'autorité compétente ont été ajoutées aux spécifications d'exploitation de l'UE. Le CTA n'a pas de date de validité. |
| § 4.2.2.1 | A | Le règlement de l'UE exige également le respect des annexes 1, 2, 8 et 18 de l'OACI. En outre il faut se conformer aux mesures d'atténuation acceptées par l'AESA conformément à l'article 200 d), aux exigences pertinentes du Part-TCO et aux règles de l'air applicables de l'Union. |
| § 4.2.11.2 | B | Autres moyens de conformité.<br>Des mesures appropriées sont prises lorsque la dose reçue par l'équipage est susceptible d'être supérieure à 1 mSv/an. |
| § 4.3.1 | C | L'alinéa g) n'est pas pleinement appliqué. |
| § 4.3.3.1 | C | Partiellement mise en œuvre.<br>Un plan de vol opérationnel n'est pas requis pour les opérations en VFR d'avions motorisés autres que complexes qui décollent et atterrissent au même aérodrome ou site d'exploitation. |
| § 4.3.4.1.2 | C | Partiellement mise en œuvre.<br>L'EDTO n'est pas encore mis en œuvre. |
| § 4.3.4.1.3 | A | CAT.OP.MPA.182 a) exige une période commençant une heure avant et se terminant une heure après l'heure d'arrivée prévue à l'aérodrome. |
| § 4.3.4.2, § 4.3.4.3.2 et § 4.4.7 | C | Les nouvelles expressions « plan de vol déposé » et « plan de vol en vigueur » ne figurent pas dans le règlement (UE) n° 965/2012, qui fait uniquement référence au « plan de vol ATS ». |
| § 4.3.4.3.1 | C | Les règles européennes exigent une période commençant une heure avant et se terminant une heure après l'heure d'arrivée estimée à l'aérodrome. |
| § 4.3.4.4 | A | Les règles européennes exigent une collecte de données pertinentes pour une période de 2 ans d'opérations continues avant de demander un programme spécifique. En outre, il est obligatoire de mettre en place un système efficace de compte-rendu continu à l'autorité compétente sur la performance en matière de sécurité et la conformité réglementaire. |
| § 4.3.6.3 | C | Partiellement mise en œuvre.<br>L'EDTO n'est pas encore transposé dans le règlement N° 965/2012 qui utilise toujours ETOPS. |
| § 4.3.6,4* | A | La Part-CAT exige que le calcul du carburant utilisable soit effectué pour chaque vol, en prenant en compte la masse estimée de l'aéronef. |
| § 4.3.9.2 | A | Les règles européennes ont des exigences supplémentaires et plus spécifiques sur les quantités d'oxygène et les pourcentages de passagers, ainsi que des exigences sur les masques déployables automatiquement pour les avions certifiés pour voler au-dessus de 25 000 pieds. |
| § 4.3.10.1* | C | Partiellement mise en œuvre.<br>L'EDTO n'est pas encore mis en œuvre dans le règlement (UE) N° 965 qui utilise encore l'ETOPS. |
| § 4.6.1 | C | Partiellement mise en œuvre.<br>Les tâches et responsabilités du contrôleur d'exploitation aérienne ou régulateur de vol ne sont pas spécifiquement décrites dans le règlement (UE) N° 965/2012. |
| § 4.6.2 | C | Non mise en œuvre.<br>L'officier des opérations aériennes ou le régulateur de vol n'a pas de telles tâches décrites. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 4.7.1.1, § 4.7.2.1, § 4.7.2.2, § 4.7.2.3 et § 4.7.2.4 | C | Non mise en œuvre.<br>Les règles européennes n'utilisent pas l'EDTO. Au lieu de cela, le concept ETOPS est utilisé. |
| § 4.7.2.6 | B | Partiellement mise en oeuvre.<br>Les règles de l'UE n'utilisent pas l'EDTO. Au lieu de cela, le concept ETOPS est utilisé. |
| § 4.9.2 | C | Partiellement mise en œuvre.<br>Les règles européennes ne contiennent pas de dispositions relatives à la masse maximale certifiée au décollage. Cependant, le nombre de passagers est limité à moins de 9. |
| | | |
| **CHAPITRE 5** | | |
| § 5.1.1 | B | Les responsabilités de l'État d'immatriculation sont assumées par l'État de l'exploitant. |
| § 5.2.4 | B | Les responsabilités de l'État d'immatriculation sont assumées par l'État de l'exploitant. |
| § 5.2.10 | A | Exigences plus strictes et plus détaillées. |
| § 5.4.1 | A | Les règles de l'UE exigent que les opérateurs veillent à ce que les itinéraires et les altitudes de croisière soient sélectionnés de manière à avoir un site d'atterrissage à portée de plané. Protection supplémentaire compte tenu des caractéristiques géographiques du territoire européen. |
| | | |
| **CHAPITRE 6** | | |
| ← § 6.2.2.1 | C | Mise en œuvre partielle :<br>Uniquement pour les avions lourds : CdN initial après le 18 février 2020 (toilettes) et le 18 mai 2019 (portable). |
| § 6.3 | C | Les enregistreurs d'images embarqués et les enregistreurs de vol légers ne sont pas nécessaires. |
| § 6.3.1.1.1 et 6.3.1.1.2* | C | Mise en œuvre partielle :<br>Pour les avions légers avec un CdN individuel délivré pour la première fois avant le 5 septembre 2022, seuls ceux qui sont multimoteurs à turbine et qui ont une MOPSC de plus de 9 sont tenus d'avoir un enregistreur de bord. De plus, les avions à moteur à turbine dont la MCTOM est inférieure à 2 250 kg et la MOPSC de 9 ou moins ne sont pas tenus d'être munis d'un enregistreur de bord, quelle que soit la date de délivrance du CdN. |
| § 6.3.1.1. 3 et 6.3.1.1.4 | B | CAT.IDE.A.190 (a) (3) s'applique aux avions avec un CdN individuel après le 1er juin 1990 et une MCTOM supérieure à 5700 kg. CAT. IDE. A.190 a) 2) s'applique aux avions équipés d'un moteur à turbine avec un CdN individuel avant le 1er juin 1990 et une MCTOM de plus de 5700 kg. |
| § 6.3.1.1.5* | C | CAT.IDE.A.190 (a) (1) s'applique aux avions avec un CdN individuel après le 1er avril 1998. |
| § 6.3.1.1.7* | A | L'AMC6 CAT.IDE.A.190 (a) (1) & (a) (2) & (a) (3) s'applique aux avions ayant reçu un CdN individuel avant le 1er juin 1990. |
| § 6.3.1.1.8 | A | Selon l'AMC6 CAT.IDE.A.190 (a) (4), le FDR doit enregistrer 32 paramètres s'il est installé dans des avions dont la MCTOM est supérieure à 27 000 kg lorsque les conditions suivantes sont remplies :<br>(i) une capacité suffisante est disponible sur un système d'enregistrement de vol ;<br>(ii) le capteur est facilement disponible ; et<br>(iii) il n'est pas nécessaire de modifier l'équipement qui génère les données.<br>CAT.IDE.A.190 (a) (2) s'applique à tous les avions à turbomoteur dont la MCTOM est supérieure à 5700 kg et qui ont reçu pour la première fois un CdN individuel avant le 1er juin 1990, quelle que soit la date de certification du prototype. |
| § 6.3.1.1.9* | A | Selon l'AMC6 CAT.IDE.A.190 le FDR doit enregistrer 16 paramètres s'il est installé dans des avions dont la MCTOM est supérieure à 27 000 kg et qui sont d'un type de premier type certifié après le 30 septembre 1969, à l'exception de la position du déporteur sol et/ou de la sélection des aérofreins, de la température de l'air extérieur (OAT) ou de la température de l'air total et des modes de fonctionnement du pilote automatique, de l'automanette et de l'AFCS, de l'état d'engagement des systèmes et des modes d'exploitation lorsque l'une des conditions suivantes est remplie :<br>(1) une capacité suffisante n'est pas disponible sur un système d'enregistrement de vol ;<br>(2) le capteur n'est pas facilement disponible ; et<br>(3) un changement est nécessaire dans l'équipement qui génère les données. Tous les autres paramètres dépassent ceux recommandés dans le SARP. |
| ← § 6.3.1.1.10 | C | Partiellement mise en œuvre.<br>CAT. IDE.A.190 a) 1) s'applique à tous les avions dont la MCTOM est supérieure à 5 700 kg et qui ont un CofA individuel délivré pour la première fois le 1er juin 1990 ou après cette date. Toutefois, dans le cas où l'avion a reçu pour la première fois un CofA individuel entre le 1er janvier 2005 et le 1er janvier 2016, l'AMC2 CAT.IDE.A.190 est applicable et ne spécifie pas l'ensemble des 78 premiers paramètres énumérés dans le tableau A8-1. |
| § 6.3.1.1.11 | A | CAT.IDE.A.190 a) 1) s'applique à tous les avions dont la MCTOM est supérieure à 5 700 kg et qui ont un CdN individuel délivré pour la première fois le 1er juin 1990 ou après cette date. |
| § 6.3.1.2 | C | Partiellement mise en œuvre.<br>L'utilisation de bandes magnétiques pour le FDR n'est pas interdite. |
| § 6.3.1.3 | A | La durée minimale d'enregistrement pour le FDR est de 25 heures pour les avions autres que ceux mentionnés au 6.3.1.1.5. Pour les avions mentionnés au 6.3.1.1.5, la durée minimale d'enregistrement est de 10 heures. |
| | | |
| ← § 6.3.2.1.1 et § 6.3.2.1.2* | C | Partiellement mise en œuvre.<br>CAT.IDE.A.185 a) 2) est limité aux avions multimoteurs à turbine dont la MCTOM est inférieure à 5 700 kg. CAT.IDE.A.191 couvre les aéronefs dont le CdN individuel a été délivré pour la première fois le 5 septembre 2022 ou après cette date; pas de rétrofit. |
| ← § 6.3.2.1.3 | A | CAT.IDE.A.185 pt. (a) (1) est applicable à tous les avions dont la MCTOM est supérieure à 5 700 kg, quelle que soit la date de première délivrance du CdN. |
| ← § 6.3.2.1.4 et § 6.3.2.1.5* | A | CAT.IDE.A.185 a) 1) s'applique à tous les avions dont la MCTOM dépasse 5 700 kg, qu'ils soient équipés ou non d'un moteur à turbine. Le CAT.IDE.A.185 a) 1) s'applique quelle que soit la date de certification du prototype. |
| § 6.3.2.4.2 | C | Partiellement mise en œuvre.<br>Une autre source d'énergie pour le CVR est requise pour les avions dont la MCTOM est supérieure à 27 000 kg et qui ont reçu pour la première fois un CdN individuel le 5 septembre 2022 ou après cette date, quelle que soit la date de la demande de certification de type. |
| § 6.3.2.4.3* | C | Partiellement mise en œuvre.<br>Une autre source d'énergie pour le CVR est requise pour les avions dont la MCTOM est supérieure à 27 000 kg et qui ont reçu pour la première fois un CdN individuel le 5 septembre 2022 ou après cette date. Le CAT.IDE.A.185, point i), contient la prescription relative aux sources d'énergie de remplacement. |
| § 6.3.3.1.1 | A | CAT .IDE.A.195 (a) exige l'enregistrement des communications par liaison de données pour les avions avec un CdN individuel délivré le 8 avril 2014 ou après cette date. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 6.3.3.1.2 | C | Partiellement mise en œuvre.<br>CAT.IDE.A.195 a) ne s'applique qu'aux avions qui ont reçu pour la première fois un CdN individuel le 8 avril 2014 ou après cette date. |
| § 6.3.3.1.3*, § 6.3.4.1.1, § 6.3.4.1.2*, § 6.3.4.2 et § 6.3.4.3 | C | Non mise en œuvre. |
| § 6.3.5.4* | C | Partiellement mise en œuvre.<br>Il n'est pas nécessaire que la documentation du FDR soit en format électronique. |
| § 6.3.5.5.1* | C | Non mise en œuvre. |
| § 6.3.5.5.2 | C | L'utilisation de deux enregistreurs combinés est une solution de rechange à l'utilisation d'un CVR et d'un FDR distincts pour les avions de MCTOM > 5 700 kg, quelle que soit la date de demande de leur certificat de type. |
| § 6.3.6.1 | B | Caractère différent.<br>CAT.GEN.MPA.210 s'applique également aux avions dont la MCTOM est supérieure à 45 500 kg et de moins de 19 passagers. CAT.GEN.MPA.210 s'applique à tous les avions dont le CdN a été délivré pour la première fois le 1er janvier 2024 ou après cette date. |
| § 6.3.6.2 | B | Caractère différent.<br>CAT. GEN. MPA.210 s'applique également aux avions dont la MCTOM est supérieure à 45 500 kg et de moins de 19 passagers. CAT. GEN. MPA.210 s'applique à tous les avions dont le CdN a été délivré pour la première fois le 1er janvier 2023 ou après cette date. |
| § 6.4.1 | A | La partie CAT est plus prescriptive. |
| § 6.4.2 | C | Partiellement mise en œuvre, le règlement (UE) 965/2012 impose le transport d'un appareil de mesure d'altitude barométrique et de DEUX appareils lorsque deux pilotes sont nécessaires. |
| § 6.5.2.1 | C | Moins protecteur.<br>Transport de gilets de sauvetage lorsque le vol au-dessus de l'eau va au-delà de la distance de vol plané du rivage, non mis en œuvre dans le cas de tous les autres avions terrestres (non exploités conformément aux 5.2.9 ou 5.2.10). |
| § 6.5.3.1 | C | Partiellement mise en œuvre.<br>L'obligation de transporter un dispositif de localisation sous-marine (ULD) de 8,8 KHz s'applique aux avions dont la MCTOM est supérieure à 27 000 kg et dont la MOPSC est supérieure à 19 et à tous les avions dont la MCTOM est supérieure à 45 500 kg. L'ULD peut ne pas être installé si l'avion est équipé de moyens fiables et automatiques permettant de déterminer avec précision, à la suite d'un accident où l'avion est gravement endommagé, l'emplacement du point de fin de vol. |
| § 6.7.3 | A | La Part-CAT l'exige pour tous les avions. |
| § 6.7.6 | C | Le règlement (UE) 965/2012 ne recommande pas de l'avoir pour les aéronefs pour lesquels le CdN a été délivré pour la première fois avant le 9 novembre 1998. |
| § 6.10 | A | CAT.IDE.A.115 exige des lumières portatives même pendant les vols de jour. |
| § 6.11* | A | Requis également pour les avions non pressurisés. |
| § 6.12 | B | Autres moyens de conformité.<br>Cette question est traitée par un instrument juridique différent, qui exige des États membres qu'ils prennent des mesures appropriées lorsque la dose reçue par l'équipage est susceptible d'être supérieure à 1 mSv/an. |
| § 6.15.3* | C | CAT.IDE.A.150 c) ne s'applique qu'aux avions à turbomoteur pour lesquels le certificat de navigabilité a été délivré pour la première fois après le 1er janvier 2019 alors que l'OACI le recommande pour tous les avions à turbomoteur, quelle que soit la date de délivrance de leur certificat de navigabilité. |
| § 6.18.1 | C | Partiellement mise en œuvre.<br>CAT.GEN.MPA.210 ne s'applique pas aux avions dont la MCTOM est inférieure à 45 500 kg et la MOPSC inférieure à 19. |
| § 6.18.2* | C | Non mise en œuvre.<br>CAT.GEN.MPA.210 ne s'applique pas aux avions dont la MCTOM est inférieure à 27 000 kg. |
| § 6.18.3 | B | Autres moyens de conformité.<br>Dans le cas d'une solution basée sur une ELT (ELT déclenchée en vol ou enregistreur de vol déployable automatiquement), le signal ELT est détecté par les satellites COSPAS/SARSAT, puis directement transmis au sol et envoyé au centre de coordination de sauvetage compétent. |
| § 6.19.2* | C | Partiellement mise en œuvre.<br>Les réglementations européennes exigent l'utilisation obligatoire de la version 7.1 de l'ACAS II SW pour les avions avec une MCTOM de plus de 5 700 kg ou plus de 19 passagers. Pour les avions de cette catégorie, l'ACAS n'est pas obligatoire. S'ils installent volontairement des ACAS, l'équipement doit être ACAS II version 7.1. |
| § 6.20.2 et § 6.20.3 | C | Partiellement mise en œuvre.<br>Résolution de 7,62 m pour le transpondeur pression-altitude non mise en œuvre. |
| § 6.22.1*et § 6.22.2* | C | Non mise en œuvre. |
| § 6.26.1 | C | Le point 26.205 du règlement (EU) 2015/640, amendé par le règlement (EU) 2024/2954, est applicable aux avions lourds pour lesquels le premier certificat de navigabilité a été délivré le ou après le 1er juillet 2026, alors que l'OACI fixe cette date au 1er janvier 2026. De plus, le règlement (EU) 2015/640 définit 'avion lourd' comme ayant été certifié en application du CS-25 ou équivalent ; en conséquence, les avions certifiés selon le CS-23 ne sont pas concernés par le point 26.205, alors qu'ils sont dans le domaine d'application du § 6.26.1. |

| | | |
|---|---|---|
| **CHAPITRE 7** | | |
| § 7.2.9 | C | Partiellement mise en œuvre.<br>Les règles européennes exigent de surveiller les performances de maintien de l'altitude de l'avion, mais pas dans un intervalle spécifique. |
| | | |
| **CHAPITRE 8** | | |
| § 8.2.1 | C | Partiellement mise en œuvre.<br>Les exigences de l'UE ne traitent pas des principes relatifs aux facteurs humains énoncés dans la partie CAMO pour les organismes de gestion du maintien de la navigabilité (CAMO). |
| § 8.2.3 | C | Partiellement mise en œuvre.<br>Les prescriptions de l'UE ne stipulent pas explicitement que des copies de tous les amendements doivent être fournies rapidement à toutes les organisations ou personnes auxquelles le manuel a été délivré. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 8.2.4 | B | Caractère différent.<br>L'obligation de fournir le manuel à l'État d'immatriculation s'il diffère de l'État de l'exploitant. Il doit actuellement être approuvé par l'État de l'exploitant. Au sein des États membres de l'UE, cette exigence est compensée par la reconnaissance mutuelle. |
| § 8.3.1 | C | Partiellement mise en œuvre.<br>La partie CAMO et la partie CAO ne respectent pas les principes des facteurs humains (FH) dans la conception du programme d'entretien (PE). |
| § 8.3.2 | C | Partiellement mise en œuvre.<br>Les prescriptions de l'UE ne stipulent pas explicitement que des copies de tous les amendements doivent être fournies rapidement à toutes les organisations ou personnes auxquelles le manuel a été délivré. |
| § 8.4.2 | A | Les périodes de conservation dépassent les exigences. |
| § 8.5.2 | A | Les exigences Part-M s'appliquent au-dessus de 2 730 kg, tandis que Part-ML s'applique à 2 730 kg ou moins. Cela signifie pour des masses comprises entre 2 730 et 5 700 kg l'obligation de respecter une exigence plus élevée. |
| § 8.7 | C | Partiellement mise en œuvre.<br>Les dispositions de l'annexe 19 ne sont pas appliquées. |
| § 8.8.2 et 8.8.3 | C | Non mise en œuvre. |
| | | |
| **CHAPITRE 9** | | |
| § 9.2 | A | L'ORO. FC.130 a) établit des dispositions pour chaque type et ses variantes. ORO. GEN.110 (h) exige également l'utilisation d'une checklist. |
| § 9.4.1.1 | A | Pour l'IFR monopilote, l'AESA exige également 5 vols IFR et 3 approches IFR selon ORO. FC.202. Toutefois, outre le délai de 90 jours, le règlement (UE) 965/2012 prolonge les mesures d'atténuation. |
| § 9.4.2.1 | A | La règle européenne du FCL.060 exige au moins 3 secteurs. |
| § 9.4.3.3 | B | Autres moyens de conformité.<br>Les règles européennes ont mis en place une catégorisation des aérodromes (A, B, C et/ou exigeant/non exigeant). |
| § 9.4.4.1 | B | Autres moyens de conformité.<br>Un programme alternatif de formation et de qualification (ATQP) est autorisé comme alternative aux exigences de formation. |
| § 9.4.5.2 | A | Pour les opérations IFR, le pilote doit avoir accumulé au moins 50 heures de vol IFR au lieu des 25 heures précisées à l'alinéa b). |
| | | |
| **CHAPITRE 10** | | |
| §10.2 | C | Partiellement mise en œuvre parce que l'AMC1 ORO.GEN.110(c)&(e) ne couvre que les agents techniques d'exploitation qui participent à la veille de vol et à la surveillance du vol. |
| § 10.3 | C | Partiellement mise en œuvre.<br>Le programme de formation pour les agents techniques d'exploitation est détaillé dans l'AMC1 ORO.GEN.110(c)&(e). Toutefois, les exigences de l'UE n'établissent pas les conditions minimales pour l'affectation d'un agent technique d'exploitation ; en outre, les tâches et responsabilités d'un agent technique d'exploitation conformément au § 4.2.1.3 des SARP ne sont pas encore transposées dans les règles de l'UE. Le point b) n'est pas non plus transposé dans le règlement (UE) n° 965/2012. |
| §10.4* | C | Partiellement mise en œuvre.<br>La formation périodique est incluse dans l'AMC1 ORO.GEN.110(c)&(e), et les FH pris en compte dans la formation initiale. Cependant, cet AMC ne s'applique qu'aux agents techniques d'exploitation qui ont des tâches liées à la veille de vol et à la surveillance du vol. Le programme de formation des agents techniques d'exploitation est détaillé dans l'AMC1 ORO.GEN.110(c)&(e). Toutefois, les exigences de l'UE n'établissent pas les conditions minimales pour l'affectation d'un agent technique d'exploitation ; en outre, les tâches et responsabilités d'un agent technique d'exploitation conformément au § 4.2.1.3 des SARP ne sont pas encore transposées dans les règles de l'UE. Le point b) n'est pas non plus transposé dans le règlement (UE) n° 965/2012. |
| § 10.5* | C | Non mise en œuvre. |
| | | |
| **CHAPITRE 11** | | |
| § 11.4.3* | C | Moins protecteur.<br>Période de conservation de 3 mois requise en vertu du règlement (UE) 965/2012. |
| § 11.6 | C | Moins protecteur.<br>En l'absence d'indication de la part de l'autorité chargée de l'enquête, l'exploitant n'est pas tenu de conserver les données pendant plus de 60 jours après l'accident ou l'incident grave. |
| | | |
| **CHAPITRE 12** | | |
| § 12.4 | A | La réussite de la formation initiale requise par le règlement (UE) N° 1178/2011 AIRCREW entraîne la délivrance d'une attestation de membre d'équipage de cabine (CCA) au demandeur. Le CCA est requise pour les opérations CAT. Si des opérateurs autres que CAT décident d'avoir un membre d'équipage de cabine, cette personne doit également se conformer au règlement (UE) N° 1178/2011 et au règlement (UE) N° 965/2012. |
| | | |
| **CHAPITRE 13** | | |
| § 13.2.4* | C | Partiellement mise en œuvre.<br>ORO.SEC.100 b) stipule que la réglementation de l'UE ne s'applique qu'aux avions de transport de passagers qui relèvent de l'une des catégories mentionnées aux points b) 1), b) 2) ou b) 3). |
| **CHAPITRE 15** | | |
| § 15.1, § 15.2.1 et § 15.2.2 | C | Partiellement mise en œuvre.<br>La règle d'application traite de l'évaluation des risques pour la sécurité sans être aussi spécifique. |
| | | |
| * pratique recommandée | | |

**ANNEXE 6 - 2ème partie**
**Exploitation des aéronefs**

**11ème édition à jour de l'amendement 41**

| REGLEMENTATION O.A.C.I. | CAT | REGLEMENTATION FRANCAISE |
|---|---|---|
| | | |
| **CHAPITRE 2** | | |
| § 2.1.1.5* | C | Partiellement mise en œuvre.<br>Aucune exigence spécifique pour les opérations non commerciales avec des aéronefs motorisés autres que complexes (NCO). |
| § 2.1.4 | C | Partiellement mise en œuvre.<br>Les EFB ne nécessitent pas d'approbation spécifique pour les opérations non commerciales. |
| § 2.2.2.2.1 | B | Caractère différent.<br>Pour les opérations NCC, la règle s'adresse à l'exploitant, et non au Pilote Commandant de bord. Pour les opérations par faible visibilité (LVO), il s'agit de l'autorité compétente au sens de l'annexe V (Part-SPA) : État de l'exploitant si l'aéronef est immatriculé dans un État membre de l'UE ; ou État d'immatriculation si l'aéronef est immatriculé dans un pays tiers et que l'État d'immatriculation a déjà délivré l'agrément spécifique LVO. |
| § 2.2.2.2.1.1, § 2.2.2.2.1.2 et § 2.2.2.2.1.3 | B | Caractère différent.<br>L'État de l'exploitant et non l'État d'immatriculation établit les critères et approuve les crédits opérationnels pour les exploitants NCC et pour les exploitants NCO utilisant des aéronefs immatriculés dans un pays tiers. |
| § 2.2.2.2.5 et § 2.2.2.2.6 | B | Caractère différent.<br>Pour les opérations par faible visibilité (LVO), il s'agit de l'autorité compétente au sens de l'annexe V (Part-SPA) : État de l'exploitant si l'aéronef est immatriculé dans un État membre de l'UE ; ou État d'immatriculation si l'aéronef est immatriculé dans un pays tiers et que l'État d'immatriculation a déjà délivré l'agrément spécifique LVO. |
| § 2.2.3.4.3 | B | Autres moyens de conformité.<br>Pour les exploitants NCC relevant des règles de l'UE, l'État de l'exploitant est l'autorité compétente et non l'État d'immatriculation ; c'est l'État de l'exploitant et non l'État d'immatriculation qui doit établir ces critères. |
| § 2.2.3.5 | B | Autres moyens de conformité.<br>Les règles européennes exigent une période commençant une heure avant et se terminant une heure après l'heure estimée d'arrivée à l'aérodrome conformément au 2.2.3.4.3. Les règles européennes n'exigent pas un point de non-retour, mais exigent toujours d'avoir un aérodrome alternatif (à quelques exceptions près, par exemple un aérodrome isolé) et d'autres conditions (par exemple, les règles de l'UE exigent du carburant pendant 2 heures). |
| § 2.2.3.7.1* | A | Les règles de l'UE n'autorisent pas l'embarquement, la montée à bord ou le débarquement de passagers pendant le ravitaillement en carburant AVGAS ou un carburant volatil ou un mélange de ces types de carburant. |
| § 2.2.4.7 | C | Partiellement mise en œuvre.<br>Un allègement est possible pour les opérations non commerciales. Les règles de l'UE prévoient des allégements concernant la disponibilité et l'utilisation de l'oxygène à bord dans le cadre du NCO.OP 190 et AMC1.NCO.OP 190 a). Le commandant de bord peut décider de voler à n'importe quelle altitude sans utiliser d'oxygène et sans que l'oxygène soit disponible. |
| § 2.2.4.9.2 | B | Autres moyens de conformité.<br>La réglementation européenne autorise des écarts acceptables dans les conditions de guidage radar par l'ATC ou lorsque le franchissement d'obstacles peut être assuré. |
| § 2.3.1.1 | B | Caractère différent.<br>Dans le système de l'UE, l'État de l'exploitant est l'autorité compétente pour les exploitants NCC et NCO exploitant des aéronefs immatriculés dans un pays tiers. |
| § 2.4.2.2 | C | Partiellement mise en œuvre.<br>Les avions ELA1, c'est-à-dire les avions dont la masse maximale au décollage (MTOM) est inférieure ou égale à 1 200 kg et qui ne sont pas classés comme aéronefs motorisés complexes, sont exemptés de l'exigence relative à l'extincteur à main conformément à NCO.IDE.A.160. |
| § 2.4.2.3 | C | Partiellement mise en œuvre.<br>Uniquement pour les avions lourds de certificat de navigabilité (CdN) initial après le 18 février 2020 (toilettes) et le 18 mai 2019 (portable). Aucune référence pour la Part-NCO, car il est très peu probable qu'un aéronef exploité en NCO ait des toilettes. |
| § 2.4.3.2* | B | Autres moyens de conformité.<br>Les règles de l'UE ne font pas de distinction entre les vols VFR et les vols contrôlés VFR. Les autres moyens de conformité sont assurés par les dispositions du paragraphe NCC.IDE.A.120 (b) pour les instruments supplémentaires dans des conditions où l'avion ne peut pas être maintenu sur une trajectoire de vol souhaitée sans référence à un ou plusieurs instruments supplémentaires, ainsi que les limitations supplémentaires de la Partie SERA 5010 pour les vols contrôlés VFR. |
| § 2.4.11.2* et § 2.4.11.3* | C | Non mise en œuvre.<br>EASA SIB 2017-14 (bulletin d'information sur la sécurité) de l'AESA recommande l'installation du TAWS pour les avions légers non engagés dans le transport aérien commercial. |
| § 2.4.12.3 | C | Partiellement mise en œuvre.<br>NCO.IDE. A.170 a) 3) : une ELT de survie (ELT(S)) ou une balise de repérage personnelle (PLB), transportée par un membre d'équipage ou un passager, est autorisée lorsqu'elle est certifiée pour une configuration maximale de six sièges passagers ou moins. |
| § 2.4.15 | B | Pour les opérateurs NCC et NCO, c'est l'État de l'opérateur qui a cette responsabilité, et non l'État d'immatriculation. |
| § 2.4.16.1.1.1* | C | Partiellement mise en œuvre.<br>Il n'y a pas d'exigence de transport d'enregistreur de bord dans la Part-NCO. |
| § 2.4.16.1.1.2 et § 2.4.16.1.1.3* | A | NCC.IDE.A.165 s'applique aux avions dont le CdN a été délivré le 1er janvier 2016 ou après cette date. |
| § 2.4.16.1.2 | C | Non mise en œuvre.<br>Le FDR est exigé par 2.4.16.1.1.2 pour les avions lourds pour lesquels la demande de certificat de type est postérieure à 2023. FDR, ADRS, AIR ou AIRS sont recommandés par le 2.4.16.1.1 pour les avions légers avec un CdN individuel délivré pour la première fois le 1er janvier 2016 ou après cette date. |
| § 2.4.16.2.1* | C | Non mise en œuvre.<br>Il n'y a pas d'exigence de transport d'enregistreur de bord dans la Part-NCO. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 2.4.16.2.2 | C | Non mise en œuvre.<br>2.4.16.2.1 ne s'applique qu'aux avions avec un CdN individuel délivré pour la première fois le 1er janvier 2016 ou après cette date, et tous les modèles modernes de CVR sont à semi-conducteurs. Il n'est donc pas nécessaire d'interdire les anciennes technologies d'enregistrement. |
| § 2.4.16.4.5* | C | Non mise en œuvre.<br>Il n'est pas nécessaire que la documentation du FDR soit sous format électronique. |
| § 2.4.17.2.2 | C | Non mise en œuvre.<br>Il n'est pas nécessaire d'obtenir une approbation spécifique pour les exploitants NCC et NCO qui utilisent des EFB. |
| § 2.4.17.3 | C | Partiellement mise en œuvre.<br>Il n'est pas nécessaire d'obtenir une approbation spécifique pour les exploitants NCC et NCO qui utilisent des EFB.<br>Pour les exploitants NCC et les exploitants NCO utilisant des aéronefs immatriculés dans des pays tiers, l'État d'exploitation établit ces critères. |
| | | |
| § 2.5.1.7, § 2.5.1.8 et § 2.5.1.9 | B | Caractère différent.<br>Pour les exploitants utilisant des aéronefs immatriculés dans un pays tiers, l'État d'exploitation établit ces critères. |
| § 2.5.2.3 | B | Caractère différent.<br>L'État d'exploitation établit ces critères pour les exploitants NCC et les exploitants NCO utilisant des aéronefs immatriculés dans des pays tiers. |
| § 2.5.2.4, § 2.5.2.5, § 2.5.2.6, § 2.5.2.7, § 2.5.2.8 et § 2.5.2.9 | B | Caractère différent.<br>L'État de l'exploitant au lieu de l'État d'immatriculation pour les exploitants NCC et les exploitants NCO utilisant des aéronefs immatriculés dans des pays tiers. |
| § 2.5.2.10 | C | Partiellement mise en œuvre.<br>Les règles de l'UE exigent de surveiller les performances de maintien de l'altitude de l'aéronef, mais pas dans un intervalle spécifique. |
| § 2.5.3.3, § 2.5.3.4 et § 2.5.3.5 | B | Caractère différent.<br>L'État de l'exploitant établit ces critères pour les exploitants utilisant des aéronefs immatriculés dans un pays tiers. |
| § 2.6.1.1 | C | Partiellement mise en œuvre.<br>L'évaluation des risques lors de l'approbation d'un programme d'entretien non fondée sur les recommandations d'entretien du titulaire du certificat de type n'a pas été prise en compte. |
| § 2.6.2.2 | A | Les périodes de conservation dépassent les exigences. |
| § 2.6.4.2 | C | Partiellement mise en œuvre.<br>La maintenance et la remise en service par une personne peuvent être effectuées par un organisme Part-MF ou Part-CAO ou par un pilote / propriétaire après une maintenance limitée du pilote / propriétaire. |
| § 2.7.2.1 et § 2.8.1 | B | Caractère différent.<br>L'État de l'exploitant au lieu de l'État d'immatriculation pour les exploitants NCC et les exploitants NCO d'aéronefs immatriculés dans des pays tiers. |
| § 2.9.1 | C | Le règlement (CE) N° 300/2008 ne contient pas de références aux responsabilités du commandant de bord liées à la sûreté des aéronefs. |
| | | |
| **CHAPITRE 3** | | |
| § 3.1.2* | C | Moins protecteur.<br>La définition d'avion à moteur complexe comprend les avions dont la MOPSC est supérieure à 19. |
| § 3.4.2.1.1 | B | Caractère différent.<br>État de l'opérateur au lieu de l'État d'immatriculation comme autorité compétente. |
| § 3.4.2.1.2 | B | Autres moyens de conformité.<br>Les règles de l'UE prévoient la surveillance coopérative des activités des opérateurs établis ou résidant dans un autre État membre de l'UE. Le règlement (CE) N° 300/2008 établit les exigences applicables aux inspections effectuées par la Commission en coopération avec les États membres. |
| § 3.4.2.7 | B | Caractère différent.<br>Pour les exploitants NCC, c'est l'État de l'exploitant qui établit les critères au lieu de l'État d'immatriculation.<br>Pour les opérations par faible visibilité (LVO), il s'agit de l'autorité compétente comme définie à l'annexe V (part-SPA) : État de l'exploitant si l'aéronef est immatriculé dans un État membre de l'UE ; ou État d'immatriculation si l'aéronef est immatriculé dans un pays tiers et que l'État d'immatriculation a déjà délivré l'agrément spécifique LVO. |
| § 3.4.2.8 | C | Partiellement mise en œuvre.<br>Les exigences de haut niveau figurent à l'annexe V des exigences essentielles du règlement (UE) 2018/1139.<br>Les dispositions détaillées en matière de FTL sont déterminées au niveau national.<br>Les exigences en matière de fatigue pour le personnel de maintenance ne sont pas prises en compte. |
| | | |
| § 3.4.3.7 * | C | Non mise en œuvre. |
| § 3.4.3.8.1 | A | Les règles de l'UE n'autorisent pas l'embarquement, la présence à bord ou le débarquement de passagers pendant le ravitaillement en carburant AVGAS ou de carburant volatil ou un mélange de ces types de carburant. |
| § 3.5.2.3 | B | Caractère différent.<br>Pour les exploitants NCC, c'est l'État de l'exploitant qui établit les critères au lieu de l'État d'immatriculation. |
| § 3.6.1.1 | B | Caractère différent.<br>L'État de l'exploitant est responsable de l'approbation des MEL. |
| § 3.6.3.1.1.1, § 3.6.3.1.1.2 et § 3.6.3.1.1.3* | C | Partiellement mise en œuvre.<br>Le transport d'un enregistreur de données de vol n'est requis que pour les avions avec un CdN individuel délivré pour la première fois le 1er janvier 2016 ou après cette date. |
| § 3.6.3.2.1.1 | A | NCC.IDE.A.160 a) 2) est applicable aux avions pour lesquels le certificat de type est délivré après le 1er janvier 2016, tandis que pour 3.6.3.2.1 le critère est la date de présentation de la demande de certificat de type. |
| § 3.6.3.2.1.2 | C | Partiellement mise en œuvre.<br>NCC.IDE.A.160 (a) (1) n'exige un CVR que pour les avions de plus de 27 000 kg de MCTOM qui ont reçu pour la première fois un CdN individuel le 1er janvier 2016 ou après cette date. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 3.6.3.2.1.3* | C | Partiellement mise en œuvre.<br>NCC.IDE.A.160 (a) (1) et (a) (2) n'exige un CVR que pour les avions avec un CdN individuel délivré pour la première fois le 1er janvier 2016 ou après cette date (voir (a) (1)) ou pour lesquels un certificat de type a été délivré pour la première fois le 1er janvier 2016 ou après cette date (voir a) (2)). |
| ← § 3.6.7 * | B | Des mesures appropriées sont prises lorsque la dose effective reçue par l'équipage est susceptible d'être supérieure à 1 mSv/an. |
| § 3.6.8.2.1* | C | Partiellement mise en œuvre.<br>Le système réglementaire européen ne l'exige que lorsque le CdN individuel a été délivré après le 31 décembre 1980. |
| § 3.6.9.1* | A | Le système réglementaire européen exige l'ACAS II pour les avions à turbine avec une MCTOM de plus de 5 700 kg ou une MOPSC de plus de 19. |
| § 3.8.1.2* | C | La recommandation n'est pas mise en œuvre ; la formation initiale et la formation continue ne sont pas spécifiquement abordées dans la MA.A.607 ou les facteurs humains. |
| § 3.8.2* | C | Partiellement mise en œuvre.<br>Les parties M, CAMO et CAO ne respectent pas les principes des facteurs humains dans la conception du manuel de contrôle de la maintenance. |
| § 3.8.3.1 | C | Partiellement mise en œuvre.<br>La sous-partie G de la partie M, les parties CAMO et CAO ne respectent pas les principes des facteurs humains dans la conception du programme de maintenance. |
| § 3.8.3.2 | C | Partiellement mise en œuvre.<br>Les exigences de l'UE ne décrivent pas explicitement que « des copies de tous les amendements doivent être fournies rapidement à toutes les organisations ou personnes auxquelles le manuel a été distribué ». |
| § 3.8.4 | A | Pour la transmission de l'information conformément à l'annexe 8, il n'y a pas d'allègement lié à la MTOW - exigé pour tous les propriétaires d'avions. |
| § 3.8.5.2 | C | Partiellement mise en œuvre.<br>L'autorisation du pilote/propriétaire n'est pas conforme à l'exigence selon laquelle une personne doit être titulaire d'une licence appropriée conformément à l'annexe 1. |
| § 3.9.4.2 et § 3.9.4.3 | B | Autres moyens de conformité.<br>Le règlement (UE) N° 965/2012 n'inclut pas cette exigence pour les pilotes effectuant des vols non commerciaux (NCC, NCO). |
| ← § 3.10 * | C | Non mise en œuvre. |
| * pratique recommandée | | |

**ANNEXE 6 - 3ème partie**
**Exploitation des aéronefs**

**11ème édition à jour de l'amendement 25**

| REGLEMENTATION O.A.C.I. | CAT | REGLEMENTATION FRANCAISE |
|---|---|---|
| | | |
| **SECTION 2** | | |
| **CHAPITRE 1** | | |
| § 1.1.4 | B | Autres moyens de conformité.<br>Les règles de l'UE exigent que la responsabilité du contrôle opérationnel incombe exclusivement au commandant de bord. |
| § 1.3.1* | C | Partiellement mise en œuvre.<br>Transposé uniquement pour les opérations offshore d'hélicoptères en CAT. |
| § 1.3.2 | A | La règle européenne exige en outre que le programme FDM soit non punitif, quelle que soit la date. |
| | | |
| **CHAPITRE 2** | | |
| § 2.2.1.5, § 2.2.1.6 et § 2.2.1.7 | B | Autres moyens de conformité.<br>Aucune date d'expiration. Le CTA est délivré pour une durée illimitée, mais sa validité est confirmée conformément à l'ORO.GEN.135.<br>Plusieurs autres rubriques nécessitant une approbation préalable de l'autorité compétente ont été ajoutées. |
| § 2.2.2.1 | A | Il est exigé également le respect des annexes 1, 2, 8 et 18 de l'OACI. En outre, il faut respecter les mesures d'atténuation acceptées par l'AESA conformément à l'article 200 d), les exigences pertinentes de la Part-TCO et les règles de l'air de l'UE. |
| § 2.3.1 | C | Partiellement mise en œuvre.<br>L'alinéa g) n'est pas pleinement appliqué. |
| § 2.3.3.1 | C | Partiellement mise en œuvre.<br>Un plan de vol opérationnel n'est pas requis pour les opérations en VFR d'aéronefs motorisés autres que complexes qui décollent et atterrissent du même aérodrome ou site d'exploitation. |
| § 2.3.4.1.2 | A | Il est exigé une période commençant 1 heure avant et se terminant 1 heure après l'heure d'arrivée estimée à l'aérodrome. |
| § 2.3.4.2.1 | B | Autres moyens de conformité.<br>Il n'est pas exigé d'héliport de dégagement lorsque la destination est un héliport côtier et que l'hélicoptère est en provenance depuis une plateforme en mer. Cependant, la règle européenne exige une période commençant 1 heure avant et se terminant 1 heure après l'heure d'arrivée estimée à l'aérodrome. |
| § 2.3.4.2.2 | A | Il est exigé une période commençant 1 heure avant et se terminant 1 heure après l'heure d'arrivée estimée à l'aérodrome et des minimums d'exploitation plus élevés (une catégorie au-dessus). |
| § 2.3.4.3.15* | C | Pas de référence à 30 NM, la seule exigence est des minimums météorologiques généraux entre 1 heure avant et 1 heure après le vol et pour le brouillard (60 NM selon l'AMC2 SPA. HOFO.120 c) 3)). |
| § 2.3.6.2 | A | Si un aérodrome de dégagement est nécessaire, il doit également être transporté suffisamment de carburant pour l'atteindre. La réglementation de l'UE stipule que lors d'un vol VFR et d'une navigation autre que par référence à des repère visuels ou de nuit, 30 minutes de carburant à la vitesse de croisière économique sont requises. |
| § 2.3.7.1 | C | Partiellement mise en œuvre.<br>En ce qui concerne le point (b) : le réapprovisionnement en oxygène est autorisé conformément aux règles de l'Air Ops et, à titre de mesure d'atténuation des risques, les parties prenantes de l'aviation sont formées à l'utilisation de l'oxygène. |
| § 2.3.7.6 | C | Mise en œuvre partielle.<br>Le réapprovisionnement en oxygène est autorisé conformément aux règles de l'Air Ops et, à titre de mesure d'atténuation des risques, les parties prenantes de l'aviation sont formées à l'utilisation de l'oxygène. |
| § 2.3.8.2 et § 2.4.6.1* | C | Non mise en œuvre. |
| § 2.6.1 | C | Partiellement mise en œuvre.<br>Les tâches et responsabilités de l'officier des opérations aériennes/régulateur de vol ne sont pas spécifiquement décrites dans le règlement (UE) N° 965/2012. |
| § 2.6.2 | C | Non mise en œuvre.<br>L'exploitant décide qui est chargé de ces responsabilités dans le cadre de sa planification et de sa gestion des interventions d'urgence. |
| | | |
| **CHAPITRE 3** | | |
| § 3.1.4, § 3.4.1, § 3.4.2, § 3.4.3 et § 3.4.4* | C | De telles opérations ne sont pas autorisées. |
| | | |
| **CHAPITRE 4** | | |
| | | |
| § 4.2.2 | C | Point e) non mis en œuvre.<br>Les fusibles électriques de rechange ne sont pas nécessaires. L'exigence relative aux fusibles n'a pas été mise en œuvre parce qu'il n'est pas pratique de changer un fusible en vol avec un hélicoptère. Piloter un hélicoptère nécessite les deux mains et les deux pieds. Les fusibles ne sont pas accessibles pour être remplacés en vol. |
| § 4.2.2.1 | C | Partiellement mise en œuvre.<br>Seulement pour les hélicoptères lourds : CdN initial après le 18 février 2020 (toilettes) et le 18 mai 2019 (portable). |
| § 4.3.1.1.2 | A | Le seuil de capacité en passagers dans le CAT.IDE.H.190 (a) (1) est 9 et non 19. |
| § 4.3.1.1.3* | C | Partiellement mise en œuvre.<br>Obligatoire pour les hélicoptères avec un CdN individuel délivrés pour la première fois le 1er août 1999 ou après cette date. |
| § 4.3.1.1.4 | C | Partiellement mise en œuvre.<br>Le CAT.IDE.H.191 couvre les hélicoptères avec un CdN individuel délivré pour la première fois le 5 septembre 2022 ou après cette date. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 4.3.1.1.5* | C | Partiellement mise en œuvre.<br>Le CAT.IDE.H.191 ne couvre que les hélicoptères ayant une MTOM de 2 250 kg ou plus et ayant un CdN individuel délivré pour la première fois le 5 septembre 2022 ou après cette date. |
| § 4.3.1.2 | C | Partiellement mise en œuvre.<br>L'utilisation de bandes magnétiques pour le FDR n'est pas interdite. |
| § 4.3.1.3 | C | Partiellement mise en œuvre.<br>Ce n'est que dans le cas des hélicoptères avec un CdN individuel délivré pour la première fois le 1er janvier 2016 ou après cette date (correspondant au type IVA) que le FDR est tenu d'enregistrer les données pendant au moins les 10 heures précédentes. |
| § 4.3.2.1.2 | B | Autres moyens de conformité.<br>CAT.IDE.H.185 (d)(3) 'l'environnement sonore du compartiment de l'équipage de conduite' inclut les fréquences correspondant au rotor principal, à partir desquelles la vitesse du rotor principal peut être calculée. |
| § 4.3.2.3 | C | Partiellement mise en œuvre.<br>Complètement mise en œuvre pour les hélicoptères avec CdN initial après le 1er janvier 2016. Les autres hélicoptères doivent être équipés d'un CVR capable de conserver les informations d'une durée de seulement 1 heure ou 0,5 heure. |
| § 4.3.3.1.1 | A | La capacité d'enregistrement par liaison de données est requise pour tous les hélicoptères avec un CdN individuel délivré pour la première fois le 8 avril 2014 ou après cette date. |
| § 4.3.3.1.2 et § 4.3.3.1.3* | C | Non mise en œuvre. |
| § 4.3.4.4* | C | Partiellement mise en œuvre.<br>Il n'est pas nécessaire que la documentation du FDR soit sous format électronique. |
| § 4.4.4* | C | Mise en œuvre uniquement pour les opérations extracôtières par hélicoptère. |
| § 4.5.2.3 | C | Moins protecteur.<br>Radeaux de sauvetage : si la distance de la terre est supérieure à 3 minutes. |
| ← § 4.5.2.6* | A | L'AMC1 CAT.IDE.H.300 est applicable à tous les hélicoptères, quelle que soit la date de délivrance du CdN. |
| ← § 4.5.2.7* | A | L'AMC1 CAT.IDE.H.300 veille à ce que tous les radeaux de sauvetage de plus de 40 kg soient équipés d'une télécommande de déploiement. |
| ← § 4.5.2.8* | A | L'AMC1 CAT.IDE.H.300 s'applique à tous les hélicoptères, quelle que soit la date de délivrance du CdN. |
| § 4.5.3.2* | C | Partiellement mise en œuvre.<br>Considérations sur le soleil non incluses. |
| § 4.8.2, § 4.8.3 et § 4.8.4* | C | Non mise en œuvre. |
| § 4.10.1* | C | Partiellement mise en œuvre.<br>Uniquement pour les hélicoptères de capacité de plus de 9 places assises. |
| § 4.15.1* | C | Partiellement mise en œuvre.<br>Uniquement requis au-dessus des mers hostiles. Non requis à terre. |
| | | |
| **CHAPITRE 5** | | |
| § 5.1.3 | C | Partiellement mise en œuvre.<br>La communication basée sur la performance n'est pas autorisée pour les opérations avec des hélicoptères. L'équipement de communication doit être conforme aux exigences applicables en matière d'espace aérien. |
| § 5.1.4, § 5.1.5, § 5.3.2, § 5.3.3 et § 5.3.4 | C | Non mise en œuvre.<br>Communication et surveillance basées sur la performance ne sont autorisées que pour les opérations avec des avions dans l'UE. |
| | | |
| **CHAPITRE 6** | | |
| § 6.2.1 | C | Partiellement mise en œuvre.<br>Les exigences de l'UE ne traitent pas des principes relatifs aux facteurs humains énoncés dans la sous-partie G de la part-M et la part-CAMO. |
| § 6.2.3 | C | Partiellement mise en œuvre.<br>Les prescriptions de l'UE ne stipulent pas explicitement que des copies de tous les amendements doivent être fournies rapidement à toutes les organisations ou personnes auxquelles le manuel a été délivré. |
| § 6.2.4 | B | Caractère différent.<br>L'obligation de fournir le manuel à l'État d'immatriculation s'il diffère de l'État d'exploitation. Il doit actuellement être approuvé par l'État de l'exploitant. Au sein des États membres de l'UE, cette exigence est compensée par la reconnaissance mutuelle. |
| § 6.3.1 | C | Partiellement mise en œuvre.<br>La sous partie G de la Part-M, la Part-CAMO et la Part-CAO ne prennent pas en compte les facteurs humains dans la conception du programme d'entretien. |
| § 6.3.2 | C | Partiellement mise en œuvre.<br>Les prescriptions de l'UE ne stipulent pas explicitement que des copies de tous les amendements doivent être fournies rapidement à toutes les organisations ou personnes auxquelles le manuel a été délivré. |
| § 6.4.2 | A | Les périodes de conservation dépassent les exigences. |
| § 6.7.2 | C | Partiellement mise en œuvre.<br>L'autorisation du pilote/propriétaire ne satisfait pas à l'exigence selon laquelle une personne doit être titulaire d'une licence appropriée à l'annexe 1. |
| § 6.8.2 | A | Les périodes de conservation dépassent les exigences. |
| | | |
| **CHAPITRE 7** | | |
| § 7.1.2 | B | Caractère différent.<br>L'État d'exploitation est l'autorité compétente pour les exploitants NCC et NCO exploitant un aéronef immatriculé dans un pays tiers. |
| § 7.2 | A | Le point 7.2 établit des dispositions pour chaque type d'hélicoptère. L'ORO.FC.130 (a) l'exige pour chaque type et variante. L'ORO.GEN.110 (h) exige l'utilisation d'une checklist, le point 7.2 ne l'exige pas. |
| § 7.4.1.1 | A | Pour l'IFR en monopilote, les règles de l'UE exigent 5 vols IFR et 3 approches IFR dans le rôle de pilote unique selon l'ORO.FC.202. Outre le délai de 90 jours, le règlement (UE) n° 965/2012 prolonge les mesures d'atténuation. Cela n'est pas requis dans le standard. |

| | | |
|---|---|---|
| § 7.4.2.3 | A | Plus exigeant. |
| | | |
| **CHAPITRE 8** | | |
| | | |
| § 8.2 | C | Partiellement mise en œuvre.<br>L'AMC1 ORO.GEN.110(c)&(e) ne vise que les agents techniques d'exploitation qui participent à la veille de vol et à la surveillance du vol. |
| § 8.3 | C | Partiellement mise en œuvre.<br>Le programme de formation pour les agents techniques d'exploitation est détaillé dans l'AMC1 ORO.GEN.110(c)&(e). Toutefois, les exigences de l'UE n'établissent pas les conditions minimales pour l'affectation d'un agent technique d'exploitation ; en outre, les tâches et responsabilités d'un agent technique d'exploitation conformément au § 4.2.1.3 des SARP ne sont pas encore transposées dans les règles de l'UE. Le point b) n'est pas non plus transposé dans le règlement (UE) n° 965/2012. |
| § 8.4* | C | Non mise en œuvre. |
| § 8.5* | C | Partiellement mise en œuvre. |
| | | |
| **CHAPITRE 9** | | |
| § 9.4.3* | C | Moins protecteur.<br>Période de stockage de 3 mois requise en vertu du règlement UE N° 965/2012. |
| § 9.6 | C | Moins protecteur.<br>En l'absence d'indication de la part de l'autorité chargée de l'enquête, l'exploitant n'est pas tenu de conserver les données pendant plus de 60 jours après un accident ou un incident grave. |
| | | |
| **CHAPITRE 10** | | |
| § 10.3 | A | La réussite de la formation initiale requise par le règlement (UE) N° 1178/2011 ÉQUIPAGE entraîne la délivrance d'une attestation de membre d'équipage de cabine (CCA) au demandeur. Le CCA est requis pour les opérations CAT. Si des opérateurs autres que CAT décident d'avoir un membre d'équipage de cabine, cette personne doit également se conformer au règlement (UE) N° 1178/2011 et au règlement (UE) N° 965/2012. |
| | | |
| **SECTION 3** | | |
| **CHAPITRE 1** | | |
| § 1.1.1 et § 1.1.3 | B | Caractère différent.<br>L'État d'exploitation est l'autorité compétente pour les exploitants NCC et NCO exploitant un aéronef immatriculé dans un pays tiers. |
| § 1.15* | C | Partiellement mise en œuvre.<br>Entièrement mis en œuvre pour NCC, mais pas pour NCO. |
| § 1.4 | B | Caractère différent.<br>Agrément délivré par l'État dans lequel l'exploitant est établi ou réside. |
| | | |
| **CHAPITRE 2** | | |
| § 2.2.1 | B | Caractère différent.<br>Dans NCC, la règle s'adresse à l'exploitant, pas au PIC. Pour les opérations par faible visibilité (LVO), il s'agit de l'autorité compétente établie à l'annexe V (partie SPA) : État de l'exploitant si l'aéronef est immatriculé dans un État membre de l'UE ; ou État d'immatriculation si l'aéronef est immatriculé dans un pays tiers et que l'État d'immatriculation a déjà délivré l'agrément spécifique LVO. |
| § 2.6.2.1 | C | Partiellement mise en œuvre.<br>Les conditions météorologiques, à l'héliport d'atterrissage prévu OU au moins un héliport de dégagement seront, à l'heure d'arrivée estimée, égales ou supérieures aux minima d'exploitation de l'héliport. |
| § 2.7.1 | A | Pour les héliports isolés, les conditions météorologiques minimales définies au point 2.6.2.2 doivent prévaloir ET toutes les autres conditions doivent être remplies. |
| § 2.7.2 et § 2.7.3* | C | Partiellement mise en œuvre.<br>Complétement mise en œuvre en NCC.<br>Non mise en œuvre en NCO. |
| § 2.10.1 | C | Partiellement mise en œuvre.<br>Les règles de l'UE prévoient un allégement de la disponibilité et de l'utilisation de l'oxygène à bord dans le cadre du NCO.OP.190 et de l'AMC1.OP.190a). Le commandant de bord peut décider de voler à n'importe quelle altitude sans utiliser d'oxygène et sans que de l'oxygène soit disponible.<br>L'AMC1.NCO.OP.190a) dispose en outre: « (...) le PIC devrait: (...) b) (2) si des symptômes précoces d'hypoxie sont détectés : (i) envisager de revenir à une altitude sûre, et (ii) s'assurer que de l'oxygène supplémentaire est utilisé si disponible. |
| § 2.10.2 | C | Non mise en œuvre. |
| § 2.11 | C | Partiellement mise en œuvre.<br>Les règles de l'UE prévoient un aménagement lié à la disponibilité et de l'utilisation de l'oxygène à bord dans le cadre du NCO.OP.190 et de l'AMC1.OP.190 a). Le commandant de bord peut décider de voler à n'importe quelle altitude sans utiliser d'oxygène et sans que de l'oxygène soit disponible.<br>L'AMC1.NCO.OP.190 a) dispose en outre: « (...) le PIC devrait : (...) b) (2) si des symptômes précoces d'hypoxie sont détectés :<br>(i) envisager de revenir à une altitude sûre, et<br>(ii) s'assurer que de l'oxygène supplémentaire est utilisé si disponible. |
| § 2.20 | C | Partiellement mise en œuvre.<br>Non mis en œuvre pour les vols à 10 minutes de vol ou moins de la terre ferme (NCC). 50 Nm (NCO). |
| | | |
| **CHAPITRE 3** | | |
| § 3.3 | C | Mise en œuvre partielle grâce à la gestion de la sécurité pour NCC.<br>Non mis en œuvre pour NCO. |
| | | |

| | | |
|---|---|---|
| **CHAPITRE 4** | | |
| § 4.1.3.1 | B | Caractère différent.<br>L'État d'exploitation est l'autorité compétente pour les exploitants NCC et les exploitants NCO exploitant des aéronefs immatriculés dans un pays tiers. |
| § 4.1.3.2 | C | Partiellement mise en œuvre.<br>Seulement pour les hélicoptères lourds : CdN initial après le 18 février 2020 (toilettes) et le 18 mai 2019 (portable). |
| § 4.1.3.3* | C | Mise en œuvre uniquement sur les vols où l'équipement de survie est requis pour les exploitants NCC. |
| § 4.2.1 | A | Les instruments supplémentaires suivants sont également prescrits : un moyen de mesurer le dérapage.<br>Pour les opérations NCC au-dessus de l'eau, tous les instruments requis pour le VFR de nuit sont également requis. |
| § 4.2.2 | A | Les instruments supplémentaires suivants sont également prescrits pour les opérations NCC : un moyen de prévenir le mauvais fonctionnement de l'indicateur de vitesse et un moyen d'indiquer quand l'alimentation électrique des instruments gyroscopiques n'est pas suffisante. |
| § 4.2.3 | A | Les instruments supplémentaires suivants sont également prescrits : une autre source de pression statique.<br>Chaque fois que 2 pilotes sont nécessaires, un moyen séparé supplémentaire d'indiquer l'altitude, l'IAS, la VS, le dérapage et le cap stabilisé. |
| § 4.3.2.1 | A | Dispositions supplémentaires pour les combinaisons de survie de l'équipage, l'équipement de sauvetage et l'équipement de survie. Exigences supplémentaires pour NCC au-dessus des eaux hostiles. |
| § 4.3.2.4* | C | Non mise en œuvre pour les exploitants NCO.<br>Mise en œuvre pour tous les exploitants NCC quelle que soit la date de délivrance du CdN.<br>50 % devraient pouvoir être déployés à partir de la position normale de l'équipage, si nécessaire par télécommande. |
| § 4.3.2.5* | C | Mise en œuvre pour les exploitants NCC - télécommande ou masse inférieure à 40 kg.<br>Non mise en œuvre pour les exploitants NCO. |
| § 4.3.2.6* | C | Mise en œuvre pour les exploitants NCC.<br>Non mise en œuvre pour les exploitants NCO. |
| § 4.5.1 | C | Partiellement mise en œuvre.<br>NCO : allégement avec le NCO.OP.190. |
| § 4.5.2* | C | Non mise en œuvre. |
| § 4.6 | C | Partiellement mise en œuvre.<br>Aucune traduction en anglais n'est requise. |
| § 4.7.1.1.2 et § 4.7.1.1.3* | C | Non mise en œuvre. |
| § 4.7.2.1.1 | C | Partiellement mise en œuvre.<br>Mise en œuvre uniquement pour les hélicoptères pour lesquels le CdN individuel a été délivré pour la première fois le 1er janvier 2016 ou après cette date. |
| § 4.7.2.1.2*, § 4.7.3.1.2 et § 4.7.3.1.3* | C | Non mise en œuvre. |
| § 4.7.4.4* | C | Il n'est pas nécessaire que la documentation du FDR soit sous format électronique. |
| § 4.12.1 | C | NCC.GEN.130 et NCO.GEN.125 traitent de l'effet potentiel sur la performance des systèmes de l'aéronef et non sur la capacité à exploiter l'hélicoptère. |
| § 4.12.2.2 | C | Non mise en œuvre. |
| § 4.12.3 | C | Partiellement mise en œuvre.<br>Une approbation spécifique n'est pas requise pour les opérateurs en NCC ou NCO qui utilisent des applications EFB.<br>Caractère différent.<br>Pour les exploitants NCC et les exploitants NCO utilisant des aéronefs immatriculés dans des pays tiers, l'État d'exploitation établit ces critères. |
| | | |
| | | |
| **CHAPITRE 5** | | |
| § 5.1.6 | C | Non mise en œuvre. |
| § 5.1.7 | B | Caractère différent.<br>Pour les exploitants NCC et pour les exploitants NCO utilisant des aéronefs immatriculés dans des pays tiers, l'État d'exploitation établit ces critères. |
| § 5.1.8 et § 5.1.9 | B | Caractère différent.<br>Pour les exploitants NCC et pour les exploitants NCO utilisant des aéronefs immatriculés dans des pays tiers, l'État d'exploitation est l'autorité compétente. |
| § 5.2.3 | B | Caractère différent.<br>Pour les exploitants NCC et pour les exploitants NCO utilisant des aéronefs immatriculés dans des pays tiers, l'État d'exploitation établit ces critères. |
| § 5.2.4 | B | Caractère différent.<br>Pour les exploitants NCC et pour les exploitants NCO utilisant des aéronefs immatriculés dans des pays tiers, l'État d'exploitation est l'autorité compétente. |
| § 5.2.5 | B | Caractère différent.<br>Pour les exploitants NCC et pour les exploitants NCO utilisant des aéronefs immatriculés dans des pays tiers, l'État d'exploitation établit l'agrément spécifique. |
| § 5.3.3 | B | Caractère différent.<br>Pour les exploitants NCC et pour les exploitants NCO utilisant des aéronefs immatriculés dans des pays tiers, l'État d'exploitation établit ces critères. |
| § 5.3.4 et § 5.3.5 | B | Caractère différent.<br>Pour les exploitants NCC et pour les exploitants NCO utilisant des aéronefs immatriculés dans des pays tiers, l'État d'exploitation est l'autorité compétente. |
| | | |
| **CHAPITRE 6** | | |
| § 6.2.2 | A | Les périodes de conservation dépassent les exigences. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 6.5.2 | C | Partiellement mise en œuvre.<br>La maintenance et la remise en service par une personne peuvent être effectuées par le pilote/propriétaire après une maintenance limitée du pilote/propriétaire. |
| | | |
| **CHAPITRE 7** | | |
| § 7.1 | B | Caractère différent.<br>Pour les exploitants NCC et pour les exploitants NCO utilisant des aéronefs immatriculés dans des pays tiers, l'État d'exploitation est l'autorité compétente qui délivre ou valide les licences. |

| REGLEMENTATION O.A.C.I.a | CAT | RÉGLEMENTATION FRANÇAISE |
|---|---|---|
| **PARTIE II** | | |
| § 1.3.2* | A | L'approche basée sur les risques de l'AESA ne concerne pas seulement le "produit", mais prend également en compte la performance du postulant. |
| § 3.6.1 | B | Evaluation possible également par le DOA dans le cadre d'une procédure convenue avec l'Agence de l'Union européenne pour la sécurité de l'aviation (AESA). |
| § 3.6.3 | B | L'autorisation de vol de l'AESA (y compris les conditions de vol) peut être délivrée par un DOA approuvé. |
| | | |
| § 4.2.4.1 | B | L'AESA élabore et adopte des exigences relatives au maintien de la navigabilité de la définition de type. L'Etat membre est responsable du maintien de la navigabilité de chaque aéronef. |
| §6.2.3.1* | B | Le certificat d'agrément de l'organisme de maintenance contient une référence générale au manuel approuvée (MOE ou CAE). Le manuel doit contenir un ou plusieurs chapitres spécifiques relatifs à la localisation des installations de maintenance. |
| § 6.2.5 | A | Les modifications importantes doivent être approuvées par l'autorité compétente avant que la modification puisse être mise en oeuvre. |
| § 6.3.3 | B | La partie 145 du règlement UE 1321/2014 ne prévoit pas d'obligation directe de distribuer le manuel aux utilisateurs finaux, mais les paragraphes 145.A.70 b) et AMC1 145.A.70 ont cet objectif. Idem pour CAO. A.025 et AMC2 CAO. A.025. |
| § 6.4.1 | A | La partie 145 est plus exigeante en ce qu'elle exige la mise en oeuvre d'une méthode de capture des erreurs pour les tâches de maintenance critiques et pour minimiser le risque d'erreurs pour des tâches identiques répétées. |
| | | |
| § 6.5.1 | A | La réglementation de l'UE prévoit des exigences supplémentaires pour les ateliers, les hangars, les bureaux et les zones de stockage. |
| § 6.5.2 | A | La réglementation de l'UE ajoute que les données de maintenance doivent être à jour et que les outils et équipements doivent être contrôlés et calibrés. |
| § 6.6.1 | A | Le règlement de l'UE ajoute des détails sur ses responsabilités. |
| § 6.6.2 | A | La réglementation de l'UE exige que les personnes désignées aient des connaissances et une expérience suffisantes. |
| § 6.6.3 | A | La partie 145 est plus précise et exigeante, nécessitant un système de planification de la production, et nécessite une réévaluation des travaux de maintenance en cas de réduction imprévue du personnel. Partie CAO : aucune différence. |
| § 6.6.4 | A | Les compétences requises pour le personnel de maintenance conformément aux articles 145.A.30 et 145.A.35 dépassent les normes de l'annexe I. La qualification conformément à l'annexe 1 n'est pas requise pour le personnel de certification des composants, le personnel de certification des services spécialisés. Conformément à l'article 5 paragraphe 6 point ii) du règlement (UE) n° 1321/2014, les exigences nationales de l'État membre relatives au personnel de certification des composants s'appliquent. |
| § 6.6.5 | B | La performance humaine est explicitement mentionnée dans la partie 145, mais n'est pas directement mentionnée dans la partie CAO. |
| § 6.7.1 | A | La partie 145 exige également de conserver les documents du sous-traitant pour la remise en service |
| § 6.7.2 | A | Le règlement de l'UE exige 3 ans. |
| § 6.7.3 | A | La partie 145 exige également une traçabilité fiable des activités effectuées et un stockage adéquat pour une récupération facile. |
| § 6.8.2 | A | La réglementation de l'UE inclut les restrictions à la navigabilité ou les limites d'exploitation, le cas échéant. Pour les composants, un formulaire spécifique est requis (formulaire 1 de l'EASA). Pour la partie 145, les détails de la certification de la maintenance sont prescrits dans l'AMC 145.A.50(b). Dans le cas de l'utilisation d'un compte rendu matériel, il est acceptable d'utiliser un certificat abrégé de remise en service au lieu de la déclaration de certification complète. |
| **PARTIE IIIA** | | |
| § 2.2.3 | C | Il n'est pas nécessaire de prévoir la distance d'atterrissage en fonction de la pente de la piste. Les performances ne sont pas prévues en fonction des variations de l'état de la surface de l'eau, de la densité de l'eau et de l'intensité du courant. |
| § 3.4 | C | CS 25 ne contient pas de spécifications pour les charges à flot |
| § 4.1 | C | La phrase « Ils doivent également respecter les principes relatifs aux facteurs humains » n'est pas pleinement respectée. |
| § 4.1.6 | C | Moins protecteur pour les alinéas b), g), h) et i). La protection contre les engins explosifs et incendiaires n'est pas exigée dans la version initiale de la CS-25, qui s'applique à la partie IIIA. |
| § 8.1 | C | La phrase « doit respecter les principes des facteurs humains » n'est pas pleinement respectée. |
| § 9.3.5 | C | Non mise en œuvre dans la version initiale de la CS-25, qui s'applique à la partie IIIA. |
| § 11.1.1* | C | Non mise en œuvre dans la version initiale de la CS-25, qui s'applique à la partie IIIA (sauf pour les portes du compartiment des pilotes). |
| § 11.2 et 11.4 | C | Non mise en œuvre dans la version initiale de la CS-25, qui s'applique à la partie IIIA. |
| **PARTIE IIIB** | | |
| § 2.2.7.1 | C | La prise en compte des freins usés est prévue par la CS 25, mais pas par la CS 23. Les modèles CS.23 et CS.25 n'ont pas de spécifications relatives aux données de performances au moment de l'atterrissage. |
| § 2.2.7.2 et 2.2.7.3 | C | Il n'est pas requis de prévoir la distance d'atterrissage en fonction de la pente de la piste. Les performances ne sont pas déterminées en fonction desvariations de l'état de la surface de l'eau, de la densité de l'eau et de la force du courant. Pour les avions CS 25, des renseignements supplémentaires sur les performances au décollage et à l'atterrissage pour l'exploitation sur des pistes contaminées par de l'eau stagnante, de la gadoue, de la neige ou de la glace peuvent être fournis, mais ce n'est pas obligatoire (voir CS et AMC 25.1591). |
| § 3.1.1 | C | La norme CS 25/23 n'exige pas la fourniture de manuels de réparation structurelle. |
| § 3.1.2 | C | Les CS-25, CS-23 et le règlement (UE) n° 748/2012 n'imposent pas la fourniture de manuels de réparation structurelle. Les défaillances dangereuses ne sont pas spécifiquement abordées en relation avec la fatigue. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 3.7 | C | Le CS-23 exige une protection contre les impacts d'oiseaux sur le pare-brise seulement et uniquement pour les avions de niveau 4. La certification avec des dispositions d'amerrissage n'est pas exigée par les CS-23 et CS-25. Pour la certification CS-25, que la certification d'amerrissage soit demandée ou non, il faut démontrer qu'à la suite d'un amerrissage imprévu, le temps et l'assiette de flottaison de l'avion permettront aux occupants de quitter l'avion (CS-25.801a)). L'avion doit également être conforme à d'autres spécifications de conception d'amerrissage (CS-25.801(b)) (prévention des blessures des occupants, enquête sur le comportement de l'avion sur l'eau, utilisation de radeaux) si le postulant demande une certification avec dispositions relatives à l'amerrissage. La CS-23 ne comprend pas de dispositions équivalentes en matière d'amerrissage. |
| § 4.1.1 | C | La phrase « tenir compte des principes des facteurs humains » n'est pas pleinement respectée. |
| § 4.2 | C | CS-23 : moins protecteur pour les paragraphes 4.2 g) et h). |
| **PARTIE IVA** | | |
| § 2.2.2.1, 2.2.2.2, 2.2.3.1, 2.2.3.1.1, 2.2.3.1.2, 2.2.3.1.3 et 2.2.3.1.4 | B | Les CS 27 et CS 29 s'adressent aux hélicoptères de catégorie A et de catégorie B et non aux hélicoptères de classe 1, 2 et 3. |
| § 2.2.3.2 | C | 2.2.3.2(b) : Non mise en œuvre dans les CS-27 et CS-29. |
| § 2.2.3.3.1 | B | Les CS 27 et CS 29 s'adressent aux hélicoptères de catégorie A et de catégorie B et non aux hélicoptères de classe 1, 2 et 3. |
| § 4.1.6 | C | La disposition du f) relative à la dépressurisation n'est pas mise en oeuvre. |
| § 4.1.8 | B | Pas d'exigence de conception explicite. Les instructions pour assurer le maintien de la navigabilité couvre le sujet. |
| **PARTIE IVB** | | |
| § 4.7 | C | Non mise en œuvre. |
| **PARTIE VA** | | |
| § 3.1 | C | La CS-23 actuelle et le règlement (UE) n° 748/2012 n'imposent pas la fourniture de manuels de réparation structurelle. |
| **PARTIE VB** | | |
| § 6.1.5 | C | Non spécifiquement abordé dans les CS 25 et CS 23. Cependant, le mémo de certification de l'EASA (CM SWCEH 001) est un guide pour l'assurance du développement de CEH et SW et appliqué dans le projet de certification dans des conditions spéciales. Le présent document fournit des indications pour se conformer aux alinéas 6.1.2 (a) et 6.1.2 (b). |

| ANNEXE 9<br>Facilitation | |
|---|---|
| **RÉGLEMENTATION O.A.C.I.** | **RÉGLEMENTATION FRANÇAISE** |
| **CHAPITRE 2**<br>**Entrée et sortie des aéronefs** | |
| Description, objet et emploi des documents d'aéronefs | |
| Norme 2.4 - Déclaration générale | Appliquée, sauf dans les cas ou les services français estiment nécessaires, compte tenu notamment du type de la maladie ou de l'origine du vol, de maintenir une déclaration générale. |
| Pratique recommandée 2.7 | Non appliquée. |
| Manifeste marchandises | Il est estimé que la présentation du manifeste de marchandises est d'une utilité primordiale pour les services douaniers. |
| Pratique recommandée 2.8.1 | Non appliquée. |
| | |
| **CHAPITRE 3**<br>**Entrée et sortie des personnes et de leurs bagages** | |
| Normes 3.8<br>Visa d'entrée | Lorsque le visa est exigé il est payant. |
| Pratique recommandée 3.8.1 - 3.8.4<br>Visa de retour | Appliquée. |
| Pratique recommandée 3.9 | Non appliquée |
| Autre documents | Les passagers étrangers doivent, outre la présentation de leurs pièces d'identité remettre à l'arrivée une carte de débarquement. Les renseignements à fournir sur ce document sont uniquement ceux qui correspondent aux rubriques du modèle de l'appendice 4 de l'annexe.<br>En règle générale, la remise d'une carte d'embarquement n'est pas exigée au départ. |
| Norme 3.10 - Autres documents | La carte d'embarquement comprend, outre l'appendice 3 de l'Annexe 9, un talon détachable demandant une information, à savoir, immigrant, transit, visiteur ou résident. |
| Norme 3.16 - Formalité de congé | Applicable aux passagers seulement. Un manifeste de pacotille est exigé des membres d'équipage. |
| Norme 3.20 - Formalité de congé | Appliquée, sous réserve qu'un mandat du propriétaire des bagages soit remis à l'exploitant. |
| | |
| **CHAPITRE 4**<br>**Entrée et sortie des marchandises et autres articles** | |
| Norme 4.7 | Non appliquée |
| Techniques de traitement électronique des données | Le principe de la participation facultative des exploitants et autres parties intéressées à l'utilisation du système électronique suppose le maintien d'une procédure normale de dédouanement des marchandises qui présente des inconvénients majeurs. |
| Norme 4.9 | |
| Congé de marchandises à l'exportation | La facture commerciale est exigée. |
| Pratique recommandée 4.18 | Non appliquée |
| Congé de marchandises à l'importation | La facture commerciale et le certificat d'origine éventuel sont exigés sous forme distincte. |
| Pratique recommandée 4.22 | Applicable uniquement aux envois non commerciaux de faible valeur. |
| Congé de marchandises à l'importation | |
| Norme 4.23 | Applicable uniquement aux envois non commerciaux de faible valeur. |
| Pratique recommandée 4.44 | Non applicable |
| Entrée et sortie de certains articles. | |
| Pratique recommandée 4.45 | Les droits de douane sont dus, mais l'importation est exempte de taxe fiscale. |
| Entrées et sorties de certains articles | |
| | |
| **CHAPITRE 5**<br>**Trafic en transit dans le territoire d'un Etat contractant** | |
| Norme 5.4<br>Trafic repartant du même aéroport par un autre service | Non appliquée intégralement.<br>Un document précisant notamment, d'une part l'identité des colis et de l'avion et, d'autre part la nature, le poids brut ainsi que le lieu de chargement des marchandises peut être exigé par la douane à titre de déclaration sommaire des marchandises. |

© Service de l'Information Aéronautique, France

| | |
|---|---|
| **CHAPITRE 6**<br>**Aéroport internationaux aménagements et services intéressant le trafic** | |
| Pratique recommandée 6.52 | Les pouvoirs publics l'appliqueront dans toute la mesure du possible. |
| Services médicaux | |
| Pratique recommandée 6.55 | Les pouvoirs publics l'appliqueront dans toute la mesure du possible. |
| Aménagement nécessaire à l'exécution des contrôles d'entrée et de sortie et fonctionnement des services de contrôle. | |
| Pratique recommandée 6.57 | Non appliquée, en raison des problèmes juridiques et financiers que pose l'installation d'agents de contrôle étrangers sur le territoire français. |
| Aménagement nécessaire à l'exécution des contrôles d'entrées et de sortie et fonctionnement des services de contrôle. | |

**Télécommunications aéronautiques**

| REGLEMENTATION O.A.C.I. | CAT | REGLEMENTATION FRANCAISE |
|---|---|---|
| **VOLUME 1 : Septième édition à jour de l'amendement N° 91 en vigueur depuis le 8 novembre 2018** | | |
| **CHAPITRE 2** | | |
| § 2.2.1 | C | Les NDB ne font pas l'objet d'essais périodiques en vol. |
| § 2.3.1 | C | En France, l'information sur le statut opérationnel du service de radionavigation GNSS n'est pas fournie aux organismes rendant les services du contrôle local d'aérodrome, de l'information de vol et d'alerte d'aérodrome ou du contrôle d'approche. |
| | | |
| **CHAPITRE 3** | | |
| § 3.1.2.1.1* | B | La majorité des radiobornes (métropole et outre-mer) ne possèdent pas de commande à distance, leur fonctionnement est assuré de façon continue.<br>Pour pallier l'indisponibilité temporaire d'une radioborne VHF ou d'un DME, le système mondial de navigation par satellite peut être utilisé pour fournir l'information de distance jusqu'au seuil de piste destinée à permettre des vérifications de l'alignement de descente. Cette possibilité sera mise en œuvre uniquement en cas de besoin et fera l'objet d'une information des usagers de l'espace aérien, notamment par la voie de l'information aéronautique. |
| §3.1.2.7.1* | C | Disposition non reprise par la France.<br>Aux emplacements où deux installations ILS distinctes desservent les extrémités opposées d'une même piste et où une installation ILS de catégorie de performances I est utilisée pour les approches et atterrissages automatiques dans des conditions de vol à vue, il n'est pas exigé qu'un dispositif de verrouillage soit établit afin de garantir que seul le radiophare d'alignement de piste desservant la direction d'approche en service rayonne des signaux. |
| §3.1.3.3.3* | C | Disposition non reprise par la France.<br>Il n'est pas exigé que, au-dessus d'une surface partant de l'antenne de l'alignement de piste et inclinée de 7° au-dessus de l'horizontale, l'intensité des signaux émis par les radiophares d'alignement de piste soit ramenée à une valeur aussi faible que possible. |
| § 3.1.4.1, § 3.1.4.2 | C | Dispositions non reprises par la France pour ce qui concerne les aéronefs évoluant en VFR. |
| §3.1.5.1.5* | C | Disposition non reprise par la France.<br>Il n'est pas exigé que la hauteur du point de repère ILS soit de 15 m (50 ft) pour les installations ILS de catégorie de performances I. |
| §3.1.5.1.6* | C | Disposition non reprise par la France.<br>Il n'est pas exigé que la hauteur du point de repère ILS soit de 12 m (40 ft) pour les installations ILS de catégorie de performances I utilisées sur les pistes courtes avec approche de précision identifiées par les chiffres de code 1 et 2. |
| §3.3.6.5.1* | C | Disposition non reprise par la France.<br>Il n'est pas exigé que le signal d'identification des VOR soit transmis au moins trois fois toutes les 30 s, ni que ces signaux soient également espacés au cours de chacune de ces périodes de 30 s. |
| § 3.3.8.1, § 3.3.8.2 | C | Dispositions non reprises par la France pour ce qui concerne les aéronefs évoluant en VFR. |
| §3.4.5.2.1* | C | Disposition non reprise par la France.<br>Il n'est ni exigé que le signal d'identification d'un NDB soit transmis au moins trois fois toutes les 30 s, ni que les signaux soient également espacés au cours de chacune de ces périodes de 30 s. |
| §3.4.7.1* | C | Disposition non reprise par la France.<br>Il n'est pas exigé que les radiobalises LF/MF utilisées comme complément de l'ILS soient installées aux emplacements de la radioborne extérieure et de la radioborne intermédiaire. |
| §3.4.7.2* | C | Disposition non reprise par la France.<br>Il n'est pas exigé que les radiobalises LF/MF installées aux emplacements de la radioborne intermédiaire et de la radioborne extérieure soient situées du même côté du prolongement de l'axe de la piste. |

**Les pratiques recommandées sont signalées par des astérisques (*).**
**Note : Les aérodromes français relèvent soit de la réglementation européenne pour ceux disposant d'un certificat de sécurité aéroportuaire européen, dont la liste figure dans la section AD 1.5 des AIP métropole, CAR-SAM-NAM et RUN, soit de la réglementation nationale.**

| REGLEMENTATION O.A.C.I | CAT | REGLEMENTATION FRANÇAISE |
|---|---|---|
| **DÉFINITIONS** | | |
| Pistes aux instruments<br>Pistes avec approche de précision | B | Pour la réglementation européenne :<br>- Le seuil minimal de visibilité de 1000 m n'est pas repris dans la définition d'une approche classique.<br>Pour la réglementation nationale :<br>- Une piste aux instruments est une piste dotée d'au-moins une procédure d'approche ou de départ aux instruments,<br>- Une approche de précision est une approche en 3D basée sur une installation électronique au sol.<br>- La différenciation Type A Type B ne fait pas partie des critères de classification.<br>- Il n'y a pas de référence à la CAT IIIC dans les règles aérodromes nationales. |
| Pistes à vue | B | Les procédures d'approche aux instruments ne sont pas autorisées sur les pistes à vue. |
| Prolongement dégagé | C | Pour la réglementation européenne, le prolongement dégagé est sous la responsabilité de l'entité appropriée (exploitant d'aérodrome).<br>La définition contenue dans la réglementation nationale est différente : il est précisé que le prolongement dégagé est nécessairement coaxial à la piste et adjacent à une de ses extrémités et inclut le prolongement d'arrêt lorsqu'il existe. De plus, le prolongement dégagé n'est pas attaché au contrôle de de l'autorité compétente. |
| | | |
| **CHAPITRE 1** | | |
| § 1.4.1 | B | La réglementation européenne s'applique aux aérodromes ouverts au public, sur lesquels sont offerts des services de transport aérien commercial, dotés d'une piste revêtue aux instruments de plus de 800 m. Ces aérodromes sont certifiés conformément à la réglementation EU, avec la possibilité d'être exemptés s'ils accueillent moins de 10 000 passagers commerciaux par an et moins de 850 mouvements de fret par an.<br>Les aérodromes ne relevant pas de la réglementation européenne sont certifiés lorsqu'ils accueillent plus de 10 000 passagers commerciaux sur 3 années consécutives.<br>Tous les aérodromes hors champ de l'Union Européenne sont sujets à homologation des pistes par l'Autorité Compétente. |
| § 1.6.2 et 1.6.4 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, la lettre de code reste basée sur l'envergure et la largeur du train hors-tout. |
| | | |
| **CHAPITRE 2** | | |
| § 2.1.2* | C | Cette disposition n'est ni transposée dans la réglementation européenne, ni dans la réglementation nationale. |
| § 2.5.3 | C | Cette disposition est transposée en guide dans la réglementation européenne.<br>Cette disposition n'est pas transposée dans la réglementation nationale. |
| § 2.9.3 | B | Pas de différences pour la réglementation européenne.<br>Pour la réglementation nationale, la fréquence des inspections est basée sur d'autres critères que le chiffre de code, notamment le trafic accueilli. |
| § 2.11.2* | B | Voir différences relatives aux articles 9.2 relatifs au RFFS |
| | | |
| **CHAPITRE 3** | | |
| § 3.1.8* | C | Cette disposition n'est ni transposée dans la réglementation européenne, ni dans la réglementation nationale. |
| § 3.1.10* | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, le code lettre reste basé sur l'envergure et la largeur du train hors tout. De plus, la largeur des pistes code F est soumise à l'approbation de l'autorité compétente. Enfin, la largeur minimale des pistes non revêtues est de 50 m (80 m pour les pistes accueillant des planeurs). |
| § 3.1.11* | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les critères de séparation entre pistes parallèles sont basés sur la longueur de piste et la surface de la chaussée. Des valeurs d'entraxe différentes peuvent être définies sur un aérodrome où se déroulent uniquement des vols VFR. |
| § 3.2.1* et 3.2.2* | C | Pour la réglementation européenne, la disposition n'est applicable que pour les aéronefs de largeur de train hors-tout supérieure ou égale à 9 m et inférieure à 15 m.<br>Pour la réglementation nationale, les accotements ne sont requis que pour les pistes de code E. |
| § 3.2.5* et 3.2.6* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, l'exigence d'accotements se limite aux pistes code E et est soumise à approbation de l'autorité compétente pour les pistes de code F. |
| § 3.3.1 et 3.3.2* | C | La construction d'une aire de demi-tour n'est pas systématiquement requise. |
| § 3.3.4*, 3.3.5* et 3.3.6 | B | Pas de différence pour la réglementation européenne.<br>Ces dispositions ne sont pas reprises dans la réglementation nationale. |
| § 3.3.9 | C | Pas de différence pour la réglementation européenne.<br>Cette norme n'est pas reprise dans la réglementation nationale. |
| § 3.4.3 | A | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, la demi-bande doit s'étendre à 150 m de l'axe pour les pistes avec approches de précision de code 3 et 4 et 75 m pour les pistes avec approches de précision de code 1 et 2. |
| § 3.4.9* | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, la partie nivelée de la bande de piste à vue non-revêtue de code 1 s'étend sur une distance de 25 m au lieu de 30 m par rapport à l'axe de piste, sauf s'il est prévu qu'elle soit utilisée par des planeurs auquel cas elle est fixée à 40 m. |
| § 3.4.12* | C | Cette disposition est transposée en guide dans la réglementation européenne.<br>Cette disposition n'est pas transposée dans la réglementation nationale. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 3.5.1 et 3.5.2* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, l'implantation d'une aire de sécurité d'extrémité de piste n'est exigée que dans le cas d'une création ou d'un allongement de piste. |
| § 3.5.4* et 3.5.6* | C | Pas de différence pour la réglementation européenne.<br>Ces recommandations ne sont pas reprises dans la réglementation nationale. |
| § 3.5.9*, 3.5.10* et 3.5.11* | C | Pas de différence pour la réglementation européenne.<br>Ces recommandations ne sont pas reprises dans la réglementation nationale. |
| § 3.8.1* | C | Pour la réglementation européenne, l'aménagement d'une aire d'emploi du radioaltimètre n'est pas obligatoire pour les pistes avec approche de CAT I.<br>Pour la réglementation nationale, il n'est pas requis dans ce cas. |
| § 3.8.3* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, la largeur de l'aire d'emploi du radioaltimètre pour les approches de précision de CAT III est de 60 m (30 m de part et d'autre de l'axe). |
| § 3.8.4* | C | Cette disposition est transposée en guide dans la réglementation européenne.<br>Pour la réglementation nationale, les caractéristiques des aires d'emploi du radioaltimètre sont les suivantes :<br>- pente longitudinale moyenne inférieure en valeur absolue à 2% ;<br>- pas de pentes locales excédant en valeur absolue 5% ;<br>- pas de dénivellations locales de plus d'un mètre.<br>Lorsque le sol naturel ne répond pas à ces caractéristiques, une étude spécifique est effectuée et un plan de sol artificiel peut être employé. |
| § 3.9.3 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les marges utilisées pour le dimensionnement des voies sont fonction de l'envergure et de la largeur du train hors-tout. De plus, la marge entre roues extérieures du train principal et bord de voie est de 4,5 m sur les sections droites et courbes des taxiways destinés aux avions d'empattement inférieur à 18 m et les exigences pour les voies code F font l'objet d'une autorisation spécifique de l'autorité compétente. |
| § 3.9.4* | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale :<br>- le dimensionnement des voies est fonction de l'envergure et de la largeur du train hors-tout,<br>- les voies de circulation code C destinées aux avions d'empattement supérieur à 18 m doivent avoir une largeur de 18 m minimum,<br>- les voies de circulation existantes code E peuvent conserver une largeur de 22,5 m,<br>- la largeur des voies de circulation code F font l'objet d'une autorisation spécifique de l'autorité compétente. |
| § 3.9.9* | C | La réglementation européenne offre la possibilité de pentes différentes sous certaines conditions.<br>Cette recommandation n'est pas reprise dans la réglementation nationale. |
| § 3.9.12* | C | Pour la réglementation européenne, la résistance des voies de circulation doit être adaptée et non équivalente à celle de la piste.<br>Cette recommandation n'est pas reprise par la réglementation nationale. |
| § 3.13.6* | C | La réglementation européenne donne la possibilité de réduire le dégagement minimal dans le cas d'objets de hauteur limitée ou de poste restreint aux aéronefs de caractéristiques spécifiques.<br>Cette recommandation n'est pas reprise dans la réglementation nationale. |
| | | |
| **CHAPITRE 4** | | |
| § 4.1.8 | B | Pas de différence pour la réglementation européenne.<br>Disposition partiellement reprise dans la réglementation nationale : il n'existe pas de surfaces d'approche avec décalage latéral. Les trouées décalées ne sont pas prévues.<br>La réglementation en vigueur prévoit que des trouées courbes peuvent être utilisées.<br>De telles trouées sont retenues lorsque des procédures courbes sont inévitables (limitation de gêne sonore au-dessus d'habitations, présence d'obstacles inamovibles, etc.). |
| § 4.2.3 ; § 4.2.10 ;<br>§ 4.2.19 ; § 4.2.25 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, il est possible, dans les zones grevées de servitudes aéronautiques d'autoriser l'implantation d'installations et d'équipements concourant à la sécurité de la navigation aérienne et du transport aérien public, sous réserve qu'une étude technique démontre que la sécurité et la régularité de l'exploitation des aéronefs ne sont pas affectées et avis favorable de l'autorité compétente. |
| § 4.2.8 | A | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, la longueur du bord intérieur de la surface d'approche est de 150 m pour les pistes avec approches classiques code 1 et 2 et de 300 m pour les pistes avec approches classiques code 3 et 4. |
| § 4.2.16 | A | Pour la réglementation européenne : pour les codes F, la largeur du bord intérieur de la surface intérieure d'approche et de la surface d'approche interrompue sont augmentées à 140 m quel que soit le type d'avionique des avions accueillis (Table J-1).<br>Pour la réglementation nationale, la largeur du bord intérieur de la surface intérieure d'approche et de la surface d'approche interrompue pour les codes F sont soumises à une approbation spécifique de l'autorité compétente. De plus, la longueur du bord intérieur de la surface d'approche est de 150 m pour les pistes de précision CAT I (code 1 et 2) et de 300 m pour les pistes de précision CAT I, II et III (code 3 et 4). |
| § 4.2. 9 ; § 4.2.17 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, il est spécifié que lorsqu'il y a plusieurs sections, la dernière est horizontale et sa cote altimétrique est la plus élevée des deux valeurs suivantes :<br>- la cote altimétrique de l'origine de la trouée augmentée de 150 m ;<br>- la cote altimétrique augmentée de 100 m du point le plus haut du terrain naturel et des obstacles qu'il supporte sous la trouée d'atterrissage. |
| § 4.2.18 | B | Pas de différence pour la réglementation européenne.<br>La réglementation française permet à certains obstacles de faire saillie au-dessus des OFZ associées à des approches de CAT I dans certains cas très particuliers et sous réserve d'une étude de sécurité. Ces percements peuvent, en tant que de besoin, être accompagnés de restrictions opérationnelles. |
| | | |
| **CHAPITRE 5** | | |
| § 5.1.3.1 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, la fourniture d'un projecteur de signalisation n'est pas obligatoire. Néanmoins, des instructions opérationnelles sont fournies en cas de panne des moyens de radionavigation. |
| § 5.2.1.8* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, le marquage sur voies de circulation non revêtues n'est pas imposé. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 5.2.2.2* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, le marquage d'identification de piste n'est pas imposé sur pistes non revêtues. |
| § 5.2.3.3, 5.2.3.4, 5.2.4.5 et 5.2.5.4 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, une configuration de balisage simplifié (par marques) est autorisée pour les pistes en enrobé noir utilisées en conditions de vol à vue ou en condition de vol aux instruments (à l'exclusion des approches de précision), et celles en béton utilisés en conditions de vol à vue uniquement, l'administration française autorise l'utilisation d'un balisage simplifié (par marques). |
| § 5.2.4.3* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les marques de seuil ne sont pas requises sur pistes non revêtues. |
| § 5.2.4.9 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les marques de seuils décalés sont représentées par une à trois marques en "V". |
| § 5.2.8.4* et 5.2.8.5 | C | Pour la réglementation européenne, les marques axiales améliorées de voies de circulation ne sont pas obligatoires.<br>Cette disposition n'a pas été transposée dans la réglementation nationale. |
| § 5.2.13.1* | C | Pour la réglementation européenne, les marques de poste de stationnement ne sont pas obligatoires.<br>Cette disposition n'a pas été transposée dans la réglementation nationale. |
| § 5.2.13.2* | C | Cette disposition n'est transposée ni dans la réglementation européenne, ni dans la réglementation nationale. |
| § 5.2.14.1* et 5.2.14.2 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, la ligne de sécurité peut délimiter également la séparation entre l'aire de trafic et l'aire de manœuvre. |
| § 5.2.16.2* | B | Pas de différence pour la réglementation européenne.<br>La réglementation nationale permet de remplacer une marque d'obligation pour des raisons d'exploitation par une marque RUNWAY AHEAD notamment dans le cadre des doublets de piste. |
| § 5.3.3.3 | C | La réglementation européenne limite l'obligation d'installer un phare d'aérodrome aux aérodromes accueillant du trafic VFR de nuit uniquement.<br>La réglementation nationale ne présente pas de différence avec l'OACI. |
| § 5.3.3.6 | C | Pour la réglementation européenne, la couleur des éclats des phares d'aérodrome alternant avec les éclats blancs n'est pas imposée.<br>Pas de différence pour la réglementation nationale. |
| § 5.3.3.12 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, cette disposition est appliquée pour les nouvelles installations ; en France, certains phares d'identification déjà installés émettent des éclats lumineux blancs à la place des éclats verts. |
| § 5.3.4.1 et 5.3.4.10 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, le dispositif lumineux d'approche n'est pas imposé sur les pistes à vue et classique. De plus, sur les pistes de précision, la longueur du dispositif peut être réduite avec des minimums opérationnels adaptés. En l'absence de dispositif, des feux d'identification de seuil de piste sont installés. |
| § 5.3.5.1 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les indicateurs visuels de pente d'approche (PAPI et APAPI) ne sont pas imposés sur les pistes accueillant des avions à turboréacteurs. |
| § 5.3.5.2, 5.3.5.3 et 5.3.5.4* | A | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les dispositifs T-VASIS et AT-VASIS ne sont pas autorisés. |
| § 5.3.12.2* | C | Les feux d'axe de piste ne sont pas imposés sur les pistes de précision CAT I. |
| § 5.3.12.3 et 5.3.12.4* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les feux d'axe de piste sont obligatoires pour les décollages par faible visibilité quand la RVR est inférieure à 250 m pour les aéronefs de catégorie A, B, C ; et 300 m pour les aéronefs de catégorie D. |
| § 5.3.14.1 | C | Pas de différence pour la réglementation européenne.<br>Cette disposition n'a pas été transposée dans la réglementation nationale. |
| § 5.3.15.1 et 5.3.15.2 | C | L'installation de feux indicateurs de voie de sortie rapide n'est pas obligatoire dans la règlementation européenne.<br>Cette disposition n'a pas été transposée dans la réglementation nationale. |
| § 5.3.17.1 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les feux axiaux de voie de circulation ne sont systématiquement requis que dans le cas d'une utilisation par RVR inférieure à 150 m. |
| § 5.3.17.2* | C | Pas de différence pour la réglementation européenne.<br>Cette recommandation n'a pas été transposée dans la réglementation nationale. |
| § 5.3.17.13*, 5.3.17.15*, 5.3.17.19 et 5.3.17.20* | B | Pour la réglementation européenne, les espacements de 60 m entre les feux axiaux de voie de circulation ne sont pas admis.<br>Pour la réglementation nationale, l'espacement de ces feux répond à d'autres critères tels que la RVR et la proximité de la piste. |
| § 5.3.19.2* | C | Pour la réglementation européenne, les feux d'aire de demi-tour sur piste peuvent être omis si un guidage suffisant est fourni par les feux de bords de voie de circulation et un marquage axial.<br>La réglementation française n'exige pas systématiquement l'apposition de feux d'aire de demi-tour sur une piste utilisée de nuit. |
| § 5.3.20.1 et 5.3.20.2 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, l'installation de barres d'arrêt n'est obligatoire que pour les voies desservant les pistes utilisées pour les approches de précision de CAT II et III et décollages par RVR inférieure à 150 m. |
| § 5.3.22.1* | C | L'installation de feux de sortie pour poste de dégivrage/antigivrage n'est pas obligatoire dans la réglementation européenne.<br>Cette recommandation n'a pas été transposée dans la réglementation nationale. |
| § 5.3.24.1* | C | Pour la réglementation européenne, l'installation de feux d'éclairage des aires de trafic n'est pas obligatoire sur les aires de dégivrage/antigivrage.<br>Pour la réglementation nationale, l'installation de feux d'éclairage des aires de trafic n'est pas requise. |
| § 5.3.24.4* | C | Pas de différence pour la réglementation européenne.<br>Cette recommandation n'a pas été transposée dans la réglementation nationale. |
| § 5.3.25.1 | C | Pas de différence pour la réglementation européenne.<br>La réglementation nationale ne décrit pas les cas dans lesquels l'installation d'un système de guidage visuel pour l'accostage est exigée. |
| § 5.3.26.1* | C | Pas de différence pour la réglementation européenne.<br>La réglementation nationale ne décrit pas les cas dans lesquels l'installation d'un système perfectionné de guidage visuel pour l'accostage est exigée. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 5.3.27.1* | C | Pas de différence pour la réglementation européenne.<br>Cette recommandation n'a pas été transposée dans la réglementation nationale. |
| § 5.3.28.2* | C | Pas de différence pour la réglementation européenne.<br>Cette recommandation n'a pas été transposée dans la réglementation nationale ; les feux de point d'attente sur voie de service ne sont requis que lorsque la piste est utilisée en dessous de 350 m de RVR. |
| § 5.3.29.1* | C | Pas de différence pour la réglementation européenne.<br>Cette disposition n'est pas transposée dans la réglementation nationale. Toutefois, la protection contre les incursions est assurée par RVR < 550 m ou en LVP par l'installation de barres d'arrêt permanentes qui interdisent l'accès à toutes les voies inutilisables. |
| § 5.4.1.7 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, l'éclairage des panneaux de signalisation destinés à être utilisés de nuit, peut être omis si le panneau est rétro-réfléchissant sur les pistes de code 3 ou 4 avec approche exploitées à vue. |
| § 5.4.2.8 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, un seul panneau d'obligation est requis côté gauche pour les pistes à vue. |
| § 5.4.2.15 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, le panneau CAT II/III n'est pas utilisé et le panneau CAT III est installé au point d'arrêt combiné CAT II/III. |
| § 5.4.2.18 | B | Pas de différence pour la réglementation européenne.<br>L'inscription CAT II ou CAT III est toujours placée le plus près de la voie de circulation, l'indicatif de la piste, figurant à l'extérieur.<br>20-02 CAT III (Panneau côté gauche) — CAT III 20-02 (Panneau côté droit) |
| § 5.4.3.4 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les panneaux indicateurs de dégagement de piste ne sont prévus que sur les pistes avec approche de précision de CAT II ou III, ou pour les décollages par faible visibilité pour indiquer à un pilote qu'il franchit la limite de bande ou de l'aire critique ILS/MLS. |
| § 5.4.3.20 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les panneaux indicateurs de décollage depuis une intersection sont installés du côté du sens du décollage. |
| § 5.4.3.29 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les inscriptions de ces panneaux indiqueront la valeur de la distance restant jusqu'à l'extrémité de piste (TORA) exprimée en mètres mais la lettre 'm' de l'unité n'est pas affichée. L'indicatif de la piste peut être mentionné également. |
| | | |
| **CHAPITRE 6**<br>**Note : l'application de la réglementation européenne se limite à l'emprise des aérodromes.** | | |
| § 6.1.1.10* et § 6.1.2.3* | B | La réglementation européenne a transposé cette disposition en guide.<br>Pour la réglementation nationale, seuls sont balisés les fils et les câbles qui dépassent une certaine hauteur (variable en fonction de leur emplacement).<br>Les caractéristiques de balisage (marques, feux, balises) sont établies selon des critères plus détaillés que les prescriptions de la recommandation 6.1.1.10.<br>Le balisage lumineux de jour n'est pas systématiquement requis. |
| § 6.2.1.2 | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, le fonctionnement des feux BI de types A, B et E est étendu au crépuscule pour tous les obstacles et de jour également pour les éoliennes.<br>Les feux MI A ne sont pas utilisés la nuit.<br>Pour le balisage nocturne de certaines éoliennes situées au sein d'un parc, il est possible d'utiliser des feux rouges à éclats de 200 cd qui ne sont pas prévus par l'OACI.<br>Seules les exigences minimales du tableau 6-3 ("répartition lumineuse des feux HI et MI") sont applicables. Les "recommandations" du tableau 6-3 ne sont pas requises. |
| § 6.2.2.1 | B | Pour la règlementation européenne, le balisage des véhicules ne concerne que ceux se déplaçant sur l'aire de manœuvre.<br>Pour la règlementation nationale, les conditions de balisage des véhicules sur l'aire de manœuvre sont fixées par les autorités locales et incluent les dispositions communes aux véhicules incendies et de service. |
| § 6.2.2.7 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, des feux de moindre intensité peuvent être utilisés sur les véhicules d'escorte "follow-me". |
| § 6.2.2.8 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, il n'y a pas d'exigences de balisage pour les objets à mobilité limitée, comme les passerelles télescopiques. |
| § 6.2.3.4* | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, lorsque le balisage par marques est constitué d'une couleur unique, cette couleur est le jaune pour le cas des obstacles situés à proximité d'une piste dont la projection orthogonale sur un plan vertical quelconque mesure moins de 1,5 m dans ses deux dimensions. |
| § 6.2.3.7* | B | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les fanions sont de couleur rouge ou comprennent deux sections triangulaires, l'une rouge et l'autre blanche. |
| § 6.2.3.18* | B | La disposition est transposée en guide dans la réglementation européenne.<br>Pour la réglementation nationale, il est prévu de pouvoir adapter le balisage, notamment de le réduire en cas de risque de gêne visuelle pour les pilotes, toutefois le type de balisage à utiliser n'est pas spécifié (décision au cas par cas des autorités compétentes militaires et/ou civile). |
| § 6.2.3.20* | B | Pas de différence avec la réglementation européenne.<br>Pour la réglementation nationale, par défaut, le balisage par feux BI est prévu pour les obstacles de moins de 45 m. Il est prévu de pouvoir renforcer le balisage dans des situations particulières. Le besoin est évalué au cas par cas par les autorités militaires et civiles compétentes. |
| § 6.2.3.26 | C | Pas de différence avec la réglementation européenne.<br>Disposition non reprise dans la règlementation nationale. Les feux MI de type C ne sont utilisés que pour le balisage nocturne de certaines éoliennes situées au sein d'un parc. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 6.2.3.30* | B | La partie de la spécification concernant la couleur a été partiellement transposée en tant que guide dans la réglementation européenne.<br>Pour la réglementation nationale, il est prévu de pouvoir adapter le balisage, notamment de le réduire en cas de risque de gêne visuelle pour les pilotes, toutefois le type de balisage à utiliser n'est pas spécifié (décision au cas par cas des autorités compétentes militaire et/ou civile). |
| § 6.2.3.33 | C | Pas de différence avec la réglementation européenne.<br>Disposition non reprise dans la règlementation nationale. Les feux MI de type C ne sont utilisés que pour le balisage nocturne de certaines éoliennes situées au sein d'un parc. |
| § 6.2.4.2* | B | Pas de différence avec la réglementation européenne applicable sur les aérodromes ou dans les zones sous contrôle des exploitants d'aérodrome.<br>Pour la réglementation nationale, les éoliennes peuvent, en plus du blanc, être peintes en gris avec un facteur minimal de luminance supérieur ou égal à 0,4. Cette couleur doit être apposée sur la totalité des aérogénérateurs. Des marques rouges ou oranges additionnelles sont requises pour les éoliennes en mer. |
| § 6.2.4.3* et 6.2.4.5* | C | Pas de différence pour la réglementation européenne.<br>La règlementation française est conforme aux dispositions de cette recommandation à l'exception des points e)-ii et e)-iii : le 2ème feu n'est pas requis et les feux intermédiaires sont des feux faible intensité de type B.<br>Des feux rouges à éclats de 200 cd peuvent être utilisés pour le balisage nocturne de certaines éoliennes situées au sein d'un parc.<br>6.2.4.3.b) : Des espacements maximaux différents de 900 m entre les feux MI sont prescrits par la règlementation française, en fonction du type de balisage (nocturne/diurne), du type de parc éolien (terrestre, maritime), et de la hauteur des éoliennes (inférieure ou supérieure à 150 m). Ces espacements varient entre 500 m et 2 000 m. |
| § 6.2.5.1* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, tous les pylônes ne sont pas nécessairement colorés. |
| § 6.2.5.2* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, le marquage des pylônes qui supportent les fils peut être omis dans le cas des pylônes éclairés de jour par des feux d'obstacle à moyenne intensité. |
| § 6.2.5.11* | B | La disposition est transposée en guide dans la réglementation européenne applicable dans l'emprise et dans les zones sous contrôle de l'exploitant d'aérodrome.<br>Pour la réglementation nationale, il est prévu de pouvoir adapter le balisage, notamment de le réduire en cas de risque de gêne visuelle pour les pilotes, toutefois le type de balisage à utiliser n'est pas spécifié. |
| | | |
| | | |
| **CHAPITRE 8** | | |
| § 8.1.7 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, un temps de communication de l'alimentation électrique auxiliaire de 1 seconde est requis en dessous de 400 m de RVR de jour et 800 m de RVR de nuit. |
| § 8.2.3 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, lorsqu'une piste qui fait partie d'un itinéraire normalisé de circulation à la surface est dotée d'un balisage lumineux de piste et d'un balisage lumineux de voie de circulation, il n'est pas spécifié que les circuits électriques soient couplés de manière à supprimer le risque d'allumage simultané des deux formes de balisage. |
| | | |
| **CHAPITRE 9** | | |
| § 9.2.2 | C | La règlementation européenne ne prévoit pas la mise à disposition de services de sauvetage et de matériel d'incendie spécialisés appropriés au danger ou au risque.<br>La règlementation nationale prévoit des exigences spécifiques uniquement pour les étendues d'eau ("lacs", "mers") et non pour les marécages et autres milieux difficiles. |
| § 9.2.4* | C | Les règlementations européennes et françaises prévoient la réduction d'une catégorie du niveau de protection assurée sur un aérodrome lorsque le nombre de mouvements d'un avion de la classe la plus élevée qui utilise normalement l'aérodrome est inférieur à 700 pendant les trois mois consécutifs de plus fort trafic. |
| § 9.2.5 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, pour les aéronefs effectuant du transport exclusif de fret ou de courrier, la longueur hors tout divisée par trois sert de base au calcul. De plus, pour préciser la notion d'avions qui utilisent normalement l'aérodrome, un seuil de 24 mouvements d'aéronefs sur les trois mois consécutifs de plus fort trafic l'année antérieure est utilisé. |
| § 9.2.8* | C | Pas de différence pour la réglementation européenne.<br>La réglementation française ne demande pas d'agent principal pour les aérodromes de niveaux 1 et 2. |
| § 9.2.11 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les aérodromes de niveau de protection RFFS 1 disposent de 50 kg d'agent complémentaire, les aérodromes de niveau de protection RFFS 2 disposent de 250 kg d'agent complémentaire. |
| § 9.2.13 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les quantités d'eau sont données en fonction de la catégorie RFFS, sans majoration. |
| § 9.2.27 et 9.2.28* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, l'objectif opérationnel du service est un délai d'intervention de 3 minutes maximum à chaque extrémité de la piste. |
| § 9.2.29* | C | Les règlementations européenne et française ne prévoient pas de temps de réponse inférieur à 3 minutes pour atteindre toute autre partie de l'aire de mouvement. |
| § 9.2.41* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, il n'est pas prévu la mise en œuvre d'un véhicule spécifique destiné au service de sauvetage et de lutte contre l'incendie des aéronefs pour les aérodromes de niveau RFFS 1. |
| § 9.2.44* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, il n'est pas prévu la mise en œuvre de personnel RFFS pour les aérodromes de niveau RFFS 1. |
| § 9.2.45* | C | En réglementation européenne, l'analyse des ressources nécessaires aux taches afin de déterminer l'effectif minimal est reprise en guide.<br>Pour la réglementation nationale, l'effectif RFFS par catégorie est fixé réglementairement. |
| § 9.2.46 | C | Pas de différence pour la réglementation européenne.<br>La réglementation nationale ne prévoit l'utilisation d'un équipement respiratoire que sur les aérodromes de catégorie 3 ou supérieure. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 9.3.1* et 9.3.2* | C | Pour la réglementation européenne, les spécifications relatives à l'enlèvement des aéronefs sont reprises en guide.<br>La réglementation nationale prévoit que l'exploitant d'aéronef soit responsable de l'enlèvement de son aéronef. |
| § 9.5.1 à 9.5.3 | C | Cette disposition n'a été transposée ni dans la réglementation européenne, ni dans la réglementation nationale applicable aux aérodromes. |
| § 9.5.7 | C | Les réglementations européenne et française ne prévoient pas qu'une surveillance visuelle des postes de stationnement d'aéronefs soit effectuée pour s'assurer que les dégagements recommandés soient garantis. |
| § 9.8.7* et 9.8.8* | C | Le radar de surface pour aire de manœuvre n'est pas requis systématiquement. |
| § 9.9.4 | C | Pour la réglementation européenne, la présence d'équipement d'aide à la navigation aérienne après l'extrémité de piste peut être acceptée après une étude de sécurité.<br>Pour la réglementation nationale, cette spécification ne s'applique qu'aux créations et allongements de piste. |
| § 9.10.1 | | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les clôtures adaptées destinées à empêcher l'accès de l'aire de mouvement aux animaux sont exigées en fonction du risque. |
| § 9.10.5 | | Cette recommandation a été transposée en guide dans la réglementation européenne.<br>Cette recommandation n'a pas été transposée en règlementation nationale. |
| § 9.11 | | Cette recommandation n'a été transposée ni dans la réglementation européenne , ni dans la réglementation nationale. |
| | | |
| **CHAPITRE 10** | | |
| § 10.2.3 et 10.2.7 | C | Pour la réglementation européenne, les minima de frottements sont définis en guide.<br>Pas de différence pour la réglementation nationale. |
| § 10.3.1 à 10.3.3* | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, le retrait des contaminants sur les pistes, voies de circulation et aires de trafic (neige, glace, eau stagnante, poussière…) pour éliminer le risque d'accumulation fait l'objet de recommandations. |
| § 10.3.5* | C | Les spécifications relatives à l'utilisation des agents chimiques destinés à enlever la glace et la gelée n'ont pas été transposées dans les règlementations européenne et française. |
| § 10.5.1 | C | Pas de différence pour la réglementation européenne.<br>Pour la réglementation nationale, les dispositions portant sur l'intensité moyenne du faisceau principal des feux de piste sont des recommandations inscrites en guide. |

**ANNEXE 14**
**Hélistation**

**VOLUME 2**
**CONCEPTION ET EXPLOITATION DES HELISTATIONS**

**2ème édition à jour de l'amendement N° 3 applicable à partir du 25 novembre 2004**

| REGLEMENTATION O.A.C.I | CAT | REGLEMENTATION FRANÇAISE |
|---|---|---|
| Aire de prise de contact et d'envol | B | Autre moyen de conformité: En France, l'aire de prise de contact et d'envol (TLOF) a la définition suivante : "Aire portante sur laquelle un hélicoptère peut effectuer une prise de contact ou se mettre en stationnaire." |
| Hélistation | B | Autre moyen de conformité : En France, une hélistation est un aérodrome destiné à recevoir exclusivement les hélicoptères. |
| | | |
| **CHAPITRE 2** | | |
| § 2.1.2 et § 2.1.3 | C | Dispositions non reprises |
| § 2.2.2 | C | Dispositions non reprises |
| § 2.4.3 | C | Disposition non reprise : Les coordonnées géographiques des points axiaux des voies de circulation ne sont pas publiées pour le moment. |
| § 2.4.5 | C | Dispositions non reprises |
| | | |
| **CHAPITRE 3** | | |
| § 3.1.2 | C | Disposition partiellement reprise : Les spécifications relatives aux "hydro hélistations" ne sont pas traitées dans la réglementation française. |
| § 3.1.21 | C | Disposition non reprise |
| § 3.1.27 | C | Disposition partiellement reprise : cette disposition ne s'applique pas pour les accotements en France. |
| § 3.1.29<br>§ 3.1.37 | B | Autre moyen de conformité : La réglementation française fait référence au diamètre du rotor pour la largeur hors tout de l'hélicoptère. |
| § 3.2.2 | B | Autre moyen de conformité : En France, le dimensionnement d'une FATO sur une hélistation en terrasse est également prévu pour les FATO destinées à être utilisées par des hélicoptères exploités en classe de performances 3. |
| § 3.2.4 | C | Disposition partiellement reprise : La seconde partie de la norme ne fait l'objet que d'une recommandation. |
| § 3.2.10 | C | disposition non reprise |
| § 3.3 Héliplate-formes | D | Sans objet : Il n'existe pas d'héliplate-forme en France. |
| § 3.4 Hélistations sur navires | C | Disposition non reprise : La réglementation française ne traite pas des hélistations sur navire. |
| | | |
| **CHAPITRE 4** | | |
| § 4.1.5 | B | Autre moyen de conformité : La France utilise le terme surfaces latérales pour les surfaces de transition. |
| § 4.1.48<br>§ 4.1.19<br>§ 4.1.20 | C | Disposition partiellement reprise : Ces spécifications ne sont que des recommandations dans la réglementation française. |
| § 4.1.21 à § 4.1.25 | D | Sans objet : Il n'existe pas d'héliplate-forme en France. |
| § 4.2.2 | B | Autre moyen de conformité : Lorsqu'une approche directe classique est prévue aux deux extrémités, la surface intérieure peut être supprimée après étude. Dans ce cas particulier, la surface conique est remplacée par la continuation de la surface latérale. |
| § 4.2.6 | B | Autre moyen de conformité : Il est possible, dans les zones grévées de servitudes aéronautiques d'autoriser l'implantation d'installations et d'équipements concourant à la sécurité de la navigation aérienne et du transport aérien public, après avis préalable d'une commission spécifique et sous réserve qu'une étude technique démontre que la sécurité et la régularité de l'expoitation des hélicoptères ne sont pas affectées. La réalisation de l'étude est obligatoire, et les objets sont limités aux seuls installations et équipements concourant à la sécurité de la navigation aérienne et du transport aérien public. |
| § 4.2.8 | C | Disposition partiellement reprise : La réglementation française prévoit la possibilité de trouée unique. |
| § 4.2.10 | C | Disposition partiellement mise en œuvre : Les hélistations d'hôpitaux font l'objet d'une étude particulière. |
| § 4.2.11 | C | Disposition partiellement reprise : La réglementation française prévoit la possibilité de trouée unique. |
| § 4.2.12 à § 4.2.18 | D | Sans objet : Il n'existe pas d'héliplate-forme en France. |
| § 4.2.19 à § 4.2.22 | C | Dispositions non reprises : La réglementation française ne traite pas des hélistations sur navire. |

| **RÉGLEMENTATION OACI RÉF :<br>PANS OPS** | **RÉGLEMENTATION FRANCAISE<br>Réf : RECUEIL NATIONAL DE CRITÈRES** |
| **Partie I - section 2 Chap 1 : Généralités** | En France, les procédures de vol aux instruments peuvent être conçues en utilisant les critères issus :<br>- soit du document OACI 8168 volume II – PANS-OPS - version à jour ;<br>- soit du document OACI 9905 - manuel RNP AR - version à jour ;<br>- soit d'un recueil national établi sur la base de la sixième édition du volume II du Doc OACI 8168, incluant tous les amendements jusqu'au N° 7, et qui n'est plus mis à jour depuis juin 2018.<br>Les procédures établies selon l'un des deux documents de l'OACI suscités font l'objet d'une mention explicite sur les cartes aéronautiques les représentant.<br>Ces critères sont rendus applicables par décision du ministre chargé de l'aviation civile publiée au bulletin officiel du ministère chargé des transports, en application de l'arrêté du 24 janvier 2022 relatif à l'établissement et à la conception des procédures de vol aux instruments.<br>Le recueil national présente certaines différences avec les dispositions de l'OACI correspondantes, notamment dans les critères généraux ainsi que dans les critères pour les procédures conventionnelles.<br>Ces différences sont listées ci-après. |
| | **Appendice B au chapitre 1**<br>**Vitesse du vent**<br>Les aires de protection sont établies en prenant en compte l'effet non corrigé d'un vent omnidirectionnel.<br>Des statistiques météorologiques recueillies pour divers terrains de la France métropolitaine ont montré que l'on pouvait adopter pour la protection des procédures un vent maximal :<br>- de 0 à 14 000 ft : w = 1,5 h + 36<br>- de 15 000 à 31 000 ft : w = 2,5 h + 22 (avec w en kt et h en milliers de pieds)<br>- au-dessus de 31 000 ft : w = 100<br>Des valeurs différentes peuvent être adoptées si des statistiques météorologiques particulières le permettent. Lorsqu'aucune statistique n'est disponible ou lorsque l'échantillon des relevés météorologiques n'est pas jugé suffisant, un vent maximal de : w = 2 h + 47 est pris en compte.<br>Remarque : Pour certaines phases de la procédure (ex : approche interrompue), une valeur forfaitaire est fixée pour la prise en compte du vent maximal dans la construction de l'aire de protection.<br>**Température**<br>Les aires de protection sont normalement établies en considérant une température supérieure de 15° à la température standard au niveau considéré. Toutefois, dans certains cas particuliers, l'existence de statistiques de température peut être utilisée pour la prise en considération d'une température maximale différente de celle qui résulterait de l'application de la règle énoncée plus haut. |
| **Partie I - section 2 Chap 2 : REPERES DE REGION TERMINALE<br>§ 2.5.1.1 VOR** | L'aire de tolérance de repère à la verticale d'un VOR est basée sur la coupe circulaire horizontale du cône inversé d'ambiguïté au-dessus de l'installation, ayant son sommet à l'installation et un demi-angle de cône ( $\alpha$ ) de 30°. La pénétration dans le cône est censée être réalisée avec une précision de ± 15° par rapport à la trajectoire de rapprochement prescrite. À partir des points de pénétration, la trajectoire à travers le cône est censée être réalisée avec une précision de ± 5°. Si l'installation définit le MAPT ou le point de virage dans l'approche interrompue, des valeurs fixes sont utilisées.<br>  <br> |
| **Partie I - section 3 : PROCEDURES DE DEPART<br>Chap 2 - §2.6 SURFACE D'IDENTIFICATION D'OBSTACLES (OIS)** | **Non retenu** |

© Service de l'Information Aéronautique, France

| | |
|---|---|
| **Chap 2 - § 2.7.3 PENTE DE CALCUL DE PROCEDURE (PDG)** | Une PDG dépassant 3,3 % ainsi que l'altitude jusqu'à laquelle s'étend la pente augmentée sont publiées ainsi que l'obstacle déterminant cette pente. Deux cas peuvent se présenter :<br>1) la PDG résultant de la prise en compte d'obstacles très proches de la DER est très élevée (supérieure à 15%) : elle n'est pas publiée. Dans ce cas, une nouvelle PDG est calculée en faisant abstraction de ces obstacles. Cette nouvelle pente est publiée avec une mention décrivant les obstacles non pris en compte (position, cote au sommet) ainsi que l'obstacle le plus pénalisant qui la détermine.<br>2) la PDG est élevée (supérieure à 3,3%) : elle est publiée ainsi que l'obstacle déterminant cette pente. Dans le cas où cet obstacle est isolé et que cela représente un intérêt opérationnel, une deuxième pente faisant abstraction de cet obstacle peut être publiée ; l'obstacle le plus pénalisant imposant cette deuxième pente est également publié si cette dernière est supérieure à 3,3%. |
| **Chap 2 - § 2.7 PENTE DE CALCUL DE PROCEDURE (PDG)** | **§ 2.7.4** Si la PDG est augmentée, elle est ramenée à 3,3 % au point situé au-delà de l'obstacle critique où peut être assurée la marge de franchissement d'obstacles de 0,8 % de la distance depuis la DER. |
| **Chap 2 - § 2.7 PENTE DE CALCUL DE PROCEDURE (PDG)** | **§ 2.7.5 Non retenu** |
| **Chap 3 - § 3.1.2 GUIDAGE SUR TRAJECTOIRE** | **§ 3.1.2** Le guidage sur trajectoire est fourni au plus tard 10 NM :<br>a) après l'extrémité départ de la piste (DER) dans le cas des départs en ligne droite, ou<br>b) après exécution des virages dans le cas des départs avec virage |
| **Chap 3 - § 3.3.1.2 DEPART AVEC VIRAGE** | Le vol en ligne droite est présupposé jusqu'à ce que soit atteinte une hauteur d'au moins 120 m (394 ft) [CAT H : 90 m (295 ft)] au-dessus de l'altitude de la DER. Toutefois, pour les aéronefs de CAT A ou B, une hauteur inférieure peut être adoptée, en cas de nécessité, à condition qu'elle reste supérieure ou égale à 90 m (295 ft) |
| **Chap 3 - § 3.3.1.** | **Chap 3 - § 3.3.1.4 On distingue deux types de virage :**<br>- le virage initial entrepris à une hauteur inférieure ou égale à 300 m (984 ft au-dessus du niveau de la DER, dans le cas d'un virage à une altitude/hauteur, ou à un TP désigné situé à une distance inférieure ou égale à 3,2 NM de la DER,<br>- le virage après montée initiale, entrepris à une hauteur supérieure à 300 m (984 ft) au-dessus du niveau de la DER, dans le cas d'un virage à une altitude/hauteur ou à un TP désigné situé à une distance supérieure à 3,2 NM de la DER |
| **Chap 3 - § 3.3.4 PARAMETRES DE VIRAGE** | **§ 3.3.4 Paramètres de virage**<br>**On distingue deux types de virages :**<br>- le virage initial (H 300 m (984 ft) ou TP à moins de 3,2 NM de la DER) ;<br>- le virage après montée initiale (dans le cas contraire).<br>**Vitesses :**<br>**Catégories d'aéronefs** / **Vitesses maximales indiquées (kt)** : **Virage initial** / **Virage après montée initiale**<br>A : 120 / 120<br>B : 145 / 165<br>C : 175 / 265<br>D : 205 / 290<br>**angle d'inclinaison :**<br>- virage initial : 15°<br>- virage après départ initial : 25° ou vitesse angulaire de 3°/s si l'inclinaison qui en résulte est inférieure à 25°. |
| **Chap 3 - § 3.3.5.3** | a) ....<br>1) altitude/hauteur maximale d'obstacles = TNA/H – [50 m (165 ft) pour un virage initial ou 90 m (295 ft) pour un virage après montée initiale] dans le cas des avions.<br>2) altitude/hauteur maximale d'obstacles = TNA/H – [40 m (131 ft) pour un virage initial ou 80 m (265 ft) pour un virage après montée initiale] dans le cas des hélicoptères. |
| **Chap 4 - § 4.2.1 AIRE 1** | **Aires de mise en virage (Aire 1)**<br>Les critères en ligne droite s'appliquent jusqu'au TP (aire de mise en virage). |
| **Chap 4 - § 4.2.2 AIRE 2** | **Aires de mise en virage (Aire 2)**<br>L'aire 2 de départ omnidirectionnel s'étend depuis les limites de l'aire de mise en virage, jusqu'à un cercle de rayon 25 NM centré sur l'aérodrome (point milieu de la piste). Une zone tampon de 5 NM entourant ce cercle est considérée pour la détermination des obstacles à prendre en compte.<br>En région montagneuse, le rayon de ce cercle peut être augmenté si nécessaire, la valeur considérée étant, dans tous les cas, publiée. |
| **Chap 6 - § 6.2.1 DÉPARTS AUX INSTRUMENTS À PARTIR DE PISTES PARALLÈLES** | Lorsqu'il est prévu d'utiliser simultanément deux procédures de départ aux instruments à partir de pistes parallèles, les trajectoires de départ nominales divergent d'au moins 15° immédiatement après le décollage. En fonction de la distance entre les pistes parallèles, une valeur inférieure peut être utilisée, après accord de l'autorité de surveillance |
| **Chap 6 - § 6.2.1 SÉGRÉGATION DES MOUVEMENTS SUR PISTES PARALLÈLES** | Lorsqu'il est prévu d'utiliser simultanément une procédure de départ aux instruments et une procédure d'approche aux instruments dans la même direction sur des pistes parallèles, les trajectoires nominales de la procédure de départ et de la procédure d'approche interrompue divergent aussitôt que possible d'au moins 30° (voir IIème Partie, Section 1, Chapitre 1 – ILS).<br>En fonction de la distance entre les pistes parallèles, une valeur inférieure peut être utilisée, après accord de l'autorité de surveillance. |

**Partie I - section 4 : PROCEDURES D'ARRIVEE ET D'APPROCHE**
**Chap 1**

La réglementation française retient les valeurs suivantes, exprimées en nœuds, pour la vitesse d'approche initiale

| Catégories d'aéronefs | Vitesses d'approche initiale | |
|---|---|---|
| | mini | maxi |
| A | 90 | 150 |
| B | 120 | 180 (170 *) |
| C | 160 | 240 (220 *) |
| D | 185 | 250 (220 *) |

De plus, les vitesses maximales pour les segments d'approche finale, indirecte, et le segment d'approche interrompue intermédiaire d'une procédure protégée pour la catégorie A sont égales à 110 kt

**Chap 2 . § 2.1.1.5**

Une STAR doit permettre la transition entre la phase en route et la phase d'approche en joignant un point significatif, normalement sur une route ATS, avec un point à partir duquel commence la procédure d'approche aux instruments. Le début de la route d'arivée est, suivant les cas : 1) s'il n'existe pas d'espace contrôlé associé à la procédure : - le dernier repère en route, s'il est situé à moins de 25 NM de l'IAF, sinon le point situé à 25 NM de l'IAF sur la route d'arrivée. 2) s'il existe un espace contrôlé associé à la procédure : - la limite de cet espace ou le repère le plus proche possible de cette limite.

**Chap 3 . § 3.3.3 AIRES**

Le segment d'approche initiale n'a pas une longueur normalisée. La longueur doit être suffisante pour permettre le changement d'altitude requis dans la procédure. La largeur de l'aire d'approche initiale au travers de l'IAF est de : - 10 NM (5 NM de part et d'autre de l'axe), lorsque l'IAF n'est pas défini par la verticale d'une installation radioélectrique ; - 4 NM (2 NM de part et d'autre de l'axe), lorsque l'IAF est défini par un VOR ; - 5 NM (2,5 NM de part et d'autre de l'axe), lorsque l'IAF est défini par un NDB. La largeur de l'aire ne peut pas excéder 10 NM (5 NM de part et d'autre de l'axe). Si elle est inférieure à cette valeur à l'IAF, l'aire s'évase à 7,8° (VOR) ou 10,3° (NDB), jusqu'à ce que cette largeur atteigne la valeur de 10 NM (5 NM de part et d'autre de l'axe).

**Chap 3 . § 3.6 AIRES DE PROCEDURE EN HIPPODROME ET DE PROCEDURE D'INVERSION**

e) vitesse du vent (w) : vent omnidirectionnel pour l'altitude h spécifiée ; OACI w = (2 h + 47) kt si h est en milliers de pieds ; France métropolitaine : w = 1,5 h + 36 kt si h est en milliers de pieds ou, si des données statistiques adéquates sont disponibles, le vent omnidirectionnel maximal avec probabilité de 95 % peut être utilisé

**Chap 4 SEGMENT D'APPROCHE INTERMEDIAIRE**
**4.3.1 AIRE**

**4.3.1.1 Longueur**
**4.3.1.1.1** La longueur minimale du segment d'approche intermédiaire doit correspondre à un temps de vol de 30 s à la vitesse d'approche initiale.
**4.3.1.1.2** Lorsque la trajectoire d'approche initiale et la trajectoire d'approche intermédiaire ne sont pas alignées, la longueur minimale du segment intermédiaire est déterminée par la construction de l'aire de protection de cette phase de la procédure.

**Chap 4 . § 4.4.4 Virage non à l'installation**

Non retenu

**Chap 5 . § 5.2 SEGMENT D'APPROCHE FINALE**

**5.2.2 Conditions pour qu'une procédure d'approche finale soit considérée comme directe**
**5.2.2.1……**
**5.2.2.2 Approche finale avec trajectoire qui ne coupe pas le prolongement de l'axe de piste.**
Une approche finale qui ne coupe pas le prolongement de l'axe de piste ( égal ou inférieur à 5°) peut être établie, à condition que la trajectoire se trouve au maximum à 150 m latéralement du prolongement de l'axe de piste à une distance de 1 NM en amont du seuil de piste.
….
**5.2.2.3.2 Position de l'axe d'approche :**
L'axe d'approche finale (ou son prolongement) doit passer à moins de 150m de l'axe de piste à 1 NM en amont du seuil

**Chap 5 . § 5.4.6 PROTECTION DU SEGMENT A VUE DE LA PROCEDURE D'APPROCHE**

**5.4.6.5 Moyens de conformité**
1) Cas dans lesquels la vérification des VSS n'est pas nécessaire :
Pistes de code 3 ou 4 et procédure dans l'axe (finale dans le prolongement de l'axe de piste) :
- servitudes aéronautiques de dégagement, ou, à défaut, surfaces de dégagement (fond de trouée à 2% de pente) régulièrement vérifiées (dans le cadre du suivi de l'homologation) et non percées ou :
- piste (même QFU) équipée de PAPI et OCS PAPI (non percée par des obstacles) située en dessous de la VSS.
Pistes de code 1 ou 2 et procédure dans l'axe (finale dans le prolongement de l'axe de piste) :
- pente d'approche finale telle que la VSS soit au dessus du fond de trouée des servitudes aéronautiques de dégagement, ou à défaut, surfaces de dégagement régulièrement vérifiées (dans le cadre de l'homologation) ou
- piste (même QFU) équipée de PAPI et OCS PAPI (non percée par des obstacles) située en dessous de la VSS.

2) Cas dans lesquels la vérification des VSS est nécessaire :
- toute piste avec procédure dans l'axe ne répondant pas aux conditions ci-dessus.
- pistes avec procédures non dans l'axe.

**Chap 5 . § 5.5 PUBLICATION**

**5.5.3** L'altitude/hauteur de procédure n'est pas inférieure à l'OCA/H du segment qui précède le segment d'approche final.

**Chap 7 AIRE DE MANOEUVRES A VUE**

**7.2.4 OCA/H la plus basse**
L'OCA/H la plus basse est celle qui est indiquée dans le Tableau 1.4.7.3.
La visibilité associée est conforme au règlement européen EU-OPS et n'est pas reprise dans le tableau 1.4.7.3.

| | |
|---|---|
| **Chap 7 . § 7.4.1 Aire qui peut être négligée** | **7.4.1 Aire qui peut être négligée**<br>Un secteur de l'aire de manœuvre à vue où il y a un obstacle proéminent peut être négligé dans les calculs d'OCA/H s'il est situé hors des aires d'approche finale et d'approche interrompue et à l'extérieur d'un demi couloir de manœuvre à vue sur trajectoire prescrite (voir Fig. 1.4.7.3 et 1.4.7.4). La trajectoire nominale d'approche finale de la procédure d'approche directe ne doit pas traverser le secteur interdit (excepté le demi-couloir de manœuvre à vue sur trajectoire prescrite pour la catégorie d'aéronefs considérée). |
| **Chap 7**<br>**APPENDICE AU CHAPITRE 7**<br>**Chap7 . § 7.4** | **2.4.1 Manœuvre à vue imposée de type "circuit de piste"**<br>Cette branche constitue la trajectoire de raccordement entre l'axe de l'approche finale aux instruments et la branche vent arrière de la manœuvre à vue imposée.<br>Il est recommandé que le point d'aboutissement de la branche de divergence sur la branche vent arrière se situe en amont du travers du seuil desservi par la manœuvre à vue imposée.<br>L'angle entre la branche de divergence et la piste desservie par la manœuvre à vue imposée doit être inférieur ou égal à 45°,<br>La longueur et l'orientation de cette branche sont publiées,<br>**2.4.2 Cas particulier d'une manœuvre à vue imposée vers une piste parallèle, semi parallèle ou sécante**<br>Dans certains cas (ex. : pistes parallèles, semi parallèles ou sécantes), la branche de divergence peut se raccorder directement au segment rectiligne d'alignement. La longueur et l'orientation de la branche de divergence ne seront alors publiées que si cette longueur est égale ou supérieure à 0,5 NM.<br>Dans le cas où la longueur de la branche de divergence est inférieure à 0,5 NM, on considèrera une plage d'orientation de la branche de divergence correspondant à des angles d'intersection de l'axe de la piste desservie compris entre 30° et 45°. Le couloir de protection défini au § 1.8.2 sera élargi en conséquence.<br>**2.4.3** réservé<br>**2.4.4** réservé |
| **Chap 8 ALTITUDES MINIMALE DE SECTEUR**<br>**Chap8 . § 8.5** | **8.5 SECTEURS CENTRÉS SUR UN VOR/DME OU UN NDB/DME**<br>**8.5.1 …...**<br>**8.5.2** Le rayon (R) de l'arc DME utilisé est compris de préférence entre 10 et 15 NM, ce qui permet d'éviter un sous-secteur trop petit. La largeur de la zone tampon est réduite à 1 NM au-delà des limites circulaires (limite de secteur et limite supplémentaire). |
| **Chap 9. § 9.4.3 SEGMENT D'APPROCHE FINALE** | **9.4.3.6 SDF.**<br>Les repères de palier de descente ne doivent pas être nommés (les repères de palier de descente ne seront alors pas inclus dans la base de données de navigation ce qui assure au pilote d'avoir une information de distance par rapport au MAPt le long de la finale). |
| **Partie II Procédures conventionnelles** | **Partie II Procédures conventionnelles** |
| **section 1 Chap 1 : SYSTEME D'ATTERRISSAGE AUX INSTRUMENTS (ILS)** | **1.3.3 Longueur du segment d'approche intermédiaire**<br>**1.3.3.3** . La longueur minimale du segment intermédiaire doit correspondre à un temps de vol de 30 s à la vitesse d'approche initiale. En cas de virage à l'IF, la longueur minimale résulte des contraintes de construction de l'aire d'approche intermédiaire. Le raccord de l'aire primaire associé au virage à l'IF doit rejoindre le prolongement des OAS en amont du point I (point le plus en aval de l'aire d'approche intermédiaire basé sur l'intersection entre la surface horizontale d'évaluation des obstacles associée à l'aire primaire du segment d'approche intermédiaire et de la bordure extérieure de la surface X des OAS). La longueur maximale du segment est régie par le fait qu'il doit être situé entièrement à l'intérieur du volume de service du signal d'alignement de piste, et normalement à une distance ne dépassant pas 25 NM de l'antenne du radiophare d'alignement de piste. |
| **§ 1.5.3 APPROCHE INTERROMPUE AVEC VIRAGE** | **1.5.3.2.4 Franchissement d'obstacles**<br>b) Franchissement d'obstacles dans l'aire de virage. L'altitude/hauteur des obstacles dans l'aire de virage est inférieure ou égale à l'altitude/hauteur de virage + do tg Z – MFO où do est mesurée depuis l'obstacle jusqu'au point le plus proche sur la limite de l'aire de mise en virage, et la MFO est égale à :<br>1) 50 m (164 ft) [Cat H : 40 m (132 ft)] pour les virages de plus de 15°, diminuant linéairement jusqu'à zéro au bord extérieur des éventuelles aires secondaires.<br>2) valeur nulle pour les virages de 15° ou moins |
| | **1.5.3.3.3 Franchissement d'obstacles.** Le critère de franchissement d'obstacle à partir du TP amont est garanti par une altitude/hauteur d'obstacles inférieure à :<br>(OCA/Hps – HL ) + do tg Z – MFO<br>où : do = dz + distance la plus courte depuis l'obstacle jusqu'à la ligne K-K<br>dz = distance depuis le SOC jusqu'au TP amont<br>et la MFO est égale à :<br>- 30 m pour les virages de plus de 15° ;<br>- valeur nulle pour les virages de 15° ou moins. |
| **§ 1.6 APPROCHES ILS ET/OU MLS SIMULTANEES EN DIRECTION DE PISTES PARALLELES OU QUASI PARALLELES** | **§ 1.6.1 Généralités**<br>a), b), c),<br>Note : des critères différents peuvent être admis, selon l'écartement des pistes et après approbation par l'autorité nationale de surveillance. |

| | |
|---|---|
| **Chap 5 PAR** | **5.2.7 Aire combinée d'approche intermédiaire et finale**<br>Il s'agit d'une aire disposée symétriquement de part et d'autre du prolongement de l'axe, définie de la manière suivante :<br>- la largeur de l'aire est de 0,5 NM en un point situé à 1 NM en amont du seuil ;<br>- en aval de ce point, la largeur de l'aire demeure constante (0,5 NM) jusqu'au point correspondant à l'OCA/H de la procédure ;<br>- en amont de ce point, l'aire s'évase de 8° par rapport à la trajectoire nominale jusqu'à la limite amont de l'IF;<br>La tolérance de l'IF est de ± 0,8 NM.<br>  <br><br>**5.3.3 Marge de franchissement d'obstacles**<br>A l'intérieur des limites de l'aire d'approche finale, il est défini une surface de franchissement d'obstacles (OCS) qui se compose d'un plan incliné sous un angle de 0,6 Θ par rapport à l'horizontale et passant par une droite perpendiculaire à l'axe de piste et située à une distance horizontale D du seuil donné par la formule :<br>$D = \frac{30}{tg0.6\theta} - \frac{H}{tg\theta}$<br>D et H en mètres, θ en degrés<br>θ = angle de site du plan de descente nominal ;<br>0,6 θ = angle de descente le plus faible admis ;<br>H = hauteur de la trajectoire de descente nominale au dessus du seuil ; sa tolérance est égale à celle définie pour le point de repère ILS d'une installation exploitée en catégorie I.<br>La marge de franchissement d'obstacles est déterminée par la HL de chaque catégorie. |
| **section 2 Chap 6 SRE** | **Chap 6 SRA**<br>**6.1 GÉNÉRALITÉS**<br>Une approche SRA est une approche classique qui peut être utilisée en secours d'une procédure PAR ou ILS. Ce type d'approche n'est défini que pour les aérodromes où le SRE est installé.<br>  <br> |
| **Chap 6 . § 6.2.3 Procédures basées sur guidage tactique** | **§ 6.2.3 Altitudes minimales de sécurité radar (devenues « altitudes minimales de guidage »)**<br>Les critères relatifs au calcul des altitudes minimales de sécurité radar peuvent s'appliquer à différents types d'images radar. Pour la détermination des altitudes minimales de sécurité radar, la zone considérée est entourée d'une aire secondaire. La largeur de l'aire secondaire est égale à la norme d'espacement radar au point considéré.La MFO appliquée dans l'aire secondaire décroît de la valeur entière (minimum de 300 m ou 984 ft) à la valeur nulle. |
| **Section 4, Chap 1 . § 1.5.1 Procédure spéciale d'entrée en attente VOR/DME** | **1.5.1 Non retenu**<br>Dans le cas d'une arrivée sur le radial VOR servant de support à la branche de rapprochement de l'attente, mais en sens inverse du rapprochement de l'attente, seule la procédure avec ouverture à 30° (type 2) est protégée. |
| **Partie III Procédures RNAV et procédures basées sur satellites** | |
| **Section 1 . Chap 6 RNAV avec GBAS** | **Chap 6 Non retenu** |
| **Section 3 . Chap 6 PROCEDURES D'APPROCHE DE PRECISION – GBAS** | **Chap 6 Non retenu** |

# DIFFERENCES BETWEEN FRENCH REGULATION AND ICAO STANDARDS, RECOMMENDED PRACTICES AND PROCEDURES

**ANNEX 1**
**Personnel licensing**

**12th edition including amendment N° 175 applicable since the 8th of November 2018**
**Recommended practices are indicated by an asterisk (*).**

| ICAO REGULATIONS | CAT | FRENCH REGULATIONS |
|---|---|---|
| **CHAPTER 1**<br>**Definitions and general rules concerning licences** | | |
| § 1.1 Aircraft avionics | C | It is not defined in EU rules. |
| § 1.1 Aircraft required to be operated with a co-pilot. | B | Under Part-FCL it is limited to the aeroplane, while the ICAO definition is about aircraft. |
| § 1.1 Airship | B | In Part-FCL the hot-air airships do not fall under this definition but under the definition of "balloon". |
| § 1.1 Appropriate airworthiness requirements | B | Not defined. |
| § 1.1 ATS surveillance service | C | Not defined in EU rules. |
| § 1.1 ATS surveillance system | C | Not defined in EU rules. |
| § 1.1 Certify as airworthy (to) | C | This term and meaning is not implemented in EASA rules. |
| § 1.1 Command and control (C2) link | B | Not defined in regulations. |
| § 1.1 Flight crew member | B | Not defined in EU rules. |
| § 1.1 Flight time — remotely piloted | B | Not defined in regulation. Fly time is determined under the remote pilot's responsability and under the supervision of operator (arrêté du 17 décembre 2015 relatif à la conception des aéronefs civils qui circulent sans personne à bord, aux conditions de leur emploi et aux capacités requises des personnes qui les utilisent et arrêté du 18 mai 2018 relatif aux exigences applicables aux télépilotes qui utilisent des aéronefs civils circulant sans personne à bord à des fins autres que le loisir). |
| § 1.1 Likely | B | Different phrases used such as : "likely to interfere with the safe exercise of the privileges of the applicable licence(s)". |
| § 1.1 Quality system | C | No definition as such but we use the term "Management system" in Regulation (EU) No 1178/2011. |
| § 1.1 Remote pilot | B | The national regulation allows automatic operations. Arrêté du 17 décembre 2015 relatif à la conception des aéronefs civils qui circulent sans personne à bord, aux conditions de leur emploi et aux capacités requises des personnes qui les utilisent : "Article 2 ... 2° Remote pilot: person who controls the flight of a remotely piloted aircraft, whether manually or, when the aircraft flys autonomously, by watchning the trajectory and by staying in a position to intervene on the trajectory at all time to garantee safety". |
| § 1.1 Remote pilot station (RPS) | B | Not applicable. |
| § 1.1 Remotely piloted aircraft syst | B | Not defined in regulations. |
| § 1.1 Rendering (a licence) valid | C | It is not precisely defined in EU rules, for AMLs it is not applicable. |
| § 1.1 Significant | B | Term used throughout Reg.EU 1178/2011 but defined as: "incapacity to function as a member of the flight crew". |
| § 1.2.2.1 | B | The licenses issued by a Member State of the European Union are recognised as valid by all the other Member States without administrative issuance of an additional authorisation. |
| § 1.2.2.3.2 | B | The list of States is mentioned on an attached document. |
| § 1.2.4.2 | C | There are no risk maps regarding pilot's physical and mental health. The Eccairs database collects some flight incapacitations but not all of them. |
| § 1.2.4.7.1 | B | This regulation stipulates that AMEs make applicants aware of the consequences of making a false declaration but does not define what those consequences might be. |
| § 1.2.4.11.2 | C | Not specifically mentioned in EU regs. |
| § 1.2.5.2.4 | A | More exacting for ATCO. |
| § 1.2.9.6* | C | Pilots who have demonstrated language proficiency at operational level are re-evaluated every 4 years. |
| | | |
| **CHAPTER 2**<br>**Pilots licences and qualifications** | | |
| § 2.1.10 | C | Balloon and sailplane pilot may act in commercial air transport up to age 70 with a Part-FCL license. |
| § 2.3.3.1.1 | A | Applicants for a PPL(A) shall have completed at least 45 hours of flight instruction in aeroplanes, 5 of which may have been completed in an FSTD. |
| § 2.3.4.1.1 | A | Applicants for a PPL(H) shall have completed at least 45 hours of flight instruction on helicopters, 5 of which may have been completed in an FNPT or FFS. |
| § 2.3.4.2.1 | A | The total dual flight instruction in ICAO is 20 hours and in Part-FCL 25 hours See general difference in 2.3.4.1.1. |
| § 2.3.5.1.1* | A | Regulation requires a CPL(A) or (H) Part-FCL license and compliance with provisions in FCL.720.PL. |
| § 2.3.5.1.2* | A | Regulation requires a CPL(A) or (H) Part-FCL license and compliance with provisions in FCL.720.PL. |
| § 2.3.5.1.3* | A | Regulation requires a CPL(A) or (H) Part-FCL license and compliance with provisions in FCL.720.PL. |
| § 2.3.5.2* | A | Regulation requires a CPL(A) or (H) Part-FCL license and compliance with provisions in FCL.720.PL. |
| § 2.3.6.1 | A | The total flight time in ICAO is 25 hours and in Part-FCL 35 hours. |
| § 2.4.4.1.1 | A | The total flight time in ICAO is 150 hours and in Part-FCL 185 hours. |
| § 2.4.4.1.1.1 | A | The total flight time in ICAO is 150 hours and in Part-FCL 185 hours. |
| § 2.4.5.1.1* | B | Regulation requires a CPL(A) or (H) Part-FCL license and compliance with provisions in FCL.720.PL. |
| § 2.4.5.1.2* | B | Regulation requires a CPL(A) or (H) Part-FCL license and compliance with provisions in FCL.720.PL. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 2.4.6.1.1 | A | The total flight time for experience in ICAO is 200 hours and in Part-FCL 250 hours. |
| § 2.4.6.1.1.1 | B | Different division of hours different, in Part-FCL it is 5 hours cross-country flight time and 5 hours of night flight. |
| § 2.6.3.1.1.1 | A | Part-FCL requires in addition 500 hours in multi-pilot operations on aeroplanes. |
| § 2.6.4.1.1.1 | A | Part-FCL requires in addition 350 hours in multi-pilot helicopters. This difference was already part of JAR-FCL in JAR-FCL 2.280(a). Next to that: In ICAO under a) gives the combination 70 hours PIC and rest of the 250 hours as PIC under supervision In Part-FCL the combination is 100 hours PIC and 150 hours PIC under supervision Under d) ICAO requires 50 hours of night flight and Part-FCL 100 hours of night flight. |
| | | |
| **CHAPTER 4** | | |
| ← § 4.2.1.4* | C | For Basic training - Part 66.A.25 only requires that the level of knowledge is demonstrated by examinations. For aircraft type training - Approved type rating courses are only required for Group 1 aircraft. For other 2 groups it is optional . |
| § 4.2.1.5 | B | The skill assessment is not required in case of licence issue based on the Basic knowledge examination only. For Cat. A CS the assessment is performed in Part-145 Organisations. For type examination for Group 2 and 3 aircraft the skill assessment is not mandatory. |
| § 4.2.2.2 | C | No certifying staff licencing for the release of the components, the entire aircraft can be released by Cat. C CS after the base maintenance. |
| § 4.4.1.3 | B | The unit endorsement course duration is not established by the Regulation. |
| § 4.5.1 | B | The list of ratings is slightly different: a)aerodrome control visual; b) aerodrome control instrument; c) approach control procedural; d) approach control surveillance; e) area control procedural; f) area control surveillance. |
| § 4.5.2.2.1 | C | The supervision duration for initial training is not established by the Regulation. |
| § 4.5.2.2.2 | B | The validity period of unit endorsements for initial issue and renewal shall commence not later than 30 days from the date on which the assessment has been successfully completed. |
| § 4.5.3.1 | B | Some ratings are slightly different, although the Regulation covers all of them. |
| § 4.5.3.3 | A | Holders of an instructor endorsement shall be authorized to provide on-the-job training and supervision at a working position for areas covered by a valid unit endorsement. |
| § 4.5.3.4 | C | Although the concept of 'invalidation of a rating' as such does not exist, the holder of an air traffic controller licence is not allowed to exercise the privileges of a rating after a period of absence of more than 90 days or if the revalidation of the unit endorsement fails due to the non-availability of the minimum number of working hours. |
| | | |
| **CHAPTER 5** | | |
| § 5.1.2 | C | No corresponding provisions on the material 5.1.2 of the licence in Part-66. |
| § 5.1.3 | B | For maintenance staff the requirements are different but serve the same purpose, in particular when licence is issued by the MS in the national language and the bearer is working in that MS, the rule allows for such licence not to have any English translation |
| | | |
| **CHAPTER 6** | | |
| § 6.2.3.2* | C | Not defined in EU regulations. |
| § 6.2.4.2 | A | For ATCO the requirements are more restrictive: applicants shall be normal trichromates. |
| § 6.2.4.3 | A | For aircrew regulations state that applicants shall pass the Ishihara test. For ATCO the requirements are more restrictive: pseudoisochromatic plate testing alone is not sufficient. Colour vision should be assessed using means to demonstrate normal trichromacy. |
| § 6.2.4.4.1* | C | Not specified in EU regulations. |
| § 6.2.5.5* | C | Performed only when an instrument rating is to be added to licence. |
| § 6.3.2.9.1* | C | Only required on clinical or epidemiological indication. |
| § 6.3.2.21.1* | C | Fit assessment permitted from start of pregnancy until end 26th week (restricted to multi crew operations). |
| § 6.3.3.2.3 | B | Ophthalmic reports requirement is dependent on refractive error limits rather that visual acuity limits. |
| § 6.4.2.6.2* | C | Not implemented. |
| § 6.4.3.2.3* | C | Not required under EU regulations. |
| § 6.4.3.5 | B | The Acceptable means of Compliance states that visual fields should be examined but does not define that the fields should be normal. |
| § 6.4.3.6 | B | The Acceptable means of Compliance states that binocular function should be examined but does not define that the binocular function should be normal. |
| § 6.5.2.6.1 | A | Annual ECGs required after age 40. |
| § 6.5.2.20 | A | Not permitted for initial issue of class 3 certificate. |
| § 6.5.2.21.1* | C | Not implemented. |
| § 6.5.3.2 | A | Applicants with hypermetropia exceeding +5.0 dioptres, myopia exceeding -6 dioptres, an astigmatic component exceeding 3 dioptres or anisometropia exceeding 3 dioptres; shall have a corrected visual acuity of 6/6 or better in each eye. |

© Service de l'Information Aéronautique, France

**ANNEX 2**
**Rules of the Air**

**Eleventh edition including amendment N° 48 in force from 28th November 2024.**
**Recommended practices are indicated by an asterisk (*)**

| ICAO REGULATIONS | CAT | FRENCH REGULATIONS |
|---|---|---|
| **CHAPTER 3** | | |
| § 3.1.2 | A | French regulations add requirements not to fly below minimum heights, defined by arrêté, when overflying cities or other urban centers, open-air gatherings of people and animals, some facilities and premises, and by décret or arrêté when overflying national parks and other natural reserves. |
| § 3.2.2 | A | SERA requires priority also for aircraft with impaired manoeuvrability. |
| § 3.2.2.4 | C | SERA allows sailplanes to overtake each other from the right as well. |
| § 3.2.2.7.3 | A | SERA refers to the previous point, so it requires explicit clearance from the control tower in addition. |
| § 3.2.3.2 | C | SERA allows for point b) to act as far as practicable; in addition the definition of night is different. |
| § 3.2.5 | C | SERA differs from points 3.2.5(c) and 3.2.5(d) in that it specifies that subparagraphs (c) and (d) do not apply to balloons. |
| § 3.3.1.2 | A | SERA requires flight plan submission for flights planned to operate at night, if leaving the vicinity of an aerodrome. |
| § 3.3.2 | A | SERA.4005(a)(14) explicitly requires the inclusion of information regarding the existence of a ballistic parachute recovery system in the flight plan, if installed on the aircraft. |
| § 3.3.5.3 | A | SERA also considers operating sites, not just aerodromes. |
| § 3.3.5.4 | A | SERA also considers operating sites, not just aerodromes. |
| § 3.3.5.5 | A | SERA also considers operating sites, not just aerodromes. |
| § 3.6.5.2.1 | A | SERA.14083(c)(6) also requires IFR flights to set Mode A Code 7601 in order to inform the ATS unit about their intention to continue to fly in VMC and land at the nearest suitable aerodrome. Point b) is not implemented. |
| § 3.6.5.2.2 | B | SERA.14083 requires a common time parameter of 20 minutes to be observed for both procedural and surveillance environment before adapting the speed and vertical profile in accordance with the filed flight plan, as amended by the modification and delay messages. |
| § 3.8.1 | B | The words ‘in distress’ of Chapter 3 Part 3.8, are not included in Union law, thus enlarging the scope of escort missions to any type of flight requesting such service. Furthermore the provisions contained Annex 2 Parts 1.1 to 1.3 inclusive as well as those found in Attachment A, are not contained in Union law. |
| | | |
| **CHAPTER 4** | | |
| § 4.6 | B | SERA requires in addition to the ICAO obstacle clearance criteria in point (2) that the VFR flight shall be 150 m (500 ft) above the highest obstacle within a radious of 150 m (500 ft) from the aircraft. French regulations add requirements not to fly below minimum heights, defined by arrêté, when overflying cities or other urban centers, open air gatherings of people and animals, some facilities and premises, and by décret or arrêté when overflying national parks and other natural reserves. Additionaly, unmanned aircraft systems, hill soaring gliders, balloons and ultralight gliders may operate below the minimum heights in 4.6 b) provided they don't create any hazards to people or properties on the ground. For training flights, the minimum height in 4.6 b) is reduced to 50 m (150 ft) for forced landing training. Aforementioned manned aircraft keep at all times a minimum distance of 150 m from any person, vehicle, ship or artificial obstacle. |
| | | |
| **CHAPTER 5** | | |
| § 5.3.3 | A | Position reports are required by IFR flights in uncontrolled airspace even without having submitted a flight plan, when required to maintain air ground communication. |

© Service de l'Information Aéronautique, France

**ANNEX 3**
**Meteorological service for international air navigation**

**20th edition including amendment N° 81 applicable from the 28th November, 2024**
**Recommended practices are indicated by an asterisk (*)**

| ICAO REGULATIONS | CAT | FRENCH REGULATIONS |
|---|---|---|
| **PART I** | | |
| **CHAPTER 4** | | |
| § 4.5.1 | C | At N1 service level aerodromes not serving international commercial air transport operations, “reduced” regular and special observation messages may be provided.<br>The content of these “reduced” messages is specified in section GEN 3.5 of the AIP. |
| § 4.6.1.1 | B | For aerodromes in overseas territories, the wind direction is given with relation to the magnetic north in the regular and special local weather reports. |
| § 4.6.4.1 | C | The signaling of thunderstorm activity in French Polynesia and in Wallis Futuna Islands is not undertaken at automated sites in the environment of which there isn’t any lightning detection sensor. |
| § 4.6.4.3* | B | Only thunderstorms (TS) are reported in METARs from automatic weather observation systems as current weather information representative of conditions in the vicinity of the aerodrome. |
| § 4.6.8* | C | Additional information is included in METAR of aerodromes where these observations are performed by a human. |
| | | |
| **CHAPTER 6** | | |
| § 6.2.1 | B | This standard is applied except in French Polynesia aerodromes others than Tahiti Faa’a (NTAA) and Bora Bora Motu Mute (NTTB), for which a specific forecast service called « Aperçu de Zone » (Zone Overview) covering several aerodromes may be established |
| § 6.5.3 | B | In metropolitan France, the area forecast for low-altitude flights established for AIRMET information dissemination are provided in the form of charts every 3 hours from 0600 TU to midnight TU. |
| | | |
| **CHAPTER 7** | | |
| § 7.4.1 | C | To date, wind shear is considered a factor to be taken into account at the aerodromes of Nice and Tahiti. Only the Nice aerodrome has an operational sensor . |
| | | |
| **PART II** | | |
| | | |
| **APPENDIX 3** | | |
| § 2.1.1 | B | The regular and special local weather reports are produced in abbreviated plain language, in a format which is not strictly compliant with the format of table A3-1. |
| | | |
| § 4.2.4.2 | C | In the regular and special local weather reports, visibility along the runways is not specified. Only the prevailing site visibility is given with an indication of the used units of measure. |
| § 4.3.2.2* | B | When the minimum runway visual range published for landing is equal to or greater than 800 meters, the runway visual range can be obtained by conversion of the indicated meteorological visibility. |
| § 4.3.5* | B | In the regular and special local weather reports, the light intensity of the lighting system used for the calculation of RVR is the maximum light intensity available for the concerned runway. |
| § 4.3.6.2* | B | The maximum RVR that can be measured and transmitted is 5 000 m (and not only 2 000 m). |
| § 4.3.6.3 | B | In the regular and special local weather reports and in the aviation routine weather reports (METAR), the RVRs exceeding the maximum value which can be determined by the system are specified as “P” abbreviated followed by the maximum value. When the RVRs are less than minimum value which can be determined by the system, they are specified as “M” abbreviation followed by the minimum value. |
| § 4.3.6.5* | B | In the aviation routine weather reports (METAR), when the runway visual range is measured at both runway ends, these two measurements are supplied without considering the service threshold. Thus, in some cases, an aviation routine weather report may include more than 4 values for the runway visual range. |
| § 4.4.2.6* | C | The following characteristics of present weather phenomena are not indicated in the messages from fully automatic observation systems: shallow (MI), partial (PR), (drifting-) low (DR), (blowing-) high (BL). |
| § 4.5.4.3* c) | C | Vertical visibility is not indicated. |
| § 4.5.4.3* e) | A | In local routine reports, in local special reports and in METAR, in the presence of significant clouds, nebulosity and cloud base height information is provided for cloud layers above 1 500 m (5 000 ft) or above the highest minimum sector altitude. |
| § 4.5.4.6* b) | A | In the messages from fully automatic observation systems, if no cloud is detected by the system:<br>- The cloud layers are coded as NSC if the system hasn’t detected any convective cloud;<br>- The cloud layers are coded as NCD if the system has no detection ability of convective clouds. |
| § 4.5.4.6* d) | C | In local routine reports, in local special reports and in automated METAR when the sky is obscured the vertical visibility value is replaced by the symbol ///. |
| § 4.8.1.4* | C | In the aviation routine weather reports (METAR) which are not from fully automatic observation systems, information about wind shear are added if the phenomenon was reported by a pilot to air traffic services, or if wind shear sensors were installed. |
| **APPENDIX 5** | | |
| § 1.2.4* | A | When significant clouds are foreseen, nebulosity and cloud base height information is provided for cloud layers above 1 500 m (5 000 ft) or above the highest minimum sector altitude . |
| | | |
| **APPENDIX 6** | | |
| § 1.1.6* | C | The provision of SIGMET in a digital format is planned for the end of 2022 for meteorological watch offices of Tahiti flight information region (NTTT). Those provisions do not apply in New Caledonia and other overseas departments and territories. |

© Service de l'Information Aéronautique, France

**ANNEX 4**
**Aeronautical charts**

Eleventh edition, including amendment N° 62 applicable since 28th of November 2024

| ICAO REGULATIONS | CAT | FRENCH REGULATIONS |
|---|---|---|
| **CHAPTER 1 : Definitions, application and availability** | | |
| 1.2.2 | C | Charts comply with the standards of Annex 4, except those for which a « D » is depicted in the French order: « arrêté du 6 juillet 2018 modifié relatif aux cartes aéronautiques." |
| 1.2.2.1* | C | Charts comply with the recommended practices of Annex 4, except those for which a « D » is depicted in the French order: « arrêté du 6 juillet 2018 modifié relatif aux cartes aéronautiques." |
| | | |
| **CHAPTER 2 : General specifications** | | |
| 2.4.1 | B | Some conventional symbols used by France do not conform to those prescribed by Annex 4. Those are identified with a « D » in appendix B of French order: « arrêté du 6 juillet 2018 modifié relatif aux cartes aéronautiques." |
| 2.4.4 | B | Symbols used for aeronautical charts representing performance-based navigation procedures comply with appendix B to the annex to 6th of July 2018 order. For other charts, symbols will be updated during periodic reviews. |
| 2.5.7 | C | Conversion scales (kilometers/nautical miles, meters/feet) are only depicted on the charts when it deemed appropriate. Conversion tables are provided in the GEN 2.6 part of the AIP. |
| 2.12.3.1 | C | Spot elevations of doubtful accuracy are not depicted. |
| 2.14.1 | C | The airspace class may not be indicated on enroute charts. |
| 2.14.2* | B | On charts used for visual flight, the parts of the ATS airspace class table (paragraph SERA.6001 of European Commission Implementing Regulation No. 923/2012, as last amended) that apply to the airspace shown on the chart may not appear on the front or back of each chart, as the table is published in the AIP. |
| 2.15.1 | C | True North is not systematically indicated. True North direction is represented by the left edge of aeronautical charts facing up, except when the following symbol is indicated:<br>  <br>In this case, true North true is indicated by the direction of the arrow. |
| 2.15.3* | C | Magnetic variation changes are published within six AIRAC cycles in sections AD 1.3 and AD 2.2 of the Aeronautical Information Publication. Charts are updated within a period not exceeding three years. |
| | | |
| **CHAPTER 3 : AERODROME OBSTACLE CHART — ICAO TYPE A (OPERATING LIMITATIONS)** | | |
| 3.2.1 | C | The Aerodrome Obstacle Chart - Type A is published only for aerodromes receiving commercial public traffic and for which an instrument approach or departure procedure is published. |
| 3.8.2.1 | C | Only a straight takeoff trajectory is taken into account for the establishment of the chart. In the case of a standard instrument departure path at an angle of 15 ° or less, an extended obstacle chart may be established on the side of the turn. |
| **CHAPTER 4: AERODROME OBSTACLE CHART — ICAO TYPE B** | | |
| 4.2.1 | C | The publication of ICAO type B aerodrome obstacle charts is not required. When an aerodrome operator or ATS service providers decide to provide it, it is then established in conformity with the standards and recommended practices of Annex 4, Chapter IV . |
| **CHAPTER 5. AERODROME TERRAIN AND OBSTACLE CHART — ICAO (ELECTRONIC)** | | |
| 5.2.1 | C | Not provided. |
| **CHAPTER 7: EN ROUTE CHART - ICAO** | | |
| 7.9.1 | C | Not applied in France. All aerodromes used by international civil aviation and on which an instrument approach may be carried out are not necessarily indicated. |
| 7.9.2 | C | P, R and D areas with a ceiling less than 1000 feet ASFC or 3000 feet AMSL may not be depicted and the vertical limits of these areas may not be indicated. |
| 7.9.3.1.1 | C | 1.The geographical coordinates of the radionavigation aids associated with the air traffic services system may not be indicated on the lower space enroute chart. In this case, they are published in a separate document attached to the chart. The plain language names of radionavigation aids may not be indicated on enroute charts.<br>2.The altitude of the DME antenna may not be indicated. The information is then available in the AIP.<br>3.The indication of all designated airspace; their lateral and vertical limits as well as airspace classes may not be indicated.<br>5.The geographical coordinates of significant points that define ATS routes and do not correspond to the position of a radionavigation aid may not be indicated on the chart, in which case they are then published in a separate document attached to the map.<br>6.b). For the waypoints that define VOR / DME area navigation routes, the bearing is rounded to the nearest degree. The distance to the reference VOR/DME, if the waypoint is not co-implanted with it, is rounded to the nearest nautical mile.<br>10.The minimum area altitudes are rounded to the next 50 m or 100 ft. |
| | | |
| **CHAPTER 8 : Regional chart - ICAO** | | |
| 8.9.4.1.1 | B | 1.The geographical coordinates of radionavigation aids associated with the air traffic services system may not be indicated on the chart.<br>2. The altitude of the DME transmitter antenna is not indicated.<br>6. Holding patterns and terminal area routes, unless described on SID or STAR charts, with route designators and the direction of the route, rounded to the nearest degree, along each section of the prescribed terminal area airways and routes.<br>7.The geographical coordinates of significant points not corresponding to the position of a radionavigation aid may not be indicated on the map; they are then published in AIP France, en route 4.4.<br>8.b) For the waypoints defining VOR/DME area navigation routes, the bearing rounded to the nearest degree, and the distance, rounded to the nearest tenth of a nautical mile from the reference VOR/DME, if the waypoint is not co-implanted with it.<br>11.The transition points are not shown on the maps, and if necessary are defined in AIP ENR 3.<br>13.The minimum vectoring altitudes are published separately on a map entitled "minimum vectoring altitudes". |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| **CHAPTER 9. STANDARD DEPARTURE CHART — INSTRUMENT (SID) — ICAO** | | |
| ← 9.9.4.1.1 | B | b.1) i). The plain language name, unless the aid is not listed in GEN 2.5 of the AIP, in which case the plain language name may not be shown on the chart.<br>b.1) v) Geographical coordinates of radio navigation aids are not shown.<br>b.1) vi) The altitude of the DME antenna is not indicated.<br>b.2) i) The plain language name, unless the aid is not listed in GEN 2.5 of the AIP, in which case the plain language name may not be shown on the chart.<br>c.1) ii) Geographical coordinates may not be shown.<br>c.1) iii) Bearing, rounded to the nearest degree, relative to the reference radionavigation aid.<br>f. A note is included whenever there are close obstacles which are not taken into account for the published procedure calculated gradient; the position and summit rating of these obstacles are published. Information on close obstacles is provided by the procedure designer.<br>j.3) The transponder code is not depicted. |
| | | |
| **CHAPTER 10. STANDARD ARRIVAL CHART — INSTRUMENT (STAR) — ICAO** | | |
| ← 10.9.4.1.1 | B | a.4) Distances between significant points are rounded to the nearest nautical mile or tenth of a nautical mile.<br>b.1) i) and b.2) i) The plain language names of radio navigation aids not listed in GEN 2.5 may not be shown on this type of chart.<br>b.1) v) The geographical coordinates of radionavigation aids may not be shown. They are available in the AIP.<br>b.1) vi) The altitude of the DME antenna is not shown.<br>c. 1) ii) Geographical coordinates may not be indicated.<br>c. 1) iii) Bearing is rounded to the nearest degree.<br>i. 3) Transponder code not shown. |
| ← 10.9.4.2* | B | The relevant procedures to be used in case of communications loss are described whenever possible, on the chart or on the back of the chart.<br>Where deemed necessary, a text describing the STAR is also presented. |
| | | |
| **CHAPTER 11. INSTRUMENT APPROACH CHART — ICAO** | | |
| 11.2.3 | B | ILS and LOC procedures can be represented on a single chart, even if the final or interrupted approach segments are not identical. The visual prescribed track (VPT) procedures are shown on separate charts. Circling elements (OCH base and operating minima) are published on the instrument approach chart used prior to the MVL. |
| ← 11.10.1.4 | C | Only the height of the threshold, rounded to the nearest foot, is indicated. The correspondence in hectopascals (rounded to the nearest whole hectopascal) is given for the altitude taken as reference for the map. |
| 11.10.2.5 | C | The reference level is the altitude of the aerodrome, except:<br>- for precision approach charts (ILS - SBAS CAT I - PAR) and approaches with vertical guidance (APV SBAS, APV Baro);<br>- for conventional approach charts, where the threshold of the runway on which the instrument approach is conducted is more than 2 m (7 ft) below the aerodrome elevation; in both cases, the reference level is the threshold altitude |
| 11.10.4.1 | B | All radio aids in the scope of the map are indicated with their codes and frequencies. Aids directly involved in the procedure are depicted in bold. For aerodromes not published on an ICAO area chart, radioelectric aids commonly used, but located outside the limits of the instrument approach chart, are indicated in their direction by mentioning their code, frequency, magnetic bearing and nautical mile distance from the IAF. |
| 11.10.4.3 | B | The final approach fix (or final approach point, in the case of an ILS approach procedure) is not identified by geographic coordinates. A table is published to communicate the geographical coordinates of the essential points/fixes of the approach procedures |
| 11.10.6.1 | C | f) The boundaries of the sectors in which visual maneuvers (circling) are prohibited are not shown on the plan view. |
| 11.10.6.2 | C | Not applied. The plan view does not indicate the distance between the aerodrome and the radionavigation aids involved in the final approach. |
| 11.10.6.3 | C | A profile view is given below the plan view and contains the following information:<br>a) The aerodrome runway represented by a bold line at the reference level of the chart;<br>[...]<br>d) Not applied (the profile of additional segments, other than those specified in (b) and (c), are not represented by a dashed line with arrows). |
| 11.10.8.4 | C | For non-precision approaches, the distance, the flight time and the vertical speed between the FAF and a marker or the MAPT are indicated; this information is only provided when the procedure is protected considering that the MAPT is defined by its distance from the FAF or a marker. |
| | | |
| **CHAPTER 12. VISUAL APPROACH CHART — ICAO** | | |
| 12.2 | C | A visual approach chart is published for aerodromes with a control area or located in a complex aeronautical environment. |
| ← 12.10.3 | C | Prohibited, restricted and dangerous areas.<br>Airspaces are indicated only from the surface to the highest of the following two levels:<br>- 5000 ft / AMSL<br>- 2000 ft / ASFC |
| 12.10.4 | C | Designated airspace.<br>Airspaces are indicated only from the surface to the highest of the following two levels:<br>- 5000 ft/AMSL<br>- 2000 ft/ASFC |
| | | |
| **CHAPTER 13. AERODROME/HELIPORT CHART — ICAO** | | |
| ← 13.5 | C | The annual variation is not indicated.<br>Magnetic North is not represented by an arrow. True North is not always represented by an arrow.<br>True North direction is represented by the left edge of the aeronautical charts facing up, except when the following symbol is depicted on the chart:<br>  <br>In this case, True North is indicated by the direction of the arrow. |
| ← | | |

| | | |
|---|---|---|
| **CHAPTER 14. AERODROME GROUND MOVEMENT CHART — ICAO** | | |
| 14.5.1 | C | An arrow indicating true north is shown on the map unless the left edge of the map is facing true north. |
| | | |
| **CHAPTER 15. AIRCRAFT PARKING/DOCKING CHART — ICAO** | | |
| 15.5.1 | C | An arrow indicating true north is shown on the map unless the left edge of the map is facing true north. |
| | | |
| **CHAPTER 16. WORLD AERONAUTICAL CHART — ICAO 1:1 000 000** | | |
| 16.8.1 | B | The isogonic lines are represented in an inset and not plotted on the map. |
| 16.9.2.1 | B | Aerodromes with IFR activities outside controlled airspace are considered to be of aeronautical interest and are indicated by a symbol placed generally in the axis of the runway used for instrument approaches. |
| 16.9.2.2 | C | The information is limited to:<br>- the altitude of the aerodrome;<br>- frequency to be used in aerodrome traffic (TWR, AFIS, A/A)<br>- the length of the longest runway. |
| 16.9.3.1 | B | Only obstacles higher than 500 ft are shown. |
| 16.9.3.2 | C | Not applied. Prominent transmission lines, permanent cable car installations and wind turbines that are obstacles are not necessarily represented. |
| | | |
| **CHAPTER 17. AERONAUTICAL CHART — ICAO 1:500 000** | | |
| 17.7.1 | B | Towns, cities and settlements are selected according to their importance for visual air navigation and represented according to their average width. Large settlements are represented by a simplified outline of the built-up areas. |
| 17.8.1 | B | The isogonic lines are represented in an inset and not plotted on the map. |
| 17.9.3.1 | B | Obstacles outside settlements that are 100 m (300 ft) or more above ground are shown. |
| | | |
| **CHAPTER 18. AERONAUTICAL NAVIGATION CHART — ICAO SMALL SCALE** | | |
| | C | Not provided. |
| | | |
| **CHAPTER 19. PLOTTING CHART — ICAO** | | |
| | C | Not provided. |
| | | |
| **CHAPTER 20. ELECTRONIC AERONAUTICAL CHART DISPLAY — ICAO** | | |
| | C | Not provided . |
| | | |
| **CHAPTER 21. ATC SURVEILLANCE MINIMUM ALTITUDE CHART — ICAO** | | |
| | B | The ATC surveillance minimum altitude charts are called “minimum vectoring altitude charts”. |
| 21.1.2 | B | Notes of a general nature are placed in part GEN of the AIP . |
| 21.9.2 | C | For readability sake, the restricted and dangerous zones are not represented on this type of chart. Prohibited areas are represented with their identification |

| ANNEX 5<br>Units of measurement to be used in air and ground operations<br>Fifth edition including amendment N° 17 applicable since the 18th of November 2010 | |
|---|---|
| **ICAO REGULATIONS** | **FRENCH REGULATIONS** |
| NIL | |

**ANNEX 6 - Part 1**
**Operation of aircraft**

**12th edition including amendment 49**

| ICAO REGULATIONS | CAT | FRENCH REGULATIONS |
|---|---|---|
| **CHAPTER 3** | | |
| § 3.1.4 | B | The responsibility for operational control is solely with the commander/pilot in command. |
| § 3.3.1* | C | Only required for aeroplanes above 27 000 kg. |
| § 3.3.2 | C | ORO.AOC.130 does not require a flight data monitoring program for aeroplanes with a maximum certificated take-off mass (MCTOM) equal to or less than 27 000 kg. Therefore, Annex 6 Part I 3.3.2b) is not implemented. |
| § 3.3.3 | C | ORO.AOC.130 does not require a flight data monitoring programme for aeroplanes with an MCTOM equal to or less than 27 000 kg. Therefore, Annex 6 Part I, 3.3.3 is not implemented for aeroplanes with MCTOM comprised between 15 000 kg and 27 000 kg. |
| § 3.3.5 | A | The European rule requires in addition that the FDM program is non punitive, regardless of the date. |
| § 3.5.1 | C | The scope of CAT.GEN.MPA.205 is restricted to some categories of large aeroplanes. |
| § 3.5.2* | C | CAT.GEN.MPA.205 is only applicable to aeroplanes which are equipped with a capability to provide a position additional to the secondary surveillance radar transponder or which were first issued with an individual CofA on or after 16 December 2018. |
| § 3.5.3 | B | CAT.GEN.MPA.205 only applies to aeroplanes which are equipped with a capability to provide a position additional to the secondary surveillance radar transponder or which were first issued with an individual CofA on or after 16 December 2018. |
| § 3.5.4 | B | Other means of compliance. Cases for an alleviation and flexibility are provided in AMC1 CAT.GEN.MPA.205, which can be used by all operators without having to provide a risk assessment. |
| | | |
| **CHAPTER 4** | | |
| § 4.1.2 | C | Partially implemented. The implementing rule addresses the safety risk assessment without being so specific. |
| § 4.2.1.3.1 | B | The operator remains responsible that the contracted services comply with the applicable requirements and that the aviation safety hazards associated with contracted services or products are considered by the operator's management system. However, it is not specified that the operator shall develop policies and procedures for third parties. |
| § 4.2.1.5 | B | The AOC has no expiration date. The AOC is issued for an unlimited duration, but its validity is confirmed as per compliance with ORO.GEN.135. Several other entries requiring prior approval by the CA have been added to the EU Operations Specifications. |
| § 4.2.1.7 | B | Several other entries requiring prior approval by the Competent Authority have been added to the EU Operations Specifications. The AOC has no validity date. |
| § 4.2.2.1 | A | The EU regulation also requires compliance with ICAO Annexes 1, 2, 8, and 18. Additionally, compliance with the mitigating measures accepted by EASA in accordance with ART.200 (d) ; the relevant requirements of Part-TCO ; and the applicable Union rules of the air. |
| § 4.2.11.2 | B | Other means of compliance. Appropriate measures are taken where the effective dose to the crew is liable to be above 1 mSv/year. |
| § 4.3.1 | C | Paragraph (g) is not fully implemented. |
| § 4.3.3.1 | C | Partially implemented.<br>An operational flight plan is not required for operations under VFR of other-than-complex motor-powered aeroplanes taking off and landing at the same aerodrome or operating site. |
| § 4.3.4.1.2 | C | Partially implemented.<br>EDTO is not yet implemented. |
| § 4.3.4.1.3 | A | CAT.OP.MPA.182 (a) requires a period commencing one hour before and ending one hour after the estimated time of arrival at the aerodrome. |
| § 4.3.4.2, § 4.3.4.3.2 and § 4.4.7 | C | The new terms 'filed flight plan' and 'current flight plan' are not included in Regulation (EU) No 965/2012, which currently refers to 'ATS flight plan'. |
| § 4.3.4.3.1 | C | European rules require a period commencing one hour before and ending one hour after the estimated time of arrival at the aerodrome. |
| § 4.3.4.4 | A | EU rule establishes to collect relevant data for a period of 2 years of continuous operations before applying for an Individual Fuel Scheme.<br>Moreover, it is mandatory to implement an effective continuous reporting system to the competent authority on the safety performance and regulatory compliance. |
| § 4.3.6.3 | C | Partially implemented.<br>EDTO is not yet transposed in Reg. (EU) 965/2012, which still uses ETOPS. |
| § 4.3.6.4* | A | Part-CAT requires that the calculation of the usable fuel is done for each flight, including the estimated mass of the aircraft. |
| § 4.3.9.2 | A | The EU rule has additional and more specific requirements on the quantities of oxygen and the percentages of passengers and also specific requirements on automatically deployable masks for aeroplanes certified to fly above 25 000 ft. |
| § 4.3.10.1* | C | Partially implemented.<br>EDTO is not yet transposedin Reg. (EU) 965/2012, which still uses ETOPS. |
| § 4.6.1 | C | Partially implemented.<br>Flight operations officer/flight dispatcher tasks and responsibilities are not specifically described in Reg. (EU) 965/2012. |
| § 4.6.2 | C | Not implemented.<br>The flight operations officer/flight dispatcher has no such tasks described in the Air Operations rules. |
| § 4.7.1.1, § 4.7.2.1, § 4.7.2.2, § 4.7.2.3 and § 4.7.2.4 | C | Not implemented.<br>European rules do not use EDTO. Instead, the ETOPS concept is used. |
| § 4.7.2.6 | B | Partially implemented.<br>EU rules do not use EDTO. Instead, the ETOPS concept is used. |
| | | |
| § 4.9.2 | C | Partially implemented.<br>European rules do not have provisions for maximum certificated take-off mass (MCTOM). However there is a limitation in the number of passenger to less than 9. |
| | | |
| **CHAPTER 5** | | |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 5.1.1 | B | The responsibilities of the State of the Registry are assumed by the State of the Operator. |
| § 5.2.4 | B | The responsibilities of the State of the Registry are assumed by the State of the Operator. |
| § 5.2.10 | A | Stricter and more detailed requirements. |
| § 5.4.1 | A | EU Rules require the operators to ensure that the routes and cruising altitudes are selected so as to have a landing site within gliding range. Additional protection considering the geographic characteristics of the European territory. |
| | | |
| **CHAPTER 6** | | |
| ← § 6.2.2.1 | C | Partially implemented :<br>Only for Large Aeroplanes : Initial CofA after 18 February 2020 (lavatory) and 18 May 2019 (portable). |
| § 6.3 | C | Airborne image recorders and lightweight flight recorder are not required. |
| § 6.3.1.1.1 and § 6.3.1.1.2* | C | Partially implemented :<br>For those light aeroplanes first issued with an individual CofA before 5 September 2022, only those that are multi engine turbine powered and have a MOPSC of more than 9 are required to carry a flight recorder. In addition, turbine- engined aeroplanes with a MCTOM of less than 2 250 kg and a MOPSC of 9 or less are not required to carry a flight recorder, whatever their date of issuance of the individual CofA. |
| § 6.3.1.1.3 and § 6.3.1.1.4 | B | CAT.IDE.A.190 a) (3) applies to aeroplanes with an individual CofA after 1 June 1990 and MCTOM of more than 5 700 kg.<br>CAT.IDE.A.190 a) 2) applies to turbine-engined aeroplanes with an individual CofA before 1st June 1990 and MCTOM of more than 5 700 kg. |
| § 6.3.1.1.5* | C | CAT.IDE.A.190 (1) a) 2) applies to aeroplanes with an individual CofA after 1st April 1998. |
| § 6.3.1.1.7* | A | AMC6 CAT.IDE. A.190 (a) (1) & (a) (2) & (a) (3) applies to aeroplanes delivered an individual CofA before 1st June 1990. |
| § 6.3.1.1.8 | A | According to AMC6 CAT.IDE.A.190 the FDR shall record 32 parameters if installed in aeroplanes with an MCTOM exceeding 27 000 kg when the following conditions are met :<br>(i) sufficient capacity is available on a flight recorder system ;<br>(ii) the sensor is readily available ; and<br>(iii) a change is not required in the equipment that generates the data. CAT.IDE.A.190 (a) (2) applies to all turbine-engined aeroplanes with a MCTOM of over 5 700 kg and first issued with an individual CofA before 1st June 1990 whatever the date of prototype certification. |
| § 6.3.1.1.9* | A | According to AMC6 CAT.IDE.A.190 the FDR shall record 16 parameters if installed in aeroplanes with an MCTOM exceeding 27 000 kg that are of a type first type certified after 30 September 1969 except Ground spoiler position and/or speed brake selection, outside air temperature (OAT) or total air temperature and Autopilot operating modes, autothrottle and AFCS, systems engagement status and operating modes when any of the next conditions are met :<br>(1) sufficient capacity is not available on a flight recorder system ;<br>(2) the sensor is not readily available ; and<br>(3) a change is required in the equipment that generates the data. All other parameters exceed those recommended in the SARP. |
| § 6.3.1.1.10 | C | Partially implemented.<br>CAT.IDE.A.190 a) 1) applies to all aeroplanes with a MCTOM of over 5 700 kg and first issued with an individual CofA on or after 1st June 1990. However, in the case where the aeroplane was first issued an individual CofA between 1st January 2005 and 1st January 2016, AMC2 CAT.IDE.A.190 is applicable and it does not specify all of the first 78 parameters listed in table A8-1. |
| § 6.3.1.1.11 | A | CAT.IDE.A.190 (a) (1) applies to all aeroplanes with a MCTOM of over 5 700 kg and first issued with an individual CofA on or after 1st June 1990. |
| § 6.3.1.2 | C | Partially implemented.<br>The use of magnetic tape for the FDR is not forbidden. |
| § 6.3.1.3 | A | The minimum recording duration for the FDR is 25 hours for other aeroplanes than those referenced in 6.3.1.1.5.<br>For aeroplanes referenced in 6.3.1.1.5, the minimum recording duration is 10 hours. |
| | | |
| § 6.3.2.1.1 and § 6.3.2.1.2* | C | Partially implemented.<br>The scope of CAT.IDE.A.185 a) 2) is limited to multi engine turbine powered aeroplanes with a MCTOM of less than 5 700 kg.<br>The scope of CAT.IDE.A.191 covers aircrafts with an individual CofA first issued on or after 5/09/2022 ; no retrofit. |
| § 6.3.2.1.3 | A | CAT.IDE.A.185 pt. a) 1) is applicable to all aeroplanes with a MCTOM of more than 5 700 kg, irrespective of the date of first issuance of the CofA. |
| § 6.3.2.1.4 and § 6.3.2.1.5* | A | CAT.IDE.A.185 a) 1) applies to all aeroplanes with a MCTOM exceeding 5 700 kg, be they turbine-engined or not. CAT.IDE.A.185 a) 1) applies whatever the date of certification of the prototype. |
| § 6.3.2.4.2 | C | Partially implemented.<br>An alternate power source for the CVR is required for aeroplanes with an MCTOM of over 27 000 kg and first issued with an individual CofA on or after 5 September 2022, whatever the date of application for type certification. |
| § 6.3.2.4.3* | C | Partially implemented.<br>An alternate power source for the CVR is required for aeroplanes with an MCTOM of over 27 000 kg and first issued with an individual CofA on or after 5 September 2022.<br>CAT.IDE.A.185 point contains the alternate power source requirement. |
| § 6.3.3.1.1 | A | CAT.IDE.A.195 (a) requires recording data link communications for aeroplanes issued with an individual CofA on or after 8 April 2014. |
| § 6.3.3.1.2 | C | Partially implemented.<br>CAT.IDE.A.195 is only applicable to aeroplanes first issued with an individual CofA on or after 8 April 2014. |
| § 6.3.3.1.3*, § 6.3.4.1.1, § 6.3.4.1.2*, § 6.3.4.2 and § 6.3.4.3 | C | Not implemented. |
| § 6.3.5.4* | C | Partially implemented.<br>It is not required that the FDR documentation is in electronic format. |
| § 6.3.5.5.1* | C | Not implemented. |
| § 6.3.5.5.2 | C | The use of two combination recorders is an alternative to the use of a separate CVR and FDR for aeroplanes with a MCTOM > 5 700 kg regardless of the date of application for their type certificate. |
| § 6.3.6.1 | B | Different in character.<br>CAT.GEN.MPA.210 is also applicable to aeroplanes with MCTOM of over 45 500 kg and less than 19 PAX.<br>CAT.GEN.MPA.210 is applicable to every aeroplane with a CofA first issued on or after 1st January 2024. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 6.3.6.2 | B | Different in character.<br>CAT.GEN.MPA.210 is also applicable to aeroplanes with MCTOM of over 45 500 kg and less than 19 pax.<br>CAT.GEN.MPA.210 is applicable to every aeroplane with a CofA first issued on or after 1st January 2023. |
| § 6.4.1 | A | CAT part prescribes additional equipment. |
| § 6.4.2 | C | Partially implemented, Reg (EU) 965/2012 mandates the carriage of one barometricaltitude measure device, and TWO devices when two pilots are required for the operation. |
| § 6.5.2.1 | C | Less protective.<br>Carriage of life jackets when flying en route over water beyond gliding distance from the shore, in the case of all other landplanes (not operated in accordance with 5.2.9 or 5.2.10) not implemented. |
| § 6.5.3.1 | C | Partially implemented.<br>The requirement to carry an 8.8 KHz underwater locating device (ULD) applies to aeroplanes with an MCTOM of more than 27 000 kg and with an MOPSC of more than 19 and all aeroplanes with an MCTOM of more than 45 500 kg.<br>The ULD might not be fitted if the aeroplane is equipped with robust and automatic means to accurately determine, following an accident where the aeroplane is severely damaged, the location of the point of end of flight. |
| § 6.7.3 | A | Part-CAT requires it for all aircraft. |
| § 6.7.6 | C | Reg. (EU) 965/2012 does not recommend to have it for aircraft for which the CofA was first issued before 9 November 1998. |
| § 6.10 | A | CAT.IDE.A.115 requires portable lights also during daylight flights.<br>This exceeds ICAO SARP which requires it only for night flights. |
| § 6.11* | A | Required also for non-pressurised aeroplanes. |
| § 6.12 | B | Other means of compliance.<br>This matter is addressed by a different legal instrument, which requires Member States to undertake appropriate measures where the effective dose to the crew is liable to be above 1 mSv/year. |
| § 6.15.3* | C | CAT.IDE.A.150 para (c) it is only applicable to turbine-powered aeroplanes for which the CofA was first issued after 1 January 2019 and ICAO's SARP recommends it for all turbine-engined aeroplanes regardless the date of issuance of their CofA. |
| § 6.18.1 | C | Partially implemented.<br>CAT.GEN.MPA.210 is not applicable to aeroplanes with MCTOM of less than 45 500 kg and MOPSC of less than 19. |
| § 6.18.2* | C | Not implemented.<br>CAT.GEN.MPA.210 is not applicable to aeroplanes with MCTOM of less than 27 000 kg. |
| § 6.18.3 | B | Other means of compliance.<br>In the case of an ELT-based solution (in flight triggered ELT or automatic deployable flight recorder) the ELT signal is detected by COSPAS/SARSAT satellites and then it is directly transmitted to the ground and dispatched to the competent rescue coordination centre. |
| § 6.19. 2* | C | Partially implemented EU regulations require mandatory use of ACAS II SW version 7.1 for aeroplanes with an MCTOM of more than 5 700 kg or more than 19 passengers.<br>For aeroplanes out of this category ACAS is not mandatory. If they voluntarily install ACAS, the equipment shall be ACAS II version 7.1. |
| § 6.20.2 and § 6.20.3 | C | Partially implemented.<br>Resolution of 7.62 m for the pressure altitude reporting transponder not implemented. |
| § 6.22.1* and § 6.22.2* | C | Not implemented. |
| § 6.26.1 | C | Point 26.205 of Regulation (EU) 2015/640, as amended by Regulation (EU) 2024/2954, is applicable to large aeroplanes for which the first individual certificate of airworthiness is issued on or after 1 July 2026, which is after the ICAO date of 1 January 2026. Also, under Regulation (EU) 2015/640, 'Large aeroplane' means an aeroplane that has the Certification Specifications for Large Aeroplanes CS-25 or equivalent in its certification basis; this therefore does not include aeroplanes certified in the 'CS-23' category, which would also be included in the ICAO scope. |
| | | |
| **CHAPTER 7** | | |
| § 7.2.9 | C | Partially implemented.<br>European rules require to monitor the aircraft height keeping performance, but not in a specific interval. |
| | | |
| **CHAPTER 8** | | |
| § 8.2.1 | C | Partially implemented.<br>EU requirements do not address the human factors principles in Part-CAMO for Continuing Airworthiness Management Organisations (CAMO). |
| § 8.2.3 | C | Partially implemented.<br>EU requirements do not explicitly describe that "copies of all amendments shall be furnished promptly to all organizations or persons to whom the manual has been issued." |
| § 8.2.4 | B | Different in character.<br>The requirement to provide the manual to the State of Registry if different from the State of the Operator. It is currently required to be approved by the State of Operator. Within the EU Member States this requirement is compensated by the mutual recognition. |
| § 8.3.1 | C | Partially implemented.<br>Part-CAMO and Part-CAO do not observe Human Factors (HF) principles in the design of the Maintenance Programme (MP). |
| § 8.3.2 | C | Partially implemented.<br>EU requirements do not explicitly describe that Copies of all amendments shall be furnished promptly to all organizations or persons to whom the manual has been issued. |
| § 8.4.2 | A | Retaining periods exceed requirements. |
| § 8.5.2 | A | Part-M requirements apply above 2 730 kg, while Part-ML applies to 2 730 kg or below.<br>This means that the mass range between 2 730 and 5 700 kg is obliged to comply with a higher standard. |
| § 8.7 | C | Partially implemented.<br>The provisions of Annex 19 are not implemented. |
| § 8.8.2 and § 8.8.3 | C | Not implemented. |

| | | |
|---|---|---|
| **CHAPTER 9** | | |
| § 9.2 | A | ORO.FC.130 a) establishes provisions for each type and variant. ORO.GEN.110 (h) requires also the use of a checklist. ICAO Annex 6 9.2 does not require it. |
| § 9.4.1.1 | A | For single pilot IFR, EASA also requires 5 IFR flights and 3 IFR approaches in the single pilot role under ORO.FC.202. However, besides the 90 days, Reg. (EU) 965/2012 extends the mitigation measures. This is not required by the standard. |
| § 9.4.2.1 | A | European rule FCL.060 requires at least 3 sectors. |
| § 9.4.3.3 | B | Other means of compliance.<br>European rules have implemented a categorisation of aerodromes (A, B, C and/or demanding/not demanding). |
| § 9.4.4.1 | B | Other means of compliance.<br>The rule allows alternative training and qualification programme (ATQP) as an alternative to the prescriptive training requirements. |
| ← § 9.4.5.2 | A | For IFR operations, the pilot shall have accumulated at least 50 hours of IFR flight time instead of the 25 hours specified in paragraph (b) . |
| | | |
| **CHAPTER 10** | | |
| ← § 10.2 | C | Partially implemented because AMC1 ORO.GEN.110(c)&(e) covers only those flight dispatchers involved in flight monitoring and flight watch. |
| § 10.3 | C | Partially implemented.<br>The training programme for FOO and FD is detailed in AMC1 ORO.GEN.110(c)&(e). However, the EU requirements do not establish the minimum conditions for assigning an FOO or FD to duty; moreover, the duties and responsibilities of an FOO or FD as per SARP 4.2.1.3 are not transposed in the EU rules yet. Point (b) is also not transposed into Reg. (EU) 965/2012. |
| § 10.4* | C | Partially implemented.<br>Recurrent training is included in the AMC1 ORO.GEN.110(c)&(e), the HF is also captured in the initial training. However, that AMC applies only to FOO and FD who have tasks related to flight monitoring and flight watch. 'The training programme for FOO and FD is detailed in AMC1 ORO.GEN.110(c)&(e). However, the EU requirements do not establish the minimum conditions for assigning an FOO or FD to duty; moreover, the duties and responsibilities of an FOO or FD as per SARP 4.2.1.3 are not transposed in the EU rules yet. Point (b) is also not transposed into Reg. (EU) 965/2012. |
| § 10.5* | C | Not implemented. |
| | | |
| **CHAPTER 11** | | |
| ← § 11.4.3* | C | Less protective.<br>3-month storage period required under Reg. 965/2012. |
| § 11.6 | C | Less protective.<br>In the absence of indication from the investigating authority, the operator is not required to preserve the data for more than 60 days after the accident or serious incident. |
| | | |
| **CHAPTER 12** | | |
| § 12.4 | A | The successful completion of the Initial training required by Reg. (EU) NR 1178/2011 AIRCREW results in the issuance of a Cabin Crew Attestation (CCA) to the applicant. CCA is required for CAT operations. If operators other than CAT decide to carry a cabin crew member, this person shall also comply with Reg. (EU) NR 1178/2011 and Reg. (EU) NR 965/2012. |
| | | |
| **CHAPTER 13** | | |
| § 13.2.4* | C | Partilally implemented.<br>ORO.SEC.100 b) stipulates that EU regulation only applies to passenger-carrying aeroplanes which fall within one of the categories stated on b) 1), b) 2) or b) 3). |
| **CHAPTER 15** | | |
| § 15.1, § 15.2.1 and § 15.2.2 | C | Partially implemented. The implementing rule addresses the safety risk assessment without being so specific. |
| * recommended practice | | |

**ANNEX 6 - Part 2**
**Operation of aircraft**

**11th edition including amendment 41**

| ICAO REGULATIONS | CAT | FRENCH REGULATIONS |
|---|---|---|
| **CHAPTER 2** | | |
| § 2.1.1.5* | C | Partially implemented.<br>No specific requirement for non-commercial operations with other-than complex motor-powered aircraft (NCO). |
| § 2.1.4 | C | Partially implemented.<br>EFB do not require a specific approval for non-commercial operations. |
| § 2.2.2.2.1 | B | Different in character.<br>In NCC, the rule addresses to the operator, not to the PIC. For low visibility operations (LVO), it is the competent authority as established by Annex V (Part-SPA): State of the Operator if the aircraft is registered in an EU Member State; or State of Registry if the aircraft is registered in a third country and the State of Registry has already issued the LVO specific approval. |
| § 2.2.2.2.1.1, § 2.2.2.2.1.2 and § 2.2.2.2.1.3 | B | Different in character.<br>The State of Operator instead of the State of Registry shall establish those criteria and shall approve the operational credits for NCC operators and for NCO operators using third-country registered aircraft. |
| § 2.2.2.2.5 and § 2.2.2.2.6 | B | Different in character.<br>For low visibility operations (LVO), it is the competent authority as established by Annex V (Part-SPA): State of the Operator if the aircraft is registered in an EU Member State; or State of Registry if the aircraft is registered in a third country and the State of Registry has already issued the LVO specific approval. |
| § 2.2.3.4.3 | B | Other means of compliance.<br>For NCC operators in the EU, the State of the Operator is the competent authority not the State of Registry; it is the State of Operator instead of the State of Registry that shall establish those criteria. |
| § 2.2.3.5 | B | Other means of compliance.<br>European rules require a period commencing one hour before and ending one hour after the estimated time of arrival at the aerodrome in accordance with 2.2.3.4.3. European rules do not require a point of no return but instead require always to have an alternate aerodrome (with very few exceptions e.g. isolated aerodrome) and other conditions (e.g. EU rules require fuel for 2 hours). |
| § 2.2.3.7.1* | A | EU rules do not allow embarking, on board or disembarking of passengers while refuelling with AVGAS or wide-cut type fuel or a mixture of these fuel types. |
| § 2.2.4.7 * | C | Partially implemented.<br>An alleviation is available for NCO operations.<br>The EU rules contain an alleviation to the availability and use of oxygen on board under NCO.OP.190 and AMC1 NCO.OP.190 (a). The PIC can decide to fly at any altitude without using oxygen, and without oxygen being available. |
| § 2.2.4.9.2 | B | Other means of compliance.<br>European regulation allows acceptable deviations under the conditions of radar vectoring by ATC or when obstacle clearance can be observed. |
| § 2.3.1.1 | B | Different in character. In the EU system, the State of the Operator is the competent authority for NCC operators and NCO operators operating aircraft registered in a third-country. |
| § 2.4.2.2 | C | Partially implemented.<br>ELA1 aeroplanes, i.e. aeroplanes with a Maximum Take off Mass (MTOM) of 1 200 kg or less that are not classified as complex motor- powered aircraft, are exempt from the hand fire extinguisher requirement in NCO.IDE.A.160. |
| § 2.4.2.3 | C | Partially implemented.<br>Only for Large Aeroplanes Initial CofA after 18 February 2020 (lavatory) and 18 May 2019 (portable). No reference for Part-NCO, as it is very unlikely that an NCO aircraft has a lavatory. |
| § 2.4.3.2* | B | Other means of compliance.<br>The EU rules do not distinguish between VFR flights and VFR controlled flights. The other means of compliance are ensured through the provisions in NCC.IDE.A.120 (b) for additional instruments when in conditions where the aeroplane cannot be maintained in a desired flight path without reference to one or more additional instruments, as well as the additional limitations in Part-SERA 5010 for VFR controlled flights. |
| § 2.4.11.2* and § 2.4.11.3* | C | Not implemented.<br>EASA SIB 2017-14 (Safety Information Bulletin) recommends the installation of TAWS for light aeroplanes not engaged in Commercial Air Transport. |
| § 2.4.12.3 | C | Partially implemented.<br>NCO.IDE.A.170 (a) (3) : a survival ELT (ELT(S)) or a personal locator beacon (PLB), carried by a crew member or a passenger, is authorized when certified for a maximum passenger seating configuration of six or less. |
| § 2.4.15 | B | Other means of compliance.<br>In the EU system, for NCC and NCO operators, it is the State of the Operator that has this responsibility, not the State of Registry. |
| § 2.4.16.1.1.1* | C | Partially implemented.<br>There is no flight recorder carriage requirement in Part-NCO. |
| § 2.4.16.1.1.2 and § 2.4.16.1.1.3* | A | NCC.IDE.A.165 is applicable to aeroplanes with Cof A issued on or after 1 January 2016. |
| § 2.4.16.1.2 | C | Not implemented.<br>FDR is required by 2.4.16.1.1.2 for large aeroplanes for which application for TC is after 2023.<br>FDR, ADRS, AIR or AIRS is recommended by 2.4.16.1.1 for light aeroplanes first issued with an individual CofA on or after 1 January 2016. |
| § 2.4.16.2.1* | C | Not implemented.<br>There is no flight recorder carriage requirement in Part-NCO. |
| § 2.4.16.2.2 | C | Not implemented.<br>2.4.16.2.1 is only applicable to aeroplanes first issued with an individual CofA on or after 1 January 2016, and all modern models of CVR are solid state. Therefore there is no need to forbid the old recording technologies. |

| | | |
|---|---|---|
| § 2.4.16.4.5* | C | Not implemented.<br>It is not required that the FDR documentation is in electronic format. |
| § 2.4.17.2.2 | C | Not implemented.<br>A specific approval is not required for NCC or NCO operators using EFB applications. |
| § 2.4.17.3 | C | Partially implemented.<br>A specific approval is not required for NCC or NCO operators using EFB applications. For NCC operators and for NCO operators using third country registered aircraft, the State of Operator shall establish those criteria. |
| | | |
| § 2.5.1.7, § 2.5.1.8 and § 2.5.1.9 | B | Different in character.<br>For operators using third-country registered aircraft, the State of Operator shall establish those criteria. |
| § 2.5.2.3 | B | Different in character.<br>The State of Operator shall establish those criteria for NCC operators and for NCO operators using third-country registered aircraft. |
| § 2.5.2.4, § 2.5.2.5, § 2.5.2.6, § 2.5.2.7, § 2.5.2.8 and § 2.5.2.9 | B | Different in character.<br>The State of Operator instead of State of Registry for NCC operators and for NCO operators using third-country registered aircraft. |
| § 2.5.2.10 | C | Partially implemented.<br>EU rules require to monitor the aircraft height keeping performance, but not in a specific interval. |
| § 2.5.3.3, § 2.5.3.4 and § 2.5.3.5 | B | Different in character.<br>The State of Operator shall establish those criteria for operators using third-country registered aircraft. |
| § 2.6.1.1 | C | Partially implemented.<br>Risk assessment when approving a maintenance programme not based on the type certificate holder's maintenance recommendations not addressed. |
| § 2.6.2.2 | A | Retaining periods exceed requirements. |
| § 2.6.4.2 | C | Partially implemented.<br>Maintenance and release to service by a person can be performed by Part-MF, or Part-CAO or by a pilot/owner after limited pilot/owner maintenance. |
| § 2.7.2.1 and § 2.8.1 | B | Different in character.<br>State of Operator instead of State of Registry for the NCC operators and NCO operators of third-country registered aircraft. |
| § 2.9.1 | C | Reg. (EC) NR 300/2008 does not contain references to pilot-in-command responsibilities related to the security of aircraft. |
| | | |
| **CHAPTER 3** | | |
| § 3.1.2* | C | Less protective.<br>Definition of complex motor powered aeroplane includes aeroplanes only with a MOPSC of more than 19. |
| § 3.4.2.1.1 | B | Different in character.<br>The EU system has the State of Operator instead of State of Registry as the Competent Authority. |
| § 3.4.2.1.2 | B | Other means of compliance.<br>EU rules provide for the cooperative oversight of activities of operators established or residing in another EU member state. Reg. (EC) 300/2008 establishes requirements for inspections by the Commission in cooperation with Member States. |
| § 3.4.2.7 | B | Different in character.<br>For NCC operators, the State of Operator establishes the criteria instead of the State of Registry. For low visibility operations (LVO), it is the competent authority as established by Annex V (Part SPA) :<br>State of the Operator if the aircraft is registered in an EU Member State ; or<br>State of Registry if the aircraft is registered in a third country and the State of Registry has already issued the LVO specific approval. |
| § 3.4.2.8 | C | Partially implemented.<br>High level requirements are included in the Essential Requirements, Annex V to Regulation (EU) 2018/1139. Detailed FTL provisions are determined at national level. Fatigue requirements for maintenance personnel not addressed. |
| | | |
| § 3.4.3.7 * | C | Not implemented. |
| § 3.4.3.8.1 | A | EU rules do not allow embarking, on board or disembarking of passengers while refuelling with AVGAS or wide cut type fuel or a mixture of these fuel types. |
| § 3.5.2.3 | B | Different in character.<br>For NCC operators, the State of Operator establishes the criteria instead of the State of Registry. |
| § 3.6.1.1 | B | Different in character.<br>In the EU system, the State of Operator is responsible for approving the MEL. |
| § 3.6.3.1.1.1, § 3.6.3.1.1.2 and § 3.6.3.1.1.3* | C | Partially implemented.<br>Carriage of a flight data recorder is required only for aeroplanes first issued with an individual CofA on or after 1 January 2016. |
| § 3.6.3.2.1.1 | A | NCC.IDE.A.160 (a) (2) is applicable to aeroplanes for which the type certificate is issued after 1 January 2016, while 3.6.3.2.1 criterion is the date of submission of the application for a type certificate. |
| § 3.6.3.2.1.2 | C | Partially implemented.<br>NCC.IDE.A.160 (a) (1) only requires a CVR for aeroplanes above 27 000 kg MCTOM which were first issued with an individual CofA on or after 1 January 2016. |
| § 3.6.3.2.1.3* | C | Partially implemented.<br>NCC.IDE.A.160 (a) (1) and (a) (2) only requires a CVR for aeroplanes which were first issued with an individual CofA on or after 1 January 2016 (see (a) (1)) or for which a type certificate was first issued on or after 1 January 2016 (see (a) (2)). |
| § 3.6.7 * | B | Appropriate measures are taken where the effective dose to the crew is liable to be above 1 mSv/year. |
| § 3.6.8.2.1* | C | Partially implemented.<br>The European regulatory system only requires it when the individual CofA was issued after 31 December 1980. |
| § 3.6.9.1* | A | European Regulatory system requires ACAS II for turbine engine aeroplanes with an MCTOM of more than 5 700 kg or MOPSC of more than 19. |
| § 3.8.1.2* | C | Partially implemented.<br>The recommendation is not implemented ; initial and continuation training are not specifically addressed in M.A.607 or Human Factors. |

**ANNEX 6 - Part 3**
**Operation of aircraft**

**11th edition including amendment 25**

| ICAO REGULATIONS | CAT | FRENCH REGULATIONS |
|---|---|---|
| **SECTION 2** | | |
| **CHAPTER 1** | | |
| § 1.1.4 | B | Other means of compliance.<br>The EU rules require that the responsibility for operational control is solely with the commander/pilot in command. |
| § 1.3.1* | C | Partially implemented.<br>Transposed only for CAT Helicopter Offshore Operations. |
| § 1.3.2 | A | The European rule requires in addition that the FDM programme is non punitive, regardless of the date. |
| | | |
| **CHAPTER 2** | | |
| § 2.2.1.5 § 2.2.1.6 and § 2.2.1.7 | B | Other means of compliance.<br>No expiration date.The AOC is issued for an unlimited duration, but its validity is confirmed as per compliance with ORO.GEN.135. Several other entries requiring prior approval by the competent authority have been added to the EU operations specifications. |
| § 2.2.2.1 | A | Additionally, the EU rule also requires compliance with ICAO Annexes 1, 2, 8, and 18. Additionally, compliance with the mitigating measures accepted by EASA in accordance with ART.200 (d) ; the relevant requirements of Part-TCO ; and the applicable Union rules of the air. |
| § 2.3.1 | C | Partially implemented.<br>Paragraph (g) is not fully implemented. |
| § 2.3.3.1 | C | Partially implemented.<br>An operational flight plan is not required for operations under VFR of other than complex motor powered aeroplane taking off and landing at the same aerodrome or operating site. |
| § 2.3.4.1.2 | A | The EU rule requires a period commencing 1 hour before and ending 1 hour after the estimated time of arrival at the aerodrome. |
| § 2.3.4.2.1 | B | Other means of compliance.<br>The EU rules do not require an alternate when destination is a coastal aerodrome and the helicopter is routing from offshore. However, the European rule requires a period commencing 1 hour before and ending 1 hour after the estimated time of arrival at the aerodrome. |
| § 2.3.4.2.2 | A | The EU rule requires a period commencing 1 hour before and ending 1 hour after the estimated time of arrival at the aerodrome and higher operating minima (one category above). |
| § 2.3.4.3.15* | C | No reference to 30NM, the only requirement is general weather minima between 1 hour before and 1 hour after the flight and for fog (60NM in AMC2 SPA.HOFO.120 c) 3)). |
| § 2.3.6.2 | A | If required an alternate aerodrome, it shall be also carried fuel enough for reaching it.<br>EU regulation stipulates than when flying under VFR and navigating by means other than by reference to visual landmarks or at night, 30-minutes fuel at best range of speed are required. |
| § 2.3.7.1 | C | Partially implemented.<br>On point (b) : oxygen replenishment is allowed as per the Air Ops rules and as a mitigation measure, aviation stakeholders are trained on use of oxygen. |
| § 2.3.7.6 | C | Partially implemented.<br>Oxygen replenishment is allowed as per the Air Ops rules and as a mitigation measure, aviation stakeholders are trained on the use of oxygen. |
| § 2.3.8.2 and § 2.4.6.1* | C | Not implemented. |
| § 2.6.1 | C | Partially implemented.<br>Flight operations officer/flight dispatcher tasks and responsibilities are not specifically described in Reg. (EU) 965/2012. |
| § 2.6.2 | C | Not implemented.<br>The operator decides who is charged with these responsibilities as part of its emergency response planning and management. |
| | | |
| **CHAPTER 3** | | |
| § 3.1.4, § 3.4.1, § 3.4.2, § 3.4.3 and § 3.4.4* | C | Such operations are not allowed. |
| | | |
| **CHAPTER 4** | | |
| | | |
| § 4.2.2 | C | Point (e) not implemented.<br>Spare electrical fuses are not required. Fuses requirement not implemented because changing a fuse in flight with a helicopter is not practical. Flying a helicopter requires both hands and both feet at the controls. Fuses are not accessible for replacement in flight. |
| § 4.2.2.1 | C | Partially implemented.<br>Only for Large Helicopters : Initial CofA after 18 February 2020 (lavatory) and 18 May 2019 (portable). |
| § 4.3.1.1.2 | A | The passenger capacity threshold in CAT.IDE.H.190 (a) (1) is 9 not 19. |
| § 4.3.1.1.3* | C | Partially implemented.<br>Required for helicopters first issued with an individual CofA on or after 1 August 1999. |
| § 4.3.1.1.4 | C | Partially implemented.<br>The scope of CAT.IDE.H.191 covers those helicopters with an individual CofA first issued on or after 5 September 2022. |
| § 4.3.1.1.5* | C | Partially implemented.<br>The scope of CAT.IDE.H.191 covers only those helicopters having a MTOM of 2 250 kg or more and have an individual CofA first issued on or after 5 September 2022. |
| § 4.3.1.2 | C | Partially implemented.<br>The use of magnetic tape for the FDR is not forbidden. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 4.3.1.3 | C | Partially implemented.<br>Only in the case of helicopters first issued with an individual CofA on or after 1 January 2016 (corresponding to type IVA) is the FDR required to record data for at least the preceding 10 hours. |
| § 4.3.2.1.2 | B | Other means of compliance.<br>CAT.IDE.H.185 point(d)(3) 'the aural environment of the flight crew compartment' includes the frequencies corresponding to the main rotor, from which the main rotor speed can be computed. |
| § 4.3.2.3 | C | Partially implemented.<br>Fully implemented for helicopters with initial CofA after 1 January 2016. Other helicopters are required to be equipped with a CVR capable of retaining the information of a duration of only : 1 hour or 0.5 hour. |
| § 4.3.3.1.1 | A | The data link recording capability is required for all helicopters first issued with an individual CofA on or after 8 April 2014. |
| § 4.3.3.1.2 and § 4.3.3.1.3* | C | Not implemented. |
| § 4.3.4.4* | C | Partially implemented.<br>It is not required that the FDR documentation is in electronic format. |
| § 4.4.4* | C | Implemented only for Helicopter Offshore Operations. |
| § 4.5.2.3 | C | Less protective.<br>Life rafts : if distance from land is more than 3 minutes. |
| § 4.5.2.6* | A | The AMC1 CAT.IDE.H.300 is applicable to all helicopters regardless of the date of issuance of the CofA. |
| § 4.5.2.7* | A | The AMC1 CAT.IDE.H.300 ensures that all life rafts of more than 40 kg should have remote control deployment. |
| § 4.5.2.8* | A | The AMC1 CAT.IDE.H.300 is applicable to all helicopters regardless of the date of issuance of the CofA. |
| § 4.5.3.2* | C | Partially implemented.<br>Considerations on sun not included. |
| § 4.8.2, § 4.8.3 and § 4.8.4* | C | Not implemented. |
| § 4.10.1* | C | Partially implemented.<br>Only for helicopters with pax seating capability of more than 9. |
| § 4.15.1* | C | Partially implemented.<br>Only required offshore in hostile seas.<br>Not required onshore. |
| | | |
| **CHAPTER 5** | | |
| § 5.1.3 | C | Partially implemented.<br>PBC is not allowed for operations with helicopters. The references state that the communication equipment shall be the required by the applicable airspace requirements. |
| § 5.1.4, § 5.1.5, § 5.3.2, § 5.3.3 and § 5.3.4 | C | Not implemented.<br>PBCS operations only allowed for operations with aeroplanes in the EU. |
| | | |
| **CHAPTER 6** | | |
| § 6.2.1 | C | Partially implemented.<br>EU requirements do not address the human factors principles in Part-M subpart G and Part-CAMO. |
| § 6.2.3 | C | Partially implemented.<br>EU requirements do not explicitly describe that "Copies of all amendments shall be furnished promptly to all organizations or persons to whom the manual has been issued." |
| § 6.2.4 | B | Different in character.<br>The requirement to provide the manual to the State of Registry if different from the State of Operator (SoO). It is currently required to be approved by the SoO. Within the EU MS, this requirement is compensated by the mutual recognition. |
| § 6.3.1 | C | Partially implemented.<br>Part-M Subpart G, Part-CAMO and Part-CAO do not observe Human Factors principles in the design of the Maintenance Programme. |
| § 6.3.2 | C | Partially implemented.<br>EU requirements do not explicitly describe that Copies of all amendments shall be furnished promptly to all organizations or persons to whom the manual has been issued. |
| § 6.4.2 | A | Retaining periods exceed requirements. |
| § 6.7.2 | C | Partially implemented.<br>Pilot-owner authorisation does not comply with the requirement that a person shall be appropriately licenced i.a.w. Annex 1. |
| § 6.8.2 | A | Retaining periods exceed requirements. |
| | | |
| **CHAPTER 7** | | |
| § 7.1.2 | B | Different in character.<br>The State of Operator is the competent authority for NCC operators and NCO operators operating an aircraft registered in a third country. |
| § 7.2 | A | 7.2 establishes provisions for each type of helicopter, ORO.FC.130 (a) requires it for each type and variant. ORO.GEN.110 (h) requires the use of a checklist, 7.2 does not require it. |
| § 7.4.1.1 | A | For single pilot IFR, EU rules also require 5 IFR flights and 3 IFR approaches in the single pilot role under ORO.FC.202. Besides the 90 days, Reg. (EU) 965/2012 extends the mitigation measures. This is not required in the standard. |
| § 7.4.2.3 | A | This standard is met by line flying under supervision or initial line check or aerodrome competency. The Air OPS regulation requires all three. |
| | | |
| **CHAPTER 8** | | |
| | | |
| § 8.2 | C | Partially implemented.<br>AMC1 ORO.GEN.110(c)&(e) covers only those flight dispatchers involved in flight monitoring and flight watch. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 8.3 | C | Partially implemented.<br>The training programme for FOO and FD is detailed in AMC1 ORO.GEN.110(c)&(e). However, the EU requirements do not establish the minimum conditions for assigning an FOO or FD to duty. Moreover, the duties and responsibilities of an FOO or FD as per SARP 4.2.1.3 are not transposed in the EU rules yet. Point (b) is also not transposed into Reg. (EU) 965/2012. |
| § 8.4* | C | Not implemented. |
| § 8.5* | C | Partially implemented. |
| | | |
| **CHAPTER 9** | | |
| § 9.4.3* | C | Less protective.<br>3 months storage period required under Reg. 965/2012. |
| § 9.6 | C | Less protective.<br>In the absence of indication from the investigating authority, the operator is not required to preserve the data for more than 60 days after the accident or serious incident. |
| | | |
| **CHAPTER 10** | | |
| § 10.3 | A | The successful completion of the Initial training required by Reg. (EU) NR 1178/2011 AIRCREW results in the issuance of a Cabin Crew Attestation (CCA) to the applicant.<br>CCA is required for CAT operations. If operators other than CAT decide to carry a cabin crew member, this person shall also comply with Reg. (EU) NR 1178/2011 and Reg. (EU) NR 965/2012. |
| | | |
| **SECTION 3** | | |
| **CHAPTER 1** | | |
| § 1.1.1 and § 1.1.3 | B | Different in character.<br>The State of Operator is the competent authority for NCC operators and for NCO operators operating an aircraft registered in a third country. |
| § 1.15* | C | Partially implemented.<br>Fully implemented for NCC but not implemented for NCO. |
| § 1.4 | B | Different in character.<br>Approval to be granted by the State in which the operator is established or residing. |
| | | |
| **CHAPTER 2** | | |
| § 2.2.1 | B | Different in character.<br>In NCC, the rule addresses to the operator, not to the PIC. For low visibility operations (LVO), it is the competent authority as established by Annex V (Part SPA) : State of the Operator if the aircraft is registered in an EU Member State ; or State of Registry if the aircraft is registered in a third country and the State of Registry has already issued the LVO specific approval. |
| § 2.6.2.1 | C | Partially implemented.<br>Weather conditions, at the heliport of intended landing OR at least one alternate heliport will, at the estimated time of arrival, be at or above the heliport operating minima. |
| § 2.7.1 | A | For isolated heliports the minimum weather conditions defined in 2.6.2.2 have to prevail AND all the other conditions must be met. |
| § 2.7.2 and § 2.7.3* | C | Partially implemented.<br>Fully implemented for NCC.<br>Not implemented for NCO. |
| § 2.10.1 | C | Partially implemented.<br>NCO alleviation. See NCO.OP.190. The EU rules contain an alleviation to the availability and use of oxygen on board under NCO.OP.190 and AMC1 NCO.OP.190 (a). The pilot in command can decide to fly at any altitude without using oxygen, and without oxygen being available.<br>AMC1 NCO.OP.190(a) additionally states: “(…) the PIC should: (…)(b)(2) if detecting early symptoms of hypoxia conditions: (i) consider to return to a safe altitude, and (ii) ensure that supplemental oxygen is used, if available.” |
| § 2.10.2 | C | Not implemented. |
| § 2.11 | C | Partially implemented.<br>An alleviation is available for NCO operations.<br>The EU rules contain an alleviation to the availability and use of oxygen on board under NCO.OP.190 and AMC1 NCO.OP.190 (a). The PIC can decide to fly at any altitude without using oxygen, and without oxygen being available.<br>AMC1 NCO.OP.190 (a) additionally states : "(…) the PIC should : (…) (b) (2) if detecting early symptoms of hypoxia conditions :<br>(i) consider to return to a safe altitude, and<br>(ii) ensure that supplemental oxygen is used, if available." |
| § 2.20 | C | Partially implemented.<br>Not implemented for flights at a distance from land corresponding to 10 minutes of flight or less (NCC), 50Nm (NCO). |
| | | |
| **CHAPTER 3** | | |
| § 3.3 | C | Partially implemented.<br>Through safety management for NCC.<br>Not implemented for NCO. |
| | | |
| **CHAPTER 4** | | |
| § 4.1.3.1 | B | Different in character.<br>The State of Operator is the competent authority for NCC operators and for NCO operators operating aircraft registered in a third country. |
| § 4.1.3.2 | C | Partially implemented.<br>Only for Large Helicopters : Initial CofA after 18 February 2020 (lavatory) and 18 May 2019 (portable). |
| § 4.1.3.3* | C | Implemented only on flights where survival equipment is required for NCC operators. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 4.2.1 | A | The following additional instruments are also prescribed : A means of measuring slip.<br>For NCC operations over water, all instruments required for Night VFR are also required. |
| § 4.2.2 | A | The following additional instruments are also prescribed for NCC operations : a means of preventing malfunction of the airspeed indicator and a means of indicating when the supply of power to gyroscopic instruments is not adequate. |
| § 4.2.3 | A | The following additional instruments are also prescribed : an alternate source of static pressure. Whenever 2 pilots are required, an additional separate means of indicating pressure altitude, IAS, VS, slip, and stabilised heading. |
| § 4.3.2.1 | A | Additional provisions for crew survival suits, life saving equipment and survival equipment.<br>Additional requirements for NCC offshore over hostile waters. |
| § 4.3.2.4* | C | Not implemented for NCO operators.<br>Implemented for all NCC operators regardless of the date of issue of the CofA. 50 % should be deployable from the flight crew's normal position, if necessary by remote control. |
| § 4.3.2.5* | C | Implemented for NCC operators – either remote control or mass of less than 40 kg.<br>Not implemented for NCO operators. |
| § 4.3.2.6* | C | Implemented for NCC operators.<br>Not implemented for NCO operators. |
| § 4.5.1 | C | Partially implemented.<br>NCO : alleviation under NCO.OP.190. |
| § 4.5.2* | C | Not implemented. |
| § 4.6 | C | Partially implemented.<br>No English translation is required. |
| § 4.7.1.1.2 and § 4.7.1.1.3* | C | Not implemented. |
| § 4.7.2.1.1 | C | Partially implemented.<br>Implemented only to helicopters for which the individual CofA was first issued on or after 1 January 2016. |
| § 4.7.2.1.2*, § 4.7.3.1.2 and § 4.7.3.1.3* | C | Not implemented. |
| § 4.7.4.4* | C | It is not required that the FDR documentation is in electronic format. |
| § 4.12.1 | C | NCC.GEN.130 and NCO.GEN.125 only address the potential effect on the performance of the aircraft systems and not on the ability to operate the helicopter. |
| § 4.12.2.2 | C | Not implemented. |
| § 4.12.3 | C | Partially implemented.<br>A specific approval is not required for NCC or NCO operators using EFB applications.<br>Different in character.<br>For NCC operators and for NCO operators using third country registered aircraft, the State of Operator shall establish those criteria. |
| | | |
| | | |
| **CHAPTER 5** | | |
| § 5.1.6 | C | Not implemented. |
| § 5.1.7 | B | Different in character.<br>For NCC operators and for NCO operators using third country registered aircraft, the State of Operator shall establish those criteria. |
| § 5.1.8 and § 5.1.9 | B | Different in character.<br>For NCC operators and for NCO operators using third country registered aircraft, the State of Operator is the competent authority. |
| § 5.2.3 | B | Different in character.<br>For NCC operators and for NCO operators using third country registered aircraft, the State of Operator shall establish those criteria. |
| § 5.2.4 | B | Different in character.<br>For NCC operators and for NCO operators using third country registered aircraft, the State of Operator is the competent authority. |
| § 5.2.5 | B | Different in character.<br>For NCC operators and for NCO operators using third country registered aircraft, the State of Operator shall issue the specific approval. |
| § 5.3.3 | B | Different in character.<br>For NCC operators and for NCO operators using third country registered aircraft, the State of Operator shall establish those criteria. |
| § 5.3.4 and § 5.3.5 | B | Different in character.<br>For NCC operators and for NCO operators using third country registered aircraft, the State of Operator is the competent authority. |
| | | |
| **CHAPTER 6** | | |
| § 6.2.2 | A | Retaining periods exceed requirements. |
| § 6.5.2 | C | Partially implemented.<br>Maintenance and release to service by a person can be performed by Part-MF, or Part-CAO or by a pilot/owner after limited pilot/owner maintenance. |
| | | |
| **CHAPTER 7** | | |
| § 7.1 | B | Different in character.<br>For NCC operators and for NCO operators using third-country registered aircraft, the State of Operator is the competent authority issuing or validating the licences. |

**Airworthiness of aircraft**
**13th edition including amendment N° 110**
**Recommended practices are identified by an asterisk ***

| ICAO REGULATIONS | CAT | FRENCH REGULATIONS |
|---|---|---|
| **PARTIE II** | | |
| § 1.3.2* | A | EASA risk based approach is not only around the 'product' but also considers applicant performance. |
| § 3.6.1 | B | Assessment also allowed by DOA under procedure agreed with the Agency. |
| § 3.6.3 | B | EASA Permit to Fly (including flight conditions) may be issued by an approved DOA. |
| § 4.2.4.1 | B | EASA develops and adopts requirements for the continued airworthiness of the Type Design. The Member State is responsible for the continuing airworthiness of the individual aircraft. |
| §6.2.3.1* | B | The maintenance organisation approval certificate contains a general reference to the approved Exposition (MOE or CAE). The Exposition shall contain specific chapter(s) which contains the the locations of the maintenance facilities. |
| § 6.2.5 | A | Significant changes must be approved by the Competent Authority before the change may be implemented. |
| § 6.3.3 | B | Part-145 does not provide for a direct requirement for distribution of the manual to the end users, however the paragraphs 145.A.70 (b) and AMC1 145.A.70 have that objective. Same for CAO.A.025 and AMC2 CAO.A.025. |
| § 6.4.1 | A | Part-145 is more exacting in requiring to implement an error capturing method for critical maintenance tasks and to minimize the risk of errors for repeated identical tasks. |
| § 6.5.1 | A | EU Regulations has additional requirements for workshops, hangars, offices and storage areas. |
| § 6.5.2 | A | EU Regulation adds that the maintenance data has to be current and tools and equipment controlled and calibrated. |
| § 6.6.1 | A | EU Regulation adds details of his/her responsibilities. |
| § 6.6.2 | A | EU Regulation require that the nominated persons have sufficient knowledge and experience. |
| § 6.6.3 | A | Part-145 is more exacting and exceeding, requiring a production planning system, and requires reassessment of maintenance work in case of unforeseen staff reduction. Part-CAO is considered no difference. |
| § 6.6.4 | A | The required competence for maintenance personnel pursuant 145.A.30 and 145.A.35 is exceeding the standards of Annex I. The qualification in accordance with Annex 1 is not required for component certifying staff, specialized services certifying staff. In accordance with Art 5(6)(ii) of Regulation (EU) No1321/2014 the national requirements of the Member State for the component certifying staff apply. |
| § 6.6.5 | B | Human performance is explicitly mentioned in Part-145 but not directly mentioned in Part-CAO. |
| § 6.7.1 | A | Part-145 requires to keep also subcontractor's release documents. |
| § 6.7.2 | A | EU Regulation requires 3 years. |
| § 6.7.3 | A | Part-145 also requires reliable traceability of activities performed and adequate storage for easy retrievability. |
| § 6.8.2 | A | EU Regulation includes the limitations to airworthiness or operations, if any. For components a specific form is required (EASA Form 1). For Part-145, the details of the maintenance release is prescribed in AMC 145.A.50(b). In the case of the use of an Aircraft Technical Log, it is acceptable to use an alternate abbreviated certificate of release to service instead of the full certification statement. |
| **PART IIIA** | | |
| § 2.2.3 | C | Scheduling of landing distance with runway slope is not required Performance is not scheduled for variations in water surface conditions, density of water and strength of current |
| § 3.4 | C | CS 25 does not contain specifications for water loads. |
| § 4.1 | C | The sentence "They shall also observe human factors principles" is not fully complied with. |
| § 4.1.6 | C | Less protective for paragraphs (b), (g), (h) and (i). Protection against explosive and incendiary devices is not required in CS-25 initial issue, which is applicable for Part IIIA. |
| § 8.1 | C | The sentence 'shall observe Human Factors principles' is not fully complied with. |
| § 9.3.5 | C | Not implemented in CS-25 initial issue, which is applicable for Part IIIA. |
| § 11.1.1* | C | Not implemented in CS-25 initial issue, which is applicable for Part IIIA (except for pilots compartment doors). |
| § 11.2 and 11.4 | C | Not implemented in CS-25 initial issue, which is applicable for Part IIIA. |
| **PART IIIB** | | |
| § 2.2.7.1 | C | Accountability for worn brakes is covered by CS 25 but not by CS 23. CS.23 and CS.25 have no specifications dedicated to 'at time of landing performance data'. |
| § 2.2.7.2 and 2.2.7.3 | C | Scheduling of landing distance with runway slope is not required. Performance is not scheduled for variations in water surface conditions, density of water and strength of current. For CS 25 aeroplanes, supplementary take off and landing performance information for operation on runways contaminated with standing water, slush, snow or ice may be provided, but this is not mandatory (see CS and AMC 25.1591). |
| § 3.1.1 | C | CS 25/23 does not mandate the provision of structural repair manuals. |
| § 3.1.2 | C | CS-25, CS-23, and Regulation (EU) No 748/2012 do not mandate the provision of structural repair manuals. Hazardous failure is not specifically addressed in relation to fatigue. |
| § 3.7 | C | CS-23 requires protection against bird impact on the windshield only and only for Level-4 aeroplanes. Certification with ditching provisions is not required by CS-23 and CS-25. For CS-25 certification, whether or not ditching certification is requested, it must be shown that, following an unplanned ditching, the flotation time and trim of the aeroplane will allow the occupants to leave the aeroplane (CS-25.801(a)). The aeroplane must also comply with other ditching design specifications (CS-25.801(b)) (prevention of occupants injuries, investigation of aeroplane behaviour on water, use of rafts) if certification with ditching provisions is requested by the applicant. CS-23 does not include equivalent ditching provisions. |
| § 4.1.1 | C | The sentence 'consider Human Factors principles' is not fully complied with. |
| § 4.2 | C | CS-23: less protective for paragraphs 4.2 g) and h). |

| ANNEX 9<br>Facilitation | |
|---|---|
| **ICAO REGULATIONS** | **FRENCH REGULATIONS** |
| **CHAPTER 2**<br>**Arrival and departure of aircraft** | |
| Description, purpose and use of the aircraft documents | |
| Standard 2.4 - General declaration | Applicable, except for cases where the French authorities consider it necessary, notably due to the type of illness or to the origin of the flight, to retain a general declaration. |
| Recommended practice 2.7 | Not applicable. |
| Cargo manifest | It is considered that the presentation of the cargo manifest is of the utmost usefulness for the customs authorities. |
| Recommended practice 2.8.1 | Not applicable. |
| | |
| **CHAPTER 3**<br>**Arrival and departure of passengers and their luggage** | |
| Standards 3.8<br>Entry visa | When the visa is required, it is charged for. |
| Recommended practice 3.8.1 - 3.8.4<br>Exit visa | Applicable |
| Recommended practice 3.9 | Not applicable. |
| Other documents | Foreign passengers must, on arrival, in addition to the presentation of their identity documents, produce a disembarkation card. The details which are to be supplied on this document are solely those which correspond to the headings on the example in appendix 4 of the annex.<br>As a general rule, the production of an embarkation card is not required on departure. |
| Standard 3.10 - Other documents | Apart from appendix 3 of Annex 9, the embarkation card includes a detachable leaf requesting information, i.e. immigrant, transit, visitor or resident. |
| Standard 3.16 - Permit formality | Applicable to passengers only. A manifest of private acquisitions is required from the crew members. |
| Norme 3.20 - Permit formality | Applicable, provided that a warrant from the owner of the baggage is given to the operator. |
| | |
| **CHAPTER 4**<br>**Arrival and departure of cargo and other articles** | |
| Standard 4.7 | Not applicable. |
| Electronic data processing techniques | The principle of the optional participation of the users and other parties involved in the use of the electronic system implies the retention of a normal procedure for the customs clearance of cargos, which presents major disadvantages. |
| Standard 4.9 | |
| Cargo export permit. | The commercial invoice is required. |
| Recommended practice 4.18 | Not applicable. |
| Cago import permit. | The commercial invoice and the certificate of origin, if any, are required in a distinctive form. |
| Recommended practice 4.22 | Applicable solely to non-commercial consignments of little value. |
| Cargo import permit. | |
| Standard 4.23 | Applicable solely to non-commercial consignments of little value. |
| Recommended practice 4.44 | Not applicable. |
| Arrival and departure of certain articles. | |
| Recommended practice 4.45 | The customs duties are payable, but the import is exempt from tax. |
| Arrival and departure of certain articles | |
| | |
| **CHAPTER 5**<br>**Trafic and transit within the territory of contracting state** | |
| Standard 5.4<br>Traffic departing from the same airport by another service | Not applicable in its entirety.<br>A document specifying, in particular, one the one hand the identity of the packages and the aircraft and, on the other, the nature, the gross weight and the loading point of the cargo, may be demanded by the customs as a brief cargo declaration. |
| | |
| **CHAPTER 6**<br>**International airports equipment and services affecting the traffic** | |
| Recommended practice 6.52 | The official authorities will apply it as far as is possible. |
| Medical services | |
| Recommended practice 6.55 | The official authorities will apply it as far as is possible. |
| Equipment necessary for the execution of the arrival and departure controls and for the functioning of the control services. | |
| Recommended practice 6.57 | The official authorities will apply it as far as is possible. |
| Equipment necessary for the execution of the arrival and departure controls and for the functioning of the control services. | |

**Aeronautical Telecommunications**

| ICAO REGULATIONS | CAT | FRENCH REGULATIONS |
|---|---|---|
| **VOLUME 1 : Seventh edition including all amendments up to n°91 in force since the 8th of November 2018** | | |
| **CHAPTER 2** | | |
| § 2.2.1 | C | NDBs are not subject to periodic flight tests. |
| § 2.3.1 | C | In France, information about the operational status of the GNSS radionavigation service is not provided to the units providing aerodrome local air traffic control service, aerodrome flight information service or approach control service. |
| | | |
| **CHAPTER 3** | | |
| § 3.1.2.1.1* | B | Most of VHF marker beacons (mainland and overseas) are not fitted with remote control and indicator equipment. They function continuously.<br>To compensate for the temporary unavailability of a VHF marker beacon or a DME, the global navigation satellite system may be used to provide distance information to the runway threshold in order to enable glide path verification checks. This possibility will be implemented only when needed and will be the subject to specific information of airspace users, particularly through aeronautical information. |
| §3.1.2.7.1* | C | Provision not adopted by France.<br>At those locations where two separate ILS facilities serve opposite ends of a single runway and where a facility performance category I — ILS is to be used for auto-coupled approaches and landings invisual conditions, it is not required that an interlock ensures that only the localizer serving the approach direction in use radiates. |
| §3.1.3.3.3* | C | Provision not adopted by France.<br>Above 7 degrees, it is not required that the signals are reduced to as low a value as practicable |
| § 3.1.4.1, § 3.1.4.2 | C | Provisions not adopted by France for aircraft flying VFR. |
| §3.1.5.1.5* | C | Provision not adopted by France.<br>It is not required that the height of the ILS reference datum for Facility Performance Category I — ILS is 15 m (50 ft). |
| §3.1.5.1.6* | C | Provision not adopted by France.<br>It is not required that the height of the ILS reference datum for Facility Performance Category I — ILS used on short precision approach runway codes 1 and 2 is 12 m (40 ft). |
| §3.3.6.5.1* | C | Provision not adopted by France.<br>It is neither required that a VOR identification signal is transmitted at least three times each 30 seconds nor that it is spaced equally within that time period. |
| § 3.3.8.1, § 3.3.8.2 | C | Provisions not adopted by France for aircraft flying VFR. |
| §3.4.5.2.1* | C | Provision not adopted by France.<br>It is neither required that the NDB identification signal is transmitted at least three times each 30 seconds nor that this signal is spaced equally within that time period. |
| §3.4.7.1* | C | Provision not adopted by France.<br>It is not required that locators used as a supplement to the ILS are located at the sites of the outer and middle marker beacons. |
| §3.4.7.2* | C | Provision not adopted by France.<br>It is not required that locators installed at both the middle and outer marker position are located on the same side of the extended centre line of the runway. |

| | | |
|---|---|---|
| 3.5.3.1 a) | C | Provisions not adopted in the regulations by France.<br>Data communication application between installations ATS (AIDC) is not insured by ATN. |
| § 3.8.3 | C | Provisions not adopted in the regulations by France.<br>ATN endpoints are not able to confirm the identity of peer end-systems, authenticating the source of messages, and ensuring the integrity of message data. |
| | | |
| **CHAPTER 8** | | |
| § 8.2.3*, 8.2.3.1*, 8.2.4*,8.2.6*, 8.2.7*, 8.2.7.1*, 8.2.8*, 8.2.9*, 8.2.10* | C | Provisions not adopted in the regulations by France.<br>Technical provisions for teleprinter equipment and circuits not used in the RSFTA. |
| § 8.3 | C | Provisions relating to terminal equipment for aeronautical radioteleprinter channels operating in the 2.5 MHz-30 MHz band not adopted in the regulations by France. |
| § 8.5 | C | Technical provisions relating to the transmission of ATS messages not adopted in the regulations by France. |
| § 8.6.3 | C | Provisions relating to ground-to-ground link control procedures of character-based data are not apply. |
| | | |
| **VOLUME 3 - Part II: second edition including amendment NR 90 applicable from the 10th November, 2016** | | |
| | | |
| Chapters 1, 2, 3 and 4 (standards and recommended practices) transposed into French regulations without difference. | | |
| | | |
| **VOLUME 4: fifth edition including amendment NR 90 applicable from the 8th November, 2018** | | |
| | | |
| Chapters 1, 2, 3 and 6 (standards and recommended practices) and standards of section 5.2 of chapter 5 transposed into French regulations without difference. | | |
| | | |
| (*) Recommended practices are indicated by an asterisk. | | |
| | | |
| **VOLUME 5: Sixth edition updated to amendment NR 85 in force the 18th November 2010** | | |
| | | |
| **CHAPTER 4** | | |
| § 4.1.3.1.1 | B | In addition of the users specified in this paragraph, the 121.5 MHz frequency may also be used for the purposes of direction-finding. |
| § .4.1.3.1.2 | B | The 121.5 MHz frequency is implemented on some international aerodromes only when considered as necessary. |
| § 4.1.5.1 | B | As regards the geographic distribution of VHF frequencies and protection against interference, the 14 dB criterion is used only for the circular services with 25 kHz spacing.<br>The electric horizon is used in the other cases (spacing of 8.33 and 25 kHz).<br>No regional agreements as regards this issue. |
| § 4.1.8.1.3 | B | The OPC frequencies are assigned outside the dedicated band. |

**Air Traffic Services**
**Fifteenth edition including amendment N° 53 applicable from 28th November 2024**
**Recommended practices are indicated by an asterisk (*)**

| ICAO REGULATIONS | CAT | FRENCH REGULATIONS |
|---|---|---|
| | | |
| **CHAPTER 2** | | |
| § 2.6.1 | C | The SERA provision gives an exemption possibility. SERA.6001 allows aircraft to exceed the 250 knot speed limit where approved by the competent authority for aircraft types, which for technical or safety reasons, cannot maintain this speed. FRA.6001 specifies the conditions of exemption. |
| § 2.6.3 | C | The SERA provision gives an exemption possibility. SERA.6001 allows aircraft to exceed the 250 knot speed limit where approved by the competent authority for aircraft types, which for technical or safety reasons, cannot maintain this speed. FRA.6001 specifies the conditions of exemption. |
| § 2.26.5 | C | Time checks shall be given at least to the nearest minute. |
| | | |
| **CHAPTER 3** | | |
| § 3.1 | A | SERA.5010(c) introduces an accurate description of requirements for special VFR. |
| § 3.3.4 | A | SERA.8005(b) requires the agreement of the pilot of the other aircraft, the maintenance of own separation and allow this exemption below 3050 m (10000 ft) during climb or descent, during day. |
| § 3.7.3.1 | A | In addition to the ICAO standard:<br>1) in point b), point SERA.8015(e)(1)(ii) also includes ‘taxi’;<br>2) in point c), point SERA.8015(e)(1)(iii) also includes ‘the newly assigned communication channels’;<br>3) point SERA.8015(e)(1)(iv) requires the readback of transitions levels. |
| § 3.7.3.1.1 | A | The SERA 8015 (e) (2) provision includes 'taxi instructions' in addition to the ICAO requirements to be read back. |
| **CHAPTER 6** | | |
| § 6.1.2.1 | C | Regulation (EU) 2017/373 allows flexibility in the available radio coverage subject to approval by the competent authority. |

**Aerodromes**

**VOLUME 1**
***AERODROME DESIGN AND OPERATIONS***
***8th Edition including amendment 14 as from 8 November 2018 (not including amendment 13-B applicable as from 5 November 2020)***
***Recommended practices are marked with an asterisk (*).***
***Note : French aerodromes are either subject to European regulation and in this case hold a European aerodrome safety certificate (a list of those aerodromes is given in section AD 1.5 of the AIP metropolitan France, CAR-SAM-NAM and RUN), or to national regulation.***

| ICAO REGULATIONS | CAT | FRENCH REGULATIONS |
|---|---|---|
| **DEFINITIONS** | | |
| Instrument Runway<br>Precision Runway | B | Under European regulation :<br>- The 1000 m visibility limit is not used in the non-precision runway definition.<br>Under national regulation :<br>- An instrument runway is a runway using at least one instrument approach or departure procedure.<br>- A precision approach is a 3D approach based on electronic ground equipment.<br>- Classification criteria does not include Type A and Type B concepts.<br>- There is no reference to CAT III C runway in national aerodrome regulation. |
| Non-instrument Runway | B | Instrument approach procedures are not allowed on non-instrument runways. |
| Clearway | C | Under European regulation, the clearway is under the control of the appropriate entity (aerodrome operator).<br>The definition contained in national regulation is different : it is precised that the clearway when it exists, is necessary coaxial to the runway, adjacent to one of its ends, including the stopway. In addition, the clearway is not attached to the control of the appropriate authority. |
| | | |
| **CHAPTER 1** | | |
| § 1.4.1 | B | European regulation applies only to aerodromes open to public use, which serve commercial air transport, having a paved instrument runway of 800 m or more. These aerodromes are certified under European regulation, with a possible exemption for aerodromes below 10 000 commercial passengers per year and 850 fret movements per year.<br>Aerodromes not covered by European regulations are certified when they accommodate more than 10 000 commercial passengers over 3 consecutive years.<br>All aerodromes out of the scope of European Union regulation are subject to runway homologation by the Competent Authority. |
| § 1.6.2 et 1.6.4 | B | No difference for European regulation.<br>Under national regulation, the code letter is still based on the span and the OMGWS. |
| | | |
| **CHAPTER 2** | | |
| §2.1.2* | C | This recommendation has not been transposed in either european regulation, or national regulation. |
| §2.5.3 | C | Under European regulation, this provision has been transposed as guidance material.<br>Under national regulation, this provision has not been transposed. |
| § 2.9.3 | B | No difference for European regulation.<br>Under national regulation, frequency of inspections is based on different criteria, in particular the traffic received. |
| § 2.11.2* | B | See differences regarding articles 9.2 pertaining RFFS. |
| | | |
| **CHAPTER 3** | | |
| § 3.1.8* | C | This provision has not been transposed in either european regulation, or national regulation. |
| § 3.1.10* | B | No difference for European regulation.<br>Under national regulation, the code letter is still based on the span and the OMGWS. Moreover, width of code F runway is submitted to the approbation of the competent authority. Finally, the minimal width of unpaved runways is 50 m (80 m for runways used by gliders). |
| § 3.1.11* | B | No difference for European regulation.<br>Under national regulation, separation criteria between parallel runways are based on runway length and nature of the pavement. The minimum distance between centre lines may be different at an arodrome where only VFR flights are accomodated. |
| § 3.2.1* and 3.2.2* | C | Under European regulation, the relevant specification is applicable only if the Outer Main Gear Wheel Span (OMGWS) is between 9 m up to but not including 15 m.<br>Under national regulation, shoulders are only required for code E runways and submitted to the competent authority approval for code F runways. |
| § 3.2.5* and 3.2.6* | C | No difference for European regulation.<br>Under national regulation, the requirement to prepare the runway shoulder is limited to code E runways. |
| § 3.3.1 and 3.3.2* | C | The construction of a turning pad is not systematically required. |
| § 3.3.4*, 3.3.5* and 3.3.6 | B | No difference for European regulation.<br>These provisions have not been transposed in national regulation. |
| § 3.3.9 | C | No difference for European regulation.<br>This provision has not been transposed in national regulation. |
| § 3.4.3 | A | No difference for European regulation.<br>Under national regulation, the strip extends laterally to a distance of 150 m where the code number is 3 and 4 and 75 m where the code number is 1 and 2. |
| § 3.4.9* | B | No difference for European regulation.<br>Under national regulation, the graded portion of runway strip for a non-instrument unpaved code 1 runway is reduced to 25 m instead of 30 m, unless it is intended to be used by gliders and in that case is increased to 40 m. |
| § 3.4.12* | C | Under European regulation, this provision has been transposed as guidance material.<br>Under national regulation, this provision has not been transposed. |
| § 3.5.1 and 3.5.2* | C | No difference for European regulation.<br>Under national regulation, the implementation of a runway end safety area is required only in the event of runway creation or extension. |
| § 3.5.4* and 3.5.6* | C | No difference for European regulation.<br>These recommendations are not transposed in national regulation. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 3.5.9*, 3.5.10* and 3.5.11* | C | No difference for European regulation.<br>These recommendations are not transposed in national regulation. |
| § 3.8.1* | C | Under European regulation, the provision of radio altimeter operating area is not mandatory for CAT I runways.<br>Under national regulation, it is not required in this case. |
| § 3.8.3* | C | No difference for European regulation.<br>Under national regulation, the width of the radio altimeter operating area for a precision approach Category III is 60 m (30 m on each side of the centre line). |
| § 3.8.4* | C | This provision is transposed in guidance material in the european regulation.<br>Under national regulation, the characteristics of radio altimeter operating areas are as follow :<br>- average longitudinal slope less than 2 % in absolute value ;<br>- no local slopes greater than 5 % in absolute value ;<br>- no local surface height variations greater than 1 m.<br>When the terrain does not meet these requirements, a specific study shall be conducted and an artificial terrain can be used. |
| § 3.9.3 | B | No difference for European regulation.<br>Under national regulation, the clearances used for the design of taxiways are based on both wingspan and OMGWS. If the taxiway is intended to be used by aeroplanes with a wheel base less than 18 m, the clearance is always 4.5 m even for straight portions. In addition, there is no provision for code F taxiway.The provisions for taxiways code F are subject to specific approval of the competent authority. |
| § 3.9.4* | B | No difference for European regulation.<br>Under national regulation :<br>- code C taxiway intended to be used by aeroplanes with a wheel base equal to or greater than 18 m shall have a width of 18 m minimum,<br>- there is no provision for code F taxiway,<br>- existing code E taxiway under national regulation can keep a width of 22.5 m,<br>- the width of taxiways code F is subject to specific approval of the competent authority. |
| § 3.9.9* | C | The European regulation offers the possibility of different slopes under given conditions.<br>This recommendation is not transposed in national regulation. |
| § 3.9.12* | C | The European regulation requires a suitable strength for taxiways and not the strength of the runway they serve.<br>This recommendation is not transposed in national regulation. |
| § 3.13.6* | C | The European regulation offers the possibility to reduce the clearance distance for height limited objects or if the stand is restricted for aircraft with specific characteristics.<br>This recommendation is not transposed in national regulation. |
| | | |
| **CHAPTER 4** | | |
| § 4.1.8 | B | No difference for European regulation.<br>Provision partially reworked in national regulation : there are no approach surfaces with lateral offset. Offset approach surfaces are not provided for. The current regulation specifies that curved surfaces can be used. Curved surfaces are allowed when curved approaches are inevitable (noise abatement above tenements, presence of permanent obstacles, etc.). |
| § 4.2.3 ; § 4.2.10 ; § 4.2.19 ; § 4.2.25 | B | No difference for European regulation.<br>Under national regulation, the implementation of facilities and equipment involved in air navigation and public air transport safety can be authorized in areas under aeronautical regulations, upon prior notification from a specific commission and provided that a technical study has demonstrated that the safety and regularity of aircraft operations are not adversely affected. |
| § 4.2.8 | A | No difference for European regulation.<br>Under national regulation, the lengh of inner edge of the approach surface is 150 m for non-precision approach runways code 1 and 2 and 300 m for non-precision approach runways code 3 and 4. |
| § 4.2.16 | A | Under European regulation : For code F aeroplanes, the width of the inner approach surface and the lengh of the inner edge of the balked landing surface are increased to 140 m irrespective of the type of avionics (Table J-1).<br>In national regulation : the width of the inner approach surface and the lengh of the inner edge of the balked landing surface are subject to specific approval of the competent authority for code F aeroplanes. In addition, the lengh of the inner edge of the approach surface is increased to 150 m for precision approach CAT I (code 1 and 2) and 300 m fo precision approach CATI, II and III (code 3 and 4). |
| § 4.2. 9 ; § 4.2.17 | B | No difference for European regulation.<br>Under national regulation, it is specified that, in the presence of many intersections, the last one is horizontal and its elevation is :<br>- either 150 m above the elevation of the surface origin;<br>- or 100 m above the highest point of the terrain and related obstacles under the landing surface, whichever is the highest. |
| § 4.2.18 | B | No difference for European regulation.<br>Under national regulation, some obstacles are permitted above the OFZ associated with Category I approaches in some very special cases and subject to a safety study. Such extensions may, as required, be accompanied by operational restrictions. |
| | | |
| **CHAPTER 5** | | |
| § 5.1.3.1 | B | No difference for European regulation.<br>Under national regulation, the provision of signalling lamp is not required. However, operational instructions are indicated in case of failure of radio communication means. |
| § 5.2.1.8* | C | No difference for European regulation.<br>Under national regulation, marking on unpaved taxiways is not required. |
| § 5.2.2.2* | C | No difference for European regulation.<br>Under national regulation, runway designation marking is not required on unpaved runways. |
| § 5.2.3.3, 5.2.3.4, 5.2.4.5 and 5.2.5.4 | B | No difference for European regulation.<br>Under national regulation, the use of simplified marking is allowed for blacktop runways used in VFR conditions or in IFR conditions (excluding precision approaches), and for concrete runways used solely in VFR conditions. |
| § 5.2.4.3* | C | No difference for European regulation.<br>Under national regulation, threshold marking is not required on unpaved runways. |
| § 5.2.4.9 | B | No difference for European regulation.<br>Under national regulation, displaced threshold is represented by one to three "V" marks. |
| § 5.2.8.4* and 5.2.8.5 | C | In European regulation, enhanced taxiway centre line marking are not mandatory.<br>These provisions have not been transposed in national regulation. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 5.2.13.1* | C | Under European regulation, Aircraft stand markings are not mandatory.<br>This provision has not been transposed in national regulation. |
| § 5.2.13.2* | C | This provision is neither transposed in European, nor in national regulation. |
| § 5.2.14.1* and 5.2.14.2 | B | No difference for European regulation.<br>Under national regulation, the apron safety line may also separate the apron and the manoeuvring area. |
| § 5.2.16.2* | B | No difference for European regulation.<br>National regulation allows to replace a mandatory instruction marking by a specific mandatory marking indicating RUNWAY AHEAD in particular in the case of parallel runways. |
| § 5.3.3.3 | C | European regulation limits the requirement to install an aerodrome beacon to aerodromes carrying VFR traffic at night only.<br>There is no difference between national regulation and ICAO. |
| § 5.3.3.6 | C | Under European regulation, the colour of the flashes alternating with white flashes is not determined.<br>No difference for national regulation. |
| § 5.3.3.12 | B | No difference for European regulation.<br>Under national regulation, France applies this provision to new facilities ; in France, some existing identification beacons show flashing-white rather than flashing-green. |
| § 5.3.4.1 and 5.3.4.10 | C | No difference for European regulation.<br>Under national regulation, approach lighting systems are not required on non-instrument and non-precision approach runways. On precision approach runways, the length of the approach lighting system may be reduced if operational minima are adapted accordingly. When the system is not provided, runway threshold identification lights are installed. |
| § 5.3.5.1 | C | No difference for European regulation.<br>Under national regulation, visual approach slope indicator systems (PAPI, APAPI) are not required on runway used by turbojet airplanes. |
| § 5.3.5.2, 5.3.5.3 and 5.3.5.4* | A | No difference for European regulation.<br>Under national regulation, T-VASIS and AT-VASIS systems are not allowed. |
| § 5.3.12.2* | C | Runway centre line lights are not required on precision runways CAT I. |
| § 5.3.12.3 and 5.3.12.4* | C | No difference for European regulation.<br>Under national regulation, runway centre line lights are mandatory for take-off in low visibility when the RVR is lower than 250 m for aircrafts of category A, B, C; and 300 m for aircrafts of category D. |
| § 5.3.14.1 | C | No difference for european regulation.<br>Under national regulation, the simple touchdown zone lights are not implemented. |
| § 5.3.15.1 and 5.3.15.2 | C | Under European regulation, the provision of rapid exit taxiway indicator lights is not mandatory.<br>This provision has not been transposed in national regulation. |
| § 5.3.17.1 | C | No difference for European regulation.<br>Under national regulation, the taxiway centre line lights are systematically required only for taxiways used by RVR lower than 150 m. |
| § 5.3.17.2* | C | No difference for European regulation.<br>This recommendation has not been implemented in national regulation. |
| § 5.3.17.13*, 5.3.17.15*, 5.3.17.19 and 5.3.17.20* | B | Under European regulation, 60 m intervals between taxiway centre line lights are not accepted.<br>Under national regulation, intervals between these lights depend on others criterions such as RVR and proximity of the runway. |
| § 5.3.19.2* | C | In European regulation, runway turn pad lights can be omitted when taxiway edge lights and runway turnpad marking provide adequate guidance.<br>In national regulation, the provision of runway turn pad lights is not systematically required on runways intended for use at night. |
| § 5.3.20.1 and 5.3.20.2 | C | No difference for European regulation.<br>Under national regulation, stop bars are only required on taxiways giving access to CATII/CATIII precision runways and take-off with RVR lower than 150 m. |
| § 5.3.22.1* | C | Under European regulation, the provision of de-icing/anti-icing facility exit lights is not mandatory.<br>This recommendation has not been implemented in national regulation. |
| § 5.3.24.1* | C | Under European regulation, the provision of apron floodlighting is not mandatory on de-icing/anti-icing facilities.<br>Under national regulation, the provision of apron floodlighting is not required. |
| § 5.3.24.4* | C | No difference for European regulation.<br>Under national regulation, there is no requirement on the average illuminance of apron floodlighting. |
| § 5.3.25.1 | C | No difference for European regulation.<br>The national regulation does not describe the cases in which the installation of a visual docking guidance system is required. |
| § 5.3.26.1* | C | No difference for European regulation.<br>The national regulation does not describe the cases in which the installation of an advanced visual docking guidance system is required. |
| § 5.3.27.1* | C | No difference for European regulation.<br>This recommendation has not been transposed in national regulation. |
| § 5.3.28.2* | C | No difference for European regulation.<br>Under national regulation, road-holding position lights are required when the runway is to be used with RVR below 350 m. |
| § 5.3.29.1* | C | No difference for European regulation.<br>This provision has not been transposed in national regulation. However, protection against incursion is ensured when RVR <550 m or in LVP conditions by the installation of permanently lighted red bars to forbid the access to all unusable taxiways. |
| § 5.4.1.7 | C | No difference for European regulation.<br>Under national regulation, signs intended for use at night in association with non-instrument runways where the code number is 3 or 4 are not required to be illuminated if they are reflective. |
| § 5.4.2.8 | C | No difference for European regulation.<br>Under national regulation, only one runway designation sign is provided on the left-side for non-instrument runway. |
| § 5.4.2.15 | B | No difference, in the European regulation.<br>Under national regulation, the CAT II/III panel is not used and the CAT III panel is provided at the combined CAT II/III runway-holding positions. |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| § 5.4.2.18 | B | No difference, in the European regulation.<br>In the national regulation, the CAT II or CAT III inscription is always placed closest to the taxiway and the runway identifier is on the outside.<br>20-02 CAT III \| CAT III 20-02<br>Left side sign Right side sign |
| § 5.4.3.4 | C | No difference for the European regulation.<br>Under national regulation the provision partially reworked and implemented : Runway vacated signs are only provided for Category II and III precision approach runways or low-visibility take-offs to indicate to a pilot that he/she is crossing the limit of the strip or of the ILS/MLS critical area. |
| § 5.4.3.20 | B | No difference for European regulation.<br>Under national regulation, the intersection take-off signs are installed on the side of the take-off direction. |
| § 5.4.3.29 | B | No difference in the European regulation.<br>Under the national regulation, the inscriptions on these signs will indicate the value of the distance remaining to the end of the runway (TORA) expressed in metres, but the letter “m” of the unit will not be displayed. The runway identifier may also be mentioned. |
| | | |
| **CHAPTER 6**<br>*Note : the application of the european regulation is limited to the area under control of the aerodrome operator.* | | |
| § 6.1.1.10* and § 6.1.2.3* | B | The specification has been transposed as Guidance Material in the European regulation.<br>Under national regulation : Only wires and cables that exceed a certain height are marked. (variable according to their location). The visual aids characteristics (markings, lights, markers) are established according to more detailed criteria than the requirements of recommendation 6.1.1.10. Daytime lighting is not systematically required. |
| § 6.2.1.2 | B | No difference for European regulation.<br>In national regulation, the use of LI A, B and E lights is extended to twilight for all obstacles, and to daytime for wind turbines. MI A lights are not used at night.<br>At nighttime, specific wind turbines among a wind farm may be fitted with red, 200 cd, flashing lights that are not described by ICAO.<br>Only the minimum requirements of Table 6-3 ("Light distribution of HI and MI lamps") shall apply. The "recommendations" in Table 6-3 are not required. |
| § 6.2.2.1 | B | Under European regulation, the marking of vehicles applies to those operating on the manoeuvring area.<br>Under national regulation, the marking specifications of vehicles on the manoeuvring area is defined by local authorities and include national provisions on emergency and service vehicles. |
| § 6.2.2.7 | C | No difference for European regulation.<br>Under national regulation, lights with a lower intensity can be used on follow-me vehicles. |
| § 6.2.2.8 | C | No difference for European regulation.<br>Under national regulation, lights are not required on objects with limited mobility such as aerobridges. |
| § 6.2.3.4* | B | No difference for European regulation.<br>Under national regulation, when marking is undertaken with a single colour, yellow is used for obstacles located in the vicinity of a runway which projection on any vertical plane is less than 1.5 m in both dimensions. |
| § 6.2.3.7* | B | No difference for European regulation.<br>Under national regulations, flags are red in colour or have two triangular sections, one red and the other white. |
| § 6.2.3.18* | B | The specification has been transposed as Guidance Material in European regulation.<br>Under national regulation, it is intended to be possible to adapt the beaconing, in particular to reduce it in the event of visual disturbance for pilots, however the type of beaconing to be used is not specified (decision on a case-by-case basis by the competent military and civil authorities). |
| § 6.2.3.20* | B | No difference for European regulation.<br>Under national regulation, by default, LI lighting is provided for obstacles less than 45 m high. It is planned to be able to enhance the markings in particular situations. The need is assessed on a case-by-case basis by the relevant military and civil authorities. |
| § 6.2.3.26 | C | No difference for European regulation.<br>Not transposed in national regulation. Type C MI lights can only be used for specific wind turbines located inside a wind farm. |
| § 6.2.3.30* | B | The part of the specification regarding the colour has been partially transposed as Guidance Material in European regulation.<br>Under national regulation, it is intended to be possible to adapt the beaconing, in particular to reduce it in the event of visual disturbance for pilots, however the type of beaconing to be used is not specified (decision on a case-by-case basis by the competent military and civil authorities). |
| § 6.2.3.33 | C | No difference for European regulation.<br>Not transposed in national regulation. Type C MI lights can only be used for specific wind turbines located inside a wind farm. |
| § 6.2.4.2* | B | No difference from the European regulations applicable at aerodromes or in areas under the control of aerodrome operators.<br>Under national regulations, wind turbines can, in addition to white, be painted in grey with a minimum luminance factor equal or greater than 0,4. Additional red or orange markings are required for offshore wind turbines. |
| § 6.2.4.3* and 6.2.4.5* | C | No difference for European regulation.<br>National regulation complies with the provisions of this recommendation with the exception of points e)-ii and e)-iii: the 2nd lamp is not required and the intermediate lamps are low intensity type B lamps.<br>Type C MI lights can only be used for specific wind turbines located inside a wind farm.<br>6.2.4.3. b): Regarding wind turbines, maximal spacings between MI lights which are different than 900 m are prescribed by French regulation, depending on the type of lighting (night/day), on the type of wind farm (offshore, onshore), and on the height of the wind turbines (more or less than 150 m). Those spacings range from 500 m to 2 000 m. |
| § 6.2.5.1* | C | No difference for European regulation.<br>In national regulation, not all supporting towers are coloured. |
| § 6.2.5.2* | C | No difference for European regulation.<br>In national regulation, The marking of supporting towers can be omitted if daytime medium intensity lights are used. |
| § 6.2.5.11* | B | The specification has been transposed as Guidance Material in European regulation.<br>In national regulation, it is intended to be possible to adapt the beaconing, in particular to reduce it in the event of visual disturbance for pilots, however the type of beaconing to be used is not specified. |

| | | |
|---|---|---|
| **CHAPTER 8** | | |
| § 8.1.7 | C | No difference for european regulation.<br>Under national regulation, a one-second switch-off time for the secondary power supply is required under 400 m RVR by day and 800 m RVR by night. |
| § 8.2.3 | C | No difference for european regulation.<br>Under national regulation, where a runway forming part of a standard taxi-route is provided with runway lighting and taxiway lighting, the lighting systems is not required to be interlocked to preclude the possibility of simultaneous operation of both forms of lighting. |
| | | |
| **CHAPTER 9** | | |
| § 9.2.2 | C | The European regulation does not foresee the provision of specialist fire-fighting equipment appropriate to the hazard and risk.<br>The national regulation foresees specific requirements only for water areas (lakes, seas) and not for swampy areas and other difficult terrains. |
| § 9.2.4* | C | Both European and national regulations foresee the reduction of the level of protection ensured on an aerodrome when the number of movements of the aircraft in the highest category normally using the aerodrome is less than 700 in the busiest consecutive three months. |
| § 9.2.5 | C | No difference for European regulation.<br>Under national regulation, for aircraft employed for exclusive transportation of cargo or mail, the overall length divided by three is used for the calculation. In addition, to determine the type of aircraft normally using the aerodrome, a threshold of 24 aircraft movements over the busiest three consecutive months of the previous year is used. |
| § 9.2.8* | C | No difference for European regulation.<br>The national regulation does not request a main agent for aerodromes of RFFS level 1 and 2. |
| § 9.2.11 | C | No difference for European regulation.<br>Under national regulation, aerodromes with a RFFS level equal to 1 are provided with 50 kg of complementary agents, and aerodromes with a RFFS level equal to 2 are provided with 250 kg of complementary agents. |
| § 9.2.13 | C | No difference for European regulation.<br>Under national regulation, water quantity is given by the RFFS category, without extra quantities. |
| § 9.2.27 and 9.2.28* | C | No difference for European regulation.<br>Under national regulation, the operational objective is to achieve a maximum three-minute response time at the end of each runway. |
| § 9.2.29* | C | European and national regulations do not foresee a response time not exceeding three minutes to any other part of the movement area. |
| § 9.2.41* | C | No difference for European regulation.<br>Under national regulation, no vehicles specific to the aircraft rescue and fire-fighting services are provided at aerodromes with a RFFS level 1. |
| § 9.2.44* | C | No difference for European regulation.<br>Under national regulation, no RFFS personnel are provided at aerodromes with a RFFS level 1. |
| § 9.2.45* | C | Under European regulation, the task resource analysis due to determine the minimum number of RFFS personnel has been transposed as Guidance Material.<br>In national regulation, the number of RFFS personnel is set out by the regulation. |
| § 9.2.46 | C | No difference for European regulation.<br>Under national regulation, the provision of respiratory equipment is only required for aerodromes with a RFFS level 3 or higher. |
| § 9.3.1* and 9.3.2* | C | Under European regulation, specifications related to the removal of aircraft have been transposed as guidance material.<br>The national regulation foresees that the aircraft operator is responsible for the aircraft removal. |
| § 9.5.1 to 9.5.3 | C | This specification has not been transposed in either European regulation or in national regulations applicable to aerodromes. |
| § 9.5.7 | C | The European and national regulations do not require that the aircraft stands shall be visually monitored to ensure that the recommended clearance distances are provided. |
| § 9.8.7* and 9.8.8* | C | The provision of a surface movement radar for the manoeuvring area is not systematically required. |
| § 9.9.4 | C | Under European regulation, the relevant specification may allow the presence of equipment/installations after a safety assessment regarding safety and regularity.<br>Under national regulation, this specification applies to new-built runways and runway extensions. |
| § 9.10.1 | | No difference for European regulation.<br>Under national regulation, adapted fences used to prevent animals from accessing to the movement area are required depending on the risk. |
| § 9.10.5 | | This recommendation has been transposed as guidance material.<br>This recommendation has not been transposed under national regulation. |
| § 9.11 | | This recommendation has not been transposed in either European regulation or national regulations applicable to aerodromes. |
| | | |
| **CHAPTER 10** | | |
| § 10.2.3 and 10.2.7 | C | Under European regulation, minimum friction level is defined in guidance material.<br>No difference in national regulation. |
| § 10.3.1 to 10.3.3* | C | No difference for European regulation.<br>Under national regulation, the removal of contaminants on runways, taxiways and aprons (snow, ice, standing water, dust…) to minimize the risk of accumulation is a recommendation. |
| § 10.3.5* | C | The specifications regarding the use of chemicals to remove ice and frost have not been transposed in european and national regulations. |
| § 10.5.1 | C | No difference for European regulation.<br>Under national regulation, the provisions on main beam average intensity of runway lights are guidance material. |

**ANNEX 14**
**Helistation**

**VOLUME 2**
**HELIPORT DESIGN AND OPERATION**

**2nd Edition with Amendment N° 3 applicable as from November 25th, 2004**

| ICAO REGULATIONS | CAT | FRENCH REGULATIONS |
|---|---|---|
| Touchdown and liftoff area | B | Alternate means of Compliance : In France, the Touchdown and lift-off area (TLOF) definition is as follows: “A load bearing area on which a helicopter may touch down or hover.” |
| Heliport | B | Alternate means of Compliance : In France, a Heliport is an aerodrome intended to receive only helicopters. |
| | | |
| **CHAPTER 2** | | |
| § 2.1.2 and § 2.1.3 | C | Provision not reworked |
| § 2.2.2 | C | Provision not reworked |
| § 2.4.3 | C | Provision not reworked : The geographical coordinates of the taxiway centre-line points are not yet published. |
| § 2.4.5 | C | Provision not reworked |
| | | |
| **CHAPTER 3** | | |
| § 3.1.2 | C | Provision partially reworked : The specifications pertaining to “sea heliports” are not addressed in the French regulations. |
| § 3.1.21 | C | Provision not reworked |
| § 3.1.27 | C | Provision partially reworked : This provision does not apply to shoulders in France. |
| § 3.1.29<br>§ 3.1.37 | B | Alternate means of Compliance : The French regulations refer to the rotor diametre for the helicopter overall width. |
| § 3.2.2 | B | Alternate means of Compliance : In France, the dimension of the FATO on an elevated heliport applies also to the FATOs intended to be used by performance class 3 helicopters. |
| § 3.2.4 | C | Provision partially reworked : The 2nd part of the standard is only a recommendation. |
| § 3.2.10 | C | Provision not reworked |
| § 3.3 Helidecks | D | Not applicable : There are no helidecks in France. |
| § 3.4 Shipboard heliports | C | Provision not reworked : The French regulations do not address shipboard heliports. |
| | | |
| **CHAPTER 4** | | |
| § 4.1.5 | B | Alternate means of Compliance : In France, the transitional surfaces are known as lateral surfaces. |
| § 4.1.48<br>§ 4.1.19<br>§ 4.1.20 | C | Provision partially reworked : These specifications are only recommendations in the French regulations. |
| § 4.1.21 to § 4.1.25 | D | Not applicable : There are no helidecks in France |
| § 4.2.2 | B | Alternate means of Compliance : When a non-precision direct approach is planned at both ends, the inner surface can be removed after studies have been performed. In this special case, the conical surface is replaced by the continuation of the lateral surface. |
| § 4.2.6 | B | Alternate means of Compliance : The implementation of facilities and equipment involved in air navigation and public air transport safety can be authorized in areas under aeronautical regulations, upon prior notification from a specific commission and provided that a technical study has demonstrated that the safety and regularity of helicopter operations are not adversely affected. This study is compulsory, and objects are limited only to facilities and equipment involved in air navigation and public air transport safety. |
| § 4.2.8 | C | Provision partially reworked : The French regulations include the possibility of a single approach surface. |
| § 4.2.10 | C | Provision partially implemented : Hospital heliports are subject to special studies. |
| § 4.2.11 | C | Provision partially reworked : The French regulations include the possibility of a single approach surface. |
| § 4.2.12 to § 4.2.18 | D | Not applicable : There are no helidecks in France. |
| § 4.2.19 to § 4.2 22 | C | Provision not reworked : The French regulations do not address shipboard heliports. |
| | | |
| **CHAPTER 5** | | |
| § 5.1.1.1<br>§ 5.1.1.2<br>§ 5.1.1.4<br>§ 5.1.1.7 | C | Provisions partially reworked : These provisions are only recommendations in the French regulations. |
| § 5.1.2.1 to § 5.1.2.3 | C | Provisions not reworked : French regulations do not require Provisions pertaining to helicopter hoisting marking. |
| § 5.2.2.1 to § 5.2.2.5 | C | Provisions partially reworked : These provisions are only recommendations in the French regulations. |
| § 5.2.3.3 | C | Provision partially reworked : This provision is only recommendation in the French regulations. |
| § 5.2.4.1 to § 5.2.4.5 | C | Provisions partially reworked : These provisions are only recommendations in the French regulations. |
| § 5.2.5.2<br>§ 5.2.5.3 | C | Provisions partially reworked : These provisions are only recommendations in the French regulations. |
| § 5.2.6.2 to § 5.2.6.3 | C | Provisions partially reworked : These provisions are only recommendations in the French regulations. |
| § 5.2.7.1 | D | Not applicable : There are no helidecks in France. |
| § 5.2.7.3<br>§ 5.2.7.4 | C | Provisions partially reworked : These provisions are only recommendations in the French regulations. |
| § 5.2.8.2 | C | Provision partially reworked : This provision is only recommendation in the French regulations. |

|---|---|
| **Procedures for air navigation services – aircraft operation<br>Volume II : construction of visual and instrument flight procedures<br>Seventh edition including amendment N° 10 applicable since 28th of November 2024** | |
| **ICAO REGULATIONS<br>RÉF : PANS OPS** | **FRENCH REGULATIONS<br>REF : NATIONAL DESIGN CRITERIA MANUAL** |
| **Part I – section 2 Chap 1: General** | In France, instrument flight procedures can be designed using criteria from either :<br>- ICAO document 8168 Volume II – PANS-OPS – up to date version ; or<br>- ICAO document 9905 - RNP AR manual – up to date version ; or<br>- a national document based on the sixth edition of ICAO Doc 8168 Volume II including amendment NR 7, which is not updated anymore since June 2018.<br>Procedures established in accordance with one of the two above-mentioned ICAO documents are explicitly identified as such on the aeronautical charts.<br>These criteria are made applicable by decision of the Minister in charge of civil aviation published in the official bulletin of the Ministry of transports, pursuant to the 24 th of January 2022 order relating to the establishement and design of instrument flight procedures.<br>This national document has some differences with corresponding ICAO provisions, particularly regarding general criteria as well as criteria for conventional procedures. These differences are listed here-below. |
| | **Appendix B in chapter 1**<br>**Wind speed**<br>Protection areas are established by taking into account the uncorrected effect of an omni-directional wind.<br>Weather statistics collected for various fields in metropolitan France have shown that the following maximum winds can be adopted to protect procedures :<br>- between 0 and 14,000 ft : w = 1.5 h + 36<br>- between 15,000 and 31,000 ft : w = 2.5 h + 22 (with w in kt and h in thousands of feet)<br>- above 31,000 ft : w = 100<br>Different values may be adopted if specific weather statistics allow it. If there are no available statistics or if the sample from the meteorological records is considered unsatisfactory, a maximum wind of : w = 2 h + 47 is taken into account.<br>Remark : For some phases of the procedure (e.g. missed approach), a standard value is determined to take into account the maximum wind when building a protection area.<br>**Temperature**<br>Protection areas are normally established by considering a temperature which is 15° higher than the standard temperature at the considered level. Nevertheless, in some particular cases, existing temperature statistics may be used to consider a maximum temperature which differs from the one which would result from the rule mentioned above. |
| **Part I – section 2 Chap 2: TERMINAL AREA FIXES<br>Para. 2.5.1.1. VOR** | The fix tolerance area vertical to a VOR is based on the horizontal circular cut of the reversed cone of ambiguity above the facility, with its apex at the facility and a half cone angle ( ) of 30°. You are supposed to penetrate the cone with a precision of ± 15° with respect to the prescribed inbound track. From the points of penetration, the track through the cone is supposed to be followed with a precision of ± 5°. If the facility defines the MAPt or the turning point at missed approach, fixed values will be used.<br>  <br> |
| **Part I – section 3: DEPARTURE PROCEDURES<br>Chap 2 – para. 2.6 OBSTACLE IDENTIFICATION SURFACE (OIS)** | **Not retained** |
| **Chap 2 – para. 2.7.3 PROCEDURE DESIGN GRADIENT (PDG)** | A PDG of over 3.3% and the maximum altitude of the increased gradient are published, together with the obstacle used to determine this gradient. There are two possible cases: 1) the PDG resulting from the consideration of obstacles very close to the DER is very high (higher than 15%): it is not published. In this case, a new PDG is computed ignoring these obstacles. The new gradient is published with an explanation about the obstacles ignored (position, elevation at the apex) and the most penalizing obstacle used to compute this gradient. 2) the PDG is high (higher than 3.3%): it is published together with the obstacle used to compute this gradient. If this obstacle is isolated and this is of operational interest, a second gradient ignoring this obstacle may be published; the most penalizing obstacle imposing the second gradient is also published if the latter is higher than 3.3%. |

© Service de l'Information Aéronautique, France

| | |
|---|---|
| **Chap 2 – para. 2.7 PROCEDURE DESIGN GRADIENT (PDG)** | **Para. 2.7.4** If the PDG is increased, it is brought back to 3.3% at the point situated beyond the critical obstacle from which an obstacle clearance of 0.8% of the distance from the DER can be guaranteed. |
| **Chap 2 – para. 2.7 PROCEDURE DESIGN GRADIENT (PDG)** | **Para. 2.7.5 Not retained** |
| **Chap 3 – para.3.1.2 PATH VECTORING** | **§3.1.2** Path vectoring is provided not later than 10 NM :<br>a) after DER, in case of straight-line departures,<br>b) after turns completed, in case of departures with turns. |
| **Chap 3 – para. 3.3.1.2 TURNING DEPARTURE** | Straight flight is assumed until reaching a height of at least 120 m (394 ft) [Cat H: 90 m (295 ft)] above DER altitude. For category A or B aircraft, a lower altitude may nevertheless be adopted, if necessary, provided that it is never lower than 90 m (295 ft). |
| **Chap 3 – para. 3.3.1.** | **Chap 3 – para. 3.3.1.4 There are two types of turn :**<br>- the initial turn made at a height no greater than 300 m (984 ft) above DER level, in the event of a turn at an altitude/height, or made at a designated TP situated at a distance of no more than 3.2 NM from the DER,<br>- the turn after initial climb made at a height greater than 300 m (984 ft) above DER level, in the event of a turn at an altitude/height, or made at a designated TP situated at a distance of more than 3.2 NM from the DER. |
| **Chap 3 – para. 3.3.4 TURNING DATA** | **Para. 3.3.4 Turning data**<br>**There are two types of turn :**<br>- the initial turn (H 300 m (984 ft)) or TP at less than 3.2 NM from the DER) ;<br>- the turn after initial climb (the other type).<br>**Airspeeds :**<br>**Category of aircraft** / **Maximum indicated airspeeds (kt)**: Initial turn / Turn after initial climb<br>A: 120 / 120<br>B: 145 / 165<br>C: 175 / 265<br>D: 205 / 290<br>**bank angle :**<br>- initial turn: 15°<br>- turn after initial departure: 25° or angular speed of 3°/s if the resulting bank angle is less than 25°. |
| **Chap 3 – para. 3.3.5.3** | a) ....<br>1) maximum obstacle altitude/height = TNA/H – [50 m (165 ft) for an initial turn or 90 m (295 ft) for a turn after initial climb] for aircraft;<br>2) maximum obstacle altitude/height = TNA/H – [40 m (131 ft) for an initial turn or 80 m (265 ft) for a turn after initial climb] for helicopters. |
| **Chap 4 – para. 4.2.1 AREA 1** | **Turn initiation areas (Area 1)**<br>Straight flight criteria apply until the TP (turn initiation area). |
| **Chap 4 – para. 4.2.2 AREA 2** | **Turn initiation areas (Area 2)**<br>Area 2 for omnidirectional departure extends from the boundaries of the turn initiation area to a circle of 25NM radius centered on the aerodrome (runway mid-point). A buffer zone of 5 NM surrounding this circle is used to decide which obstacles to take into account.<br>In mountainous regions, the radius of this circle may be increased if necessary, as the considered value will be published in all cases. |
| **Chap 6 – para. 6.2.1 INSTRUMENT DEPARTURES FROM PARALLEL RUNWAYS** | When two instrument departure procedures are to be used simultaneously from parallel runways, the nominal departure paths will diverge by at least 15° after take-off. Depending on the distance between the parallel runways, a lower value may be used after the supervisory authority has delivered its authorization. |
| **Chap 6 – para. 6.2.1 SEGREGATION OF MOVEMENTS ON PARALLEL RUNWAYS** | When an instrument departure procedure and an instrument approach procedure are to be used simultaneously in the same direction on parallel runways, the nominal paths for the departure procedure and the missed approach procedure will diverge as soon as possible by at least 30° (see Part II, Section 1, Chapter 1 – ILS). Depending on the distance between the parallel runways, a lower value may be used after the supervisory authority has delivered its authorization. |
| **Part I – section 4: ARRIVAL AND APPROACH PROCEDURES**<br>**Chap. 1.** | **Table 1.4.1.2 Speeds (AS) to compute the procedures in knots (kt)**<br>French regulations use the following values, expressed in knots, for the initial approach speed<br>**Category of aircraft** / **Initial approach speeds**: mini / maxi<br>A: 90 / 150<br>B: 120 / 180 (170 *)<br>C: 160 / 240 (220 *)<br>D: 185 / 250 (220 *)<br>* Maximum speed for inversion procedures and in racetrack patterns. Furthermore, the maximum speeds for the indirect final approach segments and the intermediate missed approach segment of a protected procedure for category A aircraft equal 110 kt. |

© Service de l'Information Aéronautique, France

| | |
|---|---|
| **Chap 2 – para. 2.1.1.5** | A STAR should enable the transition between the en-route phase and the approach phase by joining a significant point, usually on an ATS route, to another point from which the instrument approach procedure will begin.<br>The beginning of the arrival route varies depending on the situation:<br>1) if no controlled airspace is associated with the procedure:<br>- the last en-route fix, if situated less than 25 NM from the IAF; otherwise, the point situated at 25 NM from the IAF on the arrival route.<br>2) if controlled airspace is associated with the procedure:<br>- the boundary of this airspace or the closest possible fix to this boundary. |
| **Chap. 3. Para. 3.3.3 AREAS** | The initial approach segment is not of standard length. It must be long enough to allow the change in altitude required in the procedure. The width of the initial approach area through the IAF is:<br>- 10 NM (5 NM on either side of the centerline), when the IAF is not defined by the vertical of a radio facility;<br>- 4 NM (2 NM on either side of the centerline), when the IAF is defined by a VOR;<br>- 5 NM (2.5 NM on either side of the centerline), when the IAF is defined by an NDB.<br>The area cannot be more than 10 NM wide (5 NM on either side of the centerline). If it is less than this value at the IAF, the area opens out at 7.8° (VOR) or 10.3° (NDB) until it reaches the value of 10 NM (5 NM on either side of the centerline). |
| **Chap. 3. Para. 3.6 RACETRACK PROCEDURE AND REVERSAL PROCEDURE AREAS** | **data**<br>e) wind speed (w): omnidirectional wind for the specified altitude h; ICAO w = (2 h + 47) kt if h is in thousands of feet;<br>Metropolitan France: w = 1.5 h + 36 kt if h is in thousands of feet, or<br>if there are enough statistical data available, the maximum omnidirectional wind with a probability of 95% may be used. |
| **Chap. 4. INTERMEDIATE APPROACH SEGMENT**<br>**4.3.1 AREA** | **4.3.1.1 Length**<br>**4.3.1.1.1** The minimum length of the intermediate approach segment must correspond to a flight time of 30 seconds at initial approach speed.<br>**4.3.1.1.2** When the initial approach paths and intermediate approach paths are not aligned, the minimum length of the intermediate segment is determined by building the protection area for this phase in the procedure. |
| **Chap. 4. Para. 4.4.4 Turn not over mean** | Not retained |
| **Chap. 5. Para. 5.2 FINAL APPROACH SEGMENT** | **5.2.2 Conditions under which a final approach procedure is considered to be direct**<br>**5.2.2.1** ……<br>**5.2.2.2 Final approach with a path which does not cross the extended runway centerline**<br>A final approach which does not cross the extended runway centerline (equal to or less than 5°) may be established, provided that the path is 150 m maximum to the side of the extended runway centerline at a distance of 1 NM upstream of the threshold. ….<br>**5.2.2.3.2 Position of the approach path :** The final approach path (or its extension) should run less than 150 m from the runway centerline at 1 NM upstream of the threshold. |
| **Chap. 5. Para. 5.4.6 VISUAL SEGMENT PROTECTION FOR APPROACH PROCEDURES** | **5.4.6.5 Means of compliance**<br>1) Situations in which it is unnecessary to check VSS:<br>Runways with code 3 or 4 and procedure in the axis (final approach in the extended runway centerline):<br>- navigation easements or, failing that, clearance surfaces (bottom of curved surface with 2% slope) regularly checked (as part of approval monitoring) and obstacle-free, or<br>- runway (same QFU) equipped with PAPI and PAPI OCS (obstacle-free) situated below the VSS.<br>Runways with code 1 or 2 and procedure in the axis (final approach in the extended runway centerline):<br>- final approach slope such that the VSS is above the bottom of the curved surface of the navigation easements or, failing that, clearance surfaces regularly checked (as part of approval), or<br>- runway (same QFU) equipped with PAPI and PAPI OCS (obstacle-free) situated below the VSS.<br>2) Situations in which it is necessary to check VSS:<br>- any runway with procedure in the axis which does not meet the above conditions;<br>- runways with procedures out of the axis |
| **Chap. 5. Para. 5.5 PUBLICATION** | **5.5.3** The procedure altitude/height is not lower than the OCA/H of the segment which precedes the final approach segment. |
| **Chap. 7. VISUAL MANOEUVERING AREA** | **7.2.4 Lowest OCA/H**<br>The lowest OCA/H is the one indicated in Table 1.4.7.3.<br>The associated visibility complies with the European regulation EU-OPS, and is not included in table 1.4.7.3. |
| **Chap. 7. Para. 7.4.1 Area which can be ignored** | **7.4.1 Area which can be ignored**<br>A sector of the visual manoeuvering area where there is a prominent obstacle may be ignored in OCA/H calculations if it is situated outside final and missed approach areas and outside a half-corridor for visual manoeuvring using prescribed track (see Fig. 1.4.7.3 and 1.4.7.4). The nominal final approach path of the direct approach procedure must not cross the prohibited sector (except the half-corridor for visual manoeuvering using prescribed track for the category of aircraft in question). |

| | |
|---|---|
| **Chap 7 APPENDIX TO CHAPTER 7**<br>**Chap7. Para. 7.4** | **2.4.1 'Circuit' type imposed visual manoeuvring**<br>This segment is the feeder path between the final instrument approach path and the downwind leg of the imposed visual manoeuvering.<br>It is recommended that the terminal of the divergence segment on the downwind leg is situated upstream abeam the threshold served by the imposed visual manoeuvering. The angle between the divergence segment and the runway served by the imposed visual manoeuvring must be less than or equal to 45°.<br>The length and the direction of this segment are published.<br>**2.4.2 Specific case of imposed visual manoeuvering toward a parallel, half-parallel or intersecting runway**<br>In some cases (e.g.: parallel, half-parallel or intersecting runways), the divergence segment may be directly connected to the straight line segment.<br>The length and direction of the divergence segment will only be published if the length is equal to or greater than 0.5 NM.<br>If the length of the divergence segment is less than 0.5 NM, we will consider a divergence segment direction range corresponding to angles of intersection of the served runway centerline of between 30° and 45°. The protection corridor defined in paragraph 1.8.2 will be extended as a result.<br>**2.4.3 reserved**<br>**2.4.4 reserved** |
| **Chap. 8. MINIMUM SECTOR ALTITUDES**<br>**Chap 8. Para. 8.5** | **8.5 SECTORS CENTERED ON A VOR/DME OR AN NDB/DME**<br>**8.5.1 …...**<br>**8.5.2** The DME arc radius (R) used should be between 10 and 15 NM, in order to avoid a sub-sector which is too small. The width of the buffer zone is reduced to 1 NM beyond the circular boundaries (sector and additional boundaries). |
| **Chap 9. Para. 9.4.3 FINAL APPROACH SEGMENT** | **9.4.3.6 FAS**<br>Step down fixes must not be named (they will therefore not be included in the navigation database, which ensures that the pilot has distance data with regard to the MAPt throughout the final approach). |
| **Part II Conventional procedures** | **Part II Conventional procedures** |
| **section 1 Chap 1: INSTRUMENT LANDING SYSTEM (ILS)** | **1.3.3 Length of intermediate approach segment**<br>1.3.3.3. The minimum length of the intermediate approach segment must correspond to a flight time of 30 seconds at initial approach speed. If there is a turn at the IF, the minimum length depends on the intermediate approach area building constraints. The connection of the primary area associated with the turn at the IF must join the extension of the OAS upstream of point I (the most downstream point in relation to the intermediate approach area based on the intersection between the horizontal obstacle assessment surface associated with the intermediate approach segment primary area and the outer edge of surface X of the OAS). The maximum length of the segment is governed by the fact that it must be integrally inside the on-course signal service volume, and usually at a distance of no more than 25 NM from the on-course beacon antenna. |
| **Para 1.5.3 TURNING MISSED APPROACH** | **1.5.3.2.4 Obstacle clearance**<br>b) Obstacle clearance in the turning area. The altitude/height of the obstacles in the turning area is lower than or equal to the turning altitude/height + do tg Z – obstacle clearance, where do is measured from the obstacle to the closest point on the turning area boundary, and obstacle clearance equals:<br>1) 50 m (164 ft) [Cat H: 40 m (132 ft)] for turns of more than 15°, decreasing linearly to zero at the outer edge of possible secondary areas.<br>2) zero for turns of 15° or less |
| | **1.5.3.3.3 Obstacle clearance** The obstacle clearance criterion from the upstream TP is guaranteed by an obstacle altitude/height lower than:<br>(OCA/Hps – HL ) + do tg Z – obstacle clearance<br>where: do = dz + shortest distance from the obstacle to line K-K<br>dz = distance from the SOC to the upstream TP<br>and obstacle clearance equals:<br>- 30 m for turns of more than 15°;<br>- zero for turns of 15° or less. |
| **Para. 1.6 SIMULTANEOUS ILS AND/OR MLS APPROACHES IN THE DIRECTION OF PARALLEL OR NEAR PARALLEL RUNWAYS** | **Para. 1.6.1. General**<br>a), b), c),<br>Note: different criteria may be allowed, depending on the distance between the runways and after approval from the national supervisory authority. |

© Service de l'Information Aéronautique, France

| | |
|---|---|
| **Chap. 5. PAR** | **5.2.7 Combined intermediate and final approach area**<br>This is an area which lies symmetrically either side of the extended centerline, defined as follows:<br>- the area is 0.5 NM wide at a point situated 1 NM upstream of the threshold;<br>- downstream of this point, the width of the area remains constant (0.5 NM) until the point corresponding to the OCA/H for the procedure;<br>- upstream of this point, the area opens out by 8° with regard to the nominal path until the upstream boundary of the IF.<br>IF tolerance is ± 0.8 NM.<br>  <br><br>**5.3.3 Obstacle clearance**<br>An OCS (obstacle clearance surface) is defined inside the final approach area boundaries; this surface has a gradient at an angle of 0.6 Θ relative to the horizontal, intersecting a straight line perpendicular to the runway centerline and situated at a horizontal distance D from the threshold given by the following equation:<br>$D = \frac{30}{tg0.6\theta} - \frac{H}{tg\theta}$<br>D and H in meters, θ in degrees<br>θ = angle of elevation of the nominal glide path plane;<br>0.6 θ = lowest acceptable glideslope angle;<br>H = height of the nominal glide path above the threshold; its tolerance is the same as that defined for the ILS fix of a facility operated in category I.<br>Obstacle clearance is determined by the HL of each category. |
| **section 2 Chap 6 SRE** | **Chap 6 SRA**<br>**6.1 GENERAL**<br>An SRA is a traditional approach which may be used as backup to a PAR or ILS procedure. This type of approach is only defined for aerodromes where an SRE is installed.<br>  <br> |
| **Chap. 6. Para. 6.2.3 Procedures based on tactical vectoring** | **Para. 6.2.3 Minimum safe radar altitudes**<br>**(Presently known as « minimum vectoring altitudes »)**<br>The criteria used to compute the minimum safe radar altitudes may apply to different types of radar image. The zone used to determine minimum safe radar altitudes is surrounded by a secondary area.<br>The width of the secondary area equals the radar separation standard at the considered point. The obstacle clearance applied in the secondary area decreases from the integer value (minimum of 300 m or 948 ft) to the null value. |
| **section 4 Chap 1 Para. 1.5.1 Special holding entry procedure VOR/DME** | **1.5.1 Not retained**<br>In the event of arrival on the VOR radial acting as support to the holding inbound leg, but in the opposite direction to this, only the procedure with opening at 30° (type 2) is protected. |

# GEN 2 TABLEAUX ET CODES

*TABLES AND CODES*

## GEN 2.1 SYSTEME DE MESURE, MARQUES D'AERONEF, JOURS FERIES

*MEASURING SYSTEM, AIRCRAFT MARKINGS, PUBLIC HOLIDAYS*

### 2.1.1 UNITES DE MESURE

La table d'unités (Table OACI) utilisée dans les publications d'information aéronautique, dans les NOTAM et les circulaires d'information aéronautique est donnée ci-après :

| OBJET | UNITES |
|---|---|
| Distances | Milles marins et dixièmes |
| Altitudes, hauteurs, | Pieds |
| dimensions sur les aérodromes, petites distances. | Mètres |
| Vitesse horizontale | Noeuds |
| Vitesse verticale | Mètres par seconde |
| Vitesse du vent | Noeuds |
| Direction du vent pour l'atterrissage et le décollage | Degrés magnétiques |
| Direction du vent pour tout autre usage | Degrés vrais |
| Altitude et hauteur des nuages | Mètres |
| Visibilité | Kilomètres ou mètres |
| Calage altimétrique | Hectopascal |
| Température | Degrés Celsius |
| Masse | Tonnes (métriques) ou Kilogrammes |
| Temps | Heures et minutes |

a) Expression des altitudes ou hauteurs :

L'instruction 20754 DNA du 12 octobre 1982 modifiée fixe, dans son annexe 4, les règles à appliquer pour le calcul et l'expression des altitudes ou hauteurs pour l'établissement des procédures de départ, d'attente et d'approche aux instruments.

b) Les altitudes ou hauteurs mentionnées sur les diverses cartes aéronautiques pour indiquer des informations relatives à la topographie ou aux obstacles sont calculées :

- soit en utilisant la formule : 1 mètre = 3,2808 pieds ;
- soit par lecture de la table de conversion en GEN 2.6-1.

Le résultat obtenu est publié en arrondissant au pied le plus proche.

c) Les altitudes ou hauteurs des limites verticales des espaces aériens ou d'activités aériennes (circuit d'aérodrome, voltige, parachutisme,...) sont exprimées, lorsqu'elles doivent être publiées en pieds, en adoptant les correspondances prévues dans le tableau des niveaux de croisière publié dans le règlement de la circulation aérienne (RCA 1.51 - Appendice C) complétées, si nécessaire, par les valeurs intermédiaires usuelles suivantes :

| Mètres (m) | Pieds (ft) | Mètres (m) | Pieds (ft) | Mètres (m) | Pieds (ft) |
|---|---|---|---|---|---|
| 50 | 170 | 500 | 1 700 | 1 200 | 4 000 |
| 100 | 330 | 600 | 2 000 | 1 350 | 4 500 |
| 150 | 500 | 750 | 2 500 | 1 500 | 5 000 |
| 200 | 700 | 800 | 2 700 | 1 700 | 5 500 |
| 250 | 800 | 900 | 3 000 | 1 850 | 6000 |
| 300 | 1 000 | 1 000 | 3 300 | 2 000 | 6500 |
| 450 | 1 500 | 1 050 | 3 500 | | |

d) En cas de valeur multiple publiée pour une même information (FL / ASFC / AMSL), il convient de considérer la plus élevée des deux.

### *2.1.1 UNITS*

*The units used in aeronautical information publications NOTAMs, and aeronautical information circulars are indicated in the following table (ICAO table) :*

| *SUBJECT* | *UNITS* |
|---|---|
| *Distances* | *Nautical miles and tenths* |
| *Altitudes, elevations, heights,* | *Feet* |
| *dimensions on aerodrome,short distances.* | *Meters* |
| *Horizontal speed* | *Knots* |
| *Vertical speed* | *Meters per second* |
| *Wind speed* | *Knots* |
| *Wind direction for landing and take-off* | *Magnetic degrees* |
| *Wind direction for all other use* | *True degrees* |
| *Clouds altitude and height* | *Meters* |
| *Visibility* | *Kilometers or meters* |
| *Altimeter setting* | *Hectopascal* |
| *Temperature* | *Degree Celsius* |
| *Weight* | *(Metric) tons or kilograms* |
| *Time* | *Hours and minutes.* |

*a) Expression of altitudes or heights :*

*Instruction 20754 DNA of 12 October 1982, as amended, defines, in its annex 4, the rules to be applied for the calculation and expression of altitudes or heights for the establishment of departure, holding and approach procedures on instruments.*

*b) The altitudes or heights indicated on the various aeronautical charts to provide information concerning the topography or obstacles are to be calculated using :*

*- either the formula : 1 metre = 3,2808 ft ;*

*- or by reading from the conversion table shown in page GEN 2.6-1.*

*The obtained result is to be approximated to the nearest foot for publication.*

*c) The altitudes or heights of the vertical limits of airspace or of aerial activities (aerodrome circuits, aerobatics, parachuting, etc), when they have to be published in feet, are to be expressed using the equivalents given in the table of cruising levels published in the air traffic regulation (RCA 1.51 - Appendix C), with the addition, if necessary of the following usual intermediate values :*

*d) In the event of a multiple value published for the same information (FL / ASFC / AMSL), the higher of the two should be considered.*

Ex 1 :

FL 115
4000 ft AMSL
1000 ft ASFC

Signifie :
plafond = FL 115
et plancher = le plus haut entre 1000 ft ASFC et 4000 ft AMSL

Ex 2 :

FL 195
FL 115
3000 ft ASFC

Signifie :
plafond = FL 195
et plancher = le plus haut entre 3000 ft ASFC et FL 115

*Ex 1 :*

FL 115
4000 ft AMSL
1000 ft ASFC

*Means*
*upper limit = FL 115*
*and lower limit = 1000 ft ASFC or 4000 ft AMSL whichever is higher*

*Ex 2 :*

FL 195
FL 115
3000 ft ASFC

*Means*
*upper limit = FL 195*
*and lower limit = 3000 ft ASFC or FL 115 whichever is higher.*

**2.1.2 SYSTEME DE REFERENCE TEMPOREL**

La référence au temps universel coordonné (UTC) est adoptée par le SERVICE DE L'INFORMATION AERONAUTIQUE - FRANCE dans les documents qu'il publie.

Sauf avis contraire, les horaires publiés dans l'AIP France sont exprimés en horaires UTC correspondants à la période d'hiver (HIV).
Pendant la période d'hiver, les horaires légaux sont obtenus en ajoutant une heure aux horaires UTC publiés. Pendant la période d'été, il convient de retirer une heure à l'horaire publié pour obtenir l'horaire UTC.

Si l'on prend l'exemple d'un service dont les horaires d'ouverture sont 0800-1700 en heure locale toute l'année, les horaires UTC correspondants sont :

- pendant la période hivernale : 0700-1600,

- pendant la période estivale : 0600-1500.

Les horaires d'ouverture sont donc 0700-1600 (UTC) en hiver et 0600-1500 (UTC) en été, ce qui se résume en l'horaire publié à l'AIP suivant : 0700-1600 UTC (ETE : -1 HR).

Conformément aux textes réglementaires en vigueur en France métropolitaine, les organismes de l'aviation civile adopteront l'heure légale suivante : cliquez ici .

Lorsque l'heure légale est utilisée, mention en est faite.

**2.1.3 SYSTEME DE REFERENCE HORIZONTAL**

WGS-84 sauf mention contraire.

**2.1.4 SYSTEME DE REFERENCE VERTICAL**

**2.1.4.1 GENERALITES**

Dans le domaine de l'aviation civile, les altitudes et les niveaux de vol sont définis par la pression atmosphérique. Les points au sol sont définis par leurs coordonnées planimétriques et par leur hauteur orthométrique ou altitude, qui a pour référence le géoïde (correspondant au niveau moyen des mers, ou Mean Sea Level).

Les hauteurs dérivées de systèmes GNSS ont pour référence l'ellipsoïde WGS-84, et sont donc différentes des valeurs de hauteur orthométrique en un même point.

La différence de hauteur entre l'ellipsoïde (référence des hauteurs GNSS) et le géoïde (référence des hauteurs orthométriques) est appelée l'ondulation du géoïde. Cette valeur exprime donc la distance du géoïde au dessus (ondulation du géoïde positive) ou au dessous (ondulation du géoïde négative) de l'ellipsoïde de référence. On a ainsi la relation :

Ondulation du géoïde = Hauteur ellipsoïdale - Hauteur orthométrique (altitude)

Le Service de l'Information Aéronautique publie la valeur de l'ondulation du géoïde pour chaque aérodrome IFR. Cette valeur, nommée conventionnellement GUND, est exprimée en pieds. Elle sera portée sur les cartes au fur et à mesure de leurs rééditions.

**Note :** En France métropolitaine, l'ondulation du géoïde est toujours positive (géoïde au dessus de l'ellipsoïde).

**2.1.4.2 AVERTISSEMENT :**

L'attention des usages est attirée sur le fait que la publication des valeurs d'ondulation du géoïde ne modifie pas les restrictions d'emploi du GPS. En particulier, l'information d'altitude fournie par le GPS reste inutilisable.

**2.1.2 TEMPORAL REFERENCE SYSTEM**

Reference to the coordinated universal time (UTC) has been adopted in documents issued by the AERONAUTICAL INFORMATION SERVICE - FRANCE.

Unless otherwise stated, the schedules published in the AIP France are expressed in UTC schedules corresponding to the winter period (WIN).
During the winter period, statutory schedules are obtained by adding one hour to published UTC schedules. During the summer period, it is appropriate to withdraw one hour from the published schedule to obtain the UTC schedule.

Taking the example of a service whose opening hours are 0800-1700 in local time throughout the year, the corresponding UTC schedules are:

- during the winter period: 0700-1600,

- during the summer period: 0600-1500.

The opening times are therefore 0700-1600 (UTC) in winter and 0600-1500 (UTC) in summer, which is summarized in the schedule published at the following AIP : 0700-1600 UTC (SUM: -1 HR).

In accordance with the regulations in force in metroplitan France, civil aviation organisms will comply to the following official time system: click here .

Whenever legal time is being used, this will be so stated.

**2.1.3 HORIZONTAL REFERENCE SYSTEM**

WGS-84 unless otherwise stated.

**2.1.4 VERTICAL REFERENCE SYSTEM**

**2.1.4.1 GENERAL**

In the Civil Aviation field, altitudes and flight levels are defined in terms of atmospheric pressure. Points on the ground are defined by their planimetric coordinates and by their orthometric height or altitude, which use as their reference the geoid (corresponding to Mean Sea Level).

The heights derived from GNSS systems use the WGS-84 ellipsoid as their reference and are thus different from the values of the orthometric height at the same point.

The height difference between the ellipsoid (GNSS height reference) and the geoid (orthometric height reference) is called the undulation of the geoid. This value thus defines the distance of the geoid above (positive undulation of the geoid) or below (negative undulation of the geoid) the reference ellipsoid. This gives us the relationship :

Undulation of the geoid = Ellipsoidal Height - Orthometric Height (Altitude)

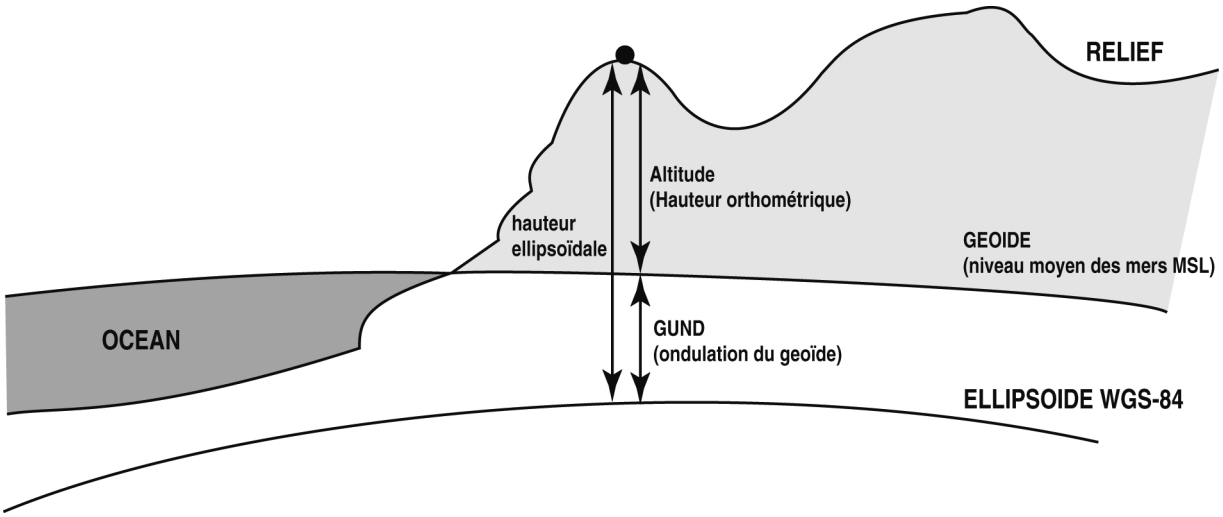
The Aeronautical Information Service publishes the values of the undulation of the geoid for each IFR aerodrome. This value, conventionally designated GUND, is expressed in feet. It will be shown on the charts as and when they are amended.

**Note :** In metropolitan France, the undulation of the geoid is always positive (geoid above the ellipsoid).

**2.1.4.2 WARNING :**

User's attention is drawn towards that publication of the geoid undulation does not modify the GPS restrictions for use. Particularly, the altitude information given by GPS has not to be used.

© Service de l'Information Aéronautique, France



### 2.1.5 MARQUES DE NATIONALITE ET D'IMMATRICULATION

La marque de nationalité des aéronefs civils français est la lettre F.

La marque de nationalité est suivie de la marque d'immatriculation composée de 4 lettres :

Ex : F-BHZR.

## PASSAGE DU MODELE DE GEOIDE FRANCAIS AU MODELE DE GEOIDE MONDIAL
## *SWITCHING OVER FROM FRENCH GEOID MODEL TO WORLD GEOID MODEL*

### 1 DESCRIPTION DES MODELES

Le modèle de géoïde choisi par l'OACI dans le cadre de l'AIP est EGM96 (Earth Gravity Model 1996). Il s'agit d'un modèle mondial. Sa précision est métrique. Son pas est de 0.25° (15').

En France, il existe un modèle local de géoïde couvrant la totalité du territoire continental, nommé RAF98 (Référence des Altitudes Françaises 1998). Sa précision est inférieure à 5 centimètres. Son pas est de 0.033° (2') en longitude et 0.025° (1.5') en latitude. Il est compatible avec le système d'altitude NGF/IGN69.

Pour la Corse, il existe un modèle local de géoïde nommé GGF97 (Géoïde Géométrique Français 1997). Sa précision est décimétrique. Son pas est de 0.1° (6'). Il est compatible avec le système d'altitude NGF/IGN78.

En un point quelconque, chaque modèle fournit par interpolation l'ondulation du géoïde au-dessus de l'ellipsoïde WGS-84.

### 1 DESCRIPTION OF MODELS

The geoid model selected by ICAO within the scope of AIP is EGM96 (Earth Gravity Model 1996). It is a World model. Its accuracy is metric. Its increment is 0.25° (15').

In France, there is a local geoid model covering the whole continental territory, called RAF98 (Reference of French Altitudes 1998). Its accuracy is less than 5 centimeters. Its increment is 0.033° (2') in longitude and 0.025° (1.5') in latitude. It is compatible with the altitude system NGF/IGN69.

For the Corsica Island, there is a local geoid model called GGF97 (French Geometric Geoid 1997). Its accuracy is decimetric. Its increment is 0.1° (6'). It is compatible with the altitude system NGF/IGN78.

At any point, each model provides through interpolation the geoid undulation above the ellipsoid WGS-84.

### 2 REPRESENTATION GRAPHIQUE DE L'ECART ENTRE MODELES

#### 2.1 Correction d'ondulation

Les graphiques ci-dessous permettent d'obtenir l'ondulation donnée par EGM96 connaissant celle donnée par les modèles locaux RAF98 et GGF97. Ils sont issus de grilles calculées aux pas des modèles locaux. Ils représentent les courbes d'égale différence d'ondulation entre ces modèles et le modèle mondial. **Cette grandeur est exprimée en mètres.**

Pour la France : Ondulation [EGM96] =
Ondulation [RAF98] + valeur lue sur le graphique.

Pour la Corse : Ondulation [EGM96] =
Ondulation [GGF97] + valeur lue sur le graphique.

#### 2.2 Correction d'altitude

Les graphiques permettent également d'obtenir l'altitude donnée par RAF98 et GGF97 connaissant celle donnée par EGM96. Ils représentent les courbes d'égale différence d'altitude entre le modèle mondial et les modèles locaux. **Cette grandeur est exprimée en mètres.**

**France : Altitude [IGN69] =**
**Altitude [EGM96] + valeur lue sur le graphique**

**Corse : Altitude [IGN78] =**
**Altitude [EGM96] + valeur lue sur le graphique**

### 2 GRAPHIC REPRESENTATION OF THE DEVIATION BETWEEN MODELS

#### 2.1 Correction of undulation

The graphic below are used to obtain the undulation given by EGM96, knowning the undulation given by local models RAF98 and GG97. They are issued from grids calculated with increments of local models. They show the curves of equal difference in undulation between these models and the world model. **The value is expressed in meters.**

For France: Undulation [EGM96] =
Undulation [RAF98] + value read on the graphic.

For Corse: Undulation [EGM96] =
Undulation [GGF97] + value read on the graphic.

#### 2.2 Correction of altitude

The graphics are also used to obtain the altitude given by RAF98 and GGF97, knowing the altitude given by EGM96. They show the curves of equal difference in altitude between the world model and the local models. **This value is expressed in meters.**

**France: Altitude [IGN69] =**
**Altitude [EGM96] + value read on the graphic**

**Corsica Island: Altitude [IGN78] =**
**Altitude [EGM96] + value read on the graphic**

### 3 REPRESENTATION TABULAIRE DE L'ECART ENTRE MODELES

L'écart entre les modèles peut se représenter sous forme de grille. La ligne supérieure des tableaux ci-dessous donne la longitude des noeuds de grille, la colonne de gauche fournit leur latitude. **Ces deux coordonnées sont exprimées en degrés décimaux.**

Pour des raisons de présentation, la France est partagée en trois zones de longitude, avec une colonne de recouvrement en limite de zone:

France Ouest : de -4.75° à -0.5°
France Centre : de -0.25° à 3.75°

France Est : de 4° à 8°.

Le tableau relatif à la Corse a été associé avec le tableau France Est.

Pour la France comme pour la Corse, la grille est au pas régulier de 0.25° (15').

Enfin, la valeur "000" signifie "en mer", la valeur "999" signifie "pays étranger".

### 3 GRAPHIC REPPRESENTATION OF THE DEVIATION BETWEEN MODELS

The deviation between the models can be shown as a grid. The upper line of tables below gives the longitude of grid knots; the left culumn provides their latitude. **These two coordinates are expressed in decimal degrees.**

For presentation purpose, Francce is divided into three longitude areas, with an overlap column at the area end.

West France: from -4.75° to -0.5°
Middle France : from -0.25° to 3.75°

East France : from 4° to 8°.

The table related to the Corsica Island has been associated with the "East France" table.

For France as for the Corsica Island, the grid is with a regular increament by 0.25° (15').

Finally, the value "000" means "at sea", the value "999" means "foreign country";

#### 3.1 Correction d'ondulation

A l'intersection d'une ligne et d'une colonne, on trouve la constante à ajouter à l'ondulation donnée par le modèle local pour passer à l'ondulation donnée par le modèle mondial. Cette constante est exprimée en centimètres.

Pour la France : Ondulation [EGM96] =
Ondulation [RAF98] + valeur lue dans le tableau.

Pour la Corse : Ondulation [EGM96] =
Ondulation [GGF97] + valeur lue dans le tableau.

#### 3.2 Correction d'altitude

A l'intersection d'une ligne et d'une colonne, on trouve la constante à ajouter à l'altitude donnée par le modèle mondial pour passer à l'altitude donnée par le modèle local. **Cette constante est exprimée en centimètres.**

**France : Altitude [IGN69] =**
**Altitude [EGM96] + valeur lue dans le tableau**

**Corse : Altitude [IGN78] =**

**Altitude [EGM96] + valeur lue dans le tableau**

#### 3.1 Correction of undulation

At the intersection of a line and a column, it is found the constant to be added to the undulation given by the local model to switch over to the undulation given by the world model. This value is expressed in centimeters.

For France: Undulation [EGM96] =
Undulation [RAF98] + value read on the graphic.

For Corse: Undulation [EGM96] =
Undulation [GGF97] + value read on the graphic.

#### 3.2 Correction of altitude

At the intersection of a line and a column, it is found the constant to be added to the undulation given by the local model to switch over to the undulation given by the world model. **This value is expressed in centimeters.**

**France: Altitude [IGN69] =**
**Altitude [EGM96] + value read on the graphic**

**Corsica Island: Altitude [IGN78] =**

**Altitude [EGM96] + value read on the graphic**

# GEN 2.2 ABREVIATIONS UTILISEES DANS LES PUBLICATIONS AIS

*ABBREVIATIONS USED IN AIS PUBLICATIONS*

La présente liste groupe l'ensemble des abréviations utilisées dans les publications françaises d'information aéronautique, avec leurs définitions et leurs traductions en anglais.

*This list contains all the abbreviations used in the French aeronautical information publication, with their meaning and English translation.*

| | | |
|---|---|---|
| A | Ambre | Amber |
| A/A | Radiocommunications Air/Air | Air to air communications |
| AAL | Au-dessus du niveau de l'aérodrome | Above aerodrome level |
| ABM | Par le travers de | Abeam |
| ABN | Phare d'aérodrome | Aerodrome beacon |
| ABV | Au-dessus (de) ou supérieur (à) | Above or upper |
| ACARS | Système embarqué de communications, d'adressage et de compte rendu | Aircraft communication addressing and reporting system |
| ACAS | Système embarqué d'anti-abordage | Airborne collision avoidance system |
| ACB | Aéro-club | Flying club |
| ACC | Centre de contrôle régional | Area control center |
| ACFT | Aéronef | Aircraft |
| ACL | Emplacement destiné à la vérification des altimètres | Altimeter check location |
| ACN | Numéro de classification d'avion | Aircraft classification number |
| ACP | Message d'acceptation | Acceptance message |
| ACPT | Accepte ou accepté | Accept or accepted |
| ACS | Service de contrôle régional | Area control service |
| ACT | En service ou en activité ou activité | Active or activated or activity |
| AD | Aérodrome | Aerodrome |
| ADAC | Avion à décollage et atterrissage court | Short take off and landing aircraft |
| ADAV | Avion à décollage et atterrissage vertical | Vertical take off and landing aircraft |
| ADC | Carte d'aérodrome | Aerodrome chart |
| ADDN | Addition ou supplémentaire | Addition or additional |
| ADF | Radio compas automatique | Automatic direction finder |
| ADJ | Adjacent | Adjacent |
| ADP | Aéroports de Paris | Aéroports de Paris |
| ADS | Adresse | Address |
| Aé | Faisceau de phare marin relevé de 10° au dessus de l'horizon en vue de son utilisation par les navigateurs aériens | Marine light beacon with beam angle 10° above the horizon for use by airmen |
| AEM | Aéromodélisme | Model aircraft flight |
| AESA | Agence européenne de la sécurité aérienne | European aviation safety agency |
| AFI | Région Afrique - Océan indien | Africa, indian Ocean region |
| AFIL | Plan de vol déposé en vol | Flight plan filled in the air |
| AFIS | Service d'information de vol d'aérodrome | Aerodrome flight information service |
| AFS | Service fixe aéronautique | Aeronautical fixed service |
| AFTN | Réseau du service fixe des télécommunications aéronautiques | Aeronautical fixed telecommunication network |
| A/G | Radio communications air/sol | Air to ground radio communications |
| AGL | Au dessus du niveau du sol | Above ground level |
| AIA | Atelier industriel de l'aéronautique | Aeronautics industrial workshop |
| AIC | Circulaire d'information aéronautique | Aeronautical information circular |
| AIM | Gestion de l'information aéronautique | Aeronautical information management |
| AIP | Publication d'information aéronautique | Aeronautical information publication |
| AIRAC | Régularisation et contrôle de la diffusion des renseignements aéronautiques | Aeronautical information regulation and control |
| AIREP | Compte rendu en vol | Air report |
| AIS | Service(s) d'information aéronautique | Aeronautical information service(s) |
| ALAT | Aviation légère de l'armée de terre | Field army light aviation |
| ALERFA | Phase d'alerte | Alert Phase |
| ALT | Altitude | Altitude |
| ALTN | Alternatif (feux à couleurs alternées) | Alternate or alternating (light alternates in colour) |
| ALTN | Dégagement (aérodrome de) | Alternate (aerodrome) |
| AMC | Moyen acceptable de conformité | Acceptable means of compliance |
| AMD | Amender ou amendé | Amend or amended |
| AMG | Altitude minimale de guidage | Minimum vectoring altitude |
| AMSL | Au dessus du niveau moyen de la mer | Above mean sea level |
| AMSR | Altitude minimum de sécurité radar | Radar minimum safe altitude |
| ANP | Qualité de navigation réellement atteinte | Actual navigation performance |
| AO | Exploitant d'aéronefs | Aircraft operator |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| AOB | Angle d'inclinaison latérale | Angle of bank |
| AOC | Carte d'obstacles d'aérodrome | Aerodrome obstruction chart |
| AP | Aéroport | Airport |
| APCH | Approche | Approach |
| APDC | Carte d'aire de stationnement | Aircraft parking and docking chart |
| API | Approche interrompue | Missed approach |
| APP | Centre de contrôle d'approche ou contrôle d'approche ou service | Approach control office or approach control |
| APP | Carte d'approche à vue | Visual approach chart |
| APR | Avril | April |
| APPR | Approche de précision | Precision approach |
| APRX | Approximativement | Approximately |
| APU | Groupe auxiliaire de puissance | Auxiliary power unit |
| APV | Procédure d'approche avec guidage vertical | Approach with vertical guidance |
| ARP | Point de référence d'aérodrome | Aerodrome reference point |
| ARR | Arriver ou arrivé ou message d'arrivé | Arrive or arrival or arrival message |
| ASAP | Dès que possible | As soon as possible |
| ASC | Monter ou je monte jusqu'à | Ascent or ascending to |
| ASDA | Longueur utilisable pour l'accélération arrêt | Accelerate stop distance available |
| ASECNA | Agence pour la sécurité de la navigation aérienne en Afrique et à Madagascar | Agency for the security of air navigation in Africa and Madagascar |
| ASFC | Au dessus de la surface | Above surface |
| ASI | Aire à signaux | Signal area |
| ASPH | Asphalte | Asphalt |
| ATC | Contrôle de la circulation aérienne (en général) | Air traffic control (in general) |
| ATI | Atmosphère type internationale | International standard atmosphere |
| ATIS | Service automatique d'information de région terminale | Automatic terminal information |
| ATIS/V | ATIS VFR (portée réduite) | VFR ATIS (reduced range) |
| ATIS/S | ATIS surface | Surface ATIS |
| ATS | Services de la circulation aérienne | Air traffic services |
| ATT | Carte d'atterrissage à vue | Visual landing chart |
| ATT | Tolérance d'écart latéral | Along-track tolerance |
| ATTN | Attention | Attention |
| ATZ | Zone de circulation d'aérodrome | Aerodrome traffic zone |
| AUG | Août | August |
| AUTO | Automatique | Automatic |
| AUX | Auxiliaire | Auxiliary |
| AVA | Administration de l'aviation civile | Civil aviation authority |
| AVASIS | Indicateur visuel de pente d'approche simplifié | Abbreviated visual approach slope indicator system |
| AVGAS | Carburant d'aviation | Aviation gasoline |
| AVOR | Radiophare omnidirectionnel VHF de faible puissance | Low power VHF omnirange |
| AVT | Avitaillement | Refuelling |
| AWOS | Système automatisé d'observation météorologique | Automated weather observation system |
| AWY | Voie aérienne | Airway |
| AZM | Azimut | Azimuth |
| | | |
| B | Bleu | Blue |
| BA | Freinage (coefficient) | Braking action |
| BATR | Bande d'atterrissage train rentré | Belly landing strip |
| BCST | Diffusion | Broadcast |
| BDP | Bureau de piste | ATS reporting office |
| BI | Basse intensité lumineuse | Low light intensity |
| BIA | Bureau d'information aéronautique | AIS office |
| BLW | Au-dessous de ou inférieur (à) | Below or lower |
| BMJ | Bulletin de mise à jour | Updating bulletin |
| BNIA | Bureau national d'information et d'assistance au vol | AIS National office |
| BRA | Brins d'arrêt | Arresting cable |
| BRIA | Bureau régional d'information et d'assistance au vol | Information and flight support Regional office |
| BRKG | Freinage | Braking |
| BRNAV | Navigation de surface de base | Basic area navigation |
| BS | Station de radiodiffusion commerciale | Commercial broadcasting station |
| BTIV | Bureau de transmission des informations en vol | Flight information emission office |
| BTN | Entre | Between |
| BV | Valeur tampon | Buffer value |
| | | |
| C | Degrés Celsius | Degrees Celsius |

| | | |
|---|---|---|
| CAA | Autorité de l'aviation civile ou | Civil aviation authority or |
| | Administration de l'aviation civile | Civil aviation administration |
| CAG | Circulation aérienne générale | General air traffic |
| CAM | Circulation aérienne militaire | Military air traffic |
| CAP | Circulation aérienne publique | Public air traffic |
| CAR | Région Caraïbes | Caribbean region |
| CAT | Catégorie | Category |
| CAUTRA | Coordinateur automatique de trafic aérien | Automatic air traffic coordinator |
| CAVOK | Visibilité, nuages et temps présent meilleurs que valeurs ou conditions prescrites | Visibility, cloud and present weather better than prescribed values or conditions |
| CBA | Zone transfontalière | Cross Border Area |
| CCER | Centre de contrôle essais réception | Test and acceptance control center |
| CCI | Chambre de commerce et d'industrie | Chamber of commerce and industry |
| CCM | Centre de contrôle militaire | Military control centre |
| CCO | Montée continue (opération à / de / en) | Continuous climb operations |
| cd | Candela | Candela |
| CDA | Approche en descente continue | Continuous descent approach |
| CDN | Certificat de navigabilité | Certificate of airworthiness |
| CDO | Descente continue (opération à / de / en) | Continuous descent operations |
| CDR | Route conditionnelle | Conditional route |
| CDT | Commandant | Officer in charge |
| CEA | Commissariat à l'énergie atomique | Nuclear power administration |
| CER | Circulation essai réception | Acceptance and test traffic |
| CEV | Centre d'essai en vol | Flight test centre |
| CF | Direction jusqu'à un repère | Course to fix |
| Ch | Canal (Télécommunications | Channel (telecommunications) |
| CHG | Modification, changement | Change |
| CIV | Civil | Civil |
| CLBR | Etalonnage | Calibration |
| CLSD | Fermé | Closed |
| cm | Centimètre | Centimetre |
| CMPL | Achèvement ou achevé ou complet | Completion or completed or complete |
| CNL | Annuler ou annulé | Cancel or cancelled |
| COM | Circulation opérationnelle militaire | Operational military traffic |
| COM | Télécommunications | Telecommunications |
| CONC | Béton | Concrete |
| COND | Condition(s) | Condition(s) |
| CONST | Construction ou construit | Construction or constructed |
| CRNA | Centre régional de la navigation aérienne | Air navigation regional centre |
| CRP | Point de compte rendu obligatoire | Compulsory reporting point |
| CTA | Région de contrôle | Control area |
| CTL | Contrôle | Control |
| CTR | Zone de contrôle | Control zone |
| CUST | Douane | Customs |
| CWY | Prolongement dégagé | Clearway |
| | | |
| D... | Zone dangereuse (suivie de son identification) | Danger area (followed by identification) |
| DA | Altitude de décision | Decision altitude |
| DCAé | Direction technique des constructions aéronautiques | Technical directory of aircraft production |
| DCC | Détachement civil de coordination | Civil unit of coordination |
| DCL | Clairance départ par liaison de données | Data-link departure clearance |
| DCP | Point de franchissement de référence | Datum crossing point |
| DCT | Direct | Direct |
| DEA | Délégation à l'espace aérien | Delegation for air space |
| DEC | Décembre | December |
| DEC | Déclinaison | Magnetic variation |
| DEG | Degrés | Degrees |
| DENEB | Opération de dissipation du brouillard | Fog dispersal operation |
| DEP | Partez ou départ ou message de départ | Depart or departure or departure message |
| DER | Extrémité départ de la piste | Departure end of the runway |
| DES | Descendez ou je descends jusqu'à | Descend to or descending to |
| DEST | Destination | Destination |
| DETRESFA | Phase de détresse | Distress phase |
| DF | Direct jusqu'à un repère | Direct to fix |
| DGAC | Direction générale de l'aviation civile | General directorate of civil aviation |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| DH | Hauteur de décision | Decision height |
| DIRCAM | Direction de la circulation aérienne militaire | Military air traffic directorate |
| DIST | Distance | Distance |
| DLA | Retard ou retardé | Delay |
| DME | Dispositif de mesure de distance | Distance measuring equipment |
| DME/ATT | Dispositif de mesure de distance d'atterrissage | Landing distance measuring equipment |
| DMN | Direction de la météorologie | National meteorology directorate |
| DNG | Danger ou dangereux | Danger or dangerous |
| DO | Direction des opérations | Operation managing |
| DOC | Document | Document |
| DOF | Date du vol | Date of flight |
| DOM/TOM | Département/territoire d'outre-mer | (French) overseas department/territory |
| DP | Point de rosée | Dew point |
| DP | Point de descente | Descent point |
| DPAC | Direction des programmes aéronautiques et de la coopération | Cooperation and aeronautical programmes directorate |
| DRE | Direction de la régulation économique | Economic control directorate |
| DSAC | Direction de la sécurité de l'aviation civile | Directorate of civil aviation safety |
| DSNA | Direction des services de la navigation aérienne | Air navigation services directorate |
| DTA | Direction du transport aérien | Air transport directorate |
| DTHR | Seuil décalé | Displaced threshold |
| DTI | Direction de la technique et de l'innovation | Technique and innovation directorate |
| DTK | Cheminement désiré (GNSS | Desired track (GNSS) |
| DUR | Durée | Duration |
| DVOR | VOR Doppler | Doppler VOR |
| DW | Roues jumelées | Dual wheels |
| | | |
| E | Est ou longitude est | East or eastern longitude |
| E | Eclat | Flash |
| EASA | Agence européenne de la sécurité aérienne | European aviation safety agency |
| EAT | Heure d'approche prévue | Expected approach time |
| EDF | Electricité de France | National electricity authority |
| EHF | Fréquence extrêmement haute (30 000 à 300 000 MHz) | Extremely high frequency (30 000 to 300 000 MHz) |
| ELR | Extra-long rayon d'action | Extra long range |
| EM | Emission | Emission |
| E-M | Etat major | Headquarters |
| EN | Anglais | English |
| ENE | Est - nord - est | East - north - east |
| ENR | En route | En route |
| EQPT | Equipement | Equipment |
| ES | Espagnol | Spanish |
| ESE | Est - sud -est | East - south - east |
| EST | Estimé ou estimer | Estimate or estimated |
| ETA | Heure d'arrivée prévue ou arrivée prévue | Estimated time of arrival or estimating arrival |
| ETD | Heure de départ prévue ou départ prévu | Estimated time of departure or estimating departure |
| EUM | Région Europe-Méditerranée | Europe-Mediterranean region |
| EXC | Excepté | Except |
| EXER | Exercice(s) ou exerçant ou exercer | Exercise(s) or exercising or to exercise |
| | | |
| F | Feu fixe | Fixed light |
| FAC | Installations et services | Facilities |
| FAF | Repère d'approche finale | Final approach fix |
| FAF | Forces aériennes françaises | French air force |
| FAL | Facilitation du transport aérien international | Facilitation of international air transport |
| FAP | Point d'approche finale | Final approach point |
| FAS | Segment d'approche finale | Final approach segment |
| FATO | Aire d'approche finale et de décollage | Final approach and take off area |
| FBZ | Zone tampon pour plan de vol | Free Buffer Zone |
| FEB | Février | February |
| FIC | Centre d'information de vol | Flight information centre |
| FIR | Région d'information de vol | Flight information region |
| FIS | Service ou secteur d'information de vol | Flight information service or sector |
| FL | Niveau de vol | Flight level |
| FLT | Vol | Flight |
| FM | De, à partir de, depuis | From |

© Service de l'Information Aéronautique, France

| | | |
|---|---|---|
| FMC | Ordinateur de gestion de vol | Flight management computer |
| FMS | Système de gestion de vol | Flight management system |
| FNA | Approche finale | Final approach |
| FNF | Force aero Navales françaises | French naval air-forces |
| FPAP | Point d'alignement de trajectoire de vol | Flight path alignment point |
| FPL | Plan de vol | Flight plan |
| FPM | Pieds par minute | Feet per minute |
| FR | Français | French language |
| FRA | Espace aérien en cheminement libre | Free Route Airspace |
| FREQ | Fréquence | Frequency |
| FRI | Vendredi | Friday |
| FRNG | Tirs | Firing |
| ft | Pieds | Feet |
| FTE | Erreur technique de vol | Flight technical error |
| FTP | Point de seuil fictif | Fictitious threshold point |
| | | |
| G | Vert | Green |
| g | Gramme | Gram |
| G/A | Radiocommunications sol-air | Ground-to-air |
| G/A/G | Radiocommunications sol-air et air-sol | Ground-to-air and air-to-ground |
| GA | Aviation générale | General aviation |
| GAP | Groupe auxiliaire de puissance | Auxiliary power unit |
| GAT | Circulation aérienne générale | General air traffic |
| GBAS | Système de renforcement au sol | Ground based augmentation system |
| GCA | Système d'approche contrôlé du sol ou approche contrôlée du sol | Ground controlled approach system or ground controlled approach |
| GEN | Général ou généralités | General |
| GEO | Géographique ou vrai | Geographic or true |

# GEN 2.7 HEURES DE LEVER ET COUCHER DU SOLEIL

*SUNRISE / SUNSET*

Les tableaux suivants indiquent, pour la période 2021 - 2031, les heures UTC de lever (SR) et de coucher (SS) du soleil sur le méridien de Greenwich (0°). Pour obtenir les heures UTC pour d'autres longitudes, ajouter 4 minutes par degré de longitude vers l'Ouest, retrancher 4 minutes par degré de longitude vers l'Est. (Heure locale hiver = heure UTC + 1 HR, heure locale été = heure UTC + 2 HR).

*The following tables give, for the period 2021 - 2031,the UTC hours of sunrise (SR) and sunset (SS) on the meridian of Greenwich (0°). To calculate UTC hours on other meridians, add 4 minutes by degree of longitude towards West, subtract 4 minutes by degree of longitude towards East. (Winter local time = UTC hour + 1 HR, summer local time = UTC hour + 2 HR).*

# GEN 3 SERVICES

*SERVICES*

## GEN 3.1 SERVICES D'INFORMATION AERONAUTIQUE

*AERONAUTICAL INFORMATION SERVICES*

### 3.1.1 SERVICE RESPONSABLE

Relevant de la Direction des Services de la navigation aérienne, le SERVICE DE L'INFORMATION AERONAUTIQUE est l'organisme central chargé de l'information aéronautique française.

### *3.1.1 RESPONSIBLE SERVICE*

*Within the "Direction des Services de la navigation aérienne", the "SERVICE DE L'INFORMATION AERONAUTIQUE" is the central unit in charge of the French aeronautical information.*

Adresse postale / *Postal address* : SERVICE DE L'INFORMATION AERONAUTIQUE
6, rue des avions ANTOINETTE - CS 90048
33693 MERIGNAC Cedex

TEL : (0)5 57 92 55 22
(0)5 57 92 57 92 (BNI-NOF)

Adresse SFA *(AFS)* : LFFAYNYX

E-mail : sia-direction@aviation-civile.gouv.fr

Internet : www.sia.aviation-civile.gouv.fr

Le bureau NOTAM international de BORDEAUX, partie intégrante du Service de l'Information Aéronautique se trouve :

6, rue des avions ANTOINETTE - CS 90048 - 33693 MERIGNAC Cedex

L'information aéronautique est assurée :

- par les bureaux d'information en vol des ACC de BORDEAUX (ACC Sud-Ouest), BREST (ACC Ouest), MARSEILLE (ACC Sud Est), PARIS (ACC Nord), REIMS (ACC Est).

- par les bureaux d'information aéronautique de certains aérodromes.

- par les bureaux régionaux d'information et d'assistance aux vols (BRIA).

*The international NOTAM office of BORDEAUX, which is integrated into the "Service de l'Information Aéronautique" is located at :*

*6, rue des avions ANTOINETTE - CS 90048 - 33693 MERIGNAC Cedex*

*Aeronautical information is distributed :*

*- by the flight information offices of BORDEAUX ACC (South-West ACC), BREST ACC (West ACC), MARSEILLE ACC (South-East ACC), PARIS ACC (North ACC), REIMS ACC (East ACC).*

*- by the aeronautical information offices of certain aerodromes.*

*- by the regional offices for flight information and assistance (BRIA).*

### 3.1.2 ZONE DE RESPONSABILITE

La zone de responsabilité du service AIS France comprend le territoire de la France métropolitaine et des départements et territoires d'Outre- Mer ainsi que les portions de l'espace aérien situées au-dessus de la haute mer dans lesquelles la France a accepté d'assurer les services de la circulation aérienne.

La présente Publication d'Information Aéronautique concerne l'espace métropolitain : les FIR de BORDEAUX, BREST, MARSEILLE, PARIS et REIMS ainsi que l'UIR France.

Les informations relatives aux départements et territoires d'Outre-Mer sont publiées dans les publications d'information aéronautique suivantes :

AIP PAC-P, AIP PAC-N, AIP RUN, AIP CAR/SAM/NAM.

Les données aéronautiques et les informations aéronautiques fournies dans les publications d'information aéronautique françaises pour le compte des Principautés d'Andorre et de Monaco sont fournies avec l'autorisation de celles-ci.

### *3.1.2 AREA OF RESPONSABILITY*

*The area of responsability of the AIS France includes the territory of Metropolitan France and of French overseas departments and territories, as well as those parts of the airspace over the high seas for which France has accepted to provide air traffic services.*

*This Aeronautical Information Publication concerns the Metropolitan airspace : BORDEAUX, BREST, MARSEILLE, PARIS and REIMS FIR and UIR France.*

*Information concerning French overseas departments and territories are published in the following aeronautical information publications :*

*AIP PAC-P, AIP PAC-N, AIP RUN, AIP CAR/SAM/NAM.*

*The aeronautical data and aeronautical information provided in French aeronautical information publications on behalf on the Principalities of Andorra and Monaco are provided with their authorization.*

### 3.1.3 LES PUBLICATIONS D'INFORMATION AERONAUTIQUE

#### 3.1.3.1 LA PUBLICATION D'INFORMATION AERONAUTIQUE - AIP

Les Publications d'Information Aéronautique sont éditées par le SERVICE DE L'INFORMATION AERONAUTIQUE dans le cadre des dispositions prévues aux Annexes 4 et 15 à la convention relative à l'Aviation civile internationale et au document OACI 8126-AN/872 (Manuel des services d'information aéronautique).

L'AIP France comprend :

Les parties GEN, ENR et AD, format eAIP.

- Un atlas des cartes d'approche et d'atterrissage à vue (ATLAS VAC) en 2 volumes, format A5.

- Un atlas des cartes VAC d'hélistations en 1 volume, format A5.

**Les amendements aux documents précités (AMDT)**

### *3.1.3 AERONAUTICAL INFORMATION PUBLICATIONS*

#### *3.1.3.1 THE AERONAUTICAL INFORMATION PUBLICATION - AIP*

*Aeronautical Information Publications are published by the "SERVICE DE L'INFORMATION AERONAUTIQUE", in compliance with the provisions of Annexes 4 and 15 to the Convention on International Civil Aviation and of ICAO document 8126-AN/872 (Aeronautical Information Service Manual).*

*The AIP France includes :*

*GEN, ENR and AD parts, eAIP format.*

*- An atlas which contains visual approach and landing charts (ATLAS VAC) in 2 volumes, A5 format.*

*- An atlas which contains helistops VAC in 1 volume, A5 format.*

***Amendments to the above mentionned documents (AMDT)***

© Service de l'Information Aéronautique, France

La mise à jour de l'AIP et des atlas s'effectue au moyen de bulletins de mise à jour publiés conformément aux cycles AIRAC. Ils sont accompagnés de la publication d'un NOTAM "TRIGGER" donnant une brève description du contenu, la date et l'heure d'entrée en vigueur et le numéro de référence du BMJ. Ce NOTAM restera valide dans les bulletins d'information prévol pendant une période de 14 jours.

Chaque bulletin peut contenir une partie AIRAC et une partie NON AIRAC qui sont, dans la mesure du possible, diffusées ensemble.

Les bulletins publiés sur papier sont précédés :

- d'une page verte indiquant les pages à insérer ou à détruire ;

- les publications des Atlas VAC et VAC HEL peuvent être complétées de pages comportant les modifications en attente d'insertion ou les corrections de dernière minute (ADD).

*The AIP and the atlas are updated by means of updating bulletins published in accordance with the AIRAC cycles. They are completed with the publication of a "TRIGGER NOTAM" giving a short description of the content, the implementation date and the effective hour, as the reference number of the AMDT. This NOTAM will remain valid whiting preflight information bulletins during a forteen days period.*

*Each bulletin may contain an AIRAC part and a NON AIRAC part which are, if possible, distributed together.*

*The bulletins published on paper are preceded by :*

*- a green page indicating pages to be removed or to be inserted ;*

*- Atlas VAC and VAC HEL publications can be supplemented with pages containing hand amendments to be inserted in the AIP, or last minute corrections (ADD).*

**3.1.3.2 LES SUPPLEMENTS A L'AIP (SUP AIP)**

Les suppléments à l'AIP sont publiés si besoin le jeudi et sont disponibles sur le site Internet du SIA : www.sia.aviation-civile.gouv.fr ainsi que sur SOFIA-Briefing.

Ils concernent des informations à caractère temporaire contenant des textes longs et/ou des éléments cartographiques. Tous les SUP AIP qu'ils soient AIRAC ou non sont accompagnés de la publication d'un « NOTAM TRIGGER » ayant la même durée de validité que celle du supplément et donnant une brève description du contenu, les principales restrictions opérationnelles et le numéro de référence du supplément.
Les 4ème et 5ème lettres du code NOTAM sont toujours « TT ».
En complément du « NOTAM TRIGGER », un ou des « NOTAM réplique » peuvent être publiés sur un ou des aérodrome(s) et/ou hélistation(s) impacté(s) par les restrictions opérationnelles contenues dans le SUP AIP. Ces « NOTAM REPLIQUE » suivent scrupuleusement les mêmes règles que les « NOTAM TRIGGER ».

Les SUP AIP sont numérotés chronologiquement à partir du 1er janvier de l'année en cours.

Une liste de contrôle des suppléments est publiée tous les jeudis ; elle remplace la page GEN 0.3.1 de l'AIP.

***3.1.3.2 THE AIP SUPPLEMENTS (AIP SUP)***

*AIP Supplements are published , if necessary, on Thursday and are available on SOFIA-Briefing tool and SIA website : www.sia.aviation-civile.gouv.fr*

*They contain temporary information with cartographic annexes and/or long texts associated with NOTAM. All AIP SUP whether AIRAC or not go together with the publication of a « TRIGGER NOTAM » with the same validity as the supplement giving a short description of the content, the main operational restrictions and the supplement reference number.*
*The 4th and 5th letters of the NOTAM code are always « TT ».*
*In addition to the « NOTAM TRIGGER », one or more « NOTAM REPLICA » may be published on one or more aerodromes and/or heliport(s) affected by the operational restrictions contained in the SUP AIP. These « NOTAM REPLICA » strictly follow the same rules as « NOTAM TRIGGER ».*

*These supplements are numbered chronologically from the first of January of the current year.*

*A check-list of supplements is published every Thursday ; it takes place of page GEN 0.3.1 of the AIP.*

**3.1.3.3 CIRCULAIRES D'INFORMATION AERONAUTIQUE (AIC)**

Elles traitent des informations d'ordre aéronautique général qui n'entrent pas dans le cadre des informations publiées dans les AIP ou dans les NOTAM.

Ces informations sont le plus souvent d'ordre explicatif ou consultatif. Elles peuvent annoncer des changements importants à longue échéance dans une législation, un règlement, des procédures, des installations ou des services et rappeler des dispositions réglementaires en vigueur.

Ces circulaires sont publiées en français et en anglais.

***3.1.3.3 AERONAUTICAL INFORMATION CIRCULARS (AIC)***

*These cover general aeronautical information not forming part of AIP or NOTAM information.*

*The information provided is mainly of an explanatory or advisory nature. AIC may be used to provide informations of a long lasting character concerning laws, regulations, procedures, facilities on services and to draw attention to regulations in force.*

*AIC are published in French and English.*

**a) Classement**

Les circulaires sont classées en deux séries différentes :

- Série A qui groupe les informations ayant une portée internationale,

- Série B qui groupe les informations intéressant le plan national (non utilisée).

***a) Classification***

*Circulars are classified into two different series :*

*- Series A, for information of an international scope,*

*- Series B, covering informations of national interest (not used).*

**b) Numérotation**

Chaque série est numérotée de 1 à suivre à partir du 1er Janvier de l'année en cours. Une liste récapitulative des circulaires d'information en vigueur est publiée avec chaque nouvelle AIC.

***b) Numbering***

*Each series is numbered 1 and on, starting from the first of January of the current year. A check-list of information circulars in force is issued with every new AIC.*

**3.1.3.4 LES NOTAM**

**a) <u>Diffusion</u>**

Le Bureau NOTAM International de Bordeaux diffuse les NOTAM par la voie du RSFTA. Ils sont également disponibles sur l'outil de consultation des NOTAM SOFIA-Briefing.

La rediffusion des NOTAM étrangers est directement assurée selon un système d'adresses de distribution prédéterminées afin de satisfaire les besoins des organismes tenus d'assurer un service d'information avant et pendant le vol.

***3.1.3.4 NOTAM***

***a) <u>NOTAM distribution</u>***

*NOTAM are distributed by the International NOTAM Office BORDEAUX via the AFTN. They are also available on SOFIA-Briefing tool.*

*NOTAM from foreign sources are distributed in accordance with a predetermined list of addresses, in order to meet the requirements of units charged with pre-flight and in-flight information service.*

**b) <u>Numérotation des NOTAM</u>**

Les NOTAM sont numérotés de 0001 à suivre à partir du 1er Janvier de l'année en cours. La numérotation est précédée de l'indicateur LFFA et de la lettre affectée à la série.

Une liste récapitulative des numéros de NOTAM en vigueur est publiée mensuellement par la voie du RSFTA.

***b) <u>NOTAM numbering</u>***

*NOTAM are numbered from 0001, starting from the first of January of the current year. This numbering is prefixed with LFFA and the series designation letter.*

*A summary list of NOTAM in force is monthly published over AFTN.*

**c) <u>Séries de NOTAM</u>**

Les NOTAM sont émis selon les séries suivantes

***c) <u>NOTAM series</u>***

*NOTAM are issued according the following series*

© Service de l'Information Aéronautique, France

| Séries | Contenu / *Content* | |
|---|---|---|
| **A** | Les aérodromes suivants et les espaces aériens associés ainsi que les aides radio d'atterrissage : | *Following aerodromes and their associated airspaces and facilities used as Approach aids :* |

### 3.1.4 SYSTEME AIRAC

Les publications relatives aux circonstances énumérées en 3.1.4.2 sont diffusées selon le système AIRAC, c'est à dire en adoptant, pour la création, la suppression ou toute modification importante des éléments, une série de dates communes de mise en vigueur à intervalles de 28 jours et comprenant la date 7 janvier 1993. Les informations sont diffusées au moins 42 jours avant la date d'application de façon qu'elles parviennent à leurs destinataires 28 jours au moins avant la date d'application. Ces informations ne sont pas modifiées de nouveau avant 28 jours au moins après la date d'application, à moins que les circonstances faisant l'objet de cette notification ne soient de nature temporaire et ne subsistent pas pendant toute cette période.

Note : la mise en vigueur des changements notifiés par le Système AIRAC est fixée à 0001 UTC à la date d'effet.

Pour tout changement majeur en projet et lorsqu'un plus long préavis est souhaitable et réalisable, une date de publication précédant d'au moins 70 jours la date d'application est utilisée (double cycle AIRAC).

Lorsqu'aucune information n'a été communiquée pour être publiée à la date AIRAC, une notification «NÉANT» est émise et diffusée par BMJ.

Il convient d'éviter d'employer la date du cycle AIRAC qui se situe entre le 21 décembre et le 17 janvier compris en tant que date d'entrée en vigueur pour l'introduction de tout changement important dans le cadre du système AIRAC.

### *3.1.4 AIRAC PROCEDURES*

*Publications concerning circumstances listed in 3.1.4.2 will be issued in accordance with AIRAC procedures using for creation, suppression or any significant change of the data a schedule of a predetermined internationally agreed effective dates on an interval of 28 days including 7th January 1993. Information is distributed at least 42 days in advance of the effective date with the objective of reaching recipients at least 28 days in advance of the same date. Information so notified shall not be changed further for at least another 28 days after the indicated effective date unless the circumstances notified is of a temporary nature and would not persist for full period.*

*Remark : Implementation of changes notified by AIRAC procedures is stated at 0001 UTC as effective date.*

*For any planned major change and when a longest prior notice is needed a further publication date of at least 70 days in advance of effective date is used (double AIRAC cycle).*

*When information has not been submitted for publication at the AIRAC date, a NIL notification must be originated and distributed by AMDT.*

*It is recommended the AIRAC cycle date occurring in the 28 days period from 21 December to 17 January (both dates included) no longer be used as an AIRAC effective date for the introduction of significant operational changes.*

© Service de l'Information Aéronautique, France

Lorsque, exceptionnellement, la date de mise en vigueur prévue ne coïncide pas avec la date AIRAC, la date de publication des informations doit précéder au moins de 28 jours le début de la période AIRAC dans laquelle se situe la date de mise en vigueur prévue.

Les amendements AIRAC à l'AIP font l'objet d'un NOTAM TRIGGER diffusé avec le même préavis de 42 jours (cf 3.1.3.1.a)).

*When, for exceptional reason the planned effective date does not coincide with one of the predetermined AIRAC effective dates, the AIP amendment or AIP supplement should, whenever possible, be published at least 28 days before the beginning of the AIRAC cycle within which the planned effective date falls.*

*Under the AIRAC system AIP amendments will be issued by TRIGGER NOTAM and dissaminated with the same prior notice of 42 days (cf 3.1.3.1.a)).*

**3.1.4.1 CALENDRIER AIRAC**

Calendrier AIRAC pour l'année .

***3.1.4.1 THE AIRAC SCHEDULE***

*AIRAC schedule for the year .*

**3.1.4.2 RENSEIGNEMENTS A DIFFUSER PAR SYSTEME AIRAC**

**Création suppression et modification importantes décidées d'avance (y compris les mises en exploitation pour essais) des éléments suivants :**

Limites horizontales et verticales, règlements et procédures applicables :

- aux régions d'information de vol,

- aux régions de contrôle,

- aux zones de contrôle,

- aux routes ATS,

- aux zones dangereuses, interdites et réglementées à caractère permanent (y compris, lorsque ces données sont connues, le type et les périodes d'activité),

- tout ou partie des zones ou routes à caractère permanent où il y a possibilité de télécommunication.

Positions, fréquences, indicatifs d'appel, irrégularités et périodes d'entretien connues des aides radio à la navigation et des installations de télécommunication.

Procédures d'attente et d'approche, d'arrivée et de départ, procédures d'atténuation du bruit et toute autre procédure ATS applicable.

Installations, services et procédures météorologiques (y compris les émissions).

Pistes et prolongements d'arrêt.

***3.1.4.2 INFORMATION TO BE DISSEMINATED THROUGH AIRAC PROCEDURES***

***Planned creation, suppression and significant changes (including testing operationings ) of the following items :***

*Horizontal and vertical limits, regulation and procedures to apply :*

*- FIR,*

*- control region,*

*- control area,*

*- ATS routes,*

*- dangerous, prohibited and restricted areas of a permanent nature (type and period of activity),*

*- part or the whole zones or routes of a permanent nature where a telecommunication is possible.*

*Positions, frequencies, call-signs, roughness and maintenance periods known for navigation radio aids and telecommunications installations.*

*Holding and approach procedures, departures and arrivals, noise abatement procedures or any other ATS procedures applicable.*

*Installations, services and MET procedures (emissions included).*

*RWYs and SWYs.*

**3.1.5 SERVICE D'INFORMATION AVANT LE VOL SUR LES AERODROMES ET HELISTATIONS**

**3.1.5.1** Un service en ligne (SOFIA-Briefing) permet de consulter le bulletin des NOTAM nécessaires à la préparation du vol. Les informations disponibles apparaissent essentiellement sous la forme de Bulletins d'Informations prévol (PIB).

A défaut de pouvoir accéder au serveur SOFIA-Briefing, ou pour obtenir des explications ou des précisions complémentaires, un service d'information avant le vol est assuré conformément aux prescriptions internationales sur les aéroports internationaux figurant au tableau ci-après :

***3.1.5 PREFLIGHT INFORMATION SERVICE AT AERODROMES AND HELIPORTS***

***3.1.5.1*** *An on-line service (SOFIA-Briefing), allows consultation of the necessary NOTAM report to prepare the flight. The available information mainly appears as a preflight information bulletin (PIB).*

*If it is not possible to access SOFIA-Briefing, or, to obtain explanations or further details, a preflight information service is provided, in line with international provisions, at international aerodromes listed hereafter :*

## ← 3.1.6 DONNEES NUMERIQUES DE TERRAIN ET D'OBSTACLES (TOD)

## *3.1.6 ELECTRONIC TERRAIN AND OBSTACLE DATA (TOD)*

### 3.1.6.1 UTILISATION DES DONNEES

### *3.1.6.1 USE OF DATA*

Les données numériques de terrain et d'obstacles utilisées le cas échéant en complément des données aéronautiques visent à satisfaire les besoins de différentes applications de navigation aérienne, à bord des aéronefs ou au sol :

*Electronic terrain and obstacle data is intended to be used in the following air navigation applications :*

- système d'avertissement de proximité du sol à fonction d'évitement du relief et système d'avertissement d'altitude minimale de sécurité (MSAW) ;
- analyse des limites d'emploi des aéronefs ;
- système perfectionné de guidage et de contrôle de la circulation de surface (A-SMGCS) ;
- visionique tout temps (EVS) ;
- conception des procédures de vol aux instruments ;
- détermination des procédures à utiliser en cas d'urgence pendant une approche interrompue ou au moment du décollage ;
- production des cartes aéronautiques et bases de données embarquées ;
- simulateur de vol ;
- limitation et suppression des obstacles au voisinage des aérodromes/hélistations.

*- ground proximity warning system with forward looking terrain avoidance function and minimum safe altitude warning (MSAW) system ;*
*- aircraft operating limitations analysis ;*
*- advanced surface movement guidance and control system (A-SMGCS) ;*
*- enhanced visual system (EVS) ;*
*- instrument flight procedure design ;*
*- determination of contingency procedures for use in the event of an emergency during a missed approach or take-off ;*
*- aeronautical chart production and on-board databases ;*
*- flight simulator ;*
*- Obstacle limitation/cancellation around aerodromes.*

### 3.1.6.2 DESCRIPTION DES ZONES DE COUVERTURES ET SPECIFICATIONS GENERALES

### *3.1.6.2 COVERAGES AREAS DESCIPTION AND GENERALS SPECIFICATIONS*

Les données numériques de terrain et d'obstacles s'organisent en 4 zones de couverture.

*The sets of electronic terrain and obstacle data shall be collected and recorded in four coverages areas.*

- Zone 1 – ensemble du territoire national.

*- Area 1 - entire territory of a state.*

- Zone 2 – région de contrôle terminale (limitée à la TMA publiée ou à la région limitée par un cercle de rayon de 45 km du point de référence de l'aérodrome ou de l'hélistation – si cette limite est moindre ou en l'absence de TMA publiée).

*- Area 2 - terminal control area (shall be the TMA as published or limited to a 45 km radius from the aerodrome/heliport reference point (whichever is smaller or if a TMA has not been published).*

- Zone 3 – zone d'aérodrome ou d'hélistation : zone comprise entre les bords de la piste et une distance de 90 m de l'axe de cette piste et, dans toutes les autres parties des aires de mouvement de l'aérodrome ou de l'hélistation, une zone de 50 m longeant les bords des aires définies.

*- Area 3 - aerodrome/heliport area : area that extends from the edges of the runway to 90 m from the runway center line and for all others parts of aerodrome/heliport movement areas, 50 m from the edges of the defined areas.*

- Zone 4 – zone d'opérations de catégorie II ou III (uniquement pour les pistes destinées aux approches de précision de catégorie II ou III) : zone de largeur de 60 m de part et d'autre du prolongement de l'axe de piste et d'une longueur de 900 m à partir du seuil de piste, mesurée le long du prolongement de l'axe de piste.

*- Area 4 - Category ll or lll operations area (restricted to those intended for Category ll or lll precision, approaches) : the width of the area shall be 60 m on either side of extended runway center line while the length shall be 900 m from the runway threshold measured along the extended runway center line.*

Les critères de sélection et les surfaces de collecte de données de terrain et obstacles sont explicités au chapitre 10 de l'Annexe 15 de l'OACI.

*The selection criteria for terrain and obstacle data collection surfaces for these areas are explained in chapter 10 of Annex 15 (ICAO).*

Les données doivent répondre à des normes précises en matière de contenu, de structure et de modélisation. L'ensemble de ces éléments est disponible dans l'Annexe 15 de l'OACI (cf. Chapitre 10 et Appendice 8).

*The electronic terrain and obstacle data shall meet a level of quality which depends on the coverage area, according to numerical requirements (accuracy, resolution integrity level) established by the ICAO. The data shall also comply with precise standards regarding content, structure and modelling. This information is available in Annex 15 (see chapter 10 and Appendix 8).*

© Service de l'Information Aéronautique, France

**3.1.6.3 MODALITES DE MISE A DISPOSITION DES DONNEES NUMERIQUES DE TERRAIN ET D'OBSTACLES POUR LA ZONE 1**

Les données numériques de terrain sont disponibles auprès de l'IGN. Le produit RGE Alti ® est en accès libre pour la France métropolitaine et les DROM sur le site :
https://geoservices.ign.fr/rgealti#telechargement5m

Les données numériques d'obstacles de la zone 1 sont publiées à l'ENR 5.4.

**3.1.6.4 SPECIFICATION DES DONNEES FRANCAISE POUR LA ZONE 1**

Les données numériques de terrain sont celles de l'IGN : données RGE Alti ® au pas de 5 mètres dont la qualité répond aux spécifications de la zone 1.

Les données numériques d'obstacles sont celles des obstacles à la navigation aérienne dont la hauteur au-dessus du sol est supérieure à 100 mètres. Un fichier des obstacles à la navigation aérienne dont la hauteur au-dessus du sol est supérieure à 50 mètres est disponible depuis la page AIP html ENR 5.4.1 et la page d'accueil du site du SIA. Il faut noter que ces données ne répondent pas à toutes les spécifications de l'OACI, notamment en matière de contenu, structure et modélisation. Comme prescrit par l'OACI, les utilisateurs de ces données devront donc soigneusement évaluer les données disponibles afin de déterminer si elles conviennent à l'emploi prévu.

**3.1.6.5 MODALITES DE MISE A DISPOSITION DES DONNEES NUMERIQUES DE TERRAIN ET D'OBSTACLES POUR LA ZONE 2**

Les données sont détenues par le SIA pour les aérodromes dont l'indicateur d'emplacement OACI est listé ci-dessous. Ces données sont disponibles dans la boutique du site internet du SIA (1).

LFBD, LFBO, LFBP, LFBZ, LFKB, LFKC, LFKJ, LFLC, LFLL, LFML, LFMN, LFMT, LFPG, LFPO, LFRS, LFSB, LFST.

**3.1.6.6 SPECIFICATIONS FRANCAISES DES DONNEES POUR LA ZONE 2**

Pour chaque aérodrome les données sont disponibles dans un fichier zip contenant les données obstacles et modèle numérique de terrain (MNT) sous deux formats :
• SHAPE (3 fichiers obstacles : ponctuels, linéaires et surfaciques)
• ASC (Fichiers terrains MNT)

**3.1.6.7 MODALITES DE MISE A DISPOSITION DES DONNEES NUMERIQUES DE TERRAIN ET D'OBSTACLES POUR LA ZONE 3**

Les données sont détenues par le SIA pour les aérodromes dont l'indicateur d'emplacement OACI est listé ci-dessous. Ces données sont disponibles dans la boutique du site internet du SIA (1).

LFBD, LFBO, LFBP, LFBZ, LFKB, LFKC, LFKJ, LFLC, LFLL, LFML, LFMN, LFMT, LFPG, LFPO, LFRS, LFSB, LFST.

**3.1.6.8 SPECIFICATIONS FRANCAISES DES DONNEES POUR LA ZONE 3**

Pour chaque aérodrome les données sont disponibles dans un fichier zip contenant les données obstacles et modèle numérique de terrain (MNT) sous deux formats :
• SHAPE (3 fichiers obstacles : ponctuels, linéaires et surfaciques)
• ASC (Fichiers terrains MNT)

**3.1.6.9 MODALITES DE MISE A DISPOSITION DES DONNEES NUMERIQUES DE TERRAIN ET D'OBSTACLES POUR LA ZONE 4**

Les données sont détenues par le SIA pour les aérodromes dont l'indicateur d'emplacement OACI est listé ci-dessous. Ces données sont disponibles dans la boutique du site internet du SIA (1).

LFBD, LFBO, LFBP, LFBZ, LFKC, LFKJ, LFLC, LFLL, LFML, LFMN, LFMT, LFPG, LFPO, LFRS, LFSB, LFST.

**3.1.6.10 SPECIFICATIONS FRANCAISES DES DONNEES POUR LA ZONE 4**

Pour chaque aérodrome les données sont disponibles dans un fichier zip contenant les données obstacles et modèle numérique de terrain (MNT) sous deux formats :
• SHAPE (3 fichiers obstacles : ponctuels, linéaires et surfaciques)
• ASC (Fichiers terrains MNT)

(1) Sur le site internet du SIA, dans le menu « Produits numériques en libre disposition », choisir « Données TOD ». (Il est possible de télécharger les terrains unitairement ou l'ensemble.) https://www.sia.aviation-civile.gouv.fr/produits-numeriques-en-libre-disposition/donnees-tod.html

E-mail : sia-direction@aviation-civile.gouv.fr

***3.1.6.3 PROVISION OF DIGITAL TERRAIN AND OBSTACLE DATA FOR AREA 1***

*The digital terrain data can be obtained from IGN : RGE Alti ® product is available on the website for Metropolitan France and also Overseas departments on :*
*https://geoservices.ign.fr/rgealti#telechargement5m*

*The obstacles digital data for area 1 are published in ENR 5.4.*

***3.1.6.4 SPECIFICATIONS OF FRENCH DATA FOR AREA 1***

*The digital terrain data can be obtained by IGN : RGE Alti ® data with 5 m post-spacing whose quality meets area 1 requirements.*

*The digital obstacle data sets are the same that air navigation obstacles whose height above ground is greater than 100 meters. A digital file is available via AIP html page 5.4.1. It also contains air navigation obstacles whose height is greater than 50 meters. Note that these data sets do not meet all ICAO requirements in particular as regards content, structure and modeling. Consequently, as specified by ICAO, careful evaluation of available data sets by data users is necessary in order to determine if the products are fit for their intended use.*

***3.1.6.5 FORMS TO PROVIDE ELECTRONIC OBSTACLE AND TERRAIN DATA SETS FOR AREA 2***

*The data are held by the SIA for the aerodromes whose the location indicator ICAO is listed below. These data are available in the SIA website e-Shop (1).*

*LFBD, LFBO, LFBP, LFBZ, LFKB, LFKC, LFKJ, LFLC, LFLL, LFML, LFMN, LFMT, LFPG, LFPO, LFRS, LFSB, LFST.*

***3.1.6.6 FRENCH DATA SET SPECIFICATIONS FOR AREA 2***

*For each aerodrome, the data are available in a zip file containing the obstacle data and the digital terrain model (DTM) in two formats :*
*• SHAPE (3 obstacle files : point, linear and surface)*
*• ASC (DTM terrain files)*

***3.1.6.7 FORMS TO PROVIDE ELECTRONIC OBSTACLE AND TERRAIN DATA SETS FOR AREA 3***

*The data are held by the SIA for the aerodromes whose the location indicator ICAO is listed below. These data are available in the SIA website e-Shop (1).*

*LFBD, LFBO, LFBP, LFBZ, LFKB, LFKC, LFKJ, LFLC, LFLL, LFML, LFMN, LFMT, LFPG, LFPO, LFRS, LFSB, LFST.*

***3.1.6.8 FRENCH SPECIFICATION DATA SETS FOR AREA 3***

*For each aerodrome, the data are available in a zip file containing the obstacle data and the digital terrain model (DTM) in two formats :*
*• SHAPE (3 obstacle files : point, linear and surface)*
*• ASC (DTM terrain files)*

***3.1.6.9 FORMS TO PROVIDE ELECTRONIC TERRAIN AND OBSTACLE FOR AREA 4***

*The data are held by the SIA for the aerodromes whose the location indicator ICAO is listed below. These data are available in the SIA website e-Shop (1).*

*LFBD, LFBO, LFBP, LFBZ, LFKC, LFKJ, LFLC, LFLL, LFML, LFMN, LFMT, LFPG, LFPO, LFRS, LFSB, LFST.*

***3.1.6.10 FRENCH DATA SETS SPECIFICATIONS FOR AREA 4***

*For each aerodrome, the data are available in a zip file containing the obstacle data and the digital terrain model (DTM) in two formats :*
*• SHAPE (3 obstacle files : point, linear and surface)*
*• ASC (DTM terrain files)*

*(1) On the SIA website, in the menu "Products to be downloaded", choose "TOD data". (It is possible to download individual plots of land or the whole set). https://www.sia.aviation-civile.gouv.fr/products-to-be-downloaded/donnees-tod.html*

# GEN 3.2 CARTES AERONAUTIQUES

*AERONAUTICAL CHARTS*

### 3.2.1 SERVICES RESPONSABLES

Afin de satisfaire les besoins des usagers de l'air en matière de cartes aéronautiques, les documents dont la liste est donnée en 3.2.5 sont publiés par le Service de l'Information Aéronautique (SIA).

Des documents cartographiques sont établis dans le cadre des dispositions de l'Annexe 4 de l'OACI pour répondre à des besoins internationaux. Des documents cartographiques sont établis selon d'autres critères, pour répondre à des besoins essentiellement nationaux.

### 3.2.2 TENUE A JOUR DES CARTES

Les cartes aéronautiques incluses dans l'AIP sont régulièrement mises à jour.

Cette mise à jour s'effectue dans un premier stade à partir des NOTAM, sous forme de corrections manuscrites. Elle s'effectue dans un deuxième stade sous forme de bulletins de modifications manuscrites et enfin par réédition des cartes intéressées par la voie des amendements (BMJ) à l'AIP.

Pour de plus amples renseignements, se reporter à la section GEN 3.1.2

En ce qui concerne les cartes aéronautiques à petites et moyennes échelles publiées par le Service de l'Information Aéronautique (SIA) non insérées dans l'AIP, leur réédition seule est portée à la connaissance des abonnés par la voie normale des amendements à la présente publication.

### 3.2.3 ACHATS DES CARTES

Le Service de l'Information Aéronautique met à la disposition des utilisateurs une boutique en ligne de publications à l'adresse suivante :
https://www.sia.aviation-civile.gouv.fr/boutique

Pour tout renseignement, vous pouvez nous contacter :

SERVICE DE L'INFORMATION AERONAUTIQUE
6, rue des avions ANTOINETTE CS 90048
33693 MERIGNAC cedex
TEL : 05 57 92 56 68
E-mail : sia-commercial@aviation-civile.gouv.fr

### 3.2.1 RESPONSIBLE SERVICE

In order to satisfy the needs of aeronautical users as regards aeronautical charts, the documents which are given in 3.2.5 are published by the Aeronautical Information Service (AIS).

Cartographic documents are established within the context of ICAO Annex 4 provisions, to serve the international requirements. Some cartographic documents are established according to other criterias, to serve essentially national requirements.

### 3.2.2 MAINTENANCE OF CHARTS

Aeonautical charts included in the AIP are regularly kept up to date.

This updating is made first, from NOTAM, by hand amendments. A second step is done by hand amendment bulletins and in a final step by publishing the affected charts by means of AIP amendment (BMJ).

For further informations, refer to section GEN 3.1.2

Concerning the small and medium scale, aeronautical charts published by the Aeronautical Information Service (AIS) not inserted in the AIP, their new edition only is brought to the attention of the suscribers by normal way of amendments to the present publication.

### 3.2.3 PURCHASE OF CHARTS

The Aeronautical Information Service offers users an online shop of publications at the following address:
https://www.sia.aviation-civile.gouv.fr/boutique

For any information you can contact us by:

**3.2.5 LISTE DES CARTES AERONAUTIQUES DISPONIBLES**

Voir liste de contrôle.

**3.2.6 CARTES DU MONDE OACI**

NIL

**3.2.7 CARTES TOPOGRAPHIQUES DISPONIBLES**

Contacter l'Institut national de l'information géographique et forestière (IGN).

**3.2.8 CORRECTIONS AUX CARTES NON INCLUSES DANS L'AIP**

Carte aéronautique à l'échelle 1/1 000 000 édition 1-2026 :

VOR/DME BZH manquant. Information publiée également par NOTAM PERM et intégrée à l'édition 2-2026.

Carte aéronautique OACI à l'échelle 1/500 000 édition 2026 :

SIV POITIERS et SIV LIMOGES : ne pas tenir compte des mentions sur la FREQ 127.675 MHz utilisable hors HOR ATS. Informations publiées également par NOTAM PERM et intégrées à l'édition 2027.

ZONES LF-CBA 16B, EU-C25 SL, EU-C25 SLP, EU-C25 SLPZ et EU-CBA C25 FW manquantes et à ajouter (REF ENR 5.2-17 et 22). Informations publiées également par NOTAM PERM et intégrées à l'édition 2027.

TMA 1, 2, 4 et 5 LIEGE : lire FREQ 119.280 au lieu de 121.500. Informations corrigées lors de l'édition 2027.

FREQ CTR LIEGE : lire 118.130 au lieu de 121.500. Information corrigée lors de l'édition 2027.

FREQ Tour AD LIEGE : lire 118.130 au lieu de 130.630. Information corrigée lors de l'édition 2027.

Limite d'espaces au Nord de la TMA 13 LILLE sans informations : il s'agit de parties d'espaces sur le territoire français délégués à l'ATC Belge : (U)L 607 area, TMA 1 et 2 OOSTENDE et CTR KOKSIJDE (REF AIP BELGIUM ENR 2.1, ENR 2.2 et EBFN AD2.17). Ces informations consultables dans les sections de l'AIP belge seront intégrées lors de l'édition 2027.

Erreur d'orientation des roses VOR. Cette erreur, négligeable au centre de la projection, s'accroit à l'Ouest (5,4° sur Brest) et à l'Est (3,4° sur Strasbourg). Informations corrigées lors de l'édition 2027.

FREQ TMA 1.2, 4.8, 5 et 6 TOULOUSE : lire 121.250 au lieu de 121.255. Ces informations seront corrigées lors de l'édition 2027.

TMA GENEVE 1, 4, 5, 6, 7 et 8 : espaces de classe « C », et non « D » comme mentionné dans les étiquettes. Informations corrigées lors de l'édition 2027.

Espaces dé-classables : seule la classe d'espace la plus contraignante est dorénavant mentionnée. La légende sera modifiée à l'édition 2027 pour tenir compte de cette évolution de représentation.

Reims Prunay : le pinceau IFR doit être orienté dans l'axe de piste (en référence aux RNP, et non à la VOR A). Information corrigée lors de l'édition 2027.

TMA BALE :

- TMA Bâle AZ2 : 5500 >D> FL100 >C> FL105 (au lieu de 5500 >E> FL100 >D> FL105)
- TMA Bâle AZ3S : 2000 >E> 6500 >C> FL105 (au lieu de 2000 >E> 6000 >D> FL105)
- TMA Bâle SW2 : 1000ASFC >E> 4500 >D> FL100 >C> FL115 (au lieu de 4500 >E> FL100 >D> FL115)

Informations publiées également par NOTAM PERM et intégrées à l'édition 2027.

Données étrangères (REF AIP BELGIUM AND LUXEMBOURG ENR 2.1) :

- TMA Luxembourg 5 : 2500 >D> FL095 >C> + (au lieu de 2500 >D> +)
- CTA Brussels S3 : FL055 >C> + (au lieu de FL055 >D> +)

Informations corrigées lors de l'édition 2027.

Erreur d'étiquette associée à la zone HOUEVILLE « R292 SFC-2000AMSL », qui est mentionnée à tort « R283 SFC-3500AMSL » (cette dernière est située à CARPIAGNE, sur le volet Sud-est). Information corrigée lors de l'édition 2027.

FREQ SIV 5 PROVENCE : lire 126.260 au lieu de 134.800. Information corrigée lors de l'édition 2027.

FREQ AD GHISONACCIA ALZITONE Tour : Lire 118.350 au lieu de 123.500. Information publiée également par NOTAM PERM et corrigée lors de l'édition 2027.

**3.2.5 LIST OF AERONAUTICAL CHARTS AVAILABLE**

See check list.

**3.2.6 INDEX TO THE WORLD AERONAUTICAL CHARTS ICAO**

NIL

**3.2.7 TOPOGRAPHICAL CHARTS AVAILABLE**

Contact the "National institute of geographic and forest information" (IGN).

**3.2.8 CORRECTIONS TO CHARTS NOT INCLUDED IN THE AIP**

Aeronautical chart, scale 1:1,000,000, edition 1-2026 :

VOR/DME BZH missing. Information also published via NOTAM PERM and included in edition 2-2026.

ICAO aeronautical chart, scale 1:500,000, edition 2026 :

SIV POITIERS and SIV LIMOGES: disregard the references to FREQ 127.675 MHz being usable outside ATS hours. Information also published via NOTAM PERM and included in the 2027 edition.

Zones LF-CBA 16B, EU-C25 SL, EU-C25 SLP, EU-C25 SLPZ and EU-CBA C25 FW are missing and must be added (REF ENR 5.2-17 and 22). Information also published via NOTAM PERM and incorporated into the 2027 edition.

TMA 1, 2, 4 and 5 LIEGE: Read FREQ 119.280 instead of 121.500. Information corrected in the 2027 edition.

FREQ CTR LIEGE: Read 118.130 instead of 121.500. Information corrected in the 2027 edition.

FREQ AD LIEGE Tower: Read 118.130 instead of 130.630. Information corrected in the 2027 edition.

Airspace boundary to the North of TMA 13 LILLE without information: these are parts of airspace over French territory delegated to Belgian ATC: (U)L 607 area, TMA 1 and 2 OOSTENDE and CTR KOKSIJDE (REF AIP BELGIUM ENR 2.1, ENR 2.2 and EBFN AD2.17). This information, available in the relevant sections of the Belgian AIP, will be incorporated in the 2027 edition.

Error in the orientation of the VOR roses. This error, which is negligible at the centre of the projection, increases towards the West (5.4° at Brest) and towards the East (3.4° at Strasbourg). Information corrected in the 2027 edition.

FREQ TMA 1.2, 4.8, 5 : read 121.250 instead of 121.255. Information corrected in the 2027 edition.

TMA GENEVA 1, 4, 5, 6, 7 and 8: 'C' class airspaces, not 'D' as stated on the labels. Information corrected in the 2027 edition.

Downgradable airspaces: only the most restrictive airspace class is now stated. The legend will be amended in the 2027 edition to reflect this change in representation.

Reims Prunay: the IFR brush must be aligned with the runway centreline (in reference to the RNP, not VOR A). Information corrected in the 2027 edition.

TMA BALE :

- TMA Basel AZ2 : 5500 >D> FL100 >C> FL105 (instead of 5500 >E> FL100 >D> FL105)
- TMA Basel AZ3S : 2000 >E> 6500 >C> FL105 (instead of 2000 >E> 6000 >D> FL105)
- TMA Basel SW2 : 1000ASFC >E> 4500 >D> FL100 >C> FL115 (instead of 4500 >E> FL100 >D> FL115)

Information also published via NOTAM PERM and included in edition 2027.

Foreign data (REF AIP BELGIUM AND LUXEMBOURG ENR 2.1):

- TMA Luxembourg 5 : 2500 >D> FL095 >C> + (instead of 2500 >D> +)
- CTA Brussels S3 : FL055 >C> + (instead of FL055 >D> +)

Information corrected in the 2027 edition.

Labeling error associated with the HOUEVILLE area "R292 SFC-2000AMSL", which is incorrectly listed as "R283 SFC-3500AMSL" (the latter is located at CARPIAGNE, on the south-eastern section). Information corrected in the 2027 edition.

FREQ SIV 5 PROVENCE: read 126.260 instead of 134.800. Information corrected in the 2027 edition.

FREQ AD GHISONACCIA ALZITONE Tower : Read 118.350 instead of 123.500. Information also published via NOTAM PERM and corrected in the 2027 edition.

# GEN 3.3 SERVICES DE LA CIRCULATION AERIENNE

*AIR TRAFFIC SERVICES*

**3.3.1 SERVICES COMPETENTS**

Les organismes désignés pour rendre le service de la circulation aérienne au bénéfice des aéronefs civils et militaires évoluant selon les règles de la circulation aérienne générale en France métropolitaine sont :

- La direction des services de la navigation aérienne (DSNA) de la DGAC,

- Les organismes relevant du ministère de la défense suivants :

Commandement de la force de l'aéronautique navale (ALAVIA),

Commandement de l'aviation légère de l'armée de terre (COMALAT),

Commandement des forces aériennes (CFA),

Centre d'essais en vol de la direction générale de l'armement (DGA-EV),

- Les prestataires de service d'information de vol d'aérodrome (AFIS) listés au paragraphe 3.3.7.

***3.3.1 RESPONSIBLE SERVICES***

*The organisms designated to provide air traffic services (ATS) for civil and military aircraft operating in general air traffic (GAT) in metropolitan France are :*

*- The « direction des services de la navigation aérienne » (DSNA) from DGAC,*

*- The following military organisms :*

*« Commandement de la force de l'aéronautique navale » (ALAVIA),*

*« Commandement de l'aviation légère de l'armée de terre » (COMALAT),*

*« Commandement des forces aériennes » (CFA),*

*« Centre d'essais en vol de la direction générale de l'armement » (DGA-EV),*

*- Aerodrome flight information service (AFIS) providers listed in § 3.3.7.*

**3.3.2 ZONE POUR LAQUELLE LES SERVICES SONT FOURNIS**

Les services de la circulation aérienne sont rendus dans l'espace aérien de France métropolitaine dont la gestion a été confiée à la France par l'OACI qui comprend les FIR de Bordeaux, Brest, Marseille, Paris et Reims ainsi que l'UIR France.

***3.3.2 AREA OF RESPONSIBILITY***

*ATS are provided in metropolitan airspace portions for which France has accepted the responsibility to do so. They include Bordeaux, Brest, Marseille, Paris and Reims flight information regions (FIR) as well as France upper information region (UIR).*

**3.3.3 TYPES DE SERVICES**

**3.3.3.1 <u>Description des services rendus</u>**

Les services de la circulation aérienne comprennent :

a. Le service du contrôle de la circulation aérienne, qui comprend :

Le service du contrôle régional, rendu par les centres de contrôle en route de la navigation aérienne (CRNA) dans la région supérieure de contrôle (UIR), le long des voies aériennes (AWY) et dans la région inférieure de contrôle (LTA).

Le service du contrôle d'approche, rendu dans les régions de contrôle ( CTA ) pour les parties des vols contrôlés se rattachant à l'arrivée ou au départ des aérodromes dotés d'une CTR et dans les régions de contrôle terminales (TMA). Ce service est rendu soit par les services de la navigation aérienne soit par des organismes relevant du ministère de la défense.

Le service du contrôle d'aérodrome rendu sur les aérodromes listés au paragraphe 3.3.6. Ce service est rendu selon les aérodromes, soit par la DSNA, soit par un organisme relevant du ministère de la défense.

b. Le service d'information de vol et d'alerte qui est rendu dans l'ensemble de la FIR France et de l'UIR France par la DSNA, les organismes relevant du ministère de la défense ou un organisme AFIS selon la portion d'espace concernée.

Les services d'information de vol et d'alerte peuvent être difficilement fournis dans certaines zones en raison du relief et / ou de la limitation de portée radio ou radar.

b.1 SERVICE D'INFORMATION DE VOL

Au titre du service d'information de vol les commandants de bord reçoivent des informations sur la météorologie, l'infrastructure et le trafic connu.

b.1.1 Météorologie

Les renseignements sont fournis conformément aux spécifications figurant dans la partie MET du présent document. En particulier les renseignements QNH peuvent être obtenus par l'intermédiaire de l'organisme desservant la région d'information de vol.

b.1.2 Infrastructure

En route, sauf sur demande du commandant de bord, il n'est fourni que des informations récentes sur l'infrastructure (informations qui n'étaient pas encore disponibles au moment du départ de l'aéronef) et jugées utiles pour l'exécution du vol. Les demandes d'information sont à formuler de préférence sur les fréquences réservées à l'information.

***3.3.3 TYPES OFSERVICES***

***3.3.3.1 <u>Description of the services that are provided</u>***

*ATS include :*

*a. The air traffic control service, which comprises :*

*The area control service provided by area control centres (ACC) in the UIR, along airways (AWY) and in the lower traffic area (LTA).*

*The approach control service provided in control areas ( CTA ) for those controlled flight portions relating to arrival to or departure from aerodromes with a CTR as well as in terminal management areas (TMA). This service is provided either by the territorially competent "air navigation services" (SNA) of "DSNA" or by military organisms.*

*The aerodrome control service provided on those aerodromes listed in § 3.3.6. This service is provided, depending on aerodromes, either by DSNA or by military organisms.*

*b. The information and alert service which is provided in France FIR and UIR by DSNA, military organisms or AFIS providers depending on airspace portions.*

*Flight information service and alerting service may be difficult to provide due to mountainous areas and / or radio or radar range limitations.*

*b.1 FLIGHT INFORMATION SERVICE*

*As flight information service, aircraft commanders receive information on meteorology, infrastructure and known traffic.*

*b.1.1 Meteorology*

*Information is provided according to specifications appearing in the MET section of the present document. In particular QNH information can be obtained from the unit serving the flight information region.*

*b.1.2 Infrastruture*

*En route, unless requested by the aircraft commander, only recent information regarding infrastructure (information which was not yet available at the aircraft's time of departure) and judged useful for performance of the flight is provided. Requests for information are to be made preferably on the frequencies reserved for information.*

© Service de l'Information Aéronautique, France

b.1.3 Trafic

Les appareils évoluant en IFR en dehors des espaces contrôlés reçoivent une information de vol sur le trafic IFR connu dans leur proximité et, le cas échéant, une suggestion sur leur demande ou à l'initiative de l'organisme de la circulation aérienne quant à la manoeuvre à effectuer pour éviter ce trafic connu.

*b.1.3 Traffic*

*Aircraft flying outside controlled airspaces receive flight information regarding known IFR traffic in the vicinity and, if need be, at their request or on the initiative of the air traffic unit, a suggestion regarding the manoeuvre to be performed in order to avoid that known traffic.*

b.2 SERVICE D'ALERTE ET D'ASSISTANCE :

Le service d'alerte est assuré :

- à tout aéronef en vol contrôlé,
- à tout aéronef ayant communiqué un PLN,
- à tout aéronef n'ayant pas communiqué de PLN, lorsqu'un organisme de la circulation aérienne estime qu'il possède suffisamment d'éléments lui permettant de douter de la sécurité de l'aéronef ou de ses occupants,
- à tout aéronef que l'on sait ou croit être l'objet d'une intervention illicite.

L'attention des usagers est attirée sur l'importance du dépôt d'un plan de vol pour faciliter la fourniture du service d'alerte lors du survol de régions montagneuses ou océaniques où la couverture radio ou radar peut être incomplète

Lorsqu'un commandant de bord se déclare en état de détresse ou d'urgence, il peut être amené à bénéficier d'une assistance en vol sans qu'il soit nécessaire de faire entreprendre une opération SAR.

*b.2 ALERTING AND ASSISTANCE SERVICE :*

*Alerting service is provided :*

*- for all aircraft in controlled flight,*

*- for all aircraft having communicated a FPL,*

*- for all aircraft not having communicated a FPL, when an air traffic unit deems that there is sufficient reason to doubt about the safety of the aircraft or its occupants,*

*- for all aircraft having communicated a FPL.*

*Airspace users attention is drawn to the importance of flight plan submission to facilitate alerting service when overflying mountainous or oceanic areas where radio or radar range might be incomplete.*

*When an aircraft commander declares a state of distress or emergency, he may have to seek in-flight assistance without the need for undertaking SAR operations.*

c. Le service d'information de vol d'aérodrome qui est rendu par les organismes AFIS listés au paragraphe 3.3.6 sur les terrains dotés de ce service. Les organismes AFIS sont désignés pour rendre les services d'information de vol et d'alerte au bénéfice de la circulation d'aérodrome dans un volume générique défini latéralement par un cylindre de rayon égal à 3 NM, centré sur le point de référence de l'aérodrome (ARP), et verticalement du sol jusqu'à un plafond horizontal situé à une hauteur de 2000 ft au-dessus de l'ARP, à l'exclusion de tout ou partie de ce volume qui rencontre un espace aérien contrôlé. Toutefois, lorsqu'une zone à utilisation obligatoire de radio est établie autour de l'aérodrome, le volume d'espace aérien est défini exclusivement par le volume de cette zone.

*c. The aerodrome flight information service which is provided by AFIS providers listed in § 3.3.6 on the concerned aerodromes. AFIS providers are designated to provide information and alert services for aerodrome traffic in a generic volume laterally defined by a 3 NM radius cylinder centred on the aerodrome reference point (ARP), and vertically defined from the ground to 2000 ft above the ARP, excluding any interfering controlled airspace. Nevertheless, when a radio mandatory zone (RMZ) is established around the aerodrome, the AFIS is provided exclusively in the volume of that RMZ.*

**3.3.3.2 Organisation territoriale des organismes de la DSNA**

***3.3.3.2 Geographic organisation of DSNA organisms***

Les CRNA rendent les services de la circulation aérienne dans leur FIR respective :

- CRNA - Nord dans la FIR de Paris (LFFF)
- CRNA - Ouest dans la FIR de Brest (LFRR)
- CRNA - Sud-Ouest dans la FIR de Bordeaux (LFBB)
- CRNA - Sud-Est dans la FIR de Marseille (LFMM)
- CRNA – Est dans la FIR de Reims (LFEE)

*ACC provide their services in their respective FIR :*

*- « CRNA – North » in Paris FIR (LFFF)*
*- « CRNA – West » in Brest FIR (LFRR)*
*- « CRNA - South-West » in Bordeaux FIR (LFBB)*
*- « CRNA - South-East » in Marseille FIR (LFMM)*
*- « CRNA – East » in Reims FIR (LFEE)*

Le service du contrôle d'approche est rendu par les organismes de la DSNA dans les TMA listées ci-après :

*The approach control service is provided by DSNA organisms in the following TMA :*

- SNA – Nord :
  TMA Beauvais
  TMA Lille

- *« SNA – North » :*

### 3.3.4 COORDINATION ENTRE L'EXPLOITANT D'AERONEF ET LES SERVICES ATS

La coordination entre les exploitants d'aéronefs et les services ATS s'effectue selon les dispositions A7005 du règlement (UE) N° 923/2012 (règles de l'air communes / SERA).

### *3.3.4 COORDINATION BETWEEN AIRCRAFT OPERATORS AND ATS PROVIDERS*

*Coordination between aircraft operators and ATS providers complies with A7005 provisions of regulation (EU) NR 923/2012 (common rules of the air / SERA).*

### 3.3.5 ALTITUDE MINIMALE DE VOL

Les altitudes minimales de vol sont établies conformément aux critères de conception de procédures contenus dans le Recueil de critères pour la conception des procédures de vol aux instruments. Ces critères sont conformes à ceux définis par les PANS-OPS de l'OACI, Doc 8168 Volume II.

Les altitudes minimales de vol prennent en compte une marge de franchissement d'obstacle qui est exprimée soit par un pourcentage de la distance de vol parcourue depuis un point (dans le cas des départ normalisés aux instruments - SID) soit par une valeur forfaitaire établie selon le segment de vol considéré. En zone montagneuse, cette valeur peut être augmentée jusqu'au double de sa valeur initiale.

Les altitudes minimales de vol sont publiées sur les cartes aéronautiques sous la forme :

- de planchers (AWY),
- d'altitudes minimales de zone (AMA),
- d'altitudes minimales de secteur (MSA),
- d'altitudes minimales de sécurité radar (AMSR),
- d'altitudes minimales de descente (MDA),
- d'altitudes de décision (DA),
- de gradients (SID, API).

Ces altitudes minimales de vol doivent faire l'objet d'une correction par le pilote en fonction de la température en conformité avec les PANS-OPS Doc 8168 Volume I lorsque il n'est pas en guidage ATS et lorsque l'aéronef n'est pas équipé d'un système prenant en charge cette correction de manière automatique.

Les altitudes minimales de sécurité radar publiées sont corrigées pour les températures froides.La correction est basée sur les températures minimales des dix dernières années dans l'aire considérée.

### *3.3.5 MINIMUM FLIGHT ALTITUDE*

*Minimum flight altitudes are established in accordance with the instrument flight procedures design criteria defined in the French document « Recueil de critères pour la conception des procédures de vol aux instruments ». These criteria conform to those in ICAO PANS-OPS (Doc 8168 Volume II).*

*Minimum flight altitudes take into account an obstacle clearance margin defined either as a percentage of a flight distance (e.g.standard instrument departures - SID) or by flat rate values established according to the considered flight segment. In mountain areas, this obstacle clearance can be increased up to two times its initial value.*

*Minimum flight altitudes are published on aeronautical charts as :*

*- Airway floors (AWY),*
*- Area minimal altitudes (AMA),*
*- Minimal sector altitudes (MSA),*
*- Minimal radar vectoring altitudes (AMSR),*
*- Minimal descent altitudes (MDA),*
*- Decision altitudes (DA),*
*- Climb gradients (SID, API).*

*These minimal flight altitudes must be corrected by pilots depending on the temperature in accordance with PANS-OPS Doc 8168 Volume I when the aircraft is not under radar vectoring and when it is not equipped with an automatic temperature correction system.*

*Published minimal radar vectoring altitudes are corrected for cold temperatures. The correction which is applied is based on the minimum temperatures of the last ten years in the considered area.*

*COMMUNICATION AND NAVIGATION SERVICES*

**3.4.1 SERVICES RESPONSABLES**

Les stations du service mobile aéronautique et du service de radionavigation aéronautique sont établies et exploitées par des organismes relevant du ministre chargé de l'aviation civile, du ministère des Armées ou par des prestataires privés de services de communication ou de navigation certifiés.

**3.4.2 ZONE DE RESPONSABILITE**

Les services de communication et de navigation sont assurés sur un certain nombre d'aérodromes, dans l'espace aérien situé au-dessus du Territoire National et au-dessus de la haute mer lorsque l'organisation de l'aviation civile internationale (OACI) y a confié la fourniture des services de la circulation aérienne à la France. Les aérodromes sont décrits en AD 2 et les espaces aériens sont décrits en ENR 2.

La portée de ces services varie en fonction des moyens radioélectriques permettant de les fournir et de l'environnement aéronautique dans la région considérée, notamment le relief.

**3.4.3 TYPES DE SERVICES**

**3.4.3.1 Service de radionavigation**

**3.4.3.1.1 Radiophares non directionnels MF (NDB)**

Couverture : l'indication chiffrée figurant dans les tableaux ENR 4.1 et AD 2.19 rubrique observations représente le rayon de la couverture nominale. Le rayon moyen de la couverture nominale d'une radiobalise utilisée comme dispositif d'approche (L) est généralement compris entre 10 et 25 NM (annexe 10 de l'OACI, 1ère partie). Cette distance n'est donc pas reportée dans la rubrique observations.

**3.4.3.1.2 Radiophares omnidirectionnels VHF (VOR) et dispositifs mesureurs de distance (DME).**

Notions sur les couvertures :
Les couvertures des aides à la navigation sont obtenues par des signaux d'une intensité suffisante pour que des installations types d'aéronefs puissent fonctionner de façon satisfaisante jusqu'aux distances et niveaux de vol qui sont nécessaires sur le plan opérationel.

D'une façon générale, les couvertures opérationnelles spécifiées sont des volumes à l'intérieur desquels les critères de protection contre les brouillages vis-à-vis des services aéronautiques sont satisfaits.

Sont indiquées dans le tableau ENR 4, rubrique observations, les couvertures opérationnelles spécifiées des installations de radionavigation. Les informations fournies par les moyens de radionavigation ne doivent pas être utilisées au-delà des distances ou hauteurs de protection publiées ni au-delà de l'horizon radio de ces aides.

Le plan de fréquences des aides VOR/DME a été établi de manière à assurer une protection contre les interférences gênantes, uniquement jusqu'aux niveaux et distances limites qui sont opérationnellement nécessaires pour chaque aide. Les hauteurs opérationnelles spécifiées sont indiquées en milliers de pieds. Certains VOR n'ont pas la même distance protégée dans toutes les directions ; les protections sont indiquées par la méthode angulaire de sectorisation des VOR qui consiste à diviser le cercle de 360° en 24 radials tous les 15 degrés. Chaque radial est désigné par une lettre (A à X) conformément au schéma ci-dessous.

D'une manière générale, la couverture opérationnelle spécifiée d'un DME associé à un VOR est identique à la couverture du VOR.

***3.4.1 RESPONSIBLE SERVICES***

*The stations for the aeronautical mobile service and aeronautical radio navigation service are established and operated by organisations under the authority of Minister in charge of Civil Aviation, the Ministry of the Armies or by private certified communication/navigation service providers.*

***3.4.2 AREA OF RESPONSIBILITY***

*Communication and navigation services are provided on a certain number of aerodromes, in the airspace above the national territory and above the high seas when the International Civil Aviation Organisation (ICAO) has entrusted the provision of air traffic services to France. Aerodromes are described in AD 2 and airspaces are described in ENR 2.*

The range of these services varies according to the radioelectric equipments available to provide them and the aeronautical environment in the region in question, particularly the terrain.

***3.4.3 TYPES OF SERVICES***

***3.4.3.1 Radionavigation services***

***3.4.3.1.1 MF non directional radio beacon (NDB)***

*Coverage area data given in tables ENR 4.1 and AD 2.19, remarks part, show the nominal coverage radius of a radio beacon.*
The mean nominal coverage radius of a radio beacon used as an approach facility aid (L) is usually between 10 and 25 NM (ICAO annex 10 part 1). The distance will not appear in remarks part.

***3.4.3.1.2 VHF omnirange radio beacon (VOR) and distance measuring equipment (DME).***

*Notions about coverage:*
*Coverages of navigation aids are obtained by signals sufficient to allow satisfactory operation of typical aircraft installations up to the distances and flight levels required for operational reasons.*

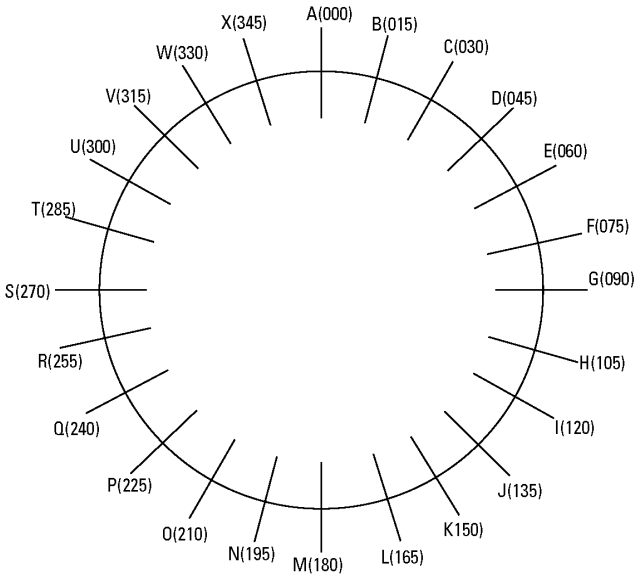
*Generally, the specified operational coverages are volumes within which the criteria for protection against interference vis-à-vis aeronautical services are met.*

*Given in table ENR 4, under the heading "observations", are the specified operational coverages of radio navigation installations. Information provided by radio navigation facilities must not be used beyond the published distances or protection heights nor beyond the radio horizon of those aids.*

*The frequency plan of VOR/DME aids has been set up so as to ensure protection against harmful interference, only up to the maximum levels and distances operationally required for each aid. The specified operational heights are indicated in thousands of feet. Some VOR do not have the same protected distance in all directions; protections are indicated using the angular method of VOR sectorization which consists in dividing the 360° circle into 24 radials, every 15 degrees. Each radial is designated by a letter (A to X) in accordance with the table below:*

*Generally, the specified operational coverage of a DME associated with a VOR is the same as the VOR.*

© Service de l'Information Aéronautique, France



Le secteur est toujours décrit par deux lettres désignant les radials délimitant le secteur en partant de la première lettre, dans le sens des aiguilles d'une montre, jusqu'à la deuxième.

*The sector is always described by two letters designating the radials delimiting the sector, starting from the first letter clockwise to the second.*

**Exemple 1 :** 120/VF/100-50 signifie 120 NM dans le secteur 315°-075° et 100 NM dans les autres directions ; hauteur maximum spécifiée 50 000 pieds.

***Example 1** : 120/VF/100-50 signifies 120 NM in the sector 315°-075° and 100NM in the other directions; specified maximum height 50 000 feet.*

**Exemple 2 :** 200 GS/100-35 signifie 200NM dans le secteur 090°-270° et 100NM dans les autres directions ; hauteur maximum spécifiée 35 000 pieds.

***Example 2:** 200 GS/100-35 signifies 200 NM in the sector 090°-270° and 100 NM in the other directions ; specified maximum height 35 000 feet.*

**Exemple 3 :** 60 PV/80 VD/40-50 signifie 60NM dans le secteur 225°- 315° ; 80NM dans le secteur 315-045° ; et 40NM dans les autres directions ; hauteur maximum spécifiée 50 000 pieds.

***Example 3:** 60 PV/80 VD/40-50 signifies 60 NM in the sector 225°-315°, 80NM in the sector 315°-045°; and 40NM in the other directions ; specified maximum height 50 000 feet.*

**Exemple 4 :** 80 DJ + PV/60-25 signifie 80NM dans les secteurs 045°- 135° et 225°-315° et 60NM dans ce qui reste, c'est-à-dire dans les secteurs intermédiaires 135°-225° et 315°-045°, hauteur maximum spécifiée 25 000 pieds.

***Example 4:** 80 DJ + PV/60-25 signifies 80NM in the sectors 045 ° - 135 ° and 225 °-315 ° and 60NM in the rest, that is in the intermediate sectors 135 °-225° and 315 °-045 °; specified maximum height 25 000 feet.*

**Exemple 5 :** 100-35 signifie 100NM dans tous les secteurs ; hauteur maximum spécifiée 35 000 pieds.

***Example 5:** 100-35 signifies 100NM in all sectors; specified maximum height 35 000 feet.*

**Indications au cours de réglages de VOR**

***Indications during VOR setting adjustmments***

Les manoeuvres de mesures et de réglages de VOR sont susceptibles d'occasionner le rayonnement de signaux incorrects :

*VOR measuring and adjustment operations may cause incorrect signals to be radiated:*

- la modulation 9960 périodes est susceptible d'être coupée occasionnant un retour de l'indicateur "to from" à sa position centrale, une apparition périodique du «flag alarm» d'importance variable. Cette dernière manifestation dépendant de la qualité des réglages du récepteur de bord, n'est pas toujours perceptible en cas de réglage douteux de ce dernier.

*- the 9960 cycle modulation may be cut off, which causes: "to from" indicator to return to centre position "flag alarm" to appear periodically at a variable rate. The latter condition depends on the aircraft receiver setting accuracy and will not always be visible in case of poor receiver setting.*

- l'indicatif est supprimé pendant toute la durée de l'intervention.

*- the identity code is not transmitted throughout the maintenance operation.*

En conséquence l'attention des usagers est attirée sur le fait que tout VOR en réglagle ne doit pas être utilisés. (Cf également paragraphe f).

*Consequently, the attention of users is drawn to the fact that any VOR under adjustements musn't be used (see also paragraphe f).*

**Equipement de mesure de distance (DME)**

***Distance measuring equipment (DME)***

Bien que les mesureurs de distance (DME ou TACAN) fonctionnent dans la bande des fréquences radioélectriques 960-1215 Mhz, leur fréquence est appariée avec celle du VOR correspondant, et le pilote règle en une seule fois ses équipements de bord VOR et DME.

*Although the distance measuring equipment (DME or TACAN) operate in the radio frequency band of 960 - 1215 MHz, their frequencies are paired with the corresponding VOR frequencies and the pilot can adjust the setting of his aircraft VOR and DME devices in one operation (same procedure for ILS).*

Comme tous les VOR ne comportent pas de DME, le canal disponible est utilisé pour le fonctionnement d'un équipement TACAN séparé.

*Since all VOR do not include a DME, the available channel is used to operate a separate TACAN.*

Il est donc possible de recevoir à bord, des informations azimut-distance qui ne soient pas concordantes.

*It is therefore possible that discrepant azimuth information and distance information are received by an aircraft.*

Toutefois, losqu'il s'agit d'une station jumelée VOR/DME ou VORTAC l'identification est identique.

*However, with a paired VOR/DME or VORTAC station, the idenfication is identical.*

Dans le cas contraire, deux identifications distinctes sont reçues à bord, l'une sur le récepteur VOR, l'autre sur l'équipement DME.

*In the other case, two distinct identifications are received by the aircraft one on the VOR receiver, the other on the DME equiment.*

Les navigateurs aériens doivent ainsi vérifier en vol les indicatifs des aides radio.

*Therefore, air navigators must check radio aid call signs in flight.*

**Equipement de mesure de distance d'atterrissage (DME/ATT)**

***Landing distance measuring equipment (DME/ATT)***

© Service de l'Information Aéronautique, France

Les équipements de mesures de distance d'atterrissage sont mentionnés en partie AD, avec l'abréviation "DME/ATT". La fréquence des mesureurs de distance d'atterrissage (DME/ATT) est appariée à celle des radiophares d'alignement de piste (LOC) auxquels ils sont associés. Leur identification est identique.

Les DME/ATT peuvent être directifs ou omnidirectionnels. La couverture opérationnelle spécifiée des DME/ATT doit être mentionnée dans l'AIP partie AD :

- pour un DME/ATT directionnel, la couverture opérationnelle est indiquée par la mention "Directionnel" ; cette mention correspond à la couverture en azimut du LOC définie au 1.3.1.3.2 ; la couverture en site est de 10 degrés.

- pour un DME/ATT omnidirectionnel, la couverture opérationnelle est indiquée avec la mention "Omnidirectionnel" suivie de la distance jusqu'à laquelle l'information de distance est utilisable et de l'altitude de l'antenne.

Lorsque le DME/ATT est coimplanté avec un élément de l'ILS, mention en est faite dans la colonne "Observations".

*The landing distance measuring equipment is mentioned in part AD, with the abbreviation "DME/ATT". The frequency of landing distance equipment (DME/ATT) is matched with that of the localizer beacon (LOC ) to which it is associated. Their identification signals is identical.*

*The DME/ATT can be directional or omnidirectional. The specified DME/ATT operational coverage is to be mentioned in the AIP part AD :*

*- for a directional DME/ATT, the operational coverage is mentioned as "Directional" ; this corresponds to the LOC azimuth coverage defined in para 1.3.1.3.2 ; the elevation coverage is 10 degrees.*

*- for an omnidirectional DME/ATT, the operational coverage is mentioned as "Omnidirectional" followed with the distance up to which the distance information is available and with the antenna altitude.*

*When the DME/ATT is installed together with an ILS component, this is mentioned in the "Remarks" column.*

### 3.4.3.1.3 Système d'atterrissage aux instruments : ILS

**Classification des installations**

L'annexe 10 de l'OACI, première partie, définit la notion d'installation ILS de catégorie de performance I, II et III. En rubrique observations sont indiquées toutes les catégories de performance I, II et III suivant le cas. Toutefois, le supplément C à la partie de l'annexe 10 de l'OACI (§ 2.14.) contient une méthode supplémentaire de description de l'ILS destinée à faciliter son utilisation opérationnelle.

L'arrêté du 25 août 1997 relatif aux conditions d'homologation et procédures d'exploitation des aérodromes a retenu cette dernière méthode pour définir la classe des ILS.

Ces mentions portées en rubrique observations ne se rapportent en principe qu'aux seules caractéristiques de l'installation ILS. On doit souligner le fait que la possibilité d'autorisation d'exploitation avec des minimums de catégories II ou III exige la considération de nombreux facteurs autres que les performances du système ILS : dégagement d'obstacles, caractéristiques de la piste, balisage lumineux, informations météorologiques, etc.

Néanmoins, pour éviter des confusions et pour ne pas imposer des tolérances au niveau des alarmes, plus strictes que nécessaire, il a été décidé que la valeur du premier digit devait correspondre à la catégorie d'exploitation. Dans le cas des ILS non dans l'axe, la mention NC (non classifiée) est portée car ces ILS ne peuvent pas servir à l'exécution d'approches automatiques. Les installations LOC seules (pas d'alignement de descente) ne sont pas mentionnées, car il ne s'agit pas d'ILS.

### 3.4.3.1.3 *Instrument landing system: (ILS)*

***Facilities performances category***

*Part 1 of ICAO annex 10 defines the notion of performance categories I, II and III for ILS facilities. Under "Remarks" performance categories I, II and III, are indicated for each case. However, suppement C to part 1 of ICAO Annex 10 (§ 2.14) contains an additional ILS description method, designed to facilitate operational use.*

*This latter method for defining ILS classes was made official in a ministerial order about confirmation conditions and aerodromes operation conditions dated 25 August 1997.*

*The indications given under "Remarks" are, in principle, relative only to the ILS installation characteristics. It must be stressed that possibilities of authorizing operation with category II or III minimums requires consideration of many other factors in addition to ILS system performance: obstacle clearance, runway characteristics, lighted beacons, weather information, etc.*

*However, in order to avoid confusions and not to impose alarm tolerances more stringent than necessary, it was decided that the value of the first digit was to correspond to the operating category. Mention "NC" (not classified) is indicated for off centered ILS's since these ILS systems cannot be used for execution of automatic approaches. Installations comprising a LOC only (no glideslope) are not mentioned since these are not ILS's.*

### 3.4.3.1.4 Radiophare d'alignement de piste (LOC)

Le signal de guidage rayonné par un radiophare d'alignement de piste LOC est un signal codé dont les indications sont proportionnelles à l'écart angulaire par rapport à l'axe nominal dans une zone étroite (de 3 à 6 degrés). En dehors de cette zone étroite, une autre zone limitée à ± 35 degrés est caractérisée par la présence de signaux indiquant au pilote de manière binaire sa position par rapport à l'axe ( à gauche ou à droite).

L'attention des pilotes est attirée sur la plage d'utilisation normale du radiophare d'alignement de piste (cf schémas ci-dessous) :

- ± 35 degrés sur 17 NM ;

- ± 10 degrés sur 25 NM.

Dans certains cas le premier secteur peut même être plus étroit du fait de perturbations dues à l'environnement. Les limites du secteur utilisable sont alors publiées dans l'AIP.

Il est rappelé à tous les pilotes, qu'en France, le rayonnement arrière d'un ILS ne peut en aucun cas être utilisé comme un moyen de guidage ou de confirmation de position. En effet, quel que soit le type de matériel, **ce rayonnement, lorsqu'il existe, n'est jamais surveillé et peut fournir des informations aberrantes.** En effet, si dans d'autres pays, des procédures basées sur le rayonnement arrière de l'ILS peuvent exister, elles correspondent toujours à une installation spécifique au sol qui permet de garantir l'intégrité et la continuité de service du rayonnement arrière. **Ce n'est jamais le cas pour les ILS sur le territoire français.**

### 3.4.3.1.4 *Localizers (LOC)*

*The guidance signal radiated by a LOC (localizer) is a coded signal the indications of which are proportional to the angle deviation with respect to the nominal centerline of a narrow band (3-6 degrees). Outside this band, another zone limited to ± 35 degrees is characterized by the presence of signals indicating to the pilot in a binary way, his position with respect to the centerline (on the left hand side or on the right hand side).*

*Pilot's attention is drawn to the normal operating range of the localizer beacon (report to the diagram below) :*

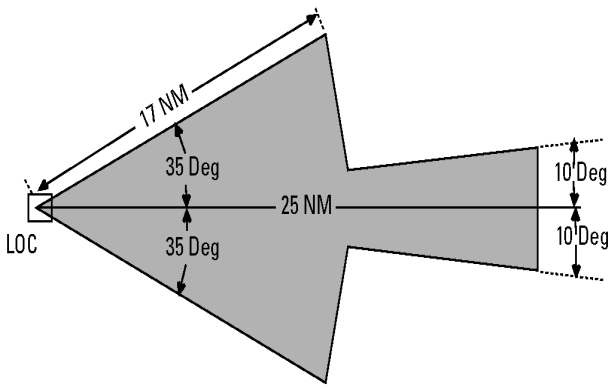
*- ± 35 degrees on 17 NM ;*

*- ± 10 degrees on 25 NM.*

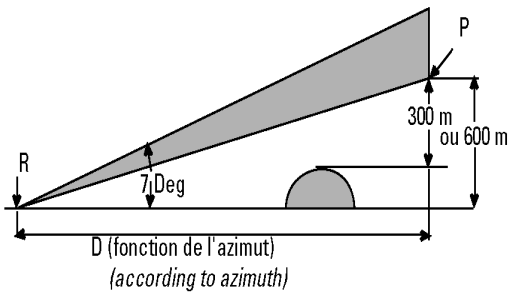
*In some cases the first sector can even be narrower due to the environment disturbances. The limits of the available sector are then published in the AIP.*

*Every pilot should be reminded that in France, the back radiations of an ILS can in no way be used as a mean of guidance or to confirm a position. Whichever the type of material, **this radiation, when it exists is never monitored and can therefore provide erroneous information.** Although in other countries, there exist procedures based on the ILS back radiation, they always correspond to a specific ground facility which guarantees the integrity and continuity of back radiation service. **This can never be the case for ILS on the French territory.***

COUVERTURE EN AZIMUT ALIGNEMENT DE PISTE
*COURSE LIGNE AZIMUTH COVERAGE*



COUVERTURE EN SITE ALIGNEMENT DE PISTE
*COURSE LINE ELEVATION COVERAGE*



Le point P est le plus élevé des deux points suivants : 600 m au-dessus du niveau du seuil ou 300 m au-dessus du point le plus élevé situé dans les aires d'approche intermédiaire et finale.

*Point P is the highest of the two following points: 600 m above the threshold level or 300 m above the highest point located in the intermediate and final approach areas.*

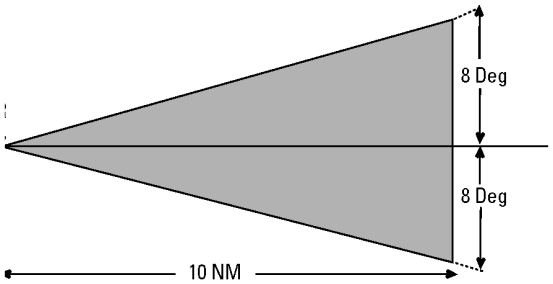
**3.4.3.1.5 Radiophare d'alignement de descente (GP).**

Le même découpage de l'espace est utilisé dans le plan vertical pour assurer le guidage en site : un secteur où les indications sont proportionnelles à l'écart angulaire par rapport à l'axe de descente complété par une zone de couverture où les signaux indiquent au pilote sa position par rapport à l'axe de descente (au-dessus ou au-dessous). On prendra garde à la couverture en azimut de l'alignement de descente qui est limité à + 8 degrés, ce qui est bien inférieur à la couverture de l'alignement de piste (+ 35 degrés) "cf schéma ci-dessus". **Il est donc illusoire et dangereux de vouloir intercepter l'alignement de descente avant d'être sur l'axe de l'alignement de piste.**

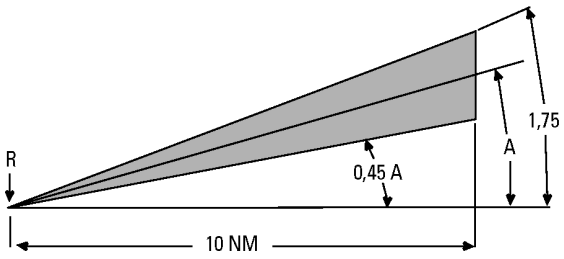
**3.4.3.1.5 *Glide parth transmitters (GP).***

*The same airspace breakdown is used vertically to ensure elevation guidance i.e: a sector where the indications are proportional to the angle deviation with respect to the glide path angle completed by a area of coverage where the signals indicate to the pilot his position with respect to the glide path line (over or below this line). The pilot's attention is drawn to the azimuth coverage of the glide path which is limited to ± 8 degrees, which is far less than the course line coverage ± 35 degrees) "see diagram below". **It is therefore dangerous and illusive to try and intercept the glide path before the course line has been reached.***

COUVERTURE EN AZIMUT DE L'ALIGNEMENT DE DESCENTE
*GLIDE PATH AZIMUTH COVERAGE*



COUVERTURE EN SITE DE L'ALIGNEMENT DE DESCENTE
*GLIDE PATH ELEVATION COVERAGE*



R est le point où le prolongement en ligne droite de l'alignement de descente ILS coupe l'axe de piste.
A est l'angle de site d'alignement de descente ILS (généralement 3 degrés).

*R is the point where the straight line extension of ILS glide path cuts the runway centreline.*
A is the ILS glide path elevation angle (generally 3 degrees).

En dehors de ces zones, que ce soit pour le radiophare d'alignement de piste ou le radiophare d'alignement de descente, **aucune information de position ne peut être utilisée, même si certaines de ces informations peuvent paraître crédibles.**

*Outside these areas, **no position information can be used, even if some may sound credible,** either for localizers or for glide path transmitters.*

**3.4.3.1.6 Installations «en réglage»**

Pendant la mise en réglage d'une installation de radionavigation ou d'atterrissage, des indications erronées peuvent être fournies. Durant cette période on ne doit pas utiliser ces aides pour la navigation ou l'atterrissage et ceci, jusqu'à la date de mise en service annoncée par publication AIRAC. L'identification est supprimée pendant toute la période de réglage.

**3.4.3.1.6 *Facilities "being adjusted"***`

*While radionavigation and landing ground equipment are being adjusted, erroneous indications may be given. During this period, such nav aids should not be used for navigation or landing purposes, until AIRAC publication announces the ground equipment has been commissioned. The identity code is not transmitted during adjustment.*

**CLASSIFICATION DES ILS (METHODE)**

Chaque installation ILS est caractérisée par un code de classification qui n'est pas réactualisé lors de dégradations temporaires de l'installation et qui comporte trois digits.

**a) Niveau de performances du signal dans l'espace :**

***ILS CLASSIFICATION (EXPLANATION)***

*Every ILS installation is characterized by a classification code which is not updated for temporary downgrading of the installation and which has 3 digits.*

***a) Signal performance level in space:***

© Service de l'Information Aéronautique, France

Ce digit peut prendre les valeurs suivantes : (annexe 10. VOL I, supplément C à la première partie) :
I : niveau de performances de catégorie I

II : niveau de performances de catégorie II

III : niveau de performances de catégorie III

Le niveau de performance correspondant à ce digit est décrit de manière détaillée dans l'annexe 10 de l'OACI (partie 1, paragraphe 3.1.3 et 3.1.4). Il concerne en particulier les paramètres suivants :

Paramètres principaux :

- structure d'axe,
- calage d'axe,
- plages d'alarmes du systèmes de contrôle
- temps de rayonnement hors tolérance

Paramètres secondaires :

- polarisation croisée
- couverture
- taux de modulation, etc.

Ce digit décrit donc le niveau de performance du signal dans l'espace à l'exclusion des notions de continuité de service et d'intégrité qui interviennent dans le digit "niveau de sécurité". Il est déterminé en prenant en compte uniquement les paramètres principaux.

Toutefois, afin d'éviter des confusions entre catégorie de performances et catégorie d'exploitation et d'uniformiser et rationaliser la maintenance de ces différents ILS en termes de périodicité et de plage de réglage, pour les ILS installés en France, la valeur du premier digit correspond à la catégorie d'exploitation.

Dans le cas d'un ILS dont l'axe du radio alignement de piste ne coïncide pas exactement avec l'axe de piste, la mention NC (non classé) est publiée à la place du code de classification à 3 digits.

**b) Limite du guidage**

Ce digit peut prendre les valeurs suivantes : A, B, C, T, D, E. Il indique le point ILS jusqu'où la structure d'axe (qualité du guidage) est conforme aux spécifications associées aux performances CAT.III (§ 3.1.3.4.2 de l'annexe 10 de l'OACI).

Rappelons que :

- le point A est le point situé sur l'alignement de descente ILS dont la distance au seuil mesurée le long du prolongement de l'axe de piste dans la direction d'approche est de 7,5 km (4 NM) ;
- le point B est le point situé sur l'alignement de descente ILS dont la distance au seuil mesurée le long du prolongement de l'axe de piste dans la direction d'approche est de 1 050 m ;
- le point C est le point par lequel le prolongement vers le bas de la partie rectiligne de l'alignement nominal de descente passe à une hauteur de 30 m (100 ft) au-dessus du plan horizontal contenant le seuil ;
- le point T est le point de référence ILS (15 m au-dessus du seuil et sur l'axe) ;
- le point D est le point sur l'axe de piste à une hauteur de 4 m et à 900 m après le seuil ;
- le point E est le point sur l'axe de piste à une hauteur de 4 m et à 600 m de l'extrémité de piste.

**c) Niveau de sécurité**

Ce digit peut prendre les valeurs suivantes : 1, 2, 3 et 4.
Il décrit à la fois le niveau de continuité de service et le niveau d'intégrité de l'ILS.

Ce dernier digit combiné au premier représente ce que l'on appelait auparavant la catégorie de performances de l'ILS (I, II, III). Ce découpage entre performances du signal dans l'espace et niveau de sécurité permet une description plus fine.

Voici la signification des 4 valeurs de ce digit :

*This digit can be as follows: (annex 10. VOL I. Supplement C to the first part).*
*I: category I performances level*

*II: category II performances level*

*III: category III performances level*

*The performance level corresponding to this digit is described in detail in ICAO Annex 10 (part I, para 3.1.3 and 3.1.4). It pertains, in particular, to the following parameters;*

*Main parameters:*

*- centerline structure,*
*- centerline setting,*
*- range of monitor system alarms*
*- period of outside tolerance radiation*

*Secondary parameters:*

*- cross polarization*
*- coverage*
*- rate of modulation, etc.*

*Consequently, this digit describes the performance level of the signal in space, exclusive of any notion of service continuity and integrity, which come under the "safety level" digit. It is determined by consideration of the main paramaters only.*

*However, in order to avoid confusion between performance category and category of operation and to standardize and improve the maintenance of these different ILS in terms of periodicity and adjustment range, for ILS installed in France, the value of the first dgit corresponds to the category of operation.*

*In the case of an ILS the runway beam course line of which does not coincide exactly with the runway centre line, the note NC (notclassified) is published in place of the 3 digits classification code.*

***b) Guidance limit***

*This digit can have one of the following values: A, B, C, T, D, E. It indicates the ILS point up to where the centerline structure (guidance quality) meets the specifications associated with CAT. III performance (ICAO Annex 10 para. 3.1.3.4.2).*

*We wish to remind that:*

- *point A is the point situated on the ILS glide path at a distance of 7,5 km (4 NM) from the threshold measured along the extended runway centerline in the approach direction;*
- *point B is the point situated on the ILS glide path at a distance of 1 050 m from the threshold, measured along the extended runway centerline in the approach direction;*
- *point C is the point through which the downward extension of the straight part of the nominal glide path passes at an altitude of 30 m (100 ft) above the horizontal plane containing the threshold;*
- *point T is the ILS reference point (15 m above the threshold, on the runway centerline);*
- *point D is the point on the runway centerline situated at a height of 4 m and 900 m after the thresold;*
- *point E is the point on the runway centerline situated at a height of 4 m and 600 m from the runway end.*

***c) Safety level***

This digit can have one of the following values: 1, 2, 3 and 4.
*It describes both the service continuity level and the integrity level of the ILS.*

*This digit associated with the first one, represents what was previously called the ILS "performance category" (I, II, III). This separation between signal performance in space and safety level allows a more accurate description.*

*The values of this digit mean the following:*

© Service de l'Information Aéronautique, France

| Radioalignement de piste ou radioalignement de descente<br>*RWY course line or glide path* | | | |
|---|---|---|---|
| **Niveau**<br>*Level* | **Intégrité**<br>*Integrity* | **Continuité du service**<br>*Continuity of service* | **MTBO**<br>Heures / *Hours* |
| 1 | Non démontrée ou inférieure à ce qui est exigé pour le niveau 2<br>*Not demonstrated, or less than required for level 2* | | |
| 2 | $1\text{-}10^{-7}$ par atterrisage<br>*per landing* | $1\text{-}4 \times 10^{-6}$ chaque période de 15s<br>*any period of 15 seconds* | 1000 |
| 3 | $1\text{-}0{,}5 \times 10^{-9}$ par atterrissage<br>*per landing* | $1\text{-}2 \times 10^{-6}$ chaque période de 15s<br>*any period of 15 seconds* | 2000 |
| 4 | $1\text{-}0{,}5 \times 10^{-9}$ par atterrissage<br>*per landing* | $1\text{-}2 \times 10^{-6}$ chaque période de 30s (LOC)<br>*any period of 30s (LOC)* | 4000 |
| | | chaque periode de 15s (GP)<br>*any period of 15s (GP)* | 2000 |
| * **MTBO** (Mean Time Between Outage) : temps moyen entre deux interruptions de service. | | | |

← Ce code signifie : ILS de niveau de performance III, utilisable jusqu'au point E (guidage en azimut), d'intégrité de 1 - 0,5 X 10-9 par atterrissage et de continuité de service 1 - 2 X 10-6 sur 30 secondes soit un MTBO de 4 000 heures (pour l'alignement de piste uniquement).
En pratique, il s'agit d'un ILS dont l'alignement de piste est doublé, fonctionnant avec un secours "chaud".

*This code signifies: ILS of performance level III, usable up to point E (guidance in azimuth) of integrity equal to 1 - 0,5 X 10-9 per landing and of continuity of service 1 - 2 X 10-6 over 30 seconds, that is to say 4 000 hours MTBO (for course line only).*
*In practice, this is an ILS the course line of which is doubled, operating with a "hot" backup.*

**3.4.3.2 Services de liaison vocale et/ou de liaison de données.**

La DSNA utilise la liaison vocale et la liaison de données, dans les communications air-sol à des fins de fourniture des services de la circulation aérienne dans les espaces aériens et sur les aérodromes sur lesquels elle est chargée de rendre les services de la circulation aérienne.

***3.4.3.2 Voice and/or data link services.***

*The DSNA uses voice and data links in air-ground communications to provide air traffic services in the airspace and at the aerodromes where it is responsible for providing air traffic services.*

**3.4.3.2.1 Services de liaisons vocales**

**a) Utilisation des liaisons VHF air/sol pour les communications vocales**

Des cas de brouillages sont parfois signalés sur les voies VHF air/sol. On constate que la cause principale est une utilisation par les aéronefs d'une liaison au-delà des limites normales de portée pour une fonction donnée.

L'annexe 10 de l'OACI (Volume 1, 2ème partie) précise dans le cadre de la protection contre le brouillage nuisible que :

''L'espacement géographique entre installations fonctionnant sur la même fréquence sera tel que des points situés aux hauteurs de protection et à la limite de portée utile de chaque installation seront séparés par une distance au moins égale à la somme des distances de chacun de ces points jusqu'à l'horizon radio qui lui correspond".

Cet horizon radio, ou portée maximale, est fonction de l'altitude de l'aéronef, il correspond aux distances suivantes :

| Altitude de l'aéronef : | Distance de l'horizon radio : |
|---|---|
| 500 m | 50 NM |
| 1000 m | 70 NM |
| 3000 m | 120 NM |
| 5000 m | 160 NM |
| 10000 m | 220 NM |

***3.4.3.2.1 Voice link service***

***a) Use of VHF air/ground links for voice communications***

*Cases of interference are sometimes notified on VHF air/ground channels. It has been seen that the main cause is the use of a link by aircraft beyond normal range limits for a specific function.*

*ICAO annex 10 (Volume 1, part 2) states the following regarding protection against harmful interferences :*

*''The geographical spacing between facilities operating on the same frequency shall be such that points located at the protection heights and at the usable range limit of each facility will be separated by a distance at least equal to the sum of the distances from each of these points to the corresponding radio horizon".*

*This radio horizon, or maxima range, is a function of an aircraft altitude ; it corresponds to the following distances :*

| Aircraft altitude: | Distance to radio horizon |
|---|---|
| 500 m | 50 NM |
| 1000 m | 70 NM |
| 3000 m | 120 NM |
| 5000 m | 160 NM |
| 10000 m | 220 NM |

**b) Utilisation des liaisons UHF air/sol pour les communications vocales**

L'attention des navigateurs aériens est attirée sur le fait que tous les secteurs des ACC/FIC/UAC de France ne sont pas dotés de liaisons UHF air/sol.

Il est rappelé qu'en conformité avec les dispositions de l'annexe 11 de l'OACI, la réglementation française prévoit que tout vol IFR à l'intérieur de l'espace aérien contrôlé en France implique une liaison bilatérale directe avec l'organisme intéressé. En conséquence, l'autorisation de vol sera refusée par l'ACC/UAC à tout aéronef non équipé des fréquences associées à chaque secteur.

***b) Use of UHF air/ground links for voice communications***

*The attention of air navigators is drawn to the fact that ACC/FIC/UAC sectors are not provided with UHF air/ground link.*

*It is recalled that in compliance with the provision of ICAO Annex 11, French regulation provide the all IFR flights into French controlled airspace implies direct duplex communication with the concerned organization. Consequently, flight clearance will be refused by ATC to any aircraft not equipped with the UHF frequencies to be used in each area or sector.*

**c) Portées opérationnelles spécifiées des fréquences ATS**

1 - La portée opérationnelle spécifiée des fréquences ATS figure dans le tableau §3.4.4.2.

2 - Les usagers doivent appliquer le plus strictement possible les limitations en niveau et en distance à la station sol rappelées dans ce tableau afin d'éviter le brouillage d'autres stations utilisant la même fréquence.

***c) Specified operational range of ATS frequencies***

*1 - The specified operational range of ATS services, is given in the table §3.4.4.2.*

*2 - Users have to apply the most strictly as possible, at the ground station, the limitations in levels and distances which are written down in this table, to avoid interference of the other staions using the same frequency.*

© Service de l'Information Aéronautique, France

3 - En ce qui concerne les fréquences APP notamment, la portée opérationnelle diffère selon qu'il s'agit d'une couverture haute (H), intermédiaire (I), ou basse (L). L'information relative à la portée opérationnelle des fréquences APP est précisée sur les cartes IAC par la lettre H, I ou L insérée entre l'indicatif d'appel de l'approche et la fréquence.

*3 - Conceming particularly APP frequencies, the operational range differs according as its coverage is high (H), intermediate (I), or low (L). The information relating to operational range of APP frequencies is specified on IAC by the letter H. I or L situated between the Approach call sign and the frequency.*

### 34322 Diffusions du service automatique d'information de région terminale par liaison vocale (ATIS)

### *34322 Broadcast of automatic terminal information service (ATIS)*

Les émissions ATIS sont assurées sur un certain nombre d'aérodromes où il est nécessaire de réduire le volume de communication VHF air-sol des services ATS.

*ATIS transmissions are provided on a certain number of aerodromes where it is necessary to reduce the volume of VHF air-ground communications made by ATS services.*

La fourniture de l'ATIS par liaison de données est également disponible (voir Service de liaison de données).

ATIS can also be provided by data link (see Data link service).

**a) Teneur des émissions ATIS**

***a) Content of ATIS transmissions***

**a1 -** Les émissions ATIS sont destinées à la fois aux aéronefs à l'arrivée et au départ. Elles contiennent les éléments d'information dans l'ordre suivant :

***a1 -** ATIS transmissions are intended for arriving and departing aircraft and contain the following information:*

- identification de la station, telle que publiée à l'AIP partie Aérodromes (AD).

*- station identification as published in the Aerodromes Section (AD) of AIP.*

- identification du message (indicateur alphabétique).

*- message identification (alphabetic call sign).*

- heure (UTC) d'enregistrement, afin que les passagers puissent en vérifier la validité.

*- (UTC) recording time, so that users can check its validity.*

- type d'approche à prévoir

*- type of approach to be used.*

- piste (s) en service.

*- runway(s) in operation.*

- état de la surface de la piste et de la plate-forme.

*- surface condition of runway and pad.*

- niveau de transition.

*- transition level.*

- modification de l'état opérationnel des aides visuelles et radioélectriques indispensables pour l'approche, l'atterrissage et le décollage.

*- any changes of operating conditions of visual and radio electric aids that are essential for approach, landing and taking off.*

- situation météorologique exceptionnelle.

*- particular meteorological situation.*

- éventuellement, des renseignements concernant l'activation de certaines zones à statut particulier intéressant la TMA.

*- any information on activation of specially regulated areas with respect to the TMA.*

- renseignements météorologiques : direction et force du vent au sol, visibilité, temps présent, quantité de nuages bas et hauteur de leur base ou mesure instrumentale de la hauteur de la base des nuages, température au sol, température du point rosée, QNH, QFE aérodrome et, si nécessaire, QFE seuil, autres renseignements météorologiques significatifs ou intéressant les changements prévus.

*- meteorological information: surface wind force and direction, visibility, present weather, amount of low clouds and cloud base height, or measurement by instrument of the cloud base height, surface temperature, dew point temperature, QNH, aerodrome QFE, and when needed, threshold QFE, other significant meteorological information or information on expected changes.*

- rappel aux usagers de confirmer la réception du message au premier contact avec l'organisme du contrôle de la circulation aérienne.

*- reminder to users to confirm receipt of the message when first contacting the air traffic control service.*

**a2 -** Les messages ATIS sont diffusés en anglais et en français.

***a2 -** ATIS messages are broadcast in English and in French.*

**a3 -** Les messages ATIS sont diffusés sur une (ou des) fréquences VHF, et par liaisons de données numériques sur certains aérodromes français.

***a3 -** ATIS messages are broadcast on one (or some) VHF frequencies, and by numerical data-links on some French aerodromes.*

**a4 -** La durée totale du message vocal ne dépasse généralement pas 90 secondes.

***a4 -** Total vocal message time generally does not exceed 90 seconds.*

**b) Fréquences et critères de renouvellement des messages**

***b) Message renewal frequency and criteria***

**b1 -** Toute modification significative de l'un des éléments d'information contenus dans l'émission ATIS en cours donne lieu à l'enregistrement et à la diffusion d'un nouveau message.
C'est en particulier le cas pour toute variation, indiquée ci-après, des éléments fournis par les services de la météorologie (METAR en particulier)

***b1 -** Any significant modification of any information contained in an ATIS transmission in progress shall cause the recording and transmission of a new message.*
*This applies particularly to any variations as specified below of information provided by the meteorological services (in particular METAR).*

- vent : variation de plus de 30 degrés ou de plus de 5 kt.

*- wind: variation of more than 30 degrees or more than 5 kt*

- visibilité : franchissement des valeurs 10 km, 8 km, 4000 m, 1500 m, 800 m.

*- visibility: when reduced to 10 km, 8 km, 4000 m, 1500 m and 800 m.*

- temps présent : apparition ou disparition de pluies, neige, grêle, orage ou grain.

*- present weather: occurence or end of rainfall, snow, hail, storms or squall.*

- pour les couches de nuages bas supérieures à 4/8, franchissement des valeurs 600 m, 300 m, 150 m, 60 m.

*- low cloud greater than 4/8, when at 600 m, 300 m, 150 m and 60 m.*

- température au sol et température du point de rosée : variation de 1 degré.

*- ground temperature and dew point temperature: variation of 1 degree.*

- QNH et QFE : variation de 1 hPa.

*- QNH and QFE: variation of 1 hPa.*

**b2 -** Le renouvellement des informations s'effectue au minimum toutes les heures.

***b2 -** All information is renewed at least every hour.*

**b3 -** Les fréquences ATIS pour chaque aérodrome figurent en partie AD et sur les cartes des aérodromes. La portée opérationnelle spécifiée est décrite en section GEN.

***b3 -** ATIS frequencies for each aerodrome are indicated in the AD section and on aerodrome charts. Specified operating ranges are described in the GEN section.*

**c) Horaires de diffusion**

***c) Transmission hours***

La diffusion des messages ATIS est assurée pendant les heures d'ouverture des services ATS. Ces horaires figurent dans la partie AD de l'AIP.

*ATIS messages are transmitted during working hours of the ATS organism which are listed in the AD section of the AIP.*

© Service de l'Information Aéronautique, France

**d) Accusé de réception**

Les pilotes sont invités à écouter l'émission ATIS avant le premier contact radio avec l'organisme ATS. En établissant ce premier contact le pilote accuse réception du message ATIS en utilisant la phrase ''information ...(indicateur alphabétique)...reçue".

**34323 Service de liaisons de données (communications contrôleur-pilote par liaison de données)**

**a) Service de liaisons de données En-Route**

**a1 - Concept d'opérations**

L'application CPDLC relative aux communications pilotes-contrôleurs par liaison de données fournit une alternative aux communications par radiotéléphonie (voix) entre le contrôleur et le pilote en utilisant une liaison de données pour les communications du contrôle de la circulation aérienne (ATC). L'application CPDLC comprend un ensemble d'éléments de messages permettant l'envoi d'instructions de contrôle, d'informations et de demandes contrôleur, et la réception de requêtes pilote qui correspondent à la phraséologie utilisée en radiotéléphonie.

Les pilotes doivent établir le premier contact avec un secteur de contrôle en utilisant la radiotéléphonie, qu'ils se soient connectés ou non.

L'utilisation du CPDLC est souhaitée et privilégiée lorsque les conditions opérationnelles le permettent. Le CPDLC ne peut être utilisé que pour les demandes non urgentes, c'est-à-dire les demandes qui ne nécessitent pas de réaction immédiate du pilote. Néanmoins, comme en radiotéléphonie, les messages CPDLC doivent recevoir une réponse avec le moins de retard possible. Si un pilote n'obtient pas de réponse à une requête dans le temps limite imparti, il devra reformuler sa requête par radiotéléphonie.

En cas d'incertitude concernant une situation opérationnelle avec dialogue CPDLC ouvert, les communications vocales doivent être utilisées pour clarifier la situation.

Si le contrôleur ou le pilote estime que le CPDLC ne doit plus être utilisé compte-tenu des circonstances, l'usage du CPDLC doit être interrompu ou la connexion terminée et l'autre partie en est informée par communication vocale.

Les instructions de contrôle tactiques urgentes continuent d'être délivrées par radiotéléphonie.

**a2 - Description et disponibilité des services**

En France métropolitaine, les services CPDLC sont fournis au sens du règlement européen d'exécution (UE) 2017/373 relatif à la fourniture des services ATM/ANS, notamment modifié par le règlement d'exécution (UE) 2023/1771 de la Commission définissant les exigences relatives aux services de liaison de données pour le ciel unique européen.

En conséquence, les services CPDLC sont fournis seulement aux aéronefs équipés de CPDLC en mode protégé ATN Protected Mode (PM) et utilisant le sous-réseau VDL mode 2. Les demandes de log-on des aéronefs équipés FANS1/A ou non équipés PM-CPDLC sont rejetées.

La bande de fréquences utilisée pour la VDL est la bande de fréquences de Service Mobile Aéronautique en Route 117.975-137 MHz assignée par l'Union Internationale des Télécommunications. La VDL Mode 2 est mise en oeuvre pour l'exploitation des communications pilotes-contrôleurs par liaison de données (CPDLC).

La fréquence 136.975 MHz a été allouée mondialement afin de fournir les services de la VDL Mode 2. Cette fréquence est le canal commun (CSC) pour la VDL Mode 2.

Des fréquences supplémentaires ont été allouées aux fournisseurs de Services Datalink, dans la bande 136.650-136.975.

← Attention à ne pas utiliser ces fréquences pour des communications vocales.

Les services CPDLC suivants sont fournis dans l'espace aérien métropolitain français, au profit des aéronefs équipés et éligibles, au-dessus du FL195 :

- DLIC (capacité d'initiation de liaison de données)
- ACL (autorisations et instructions ATC, requêtes pilote)
- ACM (gestion des communications ATC)
- AMC (vérification du microphone ATC)

← Les services ATS sont fournis dans l'espace aérien supérieur français métropolitain par cinq CRNA : CRNA Sud-Ouest (LFBB), CRNA Est (LFEE), CRNA Nord (LFFF), CRNA Sud-Est (LFMM), CRNA Ouest (LFRR).

**a3 - Bonnes pratiques**

***d) Acknowledgment of receipt***

*Pilots are requested to listen ATIS transmissions before their first radio contact with the ATS organism. When making the first contact, pilots are invited to aknowledge receipt of the ATIS message with the words "information...( alphabetic call sign)...received.*

***34323 Data link service (controller-pilot data link communications )***

***A. En route data link service***

***a1 - Concept of operations***

*The CPDLC application for controller-pilot data link communications provides an alternative to radiotelephony (voice) communications between controller and pilot using a data link for Air Traffic Control (ATC) communications. The CPDLC application comprises a set of message elements for sending control instructions, information and controller requests, and for receiving pilot requests that correspond to the phraseology used in radiotelephony.*

*Pilots must establish initial contact with a control sector using radiotelephony, whether or not they have logged on.*

*The use of the CPDLC is preferred when operational conditions allow. CPDLC can only be used for non-urgent requests, i.e. requests that do not require an immediate response from the pilot. Nevertheless, as with radiotelephony, CPDLC messages must be answered with the least possible delay. If a pilot does not receive a response to a request within the allotted time limit, he will have to reformulate his request by radiotelephony.*

*In the event of uncertainty regarding an operational situation with open CPDLC dialogue, voice communications must be used to clarify the situation.*

If the controller or pilot considers that the CPDLC should no longer be used in the circumstances, use of the CPDLC must be discontinued or the connection terminated and the other party informed by voice communication.

Urgent tactical control instructions continue to be issued by radiotelephony.

***a2 - Description and availability of services***

*In mainland France, CPDLC services are provided within the meaning European Implementing Regulation (EU) 2017/373 on the provision of ATM/ANS services, as amended by Commission Implementing Regulation (EU) 2023/1771 laying down requirements on data link services for the Single European Sky.*

*Consequently, CPDLC services are provided only to aircraft equipped with CPDLC in ATN Protected Mode (PM) and using the VDL mode 2 subnet. Log-on requests from aircraft equipped with FANS1/A or not equipped with PM-CPDLC are rejected.*

*The frequency band used for VDL is the 117.975 - 137 MHz en-route Aeronautical Mobile Service frequency band assigned by the International Telecommunication Union. VDL Mode 2 is used for controller-pilot data link communications (CPDLC).*

*The frequency 136.975 MHz has been allocated worldwide to provide VDL Mode 2 services. This frequency is the common channel (CSC) for VDL Mode 2.*

*Additional frequencies have been allocated to Datalink Services providers in the 136.650-136.975 band.*

*Be careful not to use these frequencies for voice communications.*

*The following CPDLC services are provided in French metropolitan airspace, for the benefit of equipped and eligible aircraft, above FL195 :*

*- DLIC (Data-Link Initiation Capability)*
*- ACL (ATC Clearance, pilot requests )*
*- ACM (ATC Communications Management)*
*- AMC (ATC Microphone Check)*

*ATS are provided in the upper airspace of mainland France by five ACCs : CRNA Sud-Ouest (LFBB ACC), CRNA Est (LFEE ACC), CRNA Nord (LFFF ACC), CRNA Sud-Est (LFMM ACC), CRNA Ouest (LFRR ACC).*

***a3 - Best practices***

© Service de l'Information Aéronautique, France

Le service ACM (ATC Communication Management) facilite le changement de fréquences vocales. La réponse attendue du pilote à une instruction ATC de changer de fréquence est WILCO. Toute autre réponse donne immédiatement lieu à un retour à la voix effectué par le contrôleur. Si le pilote n'est pas en mesure de se conformer à cette instruction CPDLC, ou n'a pas répondu dans le temps imparti, il revient à la communication vocale pour en informer le contrôleur. Lorsqu'un aéronef est transféré par liaison de données vers un secteur / CRNA adjacent, le pilote accuse réception de l'instruction par WILCO, avant de contacter le secteur / CRNA suivant par communication vocale sur la fréquence donnée.

Le service AMC (ATC Microphone Check) permet à un contrôleur d'envoyer l'instruction "Check Stuck Microphone" dans le cas où un aéronef bloque par inadvertance une fréquence de contrôle. Le pilote doit vérifier que son équipement radio n'est pas à l'origine du blocage.

Le Service ACL : Les instructions de contrôle ne doivent pas être exécutées tant que le message WILCO n'a pas été renvoyé ; en outre, avoir la confirmation que la réponse est parvenue au contrôleur sécurise les échanges. En cas d'incertitude concernant un message datalink, la communication vocale doit toujours être utilisée.

Les équipages de conduite sont invités à traiter et répondre aux instructions de contrôle émises par CPDLC avec diligence et, si possible, en utilisant le même moyen de communication.

**a4 - Planification de vol**

Afin de bénéficier des services CPDLC, les exploitants aériens doivent renseigner leurs plans de vol avec les deux items suivants :

- Case 10a – J1 pour indiquer un équipement CPDLC ATN VDL Mode 2
- Case 18 – Indiquer la mention CODE/ suivie par l'adresse 24 bits de l'aéronef exprimée sous forme de six caractères hexadécimaux.

Le plan de vol ne doit pas contenir la mention J1 si l'équipage n'est pas formé à l'utilisation du CPDLC.

Les dérogations aux exigences relatives à l'équipement de liaison de données doivent être indiquées dans le plan de vol, de la façon suivante :

- Case 10 – lettre « Z »
- Case 18 – indiquer la mention DAT/CPDLCX

**a5 - LOGON, LOG OFF, SUIVI DE LOGON**

Dans l'espace aérien français métropolitain, les adresses de logon sont pour chaque CRNA :
- LFFF : PARIS Control
- LFEE : REIMS Control
- LFMM : MARSEILLE Control
- LFBB : BORDEAUX Control
- LFRR : BREST Control

En France métropolitaine, tout aéronef équipé et éligible au CPDLC doit établir une connexion CPDLC.

- Pour les survols, ou arrivées, le logon doit être initié par le pilote, avec un préavis suffisant (entre 10 et 25 mn avant l'entrée dans le CRNA), pour s'assurer que la connexion est établie, et avec le premier CRNA français traversé.

- Si le logon a été établi au préalable avec un CRNA adjacent amont fournissant un suivi de logon, ou que ce suivi a échoué, le préavis n'est pas requis.

- Pour les vols au départ de terrains français, le logon doit être initié au plus tard, au passage du FL 150.
Si le logon est impossible, pour une raison technique connue ou non du pilote, l'équipage annoncera "UNABLE CPDLC" au premier contact radio.

Les équipages doivent s'assurer qu'ils n'exécutent que les instructions de contrôle du CRNA « CDA » (« Current Data Authority ») avec lequel ils sont également en contact par radiotéléphonie.

Les équipages veillent à :

- utiliser exactement l'indicatif d'appel OACI ou l'immatriculation de l'aéronef (callsign/aircraft Id) tel qu'il est spécifié dans la case 7 du plan de vol correspondant,
- ne jamais utiliser l'identifiant de vol IATA (en deux lettres) ni insérer de préfixe [0] dans la partie numérique du callsign/aircraft Id, dans la mesure où cela conduirait nécessairement à un échec de log-on.

En conditions normales, un seul logon est demandé à l'aéronef, grâce au suivi de logon assuré par les CRNA. Néanmoins, si le suivi de logon a échoué, ou si le service n'est pas mis en œuvre, les pilotes doivent effectuer un logon manuel sur le CRNA suivant suffisamment à l'avance, sauf demande contraire du contrôleur par la voix.

*The ACM (ATC Communication Management) service make it easy voice frequency changes. The expected pilot response to an ATC instruction to change frequency is WILCO. Any other response immediately results in the controller reverting to voice. If the pilot is unable to comply with this CPDLC instruction, or has not responded within the allotted time, he will revert to voice communication to inform the controller. When an aircraft is transferred by data link to an adjacent sector / ACC, the pilot acknowledges receipt of the instruction by WILCO, before contacting the next sector / ACC by voice communication on the given frequency.*

*The AMC (ATC Microphone Check) service enables a controller to send the "Check Stuck Microphone" instruction in the event of an aircraft inadvertently blocking a control frequency. The pilot must check that his radio equipment is not the cause of the blockage.*

*The ACL (ATC Clearance) Service: Control instructions should not be executed until the WILCO message has been returned; in addition, having confirmation that the response has reached the controller secures exchanges. If there is any uncertainty about a datalink message, voice communication should always be used.*

Flight crews are asked to handle and respond to control instructions issued by CPDLC with diligence and, if possible, using the same means of communication.

***a4 - Flight planning***

*To benefit from CPDLC services, air operators must include the following two items in their flight plans:*

*- Case 10a – J1 to indicate CPDLC ATN VDL Mode 2 equipment ;*
*- Case 18 – indicate CODE/ followed by the 24 bits adress of the aircraft expressed as six hexadecimal characters.*

*The flight plan must not contain the indication J1 if the crew is not trained in the use of the CPDLC.*

*Deviations from the requirements for data link equipment must be indicated in the flight plan as follows :*

*- Case 10 – letter « Z »*
*- Case 18 – indicate DAT/CPDLCX*

***a5 - LOGON, LOG OFF, LOGON FOLLOW-UP***

*In mainland French airspace, the logon addresses for each ACC are :*
*- LFFF ACC : PARIS Control*
*- LFEE ACC : REIMS Control*
*- LFMM ACC: MARSEILLE Control*
*- LFBB ACC: BORDEAUX Control*
*- LFRR ACC : BREST Control*

*In mainland France, all aircraft equipped and eligible for CPDLC must establish a CPDLC connection.*

*- For overflights and arrivals, the logon must be initiated by the pilot, with sufficient advance notice (between 10 and 25 minutes before the entry into CRNA), to ensure the connection is established and with the first French CRNA crossed.*

*- If the logon has been previously established with an adjacent upstream CRNA providing logon follow-up, or this follow-up has failed, prior notice is not required.*

*- For flights departing from French airfields, the logon must be initiated no later than FL 150.*
*If the logon is impossible, for a technical reason known or unknown to the pilot, the crew will announce "UNABLE CPDLC" at the first radio contact.*

*Crews must ensure that they only carry out the control instructions of the "CDA" (Current Data Authority) ACC with which they are also in contact by radiotelephony.*

*Crews ensure to :*

*- use exactly the ICAO call sign/aircraft Id as specified in box 7 of the relevant flight plan,*
*- never use the IATA flight identifier (in two letters) or insert a prefix [0] in the numeric part of the callsign/aircraft Id, as this would necessarily lead to a log-on failure.*

*Under normal conditions, only one logon is requested from the aircraft, thanks to the logon tracking provided by the ACCs. However, if logon tracking has failed, or if the service is not implemented, pilots must perform a manual logon at the next ACC sufficiently in advance, unless otherwise requested by the controller by voice.*

© Service de l'Information Aéronautique, France

Nota Bene : pour les aéronefs ayant un plan de vol traversant successivement la zone de responsabilité du CRNA Sud-Est (LFMM), puis celle d'Alger (DAAA), ou pour les aéronefs exécutant un vol océanique traversant la zone de responsabilité de Shanwick (EGGX) via celle du CRNA Ouest (LFRR), il y a une zone de transition entre LFMM ou LFRR respectivement (ATN VDLm2) et DAAA ou EGGX respectivement (FANS 1/A) où il n'est pas possible de mettre en œuvre le suivi de Logon. Pour pénétrer dans l'espace aérien océanique dans la zone de responsabilité de Shanwick, les équipages s'assurent, conformément à l'AIP Royaume-Uni, de remplir toutes les conditions techniques telles que déposées au plan de vol, ainsi que de respecter les éléments de la clairance OCL, et signalent tout problème à cet égard dès que possible au contrôleur avec lequel ils sont en contact. Le Logon doit être fait manuellement par le pilote entre 15 et 25 mn avant l'entrée dans la zone de responsabilité d'Alger ou Shanwick, au plus tard 4 mn avant la limite.

Dans l'espace aérien français métropolitain, l'état de connexion des aéronefs éligibles est affiché sur l'écran du contrôleur. Par conséquent, la capacité CPDLC de l'aéronef ne doit pas être annoncée en plus sur la fréquence.

Les aéronefs quittant l'espace aérien français métropolitain vers la zone de responsabilité de centres de contrôle ne fournissant pas les services CPDLC sont déconnectés automatiquement. Aucune action de l'équipage n'est requise.

*Nota Bene : for aircraft with a flight plan successively crossing the South East ACC area of responsibility (LFMM), then that of Algiers (DAAA), or for aircraft executing an oceanic flight crossing the Shanwick area of responsibility (EGGX) via that of West ACC (LFRR), there is a transition zone between LFMM or LFRR respectively (ATN VDLm2) and DAAA or EGGX respectively (FANS 1/A) where it is not possible to implement Logon tracking. To enter oceanic airspace in the Shanwick area of responsibility, crews must ensure, in accordance with the UK AIP, that they meet all the technical conditions as filed in the flight plan, as well as complying with the elements of the OCL clearance, and report any problems in this respect as soon as possible to the controller with whom they are in contact. The Logon must be done manually by the pilot between 15 and 25 minutes before entering the Algiers or Shanwick area of responsibility, at the latest 4 minutes before the limit.*

*In metropolitan French airspace, the connection status of eligible aircraft is displayed on the controller's screen. Consequently, the CPDLC capacity of the aircraft does not have to be announced in addition on the frequency.*

*Aircraft leaving metropolitan French airspace towards the area of responsibility of control centres not providing CPDLC services are automatically disconnected. No crew action is required.*

**a6 - Jeu de messages - Timers**

Lors de l'utilisation du CPDLC, les temporisations maximales allouées aux dialogues sont :

- Instructions de contrôle : 120 secondes (temps maximal 100 secondes à bord).
- Requêtes pilote : 250 secondes.

Si le système au sol reçoit un message qui n'est pas pris en charge ou non conforme aux règles techniques de communication CPDLC, l'équipage reçoit une réponse émise par le système indiquant la nature de l'erreur et, s'il y a lieu, les actions requises.

Notamment, les messages d'Urgence ou de Détresse, ainsi que les messages free text transmis par CPDLC, ne sont pas traités par les systèmes ATM dans l'espace aérien français métropolitain.

***a6 - Set of messages - Timers***

*When using CPDLC, the maximum timeouts allocated to dialogues are :*

*- Control instruction : 120 seconds (maximum time 100 seconds onborad) ;*
*- Pilot requests : 250 seconds.*

*If the ground system receives a message that is not supported or does not comply with the CPDLC technical communication rules, the crew receives a reply from the system indicating the nature of the error and, if applicable, the action required.*

*In particular, Emergency or Distress messages, as well as free text messages transmitted by CPDLC, are not processed by ATM systems in metropolitan French airspace.*

**a7 - Instructions de contrôle, message d'information ou de demande ATC**

Les messages suivants UM (Uplink Message) peuvent être utilisés dans l'espace aérien français métropolitain par le contrôleur :

- MAINTAIN [level]
- CLIMB TO [level]
- DESCEND TO [level]
- REPORT PRESENT LEVEL1
- WHEN CAN YOU ACCEPT [level]1
- STATE PREFERRED [level]1
- PROCEED DIRECT TO [position]
- MAINTAIN [speed]
- RESUME NORMAL SPEED1
- NO SPEED RESTRICTION
- CONTACT [unit name] [frequency]
- FLY HEADING [degrees]
- TURN [direction] [degrees] DEGREES2
- STATE TOP OF DESCENT1
- CHECK STUCK MICROPHONE
- [free text]1-3

Note :
1 : à l'exception de LFBB, LFRR
2 : à l'exception de LFEE, LFMM
3 : utilisé pour compenser l'absence de mise en œuvre de certains messages, ou dans le cas de situations anormales (ex : perte de communication radio)

***a7 - Control instruction, ATC information or request messages***

*The following messages UM (Uplink Message) can be used by the controller in the mainland french airspace :*

*- MAINTAIN [level]*
*- CLIMB TO [level]*
*- DESCEND TO [level]*
*- REPORT PRESENT LEVEL1*
*- WHEN CAN YOU ACCEPT [level]1*
*- STATE PREFERRED [level]1 -*
*PROCEED DIRECT TO [position]*
*- MAINTAIN [speed]*
*- RESUME NORMAL SPEED1*
*- NO SPEED RESTRICTION*
*- CONTACT [unit name] [frequency]*
*- FLY HEADING [degrees]*
*- TURN [direction] [degrees] DEGREES2*
*- STATE TOP OF DESCENT1*
*- CHECK STUCK MICROPHONE*
*- [free text]1-3 Note :*
*1 : with the exception of LFBB ACC, LFRR ACC*
*2 : with the exception of LFEE ACC, LFMM ACC*
*3 : used to compensate for the non-implementation of certain messages, or in the case of abnormal situations (e.g. loss of radio communication)*

**a8 - Requêtes pilotes**

Les messages suivants DM (Downlink Message) émis par les pilotes sont traités par le contrôleur :

- REQUEST CLIMB TO [level]
- REQUEST DESCEND TO [level]
- REQUEST DIRECT TO [position]
- DUE TO WEATHER*
- DUE TO AIRCRAFT PERFORMANCE*

Note : * uniquement en cas de concaténation avec le DM1 UNABLE, ou des demandes de modification de route ou de profil vertical.

***a8 - Pilots requests***

*The following message DM (Downlink Message) issued by the pilots are processed by the controller :*

*- REQUEST CLIMB TO [level]*
*- REQUEST DESCEND TO [level]*
*- REQUEST DIRECT TO [position]*
*- DUE TO WEATHER**
*- DUE TO AIRCRAFT PERFORMANCE**

*Note : * only in the case of concatenation with DM1 UNABLE, or requests to modify the route or vertical profile.*

**a9 - Reprise à la voix d'une instruction de contrôle**

Lorsqu'il utilise la voix pour corriger une instruction de contrôle CPDLC (en erreur ou sans réponse du pilote), le contrôleur doit initier une communication vocale en utilisant la phrase :

***a9 - Recovery of the control instruction by voice***

*When using voice to correct a CPDLC control instruction (in error or with no response from the pilot), the controller must initiate a voice communication using the phrase:*

© Service de l'Information Aéronautique, France

« [indicatif d'appel] IGNOREZ LA CLAIRANCE CPDLC [type de message], BREAK, [instruction de contrôle, information ou demande à la voix] ».

À la suite d'un tel message vocal, les pilotes doivent ignorer, ou répondre UNABLE au même type d'instructions de contrôle CPDLC qui peuvent être en attente ou qui n'ont pas encore été traitées.

Nota Bene : les systèmes mis en œuvre pour LFBB et LFRR envoient un UM « UNABLE » à une requête pilote lors d'une reprise à la voix, et ce, même si la valeur de l'instruction de contrôle est la même que celle initialement envoyée par CPDLC, ou demandée par le pilote, par exemple, si cette instruction de contrôle s'accompagne d'une contrainte.

*« [call sign] DISREGARD CPDLC [message type] MESSAGE, BREAK, [correct clearance, instruction, information or request ] ».*

*Following such a voice message, pilots must ignore, or respond UNABLE to, the same type of CPDLC control instructions that may be pending or have not yet been processed.*

*Nota Bene : the systems implemented for LFBB ACC or LFRR ACC send an "UNABLE" UM to a pilot request during a voice recovery, even if the value of the control instruction is the same as that initially sent by CPDLC, or requested by the pilot, for example, if this control instruction is accompanied by a constraint .*

**a10 - Silence CPDLC**

Afin de gérer la charge de travail du secteur, les contrôleurs peuvent exiger que tous les aéronefs, ou un aéronef spécifique, évitent d'envoyer des demandes CPDLC pendant une période limitée, au moyen du message vocal suivant :

« TOUTES LES STATIONS (ou [indicatif d'appel] selon le cas), ARRÊTEZ D'ENVOYER DES DEMANDES CPDLC [JUSQU'À AVIS] [(raison)] »

Pour révoquer le silence CPDLC, le message vocal suivant est utilisé :

« TOUTES LES STATIONS (ou [indicatif d'appel] selon le cas), REPRISE DES OPÉRATIONS CPDLC NORMALES »

***a10 - Silence CPDLC***

*In order to manage the sector's workload, controllers may instruct all aircraft, or a specific aircraft, to avoid sending CPDLC requests for a limited period of time, by means of the following voice message:*

*« ALL STATIONS (or [call sign] as appropriate), STOP SENDING CPDLC REQUESTS [UNTIL ADVISED]] [(reason)] »*

*To revoke CPDLC silence, the following voice message is used :*

*« ALL STATIONS (or [call sign] as appropriate ), RESUME NORMAL CPDLC OPERATIONS»*

**a11 - Interruption du service CPDLC, dysfonctionnements**

De manière générale, en cas d'erreur ou de panne du service CPDLC, les instructions de contrôle CPDLC qui n'ont pas encore été confirmées par l'équipage doivent être répétées et/ou confirmées/infirmées par radiotéléphonie, en employant la phrase :

« [indicatif] IGNOREZ LA CLAIRANCE CPDLC [type de message], BREAK, [instruction de contrôle, information ou demande à la voix] »

En cas d'arrêt planifié ou de panne inattendue du système CPDLC, le contrôleur demande à tous les aéronefs équipés d'une liaison de données de revenir à la communication vocale exclusivement, avec la phrase suivante :

« [TOUTES LES STATIONS] PANNE CPDLC . CONTINUEZ A LA VOIX. »

Lors de la mise à jour des données aéronautiques dans les systèmes ATM selon la fréquence des cycles AIRAC (le jeudi, à 00:00 UTC tous les 28 jours), les sessions actives CPDLC sont perdues et les équipages doivent refaire une demande de connexion manuellement auprès du CRNA responsable du secteur traversé sur instruction du contrôleur.

En cas de problème opérationnel ou technique concernant le CPDLC à bord d'un aéronef, le pilote doit informer le contrôleur en utilisant la phrase suivante :

« [indicatif] UNABLE CPDLC »
et revenir à la communication vocale exclusivement.
Les exploitants aériens sont invités à faire part de tout problème d'utilisation du CPDLC dans l'espace aérien français au moyen du formulaire ASR envoyé par mail à l'adresse suivante :
DO-analyse-incident@aviation-civile.gouv.fr
en insérant le mot-clé [DATALINK] dans le sujet du mail.

***a11 - Outage or failure of CPDLC services***

*As a general rule, in the event of a CPDLC service error or failure, CPDLC control instructions that have not yet been confirmed by the crew must be repeated and/or confirmed/infirmed by radiotelephony, using the phrase:*

*« [call sign] DISREGARD CPDLC [message type] MESSAGE, BREAK, [correct clearance, instruction, information or request] ».*

*In the event of a planned interruption or unexpected failure of the CPDLC system, the controller asks all aircraft equipped with a data link to revert to voice communication only, with the following phrase:*

*« [ALL STATIONS] CPDLC FAILURE. CONTINUE BY VOICE. »*

*When aeronautical data are updated in ATM systems according to the AIRAC cycle frequency (on Thursday, at 00:00 UTC every 28 days), active CPDLC sessions are lost and crews must manually request a new connection from the ACC responsible for the sector crossed, on the controller's instruction.*

*In the event of an operational or technical problem concerning the CPDLC on board an aircraft, the pilot must inform the controller using the following phrase :*

*« [call sign] UNABLE CPDLC »*
*and return to voice communication only.*
*Air operators are invited to report any problems with the use of CPDLC in French airspace using the ASR form sent by e-mail to the following address :*
*DO-analyse-incident@aviation-civile.gouv.fr*
*by inserting the keyword [DATALINK] in the subject of the e-mail.*

**b) Service de liaisons de données en Approche**

**b1 - Généralités**

Les services D-ATIS et DCL utilisent les moyens de communication du système de télécommunications aéronautiques air/sol ACARS qui permettent de relier les systèmes sol et bord sur la base de protocoles et de messages normalisés, en utilisant la norme ARINC 623.

Ils s'appuient sur le réseau de télécommunication de la SITA (Société Internationale de Télécommunication Aéronautique).

Afin de pouvoir utiliser les services D-ATIS et DCL, les équipages doivent :

- Bénéficier d'un équipement certifié ;
- Connaître et respecter l'intégralité des procédures opérationnelles qui pallient les risques identifiés dans les documents EUROCAE correspondants.

**b2 - Service automatique d'information de région terminale par liaison de données (D-ATIS)**

b.2.1. Présentation du service D-ATIS

Ce service permet à un équipage d'obtenir un certain nombre d'informations concernant un aérodrome par liaison de données.

Le document de référence utilisé pour la mise en œuvre du service D-ATIS en France est le document EUROCAE ED-89 révision A, auquel le système est conforme.

Le contenu du message D-ATIS respecte les exigences du paragraphe SERA.9010 du règlement (UE) n°923/2012. Il est disponible uniquement en langue anglaise et peut contenir des abréviations standardisées du Doc 9694 « Manuel des applications de la liaison de données aux services de la circulation aérienne (ATS) ».

***b) Approach data link service***

***b1 - General information***

*The D-ATIS and DCL services use the communications facilities of the ACARS air/ground telecommunications system to link ground and on-board systems on the basis of standardised protocols and messages, using the ARINC 623 standard.*

*They are based on the SITA (Société Internationale de Télécommunication Aéronautique) network.).*

*In order to use D-ATIS and DCL services, te crews must:*

*- use certified equipment ;*
*- To be familiar and comply with all the operational procedures for mitigating the risks identified in the relevant EUROCAE documents.*

***b2 - Data link-automatic terminal information service (D-ATIS)***

*b.2.1. Introduction to the D-ATIS service*

*This service enables crews to obtain a certain amount of information about an aerodrome via a data link.*

*The reference document used to implement the D-ATIS service in France is EUROCAE ED-89 revision A, to which the system complies.*

*The content of the D-ATIS message complies with the requirements of paragraph SERA.9010 of Regulation (EU) No. 923/2012. It is available in English only and may contain standardised abbreviations from Doc 9694. « Manual of Air Traffic Services Data Link Applications».*

Le message D-ATIS combine systématiquement les informations destinées aux aéronefs à l'arrivée et au départ.

*The D-ATIS message systematically combines information for arriving and departing aircraft .*

b.2.2. Disponibilité du Service, description, bonnes pratiques

*b.2.2. Availability of service, description, best practices*

Le service D-ATIS est disponible pour les aérodromes suivants :

*The D-ATIS service is available for the following aerodromes :*

- LFBP Pau Pyrénées
- LFLL Lyon Saint Exupéry
- LFMN Nice Côte d'Azur
- LFPB Paris Le Bourget
- LFPG Paris Charles de Gaulle
- LFPO Paris Orly

*- LFBP Pau Pyrénées*
*- LFLL Lyon Saint Exupéry*
*- LFMN Nice Côte d'Azur*
*- LFPB Paris Le Bourget*
*- LFPG Paris Charles de Gaulle*
*- LFPO Paris Orly*

La fourniture du service D-ATIS En-Route n'est pas mise en œuvre, et fait l'objet d'un accusé-réception négatif.

*The provision of the En-Route D-ATIS service is not implemented, and is subject to a negative acknowledgement.*

Le service D-ATIS étant un service complémentaire, il n'est pas publié de NOTAM en cas d'interruption temporaire sur un ou tous les aérodromes.

*As the D-ATIS is a complementary service, no NOTAM is published in the event of a temporary failure at one or all aerodromes .*

Le pilote envoie, à partir d'une interface bord, une demande de réception du message D-ATIS pour l'aérodrome considéré.

*The pilot sends, from an on-board interface, a request to receive the D-ATIS message for the aerodrome in question.*

L'équipage respecte la syntaxe permettant de qualifier une demande simple ou un abonnement.

*The crew complies with the syntax used to qualify a simple request or a subscription :*

- Pour une demande simple, un message D-ATIS unique est transmis à bord.

*- For a simple request, a single D-ATIS message is transmitted on board .*

- Pour un abonnement, après l'envoi du message D-ATIS initial, toute nouvelle version du message est automatiquement transmise à bord sans sollicitation du pilote. L'abonnement cesse au bout de 120 minutes ou sur demande d'arrêt du pilote avant ce terme. Un message d'arrêt de l'abonnement est alors transmis au bord.

*- For a subscription, after the initial D-ATIS message has been sent, any new version of the message is automatically transmitted on board without any request from the pilot. The subscription ceases after 120 minutes or if the pilot requests that the subscription be stopped before this time. A message indicating that the subscription has ended is then sent to the onboard unit.*

Le basculement de la procédure de collecte de l'information ATIS par liaison de données vers la VHF s'effectue au plus tard trois minutes avant le premier contact sauf consigne locale publiée par la voie de l'information aéronautique.

*The procedure for collecting ATIS information by data link is switched over to VHF no later than three minutes before the first contact, unless local instructions are published via the aeronautical information publication.*

A des fins de sécurité :

*For safety purposes:*

- Le pilote accuse réception des renseignements diffusés dans l'émission D-ATIS de la même manière que pour l'émission ATIS par VHF, à l'occasion du premier contact avec l'organisme de la circulation aérienne concerné. - En plus des paramètres réglementaires répétés dans les échanges sol bord en radiotéléphonie : o le contrôleur d'approche indique la procédure d'approche en service lors du premier contact avec l'aéronef à l'arrivée ; o le contrôleur d'aérodrome indique la piste en service lorsqu'il délivre une clearance de circulation au sol en vue d'un départ.

*- The pilot acknowledges receipt of the information broadcast in the D-ATIS transmission in the same way as for the VHF ATIS transmission, on the occasion of the first contact with the air traffic control unit concerned. - In addition to the regulatory parameters repeated in on-board ground radiotelephony exchanges: o the approach controller indicates the approach procedure in use on first contact with the arriving aircraft; o the aerodrome controller indicates the runway in use when issuing a ground clearance for departure.*

En cas d'incohérence entre les informations données par liaison de données et par le contrôleur, le pilote lève le doute par échange vocal.

*If there is any inconsistency between the information given by the data link and the information given by the controller, the pilot will resolve the doubt by voice exchange*

**b3 - Service de délivrance de clairances de départ par liaison de données (DCL)**

***b3 - Service for issuing the Departure Clearance via datalink (DCL)***

b.3.1. Présentation du service DCL

*b.3.1. Présentation of the DCL service*

Ce service permet à un équipage d'obtenir une clairance de départ par liaison de données (DCL) dans le cadre de procédures opérationnelles préétablies.

*This service enables crews to obtain a departure clearance by data link (DCL) as part of pre-established operational procedures.*

Le document de référence utilisé en France pour la mise en œuvre du service DCL est le document EUROCAE ED-85, révision A, auquel le système est conforme.

*The reference document used in France to implement the DCL service is EUROCAE ED-85, revision A, to which the system complies.*

Messages utilisés :

Messages used :

- RCD : message pilote de demande de clairance
- CLD : clairance contrôleur
- CDA : accusé de réception de l'équipage
- FSM : accusé de réception des systèmes sol/bord La révision de DCL n'est pas mise en œuvre. Toute modification de clairance est traitée par liaison VHF phonique.

- RCD : Pilot message for requesting a clearance
- CLD : Controller clearance
- CDA : crew acknowledgement
- FSM : gorund/on-board ackowledgement system DCL revision is not implemented. Any change in clearance is handled by VHF voice link.

b.3.2. Disponibilité du service

*b.3.2. Availability of service*

Le service de délivrance de clairance de départ par liaison de données (DCL) est mis en œuvre sur certains aérodromes français. Les éventuelles spécificités relatives au service sont publiées par la voie de l'information aéronautique (cf. AIP AD2).

*The service for issuing the Departure Clearance via datalink (DCL) is implemented at some French aerodromes. Any special features relating to the service are published in the aeronautical information (cf. AIP AD2).*

Le service DCL est disponible pour les aérodromes suivants :

*The DCL service is available for the following aerodromes :*

- LFBD Bordeaux Mérignac
- LFBO Toulouse Blagnac
- LFLL Lyon Saint Exupéry
- LFML Marseille Provence
- LFMN Nice Côte d'Azur
- LFPG Paris Charles de Gaulle
- LFPO Paris Orly
- LFRS Nantes Atlantique
- LFSB Bâle-Mulhouse

*- LFBD Bordeaux Mérignac*
*- LFBO Toulouse Blagnac*
*- LFLL Lyon Saint Exupéry*
*- LFML Marseille Provence*
*- LFMN Nice Côte d'Azur*
*- LFPG Paris Charles de Gaulle*
*- LFPO Paris Orly*
*- LFRS Nantes Atlantique*
*- LFSB Bâle-Mulhouse*

Le service DCL étant un service complémentaire, il n'est pas publié de NOTAM en cas d'interruption temporaire sur un ou tous les aérodromes.

*As the DCL service is a complementary service, no NOTAM is published in the event of a temporary interruption at one or all of the aerodrome.*

© Service de l'Information Aéronautique, France

b.3.3. Délivrance d'une clairance de départ par liaison de données (DCL), bonnes pratiques

Le service DCL ne peut s'appliquer qu'aux aéronefs empruntant des départs normalisés aux instruments (SID) dont les spécifications incluent les contraintes de niveau.

Toute autre situation opérationnelle non compatible avec le service DCL sur un aérodrome concerné (par exemple situation de dégivrage, avions lourds) est publiée par la voie de l'information aéronautique (cf AIP AD2).

Définition des intervalles de temps applicables :

- 'ti' : temps à partir duquel une demande de clairance de départ (RCD) peut être initiée (par défaut 10 minutes avant l'événement de référence pour la demande initiale).
- 'tt' : temps au-delà duquel il est encore possible pour l'équipage de recevoir par procédure vocale et à temps une clairance départ, au cas où le service DCL n'est pas clôturé (par défaut 3 minutes avant l'événement de référence pour la demande initiale).
- 't1' : temps maximum acceptable entre l'émission de la clairance par le contrôleur (CLD)et la réception en retour de l'accusé de réception de l'équipage (CDA) (par défaut 10 minutes). Les valeurs de 'ti', 'tt' et 't1', ainsi que l'événement de référence pour effectuer la demande de clairance départ (heure de mise en route par exemple) sont celles publiées dans chaque AIP pour chaque aérodrome concerné (cf AIP AD2), à défaut, celles indiquées ci-dessus, entre parenthèses.

*b.3.3. Issuing a departure clearance by data link (DCL), best practices*

*The DCL service can only be applied to aircraft using standard instrument departures (SIDs) whose specifications include the following level constraints.*

*Any other operational situation that is not compatible with DCL service at the aerodrome concerned (e.g. de-icing situation, heavy aircraft) is published via the aeronautical information (cf AIP AD2).*

*Definition of applicable time intervals:*

*- 'ti' : time after which a request for departure clearance (RCD) can be initiated (by default 10 before the reference event for the initial request).*
*- 'tt' : time beyond which it is still possible for the crew to receive a departure clearance by voice procedure and on time, in the event that the DCL service is not terminated (by default 3 minutes before the reference event for the initial request).*
*- 't1' : maximum acceptable time between the controller issuing the clearance (CLD) and the crew receiving the acknowledgement (CDA) (default 10 minutes). the values 'ti', 'tt' or 't1', as well as the reference event for requesting departure clearance (start up time for example) are those published in AIP for each aerodrome concerned (cf AIP AD2), or those indicated above in brackets.*

b.3.4. Déroulement de la procédure

- L'équipage envoie une demande de clairance de départ "ti" minutes avant son heure de mise en route ou de décollage tenant compte d'un éventuel créneau de décollage.
- Après élaboration par le système sol et validation par le contrôleur concerné, la clairance de départ est acheminée vers le système bord.

1) Si le pilote accepte le contenu de la clairance départ, il transmet au système sol, dès que possible, l'accusé de réception contenant l'ensemble de la clairance reçue à bord.
2) Si le pilote n'est pas en mesure d'accepter le contenu de la clairance de départ reçue, alors il contacte le contrôleur par liaison VHF phonique et poursuit la procédure de demande de clairance départ par ce même moyen.

Notes :

- En cas de non-réception à bord de l'aéronef de la clairance de départ "tt" minutes avant l'heure de mise en route ou de décollage, le pilote contacte le contrôleur par liaison VHF phonique et poursuit la procédure de demande de clairance de départ par ce même moyen.
- En cas de non-réception par le système sol de l'accusé de réception concernant la clairance émise, et ceci "t1" minutes après l'émission de la clairance de départ, ou en cas de réception d'un accusé invalide, le contrôleur contacte le pilote par liaison VHF phonique et termine la procédure de demande de clairance départ par ce même moyen.
- Le pilote est informé de la fin de la procédure par un accusé de réception. Note : Si ce dernier n'est pas reçu "t1" minutes avant l'heure de mise en route ou de décollage, ou s'il est négatif, le pilote contacte le contrôleur par liaison VHF phonique et termine la procédure de demande de clairance départ par ce même moyen.

Attention ! Toute clairance de départ délivrée, ou révisée par liaison VHF phonique annule les informations délivrées par liaison de données (DCL).

A des fins de sécurité :

- Le contrôleur répète, à l'occasion d'une clairance de contrôle vocale, au plus tard avant l'alignement, le paramètre "piste au décollage" fourni dans la clairance de départ par liaison de données.
- Le pilote est tenu, lors du premier contact radio avec le contrôleur de l'approche, d'indiquer l'indicatif du SID et le niveau vers lequel il monte.

*b.3.4. The procedure*

*- The crew sends a request for a departure clearance "ti" minutes before its departure or take-off time, taking into account any take-off slots.*
*- After being prepared by the ground system and validated by the controller concerned, the departure clearance is sent to the on-board system.*

*1) If the pilot accepts the content of the departure clearance, he transmits to the ground system, as soon as possible, the acknowledgement of receipt containing all the clearance received on board.*
*2) If the pilot is unable to accept the content of the departure clearance received, he contacts the controller by VHF voice link and continues the procedure for requesting a departure clearance by thissame means.*

*Notes :*

*- If the departure clearance is not received on board the aircraft "tt" minutes before the start or take-off time, the pilot contacts the controller by VHF voice link and continues the procedure for requesting the departure clearance by this same means.*
*- If the ground system does not receive an acknowledgement of the clearance issued "t1" minutes after the departure clearance is issued, or if an invalid acknowledgement is received, the controller contacts the pilot by VHF voice link and completes the procedure for requesting a departure clearance by this same means.*
*- The pilot is informed of the end of the procedure by an acknowledgement of receipt. Note : If the latter is not received "t1" minutes before the start or take-off time, or if it is negative, the pilot contacts the controller by VHF voice link and completes the procedure for requesting a departure clearance by the same means.*

*Warning! Any departure clearance issued or revised by voice VHF link cancels the information issued by data link (DCL).*

*For safety purposes A:*

*- The controller repeats, on the occasion of a voice control clearance, at the latest before line-up, the « take-off runway" parameter provided in the departure clearance by data link.*
*- During the first radio contact with the approach controller, the pilot must indicate the SID and the level to which he is climbing.*

**3.4.3.3. Services de radiodiffusion et de télévision**

Réservé

***3.4.3.3. Broadcasting service***

*Reserved*

**3.4.3.4 Langues utilisées**

Les communications avec les organismes rendant les services de la circulation aérienne sont effectuées en langue française ou anglaise, sauf lorsque la mention « français uniquement » est portée sur les cartes aéronautiques* auquel cas elles sont effectuées en langue française.

*Cartes de départ normalisé aux instruments, cartes d'arrivée normalisée aux instruments, cartes d'approche aux instruments, cartes d'approche à vue, cartes d'altitude minimale pour le vol sous surveillance ATC, cartes d'aérodrome/d'hélistation, cartes régionales, cartes de croisière, cartes aéronautiques du monde au 1/1 000 000, cartes aéronautiques au 1/500 000.

***3.4.3.4 Language used***

*Communications with organisations providing air traffic services shall be in French or English, except where "French only" is indicated on aeronautical charts*, in which case they shall be in French.*

**Standard instrument departures chart, standard instrument arrivals chart, instrument approach charts, visual approach charts, ATC surveillance minimum altitude chart,aerodrome/heliport charts, area charts, en-routes charts, world aeronautical charts 1/1000 000, world aeronautical charts 1/500 000.*

**3.4.4 EXIGENCES ET CONDITIONS**

**3.4.4.1 Espacement des canaux VHF.**

***3.4.4 REQUIREMENTS AND CONDITIONS***

***3.4.4.1 Spacing for VHF channels.***

L'OACI et la règlementation européenne précisent les spécifications concernant l'espacement entre canaux de 8.33 kHz en complément de celles relatives à l'espacement de 25 kHz dans la bande d'ondes métriques 117.975 - 137 MHz.

Les obligations relatives à la compatibilité des équipements de bord (GEN 1.5) ainsi que les canaux à utiliser sont portés à la connaissance des usagers par la voie de l'information aéronautique.

Un canal donné par les chiffres ABC.DEF (ex 128.025) est un « canal 25 » de largeur 25 kHz si EF = 00, 25, 50 ou 75. Dans tous les autres cas, il s'agit d'un « canal 8,33 » de largeur 8,33 kHz.

L'attention des navigateurs aériens est attirée sur ces dispositions afin qu'il n'y ait pas de difficulté dans l'établissement de liaisons air/sol avec les stations sol aéronautiques ni de risque de brouillage sur les canaux adjacents si la sélectivité des récepteurs n'est pas adaptée à cet espacement.

*ICAO and European regulations specify 8.33 kHz channel spacing in addition to 25 kHz channel spacing. In mainland France, in accordance with European regulations, 8.33 kHz channel spacing is widely deployed. in the VHF band 117.975 - 137 MHz.*

*The obligations relating to the compatibility of on-board equipment (GEN 1.5) and the channels to be used are brought to the attention of users by means of aeronautical information.*

*A channel given by the figures ABC.DEF (ex 128.025) is a "channel 25" of width 25 kHz if EF = 00, 25, 50 or 75. In all other cases, it is a "channel 8.33" of width 8.33 kHz.*

*The attention of air navigators is drawn to these provisions so that there is no difficulty in establishing air/ground links with aeronautical ground stations, nor any risk of interference on adjacent channels if the selectivity of receivers is not adapted to this spacing.*

Lorsqu'un aéronef désire une information particulière sur un aérodrome mais ne se trouve pas dans les limites de la couverture opérationnelle spécifiée, il lui appartient d'entrer en liaison avec le centre d'information de vol de la FIR traversée.

*When an aircraft requires a particular piece of information on an aerodrome but is not within the specified operational range limits he should contact the Flight Information Centre that he is crossing.*

© Service de l'Information Aéronautique, France

(1) La couverture opérationnelle de certains ATIS installés sur des aérodromes utilisables uniquement en VFR peut être réduite à la couverture opérationnelle prévue pour le service "TWR" ; ces ATIS à portée ainsi réduite sont désignés "ATIS/V".

(2) Sur certains aérodromes, des ATIS peuvent être installés sans bénéficier d'une couverture opérationnelle spécifiée ; ces ATIS ne sont alors utilisables normalement que par des aéronefs à la surface et sont alors désignés "ATIS/S".

(3) La couverture opérationnelle des RAI est la portée de la fonction ATS normalement assurée sur la fréquence utilisée.

*(1) The operational range of certain ATIS installed on aerodromes only useable on VFR can be reduced to the operational range used for "TWR" these reduced range ATIS have been designated" ATIS/V".*

*(2) On certain aerodromes, ATIS can be installed without having a specified operational range ; these ATIS are only normally therefore used by aircraft on the ground and are designated "ATIS/S".*

*(3) The operational range of RAI is the ATS range normally ensured on the frequency being used.*

**3.4.5 DIVERS**

**3.4.5.1 SATVOICE**

Le système SATVOICE n'est pas utilisé en France (métropole et outre-mer).

**3.4.5.2 Services fixes aéronautiques (SFA)**

**3.4.5.2.1 Centres raccordés au SFA**

***3.4.5 MISCELLANEOUS***

***3.4.5.1 SATVOICE***

The SATVOICE system is not used in France (mainland and overseas).

***3.4.5.2 Aeronautical fixed services (AFS)***

***3.4.5.2.1 Centres connected to the AFS***

**3.4.5.2.2 Aérodromes non raccordés au SFA**

Aérodromes ouverts à la CAP munis d'un BDP, d'un service AFIS, ou contrôlés, non raccordés au SFA, à destination ou en provenance desquels des messages peuvent être acheminés aux heures de vacation de ces différents services.

***3.4.5.2.2 Aerodromes not connected to the AFS***

*Aerodromes opened to public air traffic, equipped with an ATS reporting office, an AFIS or a TWR, not connected to ASF, to or from which messages can be routed during opening hours of these services.*

# GEN 3.5 SERVICES METEOROLOGIQUES

*METEOROLOGICAL SERVICES*

## 3.5.1 SERVICE RESPONSABLE

**a) Désignation de l'administration météorologique**

La direction générale de l'aviation civile (DGAC) est l'administration météorologique au sens OACI désignée par l'Etat français.

L'arrêté du 13 février 2020 porte règlement pour l'assistance météorologique à la navigation aérienne, conformément aux dispositions prévues par les articles D131-11 à D131-14 du code de l'aviation civile.

L'arrêté du 20 décembre 2011 désigne METEO-FRANCE comme prestataire de services météorologiques à la navigation aérienne sur une base exclusive pour fournir les services météorologiques dans les espaces aériens dans lesquels l'administration française rend des services de navigation aérienne ainsi que pour tout aérodrome situé sur le territoire français, à l'exception des aérodromes dont l'affectataire principal est le ministère de la défense et des anciens combattants.

En outre, au titre de sa mission d'Etat, METEO-FRANCE est chargé d'effectuer des recherches portant sur la météorologie générale ou appliquée.

**Adresse du département aéronautique de METEO-FRANCE :**

42, avenue Gaspar Coriolis
31057 Toulouse cedex 1

Pour tous renseignements concernant l'organisation de la météorologie aéronautique, consulter la division Certification et Coordination du département aéronautique de METEO-FRANCE (TEL : 05 61 07 82 35).

METEO-FRANCE fournit une assistance météorologique aux organismes de la navigation aérienne (contrôle d'aérodrome, d'approche ou en route), aux compagnies aériennes avant et pendant le vol si nécessaire, aux organismes de recherche et de sauvetage, aux exploitants d'aérodromes, à l'aviation générale ainsi qu'aux autres organismes intéressés à la gestion et au développement de la navigation aérienne.

L'assistance à la navigation aérienne est fournie directement aux usagers aéronautiques par les centres météorologiques d'aérodromes dont la liste est donnée dans les pages GEN 3.5 ou au travers de systèmes automatisés. Une partie de cette assistance est également procurée par le Département Aéronautique de la Direction des Services Météorologiques (DSM/AERO) située 42 avenue G. Coriolis, 31057 TOULOUSE CEDEX.

**b) Documents de référence**

La règlementation applicable est constituée : du règlement d'exécution (UE) 2017/373 de la Commission du 1er mars 2017 modifié établissant des exigences communes relatives aux prestataires de services de gestion du trafic aérien et de services de navigation aérienne ainsi que des autres fonctions de réseau de la gestion du trafic aérien, et à leur supervision ; et de l'arrêté du 13 février 2020 relatif à la fourniture de services météorologiques pour les besoins de la navigation aérienne.

Ces textes règlementaires se basent sur les dispositions des documents de l'OACI suivants :

Annexe 3 - Normes et pratiques recommandées internationales : Assistance Météorologique à la navigation aérienne internationale.

Doc 7754 - Plan ANP/EUR – Plan de Navigation aérienne pour la région Europe.

Doc 7030 – Procédures complémentaires régionales (3ème partie : Météorologie).

Les différences par rapport aux normes et aux pratiques recommandées de l'Annexe 3 sont notifiées dans la partie GEN 1.7.

## 3.5.2 ZONE DE RESPONSABILITE

De par sa désignation, METEO-FRANCE fournit les services météorologiques à la navigation aérienne dans les espaces aériens dans lesquels l'administration française rend des services de navigation aérienne ainsi que pour tout aérodrome situé sur le territoire français. Les aérodromes dont l'affectataire principal est le ministère de la défense sont exclus de ce périmètre de désignation. Cependant, conformément au protocole-cadre signé le 17 mars 2014 entre Météo-France et l'État-major des Armées, Météo-France assure aussi la fourniture du service météorologique sur les 4 aérodromes RSTCA dont l'affectataire principal est le ministère de la défense. Il s'agit de Istres le Tubé, Hyères le Palyvestre, Lorient Lann-Bihoué et Tours Val de Loire.

De plus, dans le cadre du système mondial de prévision de zones (SMPZ) mis en œuvre par l'OACI, la France a accepté, par accord régional de navigation aérienne, la responsabilité des services suivants, rendus par METEO-FRANCE :

## *3.5.1 RESPONSIBLE SERVICE*

***a) Designation of the meteorological administration***

*The Directorate general of civil aviation (DGAC) is the meteorological administration under the ICAO terms designated by the French State.*

*The decree of February 2020, 13th defines regulation for air navigation meteorological assistance, in accordance with provisions defined in articles D 131-11 to D 131-14 of the Civil Aviation code.*

*The decree of December 2011, 20th designates METEO-FRANCE as meteorological services provider for air navigation on an exclusive basis to provide the weather forecast services to airspaces in which French administration provides air navigation services as well as to any aerodrome located on French territory, except to aerodromes whose the main authority is the defense and war veterans ministry.*

*METEO-FRANCE is furthermore made responsible, as part of its State mission, to carry out researches relating to general or applied meteorology.*

***Address of METEO-FRANCE Aeronautical department :***

*For any information relating to the certification and coordination division of the aeronautical department, please refer to the aeronautical mission department of the METEOFRANCE (TEL : 05 61 07 82 35).*

*METEO-FRANCE provides meteorological assistance to the air navigation organizations (local, approach or air traffic control), to airlines before and during the flight if necessary, to search and rescue organizations, to airport management services, to other organizations interested in management and development of air navigation.*

*Air navigation assistance is provided directly to aeronautical users by the aerodrome meteorological centers the list of which is given in pages GEN 3.5 or through automated systems. Part of this assistance is also provided by the Aeronautical Department of Meteorological Services Directorate (DSM/AERO) located 42 avenue G. Coriolis, 31057 TOULOUSE CEDEX.*

***b) Reference documents***

*The applicable regulation consist of : Commission implementing regulation (EU) 2017/373 of 1 March 2017 laying down common requirements for providers of air traffic management/air navigation services and other air traffic management network functions and their oversight, as last amended ; and 13th of February 2020 decree relating to the provision of meteorological services for air navigation ("arrêté du 13 février 2020 relatif à la fourniture de services météorologiques pour les besoins de la navigation aérienne").*

*These regulatory texts are based on the provisions of the following ICAO document :*

*Annex 3 - International Standards and Recommended Practices : Meteorological Service for International Air Navigation.*

*Doc 7754 - ANP/EUR plan – European Region Air Navigation Plan Europe.*

*Doc 7030 - EUR Regional Supplementary Procedures (3rd part : Meteorology).*

*Differences from the standards and recommended practices of Annex 3 are notified in section GEN 1.7.*

## *3.5.2 AREA OF RESPONSIBILITY*

*METEO-FRANCE is designated to provide weather forecast services to the air navigation in airspaces in which French administration provides air navigation services as well as to any aerodrome located on French territory. The aerodromes whose main authority is the Defense ministry are excluded from this designation. However regarding the protocol signed March 2014, 17th between Météo-France and the Army Chief of Staff, Météo-France is responsible for the supply of meteorological services upon the 4 RSTCA aerodromes whose main administrator is the Department of National Defence. Here they are : Istres le Tubé, Hyères le Palyvestre, Lorient Lann-Bihoué and Tours Val de Loire.*

*Besides, within the framework of the World Area Forecast System (WAFS) set up by the ICAO, France accepted through an air navigation regional agreement, to bear the responsibility for the following services, provided by METEO-FRANCE :*

© Service de l'Information Aéronautique, France

- la fonction de « centre d'avis de cendres volcaniques » (VAAC) pour la zone de responsabilité définie dans le document OACI 7754 (Plan de navigation aérienne pour la région EUR, partie FASID), assurée par le Département Aéronautique de la Direction des Services Météorologiques (DSM/AERO) de Météo-France.

Le VAAC de Toulouse établit en conséquence des avis consultatifs sur les déplacements et l'intensité de nuages de cendres volcaniques à destination notamment des Centres en Route de Navigation Aérienne (CRNA) et des Centres de Veille Météorologiques (CVM) concernés, ces derniers élaborant alors des SIGMET de cendres volcaniques.

- la fonction de « banque de données internationales OPMET » pour la région EUR, assurée par la Direction des Systèmes d'Information de METEO-FRANCE ;

- la fonction de « centre régional d'échanges de données OPMET » (ROC) pour la région EUR, exploitant notamment un portail interrégional pour les données en provenance de la région AFI, assurée par la Direction des Systèmes d'Information de METEO-FRANCE.

### 3.5.3 OBSERVATIONS ET MESSAGES D'OBSERVATION METEOROLOGIQUE D'AERODROME

Les tableaux figurant en annexe décrivent pour les aérodromes dotés des équipements nécessaires mis en œuvre de façon opérationnelle, les observations et les messages d'observation météorologique fournis par METEO-FRANCE aux usagers aéronautiques.

Pour un aérodrome donné, il peut exister deux types d'observations :

1) Les observations locales, destinées uniquement au service ATS de l'aérodrome concerné, qui en informe, autant que de besoin, les aéronefs au départ, en approche et à l'atterrissage sous forme de messages MET REPORT.

Les messages MET REPORT contiennent les observations concernant la direction et la force du vent, la visibilité aéronautique, la portée visuelle de piste (RVR) s'il y a lieu, le temps présent, les nuages, la température de l'air et du point de rosée, la pression au niveau de la mer (QNH) et la pression à l'altitude de l'aérodrome (QFE). Ces informations sont fournies en temps réel et renouvelées automatiquement toutes les minutes.

En cas d'observateur humain présent sur l'aérodrome, les messages MET REPORT sont complétés, si les conditions météorologiques l'exigent par des messages d'observations spéciales locales (SPECIAL), également diffusées au contrôle aérien (ATC) ou au service d'information de vol de l'aérodrome (AFIS).

Sur certains aérodromes non dotés d'une approche de précision, les MET REPORT sont dits « réduits ». Ils contiennent uniquement les valeurs des paramètres vent, température, pression et visibilité, cette dernière étant soit estimée par l'ATS à partir d'un tour d'horizon validé par Météo-France, soit mesurée par un capteur si l'aérodrome en est équipé.

Les équipements de mesure installés satisfont aux critères réglementaires de l'aérodrome : par exemple, sur les aérodromes dotés d'une approche de précision de catégorie3, il y a installation de 3 visibilimètres pour la mesure de la RVR : au seuil de piste, au point médian de la piste, et à l'extrémité d'arrêt de la piste. De plus, sur ces aérodromes de catégorie 3 et celui de Nice-Côte d'Azur, les stations automatiques d'acquisition des paramètres météorologiques ainsi que les calculateurs d'observation sont doublés. A noter aussi que sur tous les aérodromes soumis à la RSTCA, les distributions de mesures de vent et de pression à la tour de contrôle sont doublées par une liaison directe capteurs-tour.

Sur les aérodromes équipés en instruments de mesure de la portée visuelle de piste (RVR), les capteurs sont placés sur un axe parallèle à la piste distant de 120 mètres à 170 mètres de l'axe de piste, le premier à 300 mètres en aval du seuil, le second entre 1000 et à 1500 mètres du seuil (ou à mi-piste), le troisième à 300 mètres de l'autre extrémité de la piste. La mesure locale de la Portée Optique Météorologique (POM) permet de calculer la valeur de la portée visuelle de piste (RVR) en tenant compte de la luminance de fond et pour l'intensité maximale de balisage.

Dans les messages d'observation, la RVR est fournie en mètres, par échelons de 25 mètres lorsqu'elle est inférieure à 400 mètres, de 50 mètres entre 400 et 800 mètres et par échelons de 100 mètres au-dessus de 800 mètres, les valeurs étant arrondies par défaut à l'échelon immédiatement inférieur de l'échelle utilisée.

Toutes les valeurs de RVR mesurées sont transmises à l'ATS.

*- Volcanic Ash Advisory Center (VAAC) for the area of responsibility defined in ICAO document 7754 (In-flight Air Navigation Plan, FASID part), ensured by the Aeronautical Department of Meteorological Services Directorate (DSM/AERO) of Météo-France.*

*Consequently, the VAAC of Toulouse establishes advisories on the movement and intensity of the volcanic ash clouds in particular for the flight air navigation centers (CRNA) and the Meteorological Watch Offices concerned, these ones issuing then volcanic ash SIGMETs.*

*- "OPMET International Databank" for the EUR region, ensured by the Direction des Systèmes d'Information of METEO-FRANCE (information system directorate) ;*

*- "OPMET regional data exchange center" (ROC) for the European region, operating in particular an interregional portal for the data originating from the AFI region, ensured by the Direction des Systèmes d'Information (information system directorate) of METEO-FRANCE.*

### *3.5.3 METEOROLOGICAL OBSERVATIONS AND AERODROME OBSERVATION REPORTS*

*The tables from chapter 3.5.6 show the weather observations and reports provided by METEO-FRANCE to aeronautical users for aerodromes fitted with the required equipment implemented operationally.*

*For a given aerodrome, two types of observations may exist :*

*1) Local observations, only addressed to ATC services of concerned aerodrome, which inform, as much as necessary, aircraft at departure, approaching, and landing with MET REPORT messages.*

*The MET REPORT messages contain observations regarding the wind direction and wind force, aeronautical visibility, the runway visual range (RVR) if applicable, the current weather, the clouds, the air and dew point temperatures, the atmospheric pressure at sea level (QNH), and the atmospheric pressure at the aerodrome elevation (QFE). This information is supplied in real time and is refreshed automatically every minute.*

*When there is a human observer present at the aerodrome and if the meteorological conditions require it, the MET REPORT messages are supplemented by messages containing special local observations (SPECIAL), which are also broadcast to the Air Traffic Control (ATC) or Aerodrome Flight Information Service (AFIS).*

*For some aerodromes that do not have a precision approach, the MET REPORTs are termed "reduced" reports. They contain only the parameters for wind, temperature, pressure, and visibility, with the latter being either estimated by the ATS based on a general survey confirmed by Météo-France, or measured by a sensor if the aerodrome is equipped with one.*

*The measuring equipment installed satisfy the regulatory criteria of the aerodrome : for example, at aerodromes having a category 3 precision approach, there are three visibility meters installed to measure the RVR : one at the runway threshold, one at the runway midpoint, and one at the stop end of the runway. Furthermore, at aerodromes of category 3 and those of Nice-Côte d'Azur, the numbers of automated airport weather stations and observation calculators are doubled. It is also to be noted that for all aerodromes subject to the RSTCA, wind and pressure measurements provided to the control tower (TWR) are doubled by a direct sensor-TWR link.*

*On the aerodromes equipped with instruments to measure the runway visual range (RVR), the sensors are positioned along an axis parallel to the runway and at a distance of 120 to 170 m from the runway axis, the first one downstream of the threshold, the second one between 1000 and 1500 m from the threshold (or at mid runway), the third one 300 m from the other end of the runway. Local measurement of the Meteorological Optical Range (MOR) is used to calculate the runway visual range (RVR) taking into consideration the background luminance and for the maximum lighting intensity.*

*In the observation reports, the RVR is given in meters, in steps of 25 m when it is lower than 400 m, of 50 m between 400 and 800 m, and in steps of 100 m above 800 m, the values being rounded by default to the next lower step of the scale used.*

*All the RVR values measured are transmitted to the ATS.*

2) Et en complément, uniquement pour les aérodromes où ce service est requis par la réglementation ou demandé par l'exploitant de l'aérodrome, les observations destinées à la planification des vols et diffusées au-delà de l'aérodrome sous forme de messages METAR.

Les messages METAR sont diffusés toutes les demi-heures. Ils sont souvent entièrement automatiques (METAR AUTO), sauf pour les aérodromes les plus importants sur lesquels des observateurs sont présents.

**Caractéristiques du METAR AUTO**

Tous les aérodromes pour lesquels des METAR sont requis, sont équipés pour émettre des observations entièrement automatiques. Sur les aérodromes ainsi équipés, la production de METAR AUTO est soit permanente, soit limitée à des plages horaires spécifiques (la nuit par exemple) en complément de l'observation humaine, soit activée exceptionnellement (absence imprévue de l'observateur).

Les points communs et les différences entre un METAR AUTO et un METAR élaboré par un observateur sont indiqués ci-après :

**a) Informations identiques**

Les données vent, température de l'air, point de rosée et QNH sont mesurées automatiquement et sont identiques à celles qui figurent dans un METAR classique.

La RVR est calculée à partir de capteurs en place et elle est identique à celle fournie dans un METAR classique.

**b) Informations différentes ou manquantes :**

1 - La visibilité instrumentale est mesurée à l'emplacement du ou des capteurs. La visibilité dominante est calculée à partir des mesures minute de tous les capteurs de visibilité sur les 10 dernières minutes (visibilité dominante instrumentale = valeur médiane). Elle est représentative de la visibilité au lieu d'implantation des instruments et avec un capteur unique, n'est donc représentative de la visibilité sur l'aérodrome qu'en conditions météorologiques homogènes.

2 - Bien que toutes les variétés possibles de temps présent ne puissent être codées automatiquement, les équipements évoluent et des nouveaux codes apparaissent dans les METAR AUTO. Actuellement, les codes suivants sont possibles : DZ ou FG ou BR ou HZ ou RA ou SN ou FZFG ou SHRA ou SHSN ou FZRA ou FZDZ ou TS . L'abréviation UP (Unknown Precipitation) est utilisée pour indiquer une précipitation non identifiée lorsque le type de précipitation n'a pas pu être identifié par le système d'observation automatique. L'attribut VC (à proximité) est utilisé par les systèmes automatiques uniquement pour coder les orages à proximité de l'aérodrome (VCTS), c'est à dire entre 8 et 16 km de l'aérodrome,

3 - La couche nuageuse est calculée à partir des mesures d'un télémètre et d'un algorithme d'évaluation des couches nuageuses. La représentation est bonne en moyenne, mais dépend des conditions météorologiques. Le symbole /// est inséré à la suite du groupe de codage des nuages pour signaler que le type de nuage n'est pas observable par le système automatique. L'abréviation NCD (No Cloud Detected) est insérée à la place du groupe de codage des nuages lorsqu'aucun nuage (en dessous de la hauteur du CAVOK) n'a été détecté par le système automatique et lorsque le système n'est pas capable de détecter l'absence de CB et de TCU. L'abréviation NSC (No Significant Cloud) est insérée à la place du groupe de codage des nuages lorsque le système automatique n'a pas détecté de nuage (en dessous de la hauteur du CAVOK) et qu'il est capable de détecter l'absence de CB ou de TCU. En France, l'identification des conditions convectives (CB, TCU) est assurée grâce à un algorithme utilisant les données issues des radars de précipitations et celles issues de la détection de la foudre. Le symbole /// est utilisé devant CB (ou TCU) lorsque le système automatique a détecté un CB (ou TCU), la nébulosité et la hauteur de ces nuages ne pouvant être observées.

4 - En France, dans le METAR AUTO, les phénomènes récents ne sont pas renseignés pour le moment.

5 - En France, dans le METAR AUTO, l'état des pistes n'est pas renseigné.

6 - En France, dans le METAR AUTO, la tendance (ou prévision d'atterrissage TREND) est renseignée pour les aérodromes qui disposent d'un service TAF.

Compte tenu des limites de certaines informations contenues dans un METAR AUTO il est recommandé à l'usager, lors de la préparation du vol, de porter une attention particulière aux autres informations à sa disposition, en particulier TAF et cartes de temps significatif (TEMSI).

**3.5.4 TYPES DE SERVICES**

**a) Services aux organismes français assurant les services de la circulation aérienne.**

Météo-France fournit aux services de la circulation aérienne :

- Les messages MET REPORT et SPECIAL.
- Les METAR et TREND.
- Les avertissements d'aérodrome.

*2) And in addition, only for aerodromes where this service is required by regulation or asked by aerodrome operator, observations addressed to flight planning and broadcast beyond the aerodrome with METAR messages.*

*The METAR messages are broadcast every half hour. They are often completely automatic (METAR AUTO), except in the case of major aerodromes, where there are observers present.*

***AUTO METAR characteristic***

*All aerodromes for which METAR are requested, are equipped to broadcast fully-automatic observation reports. On aerodromes fitted with this equipment, AUTO METAR production is either permanent, or limited to specific time slots (night for instance) in addition to human observation, or exceptionally activated (unexpected absence of the observer).*

*The common points and differences between an AUTO METAR and a METAR issued by an observer are indicated hereafter :*

***a) Identical information***

*The wind, air temperature, dew point and QNH data is measured automatically and is the same as that of a classical METAR.*

*The RVR is calculated by installed sensors and is the same as that supplied in a classical METAR.*

***b) Different or missing information :***

*1 - The instrumental visibility is measured at the sensor location. The prevailing visibility is calculated from the minute measures by all the sensors of visibility over the last 10 minutes (instrumental dominant visibility = median value). It is representative of the visibility at the instrument installation location and with a single sensor is therefore representative of the visibility on the aerodrome only under homogeneous meteorological conditions.*

*2 - Although all possible kinds of current weather cannot be coded automatically, the instruments evolve and new codes appear in the AUTO METAR. Currently, the following codes are possible : DZ or FG or BR or HZ or RA or SN or FZFG or SHRA or SHSN or FZRA or FZDZ or TS. The abbreviation UP (Unknown Precipitation) is used to indicate a non-identified precipitation when the type of precipitation could not be identified by the automatic observation system. The attribute VC (in the vicinity) is used by the automatic systems only to code thunderstorms in the vicinity of aerodrome (VCTS), i.e. 8 and 16 km from the aerodrome).*

*3 - The cloud layer is calculated using a telemeter and a cloud layer evaluation algorithm. On average, the representation is correct, but depends on the meteorological conditions.The symbol /// is inserted after the cloud coding group to indicate that the type of cloud cannot be observed by the automatic system. The abbreviation NCD (No Cloud Detected) is inserted in place of the cloud coding group when no cloud (below CAVOK height) has been detected by the automatic system and when the system is not able to detect the absence of CB and TCU. The abbreviation NSC (No Significant Cloud) is inserted in place of the cloud coding group when no cloud has been detected by the automatic system (below CAVOK height) and when the system is able to detect the absence of CB or TCU. In France, the identification of the convective conditions (CB, TCU) is ensured via an algorithm using the data from the precipitation radars and lightning detection. The ////// symbol is used in front of CB (or TCU) when the automatic system has detected a CB (or TCU), as the cloud amount and the cloud height cannot be observed.*

*4 – At this time in France in the AUTO METAR, recent events are not documented.*

*5 – In France, in the AUTO METAR, runways condition is not documented for the time being.*

*6 - In France, in the AUTO METAR, the TREND is documented for the aerodromes with a TAF service provided.*

*Given the limits of some information contained in an AUTO METAR, it is recommended that air users, when preparing the flight, draw particular attention to the other available information, particularly TAF and significant weather charts (TEMSI).*

***3.5.4 TYPES OF SERVICES***

***a) Services to French air navigation organizations.***

*Météo-France supplies the following to the air traffic services :*

*- The MET REPORT and SPECIAL messages.*
*- METARs and TRENDs.*
*- Aerodrome warnings.*

© Service de l'Information Aéronautique, France

Ces messages (MAA ou AD WARNING) sont destinés à la protection des installations et des aéronefs au sol. Ils sont fournis également aux exploitants d'aérodrome. Météo-France a généralisé une production automatique de MAA réalisée à partir des prévisions d'aérodrome TAF élaborées par les prévisionnistes aéronautiques.

A noter cependant que les MAA relatifs aux aérodromes de Paris-Charles de Gaulle, Paris-Orly, Paris-Le Bourget, Lyon-St-Exupéry, Nice-Côte d'Azur, Bâle-Mulhouse et,Hyères-le Palyvestre ne sont pas automatisés et continuent à être réalisés par les prévisionnistes.

Les MAA automatiques concernent uniquement les phénomènes suivants :

• Vent moyen
• Rafales
• Orages
• Grêle
• Pluie forte
• Grain
• Brouillard et brouillard dense
• Seuil de températures
• Brouillard givrant
• Pluie verglaçante
• Bruine verglaçante

Les autres phénomènes continuent à faire l'objet de MAA réalisés par des prévisionnistes

Les MAA automatiques concernent également les phénomènes observés.

- Les prévisions d'aérodrome TAF.

Pour chaque aérodrome un centre météorologique de rattachement a été désigné afin d'assurer la veille météorologique sur place ou à distance.

- Les renseignements SIGMET (voir chapitre 3.5.8).

**Prévisions aéronautiques locales**

Les centres météorologiques élaborent pour chaque aérodrome pour lequel un service de prévision est requis :

- des prévisions d'aérodrome (TAF) qui sont :

• soit des TAF courts avec une échéance de 9 heures et renouvelés toutes les 3 heures durant la période où le service TAF est demandé,

• soit des TAF longs avec une échéance de 24 heures ou 30 heures, et qui sont renouvelés toutes les 6 heures durant la période où le service TAF est demandé.

Pour un terrain donné, il ne peut y avoir que la production d'un seul type de TAF. La durée de validité des TAF pour un aérodrome donné, est déterminée à partir des besoins exprimés par les usagers. En cas de besoins différents pour un même terrain, METEO-FRANCE a pris la décision de produire les TAF dont la validité demandée est la plus longue, cela en accord avec le régulateur du service météorologique à la navigation aérienne, la DGAC/DTA.

- des prévisions d'atterrissage de type tendance (TREND) pendant les périodes de service de TAF,

- des prévisions de décollage (PREDEC) lorsqu'elles sont demandées par des compagnies aériennes. A noter qu'en métropole ces prévisions sont proposées uniquement pour deux aérodromes : Paris Charles de Gaulle et Paris Orly.

Pour un aérodrome donné le type de prévision fournie est listée en AD2.11.

**b) Service avant le vol pour les équipages de conduite**

Météo-France met à disposition des équipages de conduite l'ensemble des messages météorologiques réglementaires ainsi que tous les produits émis par le système mondial de prévision de zones (cartes de prévision de vent et température en altitude, cartes de temps significatif TEMSI) via les services automatisés d'information avant le vol AEROWEB PRO et AEROWEB.

En plus des informations provenant du système mondial de prévisions de zones, METEO-FRANCE élabore et met à disposition sur AEROWEB :

- des TEMSI plus fins et renouvelés toutes les 3 heures sur un domaine européen "EUROC" (de la surface au niveau de vol FL 450). Le domaine EUROC a été élargi afin d'offrir des prévisions du temps significatif sur de nouvelles escales de la navigation aérienne nationale et internationale moyen courrier vers le Moyen Orient et

- des TEMSI basse altitude sur la France renouvelés toutes les 3 heures entre 0000 UTC et 2100 UTC. Les cartes TEMSI basse altitude du domaine France contiennent notamment les renseignements AIRMET. Les AIRMET informent les usagers des phénomènes météorologiques en route pouvant affecter la sécurité des vols exécutés à basse altitude.

Les services automatisés d'information avant le vol, AEROWEB et AEROWEB PRO, sont décrits au chapitre 3.5.9.

*These messages (MAA or AD WARNING) are intended to protect the installations and aircraft on the ground. They are also supplied to the aerodrome's operators. Météo-France has generalised an automatic production of AD WARNING carried out on the basis of the aerodrome forecasts TAF elaborated by the aeronautical forecasters.*

*It should be noted, however, that the AD WARNING for the Paris-Charles de Gaulle, Paris-Orly, Paris-Le Bourget, Lyon-St-Exupéry, Nice-Côte d'Azur, Bâle-Mulhouse and Hyères-le Palyvestre aerodromes are not automated and continue to be carried out by forecasters.*

*Automatic AD WARNING only concern the following phenomena :*

*• Average wind*
*• Gusts*
*• Thunderstorms*
*• Hail*
*• Heavy rainfall*
*• Squall*
*• Fog and dense fog*
*• Temperature threshold*
*• Freezing fog*
*• Freezing rain*
*• Freezing drizzle*

*The other phenomena continue to be the subject of AD WARNING carried out by forecasters.*

*AD WARNING concern also observed phenomena.*

*- Aerodrome forecasts (TAF).*

*An assigned weather center has been designated for every aerodrome to provide a meteorological watch locally or remotely.*

*- SIGMET information (see section 3.5.8).*

***Local aeronautical forecasts***

*The meteorological centers issue for each aerodrome where a forecast service is required :*

*- aerodrome forecasts (TAF) which are :*

*• either short TAFs with a validity of 9 hours, renewed every 3 hours during the period when the TAF service is requested, or*

*• long TAFs with a validity of 24 or 30 hours, renewed every 6 hours during the period when the TAF service is requested.*

*For a given field, there can be only one type of TAF. The TAF validity time for a given aerodrome is determined based on the needs expressed by the users. In case of different needs for the same field, METEO-FRANCE decided to issue TAFs with a longer validity, in agreement with the air navigation meteorological control officer, i.e. the DGAC/DTA.*

*- trend type landing forecasts (TREND) during TAF service periods,*

*- take-off forecasts (PREDEC) when they are requested by the airlines. Note that in mainland France, these forecasts are offered for two aerodromes only : Paris Charles de Gaulle and Paris Orly.*

*The type of forecast for each aerodrome is gived and listed in AD2.11.*

***b) Assistance before flight for flight crews***

*Météo-France makes all regulatory weather messages and all reports issued by the World Area Forecast System (upper air forecasting charts for wind and temperature, TEMSI significant weather charts) available to flight crews via the automated preflight information services AEROWEB PRO and AEROWEB.*

*In addition to the information originating from the World Area Forecast System, METEO-FRANCE issues and makes available on AEROWEB :*

*- TEMSIs for European "EUROC" area (from the surface to flight level FL450) that are more precise and that are refreshed every 3 hours. The EUROC area has been enlarged in order to offer significant weather forecasts on new stopovers of national and international medium-haul air navigation to the Middle East and*

*- low-altitude TEMSIs for France that are refreshed every 3 hours between 0000 UTC and 2100 UTC. The low-altitude TEMSI charts for the France area include AIRMET. The AIRMETs inform users of en-route meteorological phenomena that may affect low-altitude flights.*

*The automated pre-flight information services, AEROWEB and AEROWEB PRO, are described in Chapter 3.5.9.*

© Service de l'Information Aéronautique, France

Les équipages de conduite peuvent également être assistés par téléphone (renseignements téléphoniques supplémentaires ou consultation – voir AD 2.11) par des prévisionnistes du centre de rattachement de l'aérodrome de départ.

Enfin, sur les aérodromes où Météo-France est présent, les membres d'équipage peuvent, le cas échéant, consulter au centre météorologique toute l'information réglementaire aéronautique la plus récente et peuvent bénéficier avant le départ d'un exposé verbal.

**c) Service pendant le vol pour les équipages de conduite**

Les renseignements qu'un aéronef muni de radio peut recevoir en vol ne doivent être considérés que comme des recoupements, des précisions ou des rectifications de l'information météorologique reçue au départ. Ils ne sauraient la remplacer.

Les renseignements météorologiques susceptibles d'être reçus en vol se divisent en deux catégories:

- l'information "en route".

- les renseignements pour l'atterrissage.

L'information "en route" comprend :

• Les renseignements obtenus par l'écoute des émissions météorologiques régulières en radiotéléphonie (Emission VOLMET), donnant des observations régulières (METAR) pour une sélection d'aérodromes ainsi que des avis de SIGMET.

• Les renseignements obtenus par trafic radio :

**1. à l'initiative des organismes de la circulation aérienne, peuvent concerner les renseignements SIGMET relatifs à l'apparition, ou à la prévision de l'un ou de plusieurs des phénomènes suivants, dans la région de veille météorologique :**

• Orages (avec ou sans grêle) noyés dans la masse,

• Orages (avec ou sans grêle) fréquents,

• Orages (avec ou sans grêle) obscurcis,

• Orages (avec ou sans grêle) organisés en lignes de grains,

• Turbulence forte,

• Givrage fort,

• Givrage fort par précipitation se congelant,

• Ondes orographiques fortes,

• Forte tempête de poussière,

• Forte tempête de sable,

• Présence de cendres volcaniques,

• Cyclone tropical,

• Nuage radioactif

**2. sur demande l'équipage de l'avion, peuvent concerner :**

- les observations de surface les plus récentes disponibles effectuées en des points du trajet restant à parcourir ;

- le temps prévu pour un certain intervalle de temps, en un point, sur un tronçon de trajet, ou sur une région ;

- les phénomènes météorologiques importants. (METAR, comptes rendus en vol spéciaux reçus d'aéronefs (AIREP spéciaux), TREND, TAF ainsi que leurs amendements).

Les renseignements pour l'atterrissage comprennent :

- le vent en surface représentatif de la piste utilisée ainsi que, le cas échéant, les variations de la direction et les variations par rapport à la vitesse moyenne indiquée sous forme de valeurs maximales et minimales,

- la visibilité, ou pour certains aérodromes, pour l'atterrissage comme pour le décollage, les valeurs de portée visuelle (RVR) représentatives de la piste utilisée,

- les phénomènes météorologiques,

- la nébulosité et la hauteur de la base des couches nuageuses,

- pour l'atterrissage, la valeur de la pression représentative de la zone de toucher des roues,

- pour le décollage, la valeur de pression représentative de la zone de la piste utilisée.

Le cas échéant, les renseignements suivants sont fournis :

- température de l'air et du point de rosée,

- remarques en clair ou à l'aide d'abréviations normalisées permettant de mieux préciser les conditions météorologiques existantes sur l'aérodrome et dans les aires d'approche et de montée au décollage,

- sur demande, une évolution prévue du temps (TREND et/ou TAF et/ou PREDEC).

*The flight crews may also obtain phone assistance (additional information or consultation – see AD 2.11) from forecasters of the departure aerodrome attachment centre.*

*Finally, on aerodromes where Météo-France is present, crew members may consult, if appropriate, to the meteorological centre, the most recent aeronautical statutory information and may have a briefing before departure.*

***c) Service during flight for flight crews***

*Any information that an aircraft can receive by radio during a flight shall only be considered only as cross-information, details or amendments to the meteorological information received upon departure. It shall in no way replace it.*

*The meteorological information liable to be received during flight is divided in two categories :*

*- in-flight information,*

*- landing information.*

*"In-flight" information includes :*

*• The information obtained by listening to regular meteorological broadcast by radiotelephony (VOLMET broadcast), supplying regular observations (METAR) for a selection of aerodromes and SIGMET advisories.*

*• The information obtained by radio traffic :*

***1. at the initiative of the air traffic organization, may concern the SIGMET information related to the occurrence or the expectation of one or more of the following events, in the meteorological watch area :***

*• Embedded storms (with or without hail),*

*• Frequent storms (with or without hail),*

*• Obscure storms (with or without hail),*

*• Storms (with or without hail) organized in squall line,*

*• Severe turbulence,*

*• Severe icing,*

*• Severe icing by freezing precipitation,*

*• Strong mountain wave,*

*• Strong dust storm,*

*• Strong sand storm,*

*• Presence of volcanic ashes,*

*• Tropical cyclone,*

*• Radioactive cloud.*

***2. on request from the aircraft crew, such information may relate to :***

*- the most recent surface observations available, made at points of the remaining flight ;*

*- the planned weather for a given time slot, at one point, on one leg, or on one region ;*

*- the major meteorological events. (METARs, special inflight reports received from aircraft (special AIREPs), TRENDs, TAFs and their amendments).*

*The landing information includes the following :*

*- surface wind representative of the runway used and, when appropriate, variations of direction and variations in relation to the average wind speed given in the form of maximum and minimum values,*

*- visibility, or for some aerodromes, both for landing and take-off, the RVR of the used runway,*

*- meteorological events,*

*- cloud amount and height of the cloud layer base,*

*- for landing, pressure value representative of the touchdown area,*

*- for take-off, pressure value representative of the runway area used.*

*As applicable, the following information is provided :*

*- air and dew point temperature,*

*- remarks in plain text or using standardized abbreviations to better specify the meteorological conditions prevailing on the aerodrome and in the approach and climb areas,*

*- on request, an expected weather change (TREND and/or TAF and/or PREDEC).*

© Service de l'Information Aéronautique, France

**d) Autres services**

**Climatologie aéronautique**

Les renseignements climatologiques aéronautiques nécessaires à la planification des vols et des aérodromes sont établis pour chaque aérodrome bénéficiant d'un service météorologique. sous réserve de la disponibilité d'un minimum de 5 années de mesures récentes, sous la forme de tableaux et de résumés climatologiques d'aérodrome par le service. Ils sont fournis à la demande en s'adressant aux centres météorologiques d'aérodromes ou à la DCSC, Direction de la Climatologie et des Services Climatiques, 42, Avenue G. Coriolis - 31057 TOULOUSE CEDEX.

**Dossiers d'enquêtes aéronautiques**

Sur demande écrite du Bureau d'Enquêtes et d'Analyses pour la Sécurité de l'Aviation Civile (BEA), du Bureau Enquêtes Accidents pour la sécurité de l'aéronautique d'Etat (BEA-É) et des autorités aéronautiques, les cellules d'enquêtes aéronautiques mises en place à METEO- FRANCE réalisent les études et recherches météorologiques nécessaires à l'instruction d'accidents ou d'incidents.

**Service de réponse téléphonique 0 899 70 12 15 (2,99 € par appel + prix d'un appel).** Ce service est disponible 24h/24, en France métropolitaine, pour les usagers de l'aviation générale désirant un complément d'information pour préparer leur vol, ou si le terrain d'où ils décollent ne permet pas l'accès au réseau internet

***d) Other services***

**Aeronautical climatology**

*The aeronautical climatologic information required for flight and aerodrome scheduling is established for each aerodrome providing a meteorological service, provided that a minimum of 5 years of recent measurements is available, in the form of aerodrome weather tables and summaries, by the service. It is supplied on request to the aerodrome meteorological centers or to DCSC, Direction de la Climatologie et des Services Climatiques (42, avenue G. Coriolis - 31057 TOULOUSE CEDEX).*

***Aeronautical investigation files***

*On the written request of the bureau d'Enquêtes et Analyses pour la sécurité de l'Aviation Civile (BEA), the Bureau Enquêtes Accidents for State aeronautical safety (BEA-É) and the aeronautical authorities, aeronautical investigation units have been set up at METEO-FRANCE to conduct the meteorological studies and researches required when investigating on accidents.*

***Phone answering service 0 899 70 12 15 (2,99 € + normal rate).** This service is available 24/24 hours in metropolitan France for General air traffic users needing any additional information to prepare the flight, or if there is no access to Internet from the take-off field.*

### 3.5.5 AVIS PREALABLES EXIGES DES EXPLOITANTS

Lorsqu'un exploitant estime que le service normalement déployé par Météo-France ne répond pas pleinement à ses besoins, et qu'une assistance complémentaire ou nouvelle lui serait nécessaire, il notifie ce besoin avec un préavis suffisant au centre météorologique associé à l'aérodrome de départ.

Pour tous les systèmes automatisés de METEO-FRANCE, la mise à disposition des documents météorologiques réglementaires est conforme aux délais définis dans les documents officiels de l'OACI ou, pour ce qui concerne les produits spécifiques français, aux délais définis entre les compagnies aériennes et METEO-FRANCE dans le cadre des commissions aviation de transport et aviation légère du Conseil Supérieur de la Météorologie.

### *3.5.5 NOTIFICATION REQUIRED FROM OPERATORS*

*When an operator considers that the service normally provided by Météo-France does not fully meet its needs, and that an additional or new assistance is necessary, he notifies this need, with a sufficient prior notice, to the meteorological center associated to the departure aerodrome.*

*For all METEO-FRANCE automated systems, the statutory meteorological documents are made available within the deadlines defined in the official ICAO documents or, as concerns specific French products, within the deadlines agreed upon between the airlines and METEO-FRANCE, within the framework of the transport and general aviation committee of the Conseil Supérieur de la Météorologie (higher council of meteorology).*

### 3.5.6 COMPTES-RENDUS AIREP EXIGES DES EXPLOITANTS

Les observations d'aéronef et les comptes rendus par radiotéléphonie sont définis au chapitre 12 du règlement d'exécution (UE) N° 923/2012 de la Commission du 26 septembre 2012 établissant les règles de l'air communes et des dispositions opérationnelles relatives aux services et procédures de navigation aérienne.

Les pilotes rendent compte des observations sur les phénomènes météorologiques rencontrés pendant toute phase de vol conformément aux dispositions décrites en ENR 1.1.

### *3.5.6 AIREP REPORTS EXPECTED FROM OPERATORS*

*The conditions in which regular and special observations are required from aircraft are described in chapter 12 of Commission implementing Regulation (EU) NR 923/2012 laying down the common rules of the air and operational provisions regarding services and procedures in air navigation.*

*Thus, pilots report observations during any flight phase, according to rules described in ENR 1.1.*

© Service de l'Information Aéronautique, France

**3.5.7 SERVICE VOLMET**

Le service VOLMET n'est pas rendu.

***3.5.7 THE VOLMET SERVICE IS NOT PROVIDED***

*The VOLMET service is not provided.*

**3.5.8 SERVICE SIGMET ET AIRMET**

***3.5.8 SIGMET and AIRMET SERVICE***

| **Centre de Veille Météorologique** *Meteorological watch offices (CVM)* | **Heures de service** *Service hours (UTC)* | **Région d'information de vols concernée** *Flight information region concerned* | **Renseignements diffusés** *Broadcast information* | **Organisme desservi** *Served organization* |
|---|---|---|---|---|
| Toulouse CVM LFPW | H 24 | FIR/UIR MARSEILLE | SIGMET | LFMM : CRNA Sud-Est à / *in* Aix en Provence |
| | | FIR/UIR BORDEAUX | SIGMET | LFBB : CRNA Sud-Ouest à / *in* Bordeaux-Mérignac |
| | | FIR/UIR PARIS | SIGMET | LFFF : CRNA Nord à / *in* Athis-Mons |
| | | FIR/UIR BREST | SIGMET | LFRR : CRNA Ouest à / *in* Brest |
| | | FIR/UIR REIMS | SIGMET | LFEE : CRNA Est à / *in* Reims |

La veille météorologique en route est assurée, pour les 5 FIR/UIR métropolitaines, par le Centre de Veille Météorologique (CVM) de Toulouse qui dépend du Département Aéronautique de la Direction des Services Météorologiques (DSM/AERO) de METEO- FRANCE. Dans le cadre de cette fonction, le CVM deToulouse assure, entre autres, la production et le suivi des SIGMET.

La période de validité des messages SIGMET ne dépasse pas 4 heures. Dans le cas particulier des messages SIGMET concernant un nuage de cendres volcaniques, la période de validité est de 6 heures.

Les messages SIGMET concernant un nuage de cendres volcaniques sont fondés sur les renseignements consultatifs fournis par les VAAC de Toulouse ou de Londres.

Les renseignements AIRMET ne sont pas fournis sous forme de messages mais sont contenus dans les cartes TEMSI France basse altitude.

*For the 5 mainland French FIRs/UIRs, in-flight meteorological watch is provided by the Toulouse Meteorological Watch Office (CVM), which reports to the Département Aéronautique de la Direction des Services Météorologiques (DSM/AERO – Aeronautical Department of the Meteorological Services Office) of METEO-FRANCE. As part of its duties, the Toulouse CVM provides for production and follow-up of SIGMETs.*

*The validity period of SIGMET messages never exceeds 4 hours. In the specific case of SIGMET messages regarding a cloud of volcanic ash, the validity period is 6 hours.*

*SIGMET messages regarding a cloud of volcanic ash are based on advisory information provided by the VAACs of Toulouse or London.*

*The AIRMET information is not provided in the form of messages, but is contained in the low-altitude TEMSI charts for France instead.*

**3.5.9 AUTRES SERVICES METEOROLOGIQUES AUTOMATISÉS**

***3.5.9 OTHER AUTOMATED METEOROLOGICAL SERVICES***

**AEROWEB PRO**

***AEROWEB PRO***

Le service AEROWEB-PRO est une application web qui rend le service d'autobriefing météorologique. Réservé aux usagers aéronautiques professionnels qui doivent en accepter les conditions d'utilisation, il est disponible via un identifiant et un mot de passe à l'URL : https://aviation-pro.meteo.fr
Il permet d'accéder à tous les messages météorologiques réglementaires aéronautiques utiles dans le monde : METAR, METAR AUTO, SPECI, TAF, et tous les produits du système mondial de prévisions de zone (obtenus à partir des centres mondiaux de prévisions de zone). Il propose aussi la consultation des messages d'avertissement d'aérodrome (AD WARNING) et des prévisions de décollage (PREDEC) produits en France, et permet de visualiser l'imagerie radar, satellite et foudre pour compléter la préparation des vols.

De plus, il permet d'accéder à la documentation de vol pour chaque vol souhaité. Pour obtenir un accès à AEROWEB-PRO, les usagers aéronautiques professionnels sont invités à s'adresser, selon leur localisation géographique, aux contacts suivants :

*The AEROWEB-PRO service is a Web application which provides a service of meteorological auto-briefing. Reserved for the professional aeronautical users who have to accept conditions of use, it is available via an identifier and a password on the URL : https://aviation-pro.meteo.fr*
*He allows to reach all the useful aeronautical statutory meteorological messages in the world : METAR, METAR AUTO, SPECI, TAF, and all the products of the world system of area forecasts (obtained from the world centers of area forecasts). It also proposes the consultation of aerodrome warning messages (AD WARNING) and forecasts for take-off (PREDEC) produced in France, and allows to display the radar, satellite and lightning images to complete flight preparation.*

*Furthermore, he allows to reach the documentation of flight for every desired flight. To obtain an access to AEROWEB-PRO, the professional aeronautical users are invited to address, according to their geographical location, the following contacts :*

**AEROWEB**

AEROWEB est le service d'autobriefing météorologique dédié à l'aviation légère et accessible sur l'URL : https://aviation.meteo.fr

Ce service, accessible sur une simple inscription, est réservé aux usagers aéronautiques qui doivent accepter les conditions d'utilisation du service.

AEROWEB met à disposition toutes les informations météorologiques aéronautiques réglementaires.

***AEROWEB***

*AEROWEB is the service of meteorological auto-briefing dedicated to the light aviation and accessible on the URL : https://aviation.meteo.fr*

*This service, accessible on a simple registration, is reserved for the aeronautical users who have to accept the conditions of use of the service.*

*AEROWEB gives all the statutory aeronautical meteorological information.*

© Service de l'Information Aéronautique, France

AEROWEB permet d'accéder à tous les messages météorologiques réglementaires aéronautiques utiles dans le monde : METAR, METAR AUTO, SPECI, TAF, et tous les produits du système mondial de prévisions de zone (obtenus à partir des centres mondiaux de prévisions de zone). Il propose aussi la consultation des messages d'avertissement d'aérodrome (AD WARNING) et des prévisions de décollage (PREDEC) produits en France, et permet de visualiser l'imagerie radar, satellite pour compléter la préparation des vols.

*AEROWEB allows to reach all the useful aeronautical statutory meteorological messages in the world : METAR, METAR AUTO, SPECI, TAF, and all the products of the world system of area forecasts (obtained from the world centers of area forecasts). It also proposes the consultation of aerodrome warning messages (AD WARNING) and forecasts for take-off (PREDEC) produced in France, and allows to display the radar, satellite and lightning images to complete flight preparation.*

De nombreuses ressources documentaires sont disponibles : didacticiel d'apprentissage des codes météorologiques avec exercices, fiches détaillées sur les phénomènes météorologiques, guide aviation.

*Numerous documentary resources are available : educational software of learning of the meteorological codes with exercises, detailed index cards on the meteorological phenomena, aviation guide.*

**EXTRANETS AEROPORTS**

***AIRPORTS' EXTRANETS***

Ce service permet aux opérateurs et usagers des plateformes aéroportuaires de gérer les situations météorologiques difficiles et constitue une aide à la prise de décision collaborative sur la plate-forme.

*This service enables operators and users of airport platforms to manage difficult weather situations and provides support for collaborative decisionmaking on the platform.*

Il fait partie des services météorologiques spécifiques à rendre par Météo-France à la navigation aérienne (Cf. Annexe 4 du protocole technique DTA-MF en vigueur)

*It is one of the specific meteorological services to be provided by Météo-France to air navigation (see Annex 4 of the current technical protocol DTA-MF).*

Il s'agit d'une application basée sur le web, qui met à disposition des opérateurs de l'aéroport des informations d'observation et de prévision météorologique, à échelles spatiale et temporelle fines et rafraîchies à très haute fréquence, et ce, à des formats plus accessibles et synthétiques.

*It is a web-based application that gives airport operators meteorological observation and forecast information, at fine spatial and temporal scales and that are refreshed at very high frequency, in more accessible and synthetic formats.*

Il existe tout d'abord des extranets aéroports dits « expertisés », mis à jour en temps réel par un prévisionniste dédié, pour les cinq aéroports dits à enjeux : Paris-Charles-de-Gaulle, Paris-Orly, Lyon-St-Exupéry, Bâle-Mulhouse et Nice-Côte d'Azur.

*First, there are expert extranets, updated in real time by a dedicated forecaster, for the five so-called airports at stake : Paris-Charles-de-Gaulle, Paris-Orly, Lyon-St-Exupéry, Bâle-Mulhouse and Nice-Côte d'Azur.*

Ces extranets expertisés font partie du service météorologique de pointe rendu à ces aéroports.

*Theses expert extranets are part of the advanced weather service provided to these airports.*

Il existe également des extranets aéroports dits semi-expertisés, destinés aux autres aéroports.

*Furthermore, there are airports half-surveyed extranets, for other airports.*

Les informations qui y sont proposées sont issues principalement de la production expertisée des TAF et elles sont complétées par des sorties de modèles de prévision numérique.

*The information comes mainly from the surveyed production of TAFs and is completed by numerical weather forecast model outputs.*

## 3.5.10 SERVICES DE METEOROLOGIE DE L'ESPACE

## *3.5.10 SPACE WEATHER SERVICES*

La France fait partie, au sein d'un consortium avec l'Australie, le Canada et le Japon, des Etats ayant accepté la responsabilité de fournir l'un des centres mondiaux de météorologie de l'espace (SWXC) désignés par l'Organisation de l'Aviation Civile Internationale.

*France, in a consortium with Australia, Canada and Japan, is one of the States having accepted the responsibility to provide one of the International Civil Aviation Organization (ICAO) designated aviation Space Weather Centres (SWXC).*

La contribution de la France aux services de ce centre, dénommé ACFJ, sera rendue par un groupement constitué de Collecte Localisation Satellites (CLS), European Satellite Services Provider (ESSP), et Météo France.

*The contribution of France to the services of this centre, named ACFJ, will be by a grouping of Collecte Localisation Satellites (CLS), European Satellite Services Provider (ESSP), and Météo France.*

Les SWXC analysent les phénomènes de météorologie de l'espace (phénomènes d'origine solaire), et diffusent des renseignements consultatifs, modérés (MOD) ou sévères (SEV), concernant des impacts, observés (OBS) ou prévus (FCST), susceptibles d'affecter :

*The SWXCs monitor space weather conditions (phenomena of solar origin), and issue moderate (MOD) or severe (SEV) advisories, about observed (OBS) ou forecast (FCST) phenomena which might affect :*

a. Les radiocommunications haute fréquence (HF COM) ;

*a) high frequency radio communications (HF COM) ;*

b. Les systèmes de navigation et surveillance basés sur le GNSS (GNSS) ;

*b) global navigation satellite systems (GNSS) based navigation and surveillance systems ;*

c. Les radiations à bord des aéronefs (RADIATION) ; et

*c) on board radiation (RADIATION) ; and*

d. Les communications par satellite (SATCOM).

*d) satellite communications (SATCOM).*

Les renseignements consultatifs sur les phénomènes de météorologie de l'espace concernant l'ensemble de la route seront fournis aux exploitants et aux membres d'équipage de conduite au titre de l'information météorologique.

*Space weather advisory information relevant to the whole route will be supplied to operators and flight crew members as part of aeronautical meteorological information.*

Les zones géographiques impactées sont repérées par leurs latitudes et longitudes, en ajoutant les niveaux de vol (ABV FL) pour ce qui concerne les radiations. Des abréviations sont aussi utilisées :

*Affected geographic areas are referenced by their latitudes and longitudes, and flight levels (ABV FL) for radiation. Abbreviations are also used :*

- Hautes latitudes de l'hémisphère nord (N9000 - N6000) : HNH
- Moyennes latitudes de l'hémisphère nord (N6000 - N3000) : MNH
- Latitudes équatoriales de l'hémisphère nord (N3000 - N0000) : EQN
- Latitudes équatoriales de l'hémisphère sud (S0000 - S3000) : EQS
- Moyennes latitudes de l'hémisphère sud (S3000 - S6000) : MSH
- Hautes latitudes hémisphère sud (S6000 - S9000) : HSH

*- High latitudes northern hemisphere (N9000 - N6000) : HNH*
*- Mid latitudes northern hemisphere (N6000 - N3000) : MNH*
*- Equatorial latitudes northern hemisphere (N3000 - N0000) : EQN*
*- Equatorial latitudes southern hemisphere (S0000 - S3000) : EQS*
*- Mid latitudes southern hemisphere (S3000 - S6000) : MSH*
*- High latitudes southern hemisphere (S6000 - S9000) : HSH*

Certaines recommandations peuvent concerner tout le côté éclairé de la terre.

*Some advisories may be for the whole daylight side of Earth (daylight side).*

Un exemple de renseignement consultatif fictif est indiqué ci-dessous :

*An example of fictitious advisory is given below :*

**Tableau 2 : OBSERVATIONS ET MESSAGES D'OBSERVATIONS METEOROLOGIQUES D'AERODROMES SUR LES AERODROMES**

Après le nom de l'aérodrome et de l'indicateur d'emplacement OACI, il y a mention de la disponibilité, le cas échéant, de tableaux climatologiques d'aérodrome (1) et de résumés climatologiques d'aérodrome (2).

**(1) TABLEAUX CLIMATOLOGIQUES**

L'établissement de tableaux climatologiques d'aérodrome est subordonné à la disposition d'un minimum de 5 années de mesures récentes.

Ces tableaux peuvent comprendre les renseignements suivants :

- Valeurs moyennes, écarts type, valeurs extrêmes, moyennes des températures de l'air en surface et de la pression atmosphérique au niveau de la station ;

- Fréquence des cas où la visibilité est inférieure à des valeurs spécifiées;

- Fréquence des cas où la hauteur de la base des nuages, qui est significative du point de vue de l'exploitation, est inférieure à des valeurs spécifiées ;

- Nombres moyens mensuels de jours où les phénomènes suivants sont observés: pluie, bruine, neige, grêle, brouillard, orage.

**(2) RESUMES CLIMATOLOGIQUES**

Les résumés climatologiques sont établis à partir des mêmes données que les tableaux climatologiques. Ils donnent des renseignements mensuels et annuels relatifs aux conditions météorologiques régnant sur l'aérodrome :

- Fréquence des cas où la direction et la vitesse du vent se situent à l'intérieur d'intervalles spécifiés, aux heures indiquées ;

- Fréquence des cas où la visibilité est inférieure à des valeurs spécifiées, aux heures indiquées ;

- Fréquence des cas où la hauteur de la base de la couche de nuages couvrant plus de 4/8 est inférieure à des valeurs spécifiées, aux heures indiquées ;

- Fréquence des cas où la température sous abri se situe à l'intérieur d'intervalles spécifiés, aux heures indiquées.

**Colonne 1** : heures de présence humaine à l'aérodrome.

**Colonne 2** : types de messages d'observations météorologiques. MET REPORT (observations régulières locales destinées à la TWR ou à l'AFIS). SPECIAL (messages abrégés en langage clair soit observations spéciales locales d'aérodrome destinées à la TWR / AFIS), METAR et/ou METAR AUTO.

Rappel : En accord avec le plan régional de navigation aérienne de la région EUROPE, la production des METAR est assurée à une fréquence semi-horaire, ce qui dispense d'une production de SPECI conformément à l'Annexe 3 de l'OACI.

**Colonne 3** : équipements de mesure et lieu d'observation. (S.A : station automatique, TNL : télémètre de nuages)

*NXT ADVISORY : WILL BE ISSUED BY 20190504/0637Z=*

***Table 2 : OBSERVATIONS AND MESSAGES OF METEOROLOGICAL OBSERVATIONS OF AERODROMES ON AERODROMES***

*After the name of the aerodrome and the ICAO location indicator, there is mention of the availability, if necessary, of the aerodrome climatological tables (1) and of aerodrome climatological summaries (2).*

***1) CLIMATOLOGICAL TABLES***

*The providing of aerodrome climatological tables is subordinated at the disposal of a minimum of 5 years of recent measures.*

*These tables can include the following information :*

*- Average values, standard deviations, extreme values, average values of the on-surface air temperatures and the atmospheric pressure at the level of the station ;*

*- Frequency of the cases where the visibility is lower than specified values ;*

*- Frequency of the cases where the height of the clouds basis, which is significant from an operational point of view, is lower than specified values ;*

*- Monthly average number of days when the following phenomena are observed : rain, drizzle, snow, hail, fog, thunderstorm.*

***(2) CLIMATOLOGICAL SUMMARIES***

*The climatological summaries are established from the same data as the climatological tables. They give monthly and annual information relative to the weather conditions reigning over the aerodrome :*

*- Frequency of the cases where the direction and the wind speed are situated inside specified intervals, at the indicated hours ;*

*- Frequency of the cases where the visibility is lower than specified values, at the indicated hours ;*

*- Frequency of the cases where the height of the basis of the cloud layer covering more than 4/8 is lower than specified values, at the indicated hours ;*

*- Frequency of the cases where the shade temperature is situated inside specified intervals, at the indicated hours.*

***Column 1** : hours of human presence to the aerodrome.*

***Column 2** : types of messages of meteorological observations. MET REPORT (local regular observations intended for the TWR or for the AFIS). SPECIAL (messages abbreviated in clear language of local special aerodrome observations intended for the TWR / AFIS), METAR and/or METAR AUTO.*

*Reminder : in agreement with the regional plan of aeronautical navigation of the region EUROPE, the production of the METAR is assured with a semi-hourly frequency, what exempts from a production of SPECI according to the Appendix 3 of the ICAO.*

***Column 3** : equipments of measure and place of observation. (S.A : automatic station, TNL : clouds rangefinder)*

# GEN 3.6 RECHERCHE ET SAUVETAGE

*SEARCH AND RESCUE*

### 3.6.0 PLAN DE COORDINATION DE SAUVETAGE

### 3.6.1 SERVICES COMPETENTS CHARGÉS DU SERVICE DE RECHERCHE ET DE SAUVETAGE (SAR)

#### 3.6.1.1 Textes de référence

Les services de recherche et de sauvetage en France sont organisés conformément aux normes et pratiques recommandées de l'OACI. La terminologie internationale SAR (OACI) est adoptée notamment dans le présent document, en ce qui concerne les Télécommunications.

Les textes de référence OACI sont les suivants :

- Convention de Chicago, article 25,

- Annexe 12 - Recherche et sauvetage,

- Doc 7754 Plan de navigation aérienne - Région Europe (EUR e-ANP - vol I partie VI et vol II partie VI),

- Doc 7030, Procédures complémentaires régionales,

- Doc 9731, Manuel international de recherche et de sauvetage aéronautiques et maritimes (manuel IAMSAR - Vol I, II et III).

Les différences par rapport à l'annexe 12 OACI sont énumérées dans la partie GEN 1.7 de l'AIP.

Textes de référence balises :

- Arrêté du 21 décembre 2018 modifié relatif au codage et à l'enregistrement, aux fins de recherche et sauvetage des aéronefs, des balises de détresse fonctionnant sur 406 MHz.

- Fascicule P - 41-65 de l'OSAC «obtention d'un code, indicatif, ou adresse, spécifique aux installations radioélectriques de bord», Rév. 1 – 06/2001.

- Arrêté du 26 mars 2008 modifié relatif à l'obligation d'emport, aux fins de recherche et sauvetage des aéronefs, d'une balise de détresse fonctionnant sur 406 MHz.

#### 3.6.1.2 Le Département « Recherche et Sauvetage »

Le ministre en charge des transports et plus précisément la Direction Générale de l'Aviation Civile (DGAC) est chargée de la direction générale des services de recherche et de sauvetage des aéronefs en détresse (SAR) en collaboration étroite avec l'armée de l'Air et de l'Espace (État-major de l'Armée de l'Air et de l'Espace) et la Marine Nationale (État-major de la Marine), et avec le concours permanent des moyens du ministère des Armées ainsi que des différentes composantes "Air', "Mer', "Terre', de la Direction Générale de la Gendarmerie Nationale (DGGN), de la Direction Générale des Douanes et des Droits Indirects (DGDDI), de la Direction Générale des Affaires Maritimes, de la Pèche et de l'Aquaculture(DGAMPA) et de la Direction Générale de la Sécurité Civile et de la Gestion des Crises (DGSCGC).

Le rôle de coordinateur national est attribué au département SAR de la Direction des Services de la Navigation Aérienne de la DGAC. Cet organisme central d'études et de coordination SAR » qui comprend du personnel du ministère de l'armée de l'Air et de l'Espace, de la Direction Générale de l'Aviation Civile ainsi que, le cas échéant, du Secrétariat d'État chargé de la Mer.

### 3.6.0 RESCUE COORDINATION PLAN

### 3.6.1 COMPETENT SERVICES IN CHARGE OFTHE SEARCH AND RESCUE (SAR) SERVICE

#### 3.6.1.1 Applicable documents

In France, Search and Rescues services are organized in accordance with the ICAO's standards and recommended practices. The international SAR terminology (ICAO) is adopted, in particular in this document as regarding telecommunications.

The ICAO applicable texts are as follows :

- Chicago Convention, article 25,

- Annex 12 - Search and Rescue,

- Doc 7754, European (EUR) navigation plan, (EUR e-ANP - vol I part VI et vol II part VI),

- Doc 7030, Regional Supplementary procedures,

- Doc 9731, International aeronautical and maritime search and rescue manual (IAMSAR manual - Vol I, II and III).

Differences between French regulation and ICAO annex 12 are listed in part GEN 1.7 of the AIP.

Beacons reference texts :

- Amended by-law dated the 21st December, 2018 on coding and registering of the 406 MHz beacons, for aircraft search and rescue purposes.

- Handbook P - 41-65 of OSAC "Obtention d'un code, indicatif, ou adresse, spécifique aux installations radioélectriques de bord", 1st updated, June 2001.

- Amended by-law dated the 26th March, 2008 relating to the obligation of carrying, for aircraft search and rescue purposes, an emergency beacon operating on 406 MHz.

#### 3.6.1.2 The "Search and Rescue" Department

The minister of Transportation and more specific, the French Civil Aviation Authority (DGAC) is in charge of the general management of search and rescue services for aircraft in distress (SAR) in close cooperation with Air Force (EMAAE) Navy (EMM) and with the permanent collaboration of the Air, Land, and Naval forces, of the French Gendarmerie, of the French Customs National Administration, of the General Directorate of Maritime Affairs, fishery and aquaculture and of the Civil Protection and Crisis Management.

The role of national coordinator is assigned to "SAR Study and Coordination Section", (SAR department of the Directorate of the Air Navigation Service Provider) wich includes staff from the Armies, the French Civil Aviation Authority, and if appropriate the general secretary for the sea.

### 3.6.4 ACCORDS DE RECHERCHE ET DE SAUVETAGE

Plusieurs accords SAR existent entre la France et les Etats frontaliers.

Leur but est de permettre une coordination et une coopération aussi étroites que possible entre les organismes de Recherche et de Sauvetage concernés afin d'assurer aux opérations SAR, dans les régions frontalières voisines, toute l'efficacité nécessaire.

#### 3.6.4.1 Espagne et Italie

Accord technique tripartite franco-hispano-italien SAR MED/OCC (Méditerranée occidentale), signés à Rome le 27 octobre 1972.

#### 3.6.4.2 Suisse

Décret n°2015-95 du 30 janvier 2015 portant publication de l'accord de coopération entre le Gouvernement de la République française et le Conseil fédéral suisse relatif à la recherche et au sauvetage d'aéronefs en détresse, signé à Paris le 30 juin 2014.

Nota : des accords avec l'Allemagne et la Belgique sont en cours d'élaboration.

### 3.6.5 CONDITIONS D'UTILISATION

#### 3.6.5.1 Numéro d'urgence aéronautique : 191

**3.6.5.1a) Organisation de l'alerte aéronautique**

En France hexagonale, l'ARCC Lyon est joignable gratuitement depuis un fixe ou un mobile en composant le numéro d'urgence aéronautique 191.

*NB : Les opérateurs de téléphonie par satellite sont actuellement exclus de ces dispositions.*

**3.6.5.1b) Utilisation du numéro d'urgence aéronautique 191**

L'usage de la ligne recevant les appels par le numéro **191** est destiné exclusivement au traitement des appels d'urgence aéronautique.

**Le numéro 191 est un numéro d'appel gratuit, utilisable 24 heures sur 24 et 7 jours sur 7.**

Il est utilisable par tout usager en situation de détresse, par tout témoin direct d'un accident d'aéronef, ou par toute personne inquiète de la disparition d'un aéronef et de ses occupants.

#### 3.6.5.2 Balises de détresse

Une balise de détresse est un émetteur radio qui peut être activée automatiquement ou manuellement dans une situation d'urgence afin de demander de l'aide aux autorités de sauvetage.

Les balises de détresse à vocation aéronautique sont les ELT (Emergency Locator Beacon) ou les PLB (Personal Locator Beacon).

L'aéronef peut être équipé d'une ou plusieurs ELT, et/ou d'une ou plusieurs PLB. Dans le cas des PLB, l'utilisateur doit vérifier auprès de la Direction de la Sécurité de l'Aviation Civile (DSAC) dans quelles conditions cet emport est autorisé.

L'exploitant de l'aéronef ou le propriétaire des balises de détresse doit les déclarer et enregistrer tous les renseignements dans le Registre Français des Balises de Détresse (RFBD).

**NOTA :** le registre doit impérativement être mis à jour lors d'un changement de propriétaire ou d'exploitant.

Dans le cas des PLB, il convient de vérifier que l'usage aéronautique de la balise est bien celui mentionné dans le RFBD, **avant tout vol** . Afin de faciliter les recherches, il est fortement recommandé de remplir le champ « Remarques » permettant de préciser les informations relatives à l'aéronef (immatriculation, couleurs, aérodrome de base, etc.) et éventuellement relatives au vol prévu.

Une balise de détresse émet sur 406 MHz et sur 121.5 MHz.

**Elle ne doit être déclenchée qu'en cas de détresse.**

Le signal 406 MHz est transmis via satellite aux MCC (Mission Control Centre) du Programme COSPAS-SARSAT, puis envoyé aux services de secours.

Plus d'informations sur les balises COSPAS-SARSAT sont disponibles sur le site : https://www.cospas-sarsat.int/fr/.

Le signal 121,5 MHz n'est plus traité par COSPAS-SARSAT. Il consiste en un signal sonore pouvant être capté par les services ATS qui veillent cette fréquence ou un autre aéronef. Les sauveteurs exploitent ce signal en « homing (radioralliement) » pour localiser la balise.

### 3.6.4 SEARCH AND RESCUE AGREEMENTS

Further agreements exist between France and his neighbouring States.

The purpose is to facilitate a mutual coordination and cooperation as closely as possible between SAR services involved, in order to ensure to SAR operations in neighbouring border regions all the effectiveness needed.

#### 3.6.4.1 Spain and Italy

Tripartite Technical Agreement between French-Spanish-Italian SAR MED/OCC (western Mediterranean) signed in Roma on October 27, 1972.

#### 3.6.4.2 Swiss

Decree n°2015-95 of 30 January 2015 publishing the cooperation agreement between the Government of the French Republic and Switzerland's Federal Council on the search and rescue of aircraft in distress signed in Paris on June 30, 2014.

Note : Agreements with Germany and Belgium are being developed.

### 3.6.5 CONDITIONS OF AVAILABILITY

#### 3.6.5.1 Aeronautical emergency number : 191

**3.6.5.1a) Organisation of the aeronautical alert**

In hexagonal France, Lyon ARCC can be reached free of charge from a landline or cell phone by dialling aeronautical emergency number 191.

*NB : Mobile satellite system operators are currently excluded from these provisions.*

**3.6.5.1b) Use of the Aeronautical Emergency Number 191**

The use of the line receiving the 191 calls is intended exclusively for the treatment of aeronautical emergency calls.

**The number 191 is a toll-free number, available on a 24/7 basis.**

It is usable by any airspace user in distress, by any direct witness of an accident of aircraft, or by any person worried about the disappearance of an aircraft and its occupants.

#### 3.6.5.2 Emergency beacons

An emergency beacon is a radio transmitter that can be activated automatically or manually to summon assistance from government authorities.

Aeronautical emergency beacons are ELT (Emergency Locator Beacon) or PLB (Personal Locator Beacon).

An aircraft may be equipped with one or more ELT beacons and/or, one or more PLB beacons. In the PLB beacons case, you must check with the directorate for civil aviation safety (DSAC) about the circumstances under which this carrying is permitted.

The aircraft operator or the distresses beacons owner must record its beacons in the French register of distress beacons (RFBD).

**NOTE:** the register must be updated when there is a change of owner or operator.

In case of PLBs, the aeronautical use of the beacon must be indicated in the data base **before flying** . In order to facilitate research, it is strongly recommended that you fill in the field "Remarks" allowing to specify the information relative to the aircraft (registration, colors, base aerodrome, etc...) and possibly relative to the planned flight.

An emergency beacon transmits on 406 MHz and 121.5 MHz.

**It shall only be triggered in case of distress** .

The 406 MHz signal is transmitted via satellite to the COSPAS-SARSAT Mission Control Centre (MCC), which sends a signal to the emergency services.

More information about COSPAS-SARSAT beacons is available at: https://www.cospas-sarsat.int/fr/.

The 121.5 MHz signal is no longer processed by COSPAS-SARSAT. It is an audible signal that can be picked up by ATS services monitoring this frequency or by another aircraft. Rescuers use this signal for homing to locate the beacon.

© Service de l'Information Aéronautique, France

**3.6.5.2a) Peines encourues pour déclenchement malveillant de fausses alertes**

L'article L39-7 du Code des postes et des communications électroniques (Chapitre V : Dispositions pénales) stipule que :
« Toute personne qui, sciemment, transmet ou met en circulation, par la voie radioélectrique, des signaux ou appels de détresse, faux ou trompeurs, est punie d'un an d'emprisonnement et de 3 750 euros d'amende ou de l'une de ces deux peines seulement. »
Les appareils utilisés par le délinquant ou ses complices peuvent être confisqués.

**3.6.5.2b) Enregistrement**

L'exploitant de l'aéronef ou le propriétaire de la balise de détresse ayant un code pays France hexagonale ou Outre-mer **a l'obligation d'enregistrer** sa ou ses balises de détresse dans le RFBD et de déclarer tout changement dans l'affectation de celles-ci.

En cas de déclenchement de la balise de détresse, cela permet aux organismes en charge de la recherche et du sauvetage de corréler le code hexadécimal de la balise avec les données fournies par son propriétaire.

Une balise non ou mal enregistrée dégrade fortement l'efficacité des recherches. Par conséquent, l'enregistrement constitue une **opération obligatoire, essentielle et indispensable** .

Les données fournies doivent être complètes, exactes et à jour, notamment en cas de cession de l'aéronef ou de la balise.

L'exploitant de l'aéronef ou le propriétaire de la balise de détresse reste responsable des données inscrites dans ce registre.

**Enregistrez votre balise au code pays France hexagonale ou Outre-mer, en ligne à l'adresse suivante :**

https://registre406.cnes.fr

**3.6.5.2c) Centre Français de contrôle de la Mission Cospas-Sarsat (FMCC)**

Le Centre Français de Contrôle de la Mission Cospas-Sarsat (FMCC) est le centre de traitement et de distribution des émissions de balise de détresse. Il est situé à Toulouse dans les locaux du Centre National d'Études Spatiales (CNES).

Adresse :

FMCC COSPAS-SARSAT

Centre National d'Etudes Spatiales (CNES) – BPI 903
18, avenue Édouard Belin
31400 TOULOUSE Cedex 9 - FRANCE
RSFTA : LFIAZSZX
Courriel : fmcc@cnes.fr
Télécopie : +33 (0)5 61 27 48 78

Centre opérationnel (24/7)

Services responsables :

Direction Générale de l'Aviation Civile et Direction Générale des Affaires Maritimes de la Pêche et de l'Aquaculture

**3.6.5.2a) Penalties incurred in case of malicious activation of false alerts**

The article L39-7 of the "Code des postes et des communications électroniques" states that: (Chapter V: Penal provisions):
"Any person who, knowingly, transmits or puts into circulation, using radio means, false or deceptive distress signals or calls, is punished by one year of imprisonment and by a 3,750 euro fine or only by one of these two penalties".
The devices used by the offender or his accomplices may be seized.

**3.6.5.2b) Registration**

The aircraft operator or the owner of the emergency beacon having a country code hexagonal France or French overseas **must register** its emergency beacon(s) and record any change of the allocation of these beacons in the RFBD.

In the event of emergency beacon activation, It enables the authorities in charge of search and rescue operations to provide a link between the beacon ID 15 Hex with data provided by its owner.

The effectiveness of researches is severely degraded by the absence of registration, incomplete or erroneous registration of beacons and its associated data. Consequently, the beacon registration is **mandatory, essential and absolutely necessary** .

The data provided must be complete, accurate and up to date, especially in case of transfer of the aircraft or beacon.

The aircraft operator or the owner of the emergency beacon is at any rate responsible for the data recorded in this register.

**Register your beacon, with country code hexagonal France or French overseas, online by visiting :**

https://registre406.cnes.fr

**3.6.5.2c) French Mission Control Centre (FMCC)**

The French Mission Control Centre (FMCC) is the distress beacon transmission processing centre. It is located in Toulouse in the premises of the National Centre for Space Studies (CNES).

Postal address :

FMCC COSPAS-SARSAT

Centre National d'Etudes Spatiales (CNES) – BPI 903
18, avenue Édouard Belin
31400 TOULOUSE Cedex 9 - FRANCE

French Civil Aviation Directorate and General Directorate of Maritime Affairs, Fishery and Aquaculture

© Service de l'Information Aéronautique, France

← **3.6.5.2d) Autotest, Maintenance**

← Les autorités de surveillance, les constructeurs de balise et les fabricants d'aéronefs déterminent les tests à réaliser (types de tests, conditions, fréquences). Se reporter notamment aux manuels d'utilisation de la balise, aux documents des fabricants d'aéronefs et au document AESA référencé « SIB EASA n° 2019-09R1 du 11 septembre 2019 ». En cas de doute, se rapprocher de l'autorité nationale de surveillance française (Direction de la Sécurité de l'Aviation Civile – DSAC).

**Ces tests doivent être réalisés sans générer d'impact sur les organismes de coordination SAR et les organismes ATS** .

En conséquence, il est **strictement interdit** de tester l'émission 406 MHz des balises en mode opérationnel afin que celle-ci ne soit pas considérée comme une détresse réelle.

**Autotest**

Seule l'utilisation du dispositif intégré d'autotest (ou self-test) est autorisée dans les limites recommandées par le fabricant de balise pour ne pas impacter la durée de vie de la batterie Cet autotest permet de vérifier le fonctionnement interne de la balise et de valider sa capacité d'émission sur 406 MHz : le signal est envoyé au système COSPAS SARSAT mais n'est pas considéré comme une détresse. Il permet également de tester la capacité de transmission sur 121,5 MHz en émettant « 3 sweeps » sonores d'une durée maximale de 1,5s. Pour des informations détaillées, se référer au site internet de COSPAS/SARSAT : https://www.cospas-sarsat.int ainsi qu'au document EUROCAE ED-62B.

**Maintenance :**

Les autres fonctionnalités de la balise, notamment sa capacité de déclenchement automatique (pour l'ELT), sont testées lors des opérations de maintenance par des ateliers spécialisés.

Lors de ces opérations, des mesures d'atténuation du signal doivent être prises afin de ne pas monopoliser inutilement les ressources des services SAR.

Pour plus d'informations concernant les opérations de maintenance, se reporter aux directives de l'AESA et de la DSAC.

**En cas d'émission accidentelle (fausse alerte) à la suite d'une mauvaise manipulation de la balise, même en cas de doute, prévenir immédiatement l'ARCC Lyon au 191 et l'organisme ATS le plus proche afin d'éviter de déclencher des opérations SAR sur des fausses alertes.**

**3.6.5.2d) Self-Testing, Maintenance**

Oversight authorities, beacon manufacturers and aircraft manufacturers determine the tests to be carried out (types of tests, conditions, frequencies). Refer in particular to the beacon user manuals, aircraft manufacturers' documents and the EASA document referenced "SIB EASA No. 2019-09R1 of 11 September 2019". In case of doubt, contact the French National Oversight Authority (French Civil Aviation Safety Directorate – DSAC).

**These tests must be conducted without impacting the RCC and ATS services** .

As a result, it is **strictly forbidden** to test the 406 MHz transmission of beacons in operational mode so that it is not considered as a real distress.

**Self-Testing**

Only the use of the built-in self-test device is permitted. within the limits recommended by the beacon manufacturer so as not to impact the life of the battery. This self-test verifies the internal functioning of the beacon and validates its transmission capacity on 406 MHz: the signal is sent to the COSPAS SARSAT system but is not considered as a distress. It also allows to test the transmission capacity on 121.5 MHz by emitting "3 sound sweeps" of a maximum duration of 1.5s. For detailed information, refer to the COSPAS/SARSAT website: https://www.cospas-sarsat.int/fr/ and EUROCAE document ED-62B

**Maintenance:**

The other functionalities of the beacon, including its automatic triggering capability (for the ELT), are tested during maintenance operations by specialized workshops.

During these operations, signal attenuation measures must be taken to avoid unnecessary monopolization of SAR resources.

For more information on maintenance operations, please refer to the EASA and DSAC guidelines.

**In the event of an accidental transmission (false alert) due to improper handling of the beacon, even in case of doubt, immediately notify the ARCC Lyon on 191 and the nearest ATS service in order to avoid triggering SAR operations on false alerts.**

← **3.6.5.2e) Recyclage, transport**

← Votre balise n'est pas avionnée : si vous souhaitez la stocker, la transporter, l'expédier, ou la recycler, vérifiez que votre balise est éteinte et **retirez la batterie** du corps de la balise pour éviter que celle-ci ne se déclenche

←
←
←
←
←

**3.6.5.2e) Recycling, transport**

Your beacon is not installed on aircraft: if you want to store, transport, ship, or recycle it, make sure your beacon is turned off and **remove the battery** from the body of the beacon to prevent it from being triggered

**3.6.5.2f) Alarme intempestive**

← Chaque année, plusieurs centaines de balises sont déclenchées sans détresse réelle. Ces fausses alertes impactent lourdement les services en charge de secourir les usagers.

← Chaque usager peut aider à réduire ces fausses alertes en adoptant les bonnes pratiques décrites plus haut.

← En cas de fonctionnement intempestif, ou de doute (par exemple en cas d'atterrissage dur ayant déclenché l'ELT ou mauvaise manipulation, même quelques secondes) :
- arrêter immédiatement l'émission de la balise (lorsque celle-ci est accessible) ;

- afin d'éviter des recherches et d'accaparer inutilement les services concernés, il convient de signaler **sans délai** cette émission intempestive à l'organisme de la circulation aérienne compétent (CIV, CRNA via le BTIV, APP ou TWR) **ET** d'en informer simultanément l'ARCC Lyon en composant le 191.

**3.6.5.2f) False alarm signals**

Every year, several hundred beacons are triggered without any real distress. These false alarms have a heavy impact on the services in charge of rescuing users.

Each user can help reduce these false alarms by adopting the good practices described above

In case of untimely operation, or in case of doubt (e.g. in case of hard landing having triggered the ELT or wrong handling, even for a few seconds):
- immediately stop the beacon emission (in the case of an accessible beacon);

- in order to avoid unnecessary search operations, **immediately** notify the appropriate air traffic unit (ATS, CRNA via BTIV, APP, TWR) **AND** at the same time, contact ARCC Lyon by calling 191.

© Service de l'Information Aéronautique, France

**3.6.5.3 Communications de détresse/urgence**

**3.6.5.3a) Définitions**

- Détresse : état caractérisé par la menace d'un danger grave et imminent et par la nécessité d'une assistance immédiate ;

- Urgence : état concernant la sécurité d'un aéronef ou de tout autre véhicule, ou celle d'une personne se trouvant à bord, mais qui n'est pas caractérisé par la nécessité d'une assistance immédiate.

**3.6.5.3b) Message de Détresse / Urgence**

Un message de détresse ou d'urgence comprend :

1. le signal radiotéléphonique de détresse MAYDAY, ou d'urgence PAN PAN, prononcé, dans toutes les langues comme l'expression française “m'aider” ou “panne panne”, répété de préférence trois fois ;

2. puis, si possible dans l'ordre :

- le nom de la station à laquelle le message est adressé (si le temps disponible et les circonstances le permettent) ;

- l'indicatif d'appel de l'aéronef ;

- la nature du cas de détresse ou d'urgence ;

- la position, le niveau et le cap ;

- les intentions du commandant de bord.

**3.6.5.3c) Fréquences à utiliser**

- Message de détresse ou d'urgence : fréquence air-sol en cours d'utilisation.

- Message de détresse : peut-être émis sur la fréquence 121,5 MHz ou sur toute autre fréquence du service mobile aéronautique ou maritime si nécessaire ou souhaitable.

Les navigateurs aériens ont le plus grand intérêt à étudier à l'avance, en fonction des équipements de bord disponibles et pour chaque tronçon de route, les dispositions qu'ils seraient amenés à prendre, le cas échéant pour l'émission de messages ou de signaux d'urgence ou de détresse, ou le déclenchement du mode et du code SSR appropriés.

**3.6.5.3 Distress / emergency communications**

**3.6.5.3a) Definitions**

- Distress : condition featured by the threat of a severe and impending danger and requiring an immediate assistance ;

- Emergency : condition concerning the safety of an aircraft or any other vehicle, or safety of any people being on - board, but not requiring immediate assistance.

**3.6.5.3b) Distress / Emergency Messages**

A distress or emergency message includes :

1. the radiotelephony distress signal MAYDAY, or the radiotelephony emergency signal PAN PAN, pronounced in all areas as the French expression “m'aider” or “panne panne”, repeated preferably three times ;

2. then, if possible in the following order :

- name of the station to which the message is addressed (available time and circumstances permitting) ;

- aircraft call sign ;

- distress or emergency type ;

- position, level and heading ;

- intentions of aircraft captain.

**3.6.5.3c) Frequency to be used**

- Distress or Emergency Message : operating air-ground frequency.

- Distress message : may be transmitted on frequency 121.5 MHz or on any other frequency of the Aeronautical or Maritime Mobile Service if necessary or desirable.

The air navigators should rather forecast actions to take, for transmission of emergency or distress messages or signals, or for activation of required SSR mode and code if necessary and depending on the available airborne equipment for any route segment.

| **FRÉQUENCES UTILISABLES** - *USABLE FREQUENCIES* | | | |
|---|---|---|---|
| Fréquence - *Frequency* | de Route - *in Route* | 121.5 MHz | 2 182 kHz (1) |
| Utilisation normale | Liaison Air/Sol | Détresse internationale | Internationale Maritime |
| *Normal use* | *Ground / Air contact* | *International Distress* | *Maritime International* |

(1) Silence international : H + 00 à H + 03 et H + 30 à H + 33 / *International Silence: H + 00 to H + 03 and H + 30 to H + 33*

**3.6.5.3d) Imposition du silence**

- Lors d'un appel de détresse, le silence peut être imposé suite au message :

**Arrêtez toutes transmissions - MAYDAY**

- Lorsque la phase de détresse prend fin, fin du silence par le message :

**Trafic de détresse terminé.**

**3.6.5.3d) Imposition of silence**

- For a distress call, the silence can be required after the message :

**Stop transmitting- MAYDAY**

- When the distress phase is over, end of silence by the following message :

**Distress traffic terminated.**

**3.6.5.3e) Accusé de réception d'un message de détresse ou d'urgence**

**SI LA STATION A LAQUELLE S'ADRESSE LE PILOTE N'ACCUSE PAS RECEPTION DU MESSAGE DE DETRESSE OU D'URGENCE, TOUTE AUTRE STATION ACCUSE RECEPTION ET PORTE ASSISTANCE.**

**3.6.5.3f) Transmission d'un message « Vol normal »**

En application des dispositions SERA 10001 du Règlement d'exécution (UE) N° 923/2012 modifié, afin d'assurer une mise en œuvre efficace du service d'alerte, les aéronefs dotés de moyens appropriés de communications radio bilatérales qui bénéficient de ce service transmettent un compte rendu pendant la période de 20 à 40 minutes qui suit le dernier contact (quelle qu'ait été la raison de ce contact) simplement pour indiquer que le vol progresse conformément au plan de vol ; ce message comprendra l'identification de l'aéronef et les mots « vol normal ».

**3.6.5.3e) Acknowledgement of a distress or emergency message**

**IF THE STATION CALLED BY THE PILOT DOES NOT ACKNOWLEDGE THE DISTRESS OR EMERGENCY MESSAGE, ANY OTHER STATION SHALL ACKNOWLEDGE AND GIVE ASSISTANCE.**

**3.6.5.3f) Transmission of “Operations normal” message**

Pursuant to the SERA 10001 provisions of the amended Implementing Regulation (UE) NR 923/2012 in order to ensure the effective implementation of the alerting service, aircraft equipped with suitable two-way radio-communications which benefit from this service shall report during the period 20 to 40 minutes following the time of the last contact, whatever the purpose of such contact, merely to indicate that the flight is progressing according to plan, such report to comprise identification of the aircraft and the words “Operations normal”.

**3.6.6.2 CODES DE SIGNAUX AIR / SOL**
(Source : Annexe 12 OACI)

Les signaux suivants, exécutés par un aéronef, signifient que les signaux disposés au sol ont été compris :

- pendant le jour : l'avion balance des ailes,

- pendant la nuit : l'avion éteint et rallume deux fois ses projecteurs d'atterrissage ou, s'il n'est pas équipé, ses feux de position.

Le fait de ne pas exécuter les signaux ci-dessus signifie que le signal disposé au sol n'est pas compris.

**3.6.6.2 AIR TO GROUND SIGNALS CODE**
(Source : Annex 12 ICAO)

The following signals done by an aircraft mean that the ground signals have been understood :

- during the hours of daylight : by rocking the aircraft's wings,

- during the hours of darkness : flashing on and off twice the aircraft's landing lights or, if not so equipped, by switching on and off twice its navigation lights.

Lack of the above signal indicates that the ground signal is not understood.

# GEN 4 REDEVANCES D'AERODROME/D'HELISTATION ET DE SERVICES DE NAVIGATION AERIENNE

*CHARGES FOR AERODROMES/HELIPORTS AND AIR NAVIGATION SERVICES*

## GEN 4.1 REDEVANCES D'AERODROME / D'HELISTATION

*AERODROME / HELIPORT CHARGES*

### 4.1.1 REDEVANCES D'AERODROME

Sur les aérodromes ouverts à la circulation aérienne publique, les services publics aéroportuaires, qui sont les services rendus aux exploitants d'aéronefs et à leurs prestataires de service à l'occasion de l'usage de terrains, d'infrastructures, d'installations, de locaux et d'équipements aéroportuaires fournis par l'exploitant d'aérodrome, dans la mesure où cet usage est directement nécessaire, sur l'aérodrome, à l'exploitation des aéronefs ou à celle d'un service de transport aérien, donnent lieu à la perception de redevances.

Pour les aérodromes relevant de la compétence de l'Etat, les redevances sont fixées et recouvrées par l'exploitant de l'aérodrome, qui assure la publication de leurs tarifs. Il en est généralement de même pour les autres aérodromes. En cas de non paiement des redevances aéroportuaires, l'exploitant de l'aérodrome peut requérir la saisie conservatoire d'un aéronef exploité par le redevable ou lui appartenant. Une consultation des usagers est engagée au moins quatre mois avant l'entrée en vigueur de nouvelles conditions tarifaires.

Pour les aérodromes dont le trafic annuel moyen des trois dernières années a dépassé 100 000 passagers, les redevances comprennent notamment :

- la redevance d'atterrissage, correspondant à l'usage, par les aéronefs de plus de six tonnes, des infrastructures et équipements aéroportuaires nécessaires à l'atterrissage, au décollage, à la circulation au sol, ainsi que, le cas échéant, à des services complémentaires ; les tarifs de cette redevance sont fonction de la masse maximale certifiée au décollage de l'aéronef;

- la redevance de stationnement, correspondant à l'usage, par les aéronefs de plus de six tonnes, des infrastructures et équipements de stationnement, ainsi que, le cas échéant, à des services complémentaires ; les tarifs de cette redevance sont fonction de la durée du stationnement, des caractéristiques de l'aéronef et, le cas échéant, de celles de l'aire de stationnement ;

- la redevance par passager, correspondant à l'usage des installations aménagées pour la réception des passagers et du public, ainsi que, le cas échéant, à des services complémentaires. L'assiette de cette redevance est le nombre de passagers embarqués. Sur un même aérodrome, le tarif applicable à une même catégorie de passagers est identique pour toutes les aérogares. Toutefois, pour les aérogares mises en service après le 1er août 2005, des tarifs différenciés pourront être fixés en fonction des coûts d'investissement et d'exploitation afférents à ces aérogares et de la qualité de service ;

- la redevance pour usage des installations fixes de distribution de carburants d'aviation ; l'assiette de cette redevance, qui est due par les exploitants de ces installations, est le volume de carburant distribué.

Des redevances accessoires peuvent être instaurées pour d'autres services. Les conditions tarifaires des redevances accessoires peuvent être fixées par contrat quand elles correspondent à des services de nature particulière qui ne sont rendus qu'à certains usagers.

Pour les aérodromes de moins de 100 000 passagers, la structuration des redevances est libre.

Tout tarif des redevances peut être demandé auprès de l'exploitant de l'aérodrome.

### *4.1.1 AIRPORT FEES*

*On aerodromes open to public air traffic, the airport public services giving rise to payment of fees shall be the services rendered to aircraft operators and their service providers in the context of the use of airport land, infrastructure, facilities, premises and equipment provided by the aerodrome operator insofar as such use is directly necessary, on the aerodrome, to the operation of aircraft or of an air transportation service.*

*For aerodromes belonging to the State, fee rates shall be set and recovered by the aerodrome operator, who is responsible for tariff publication. The same applies to other aerodromes. In case of non-payment of airport fees, the aerodrome operator is allowed to require the seizure of any aircraft operated by or belonging to the debtor. A consultation of users shall be initiated at least four months before the effective date of the new rate conditions.*

*For aerodromes whose average annual traffic has exceeded 100 000 passengers for the last three years, fees include in particular :*

*- a landing fee corresponding to the use by aircraft greater than six tonnes of airport infrastructure and equipment necessary for the landing, taking-off and taxiing, as well as additional services, such as lighting, flight information and visual assistance ; the rates for such a fee are based on the certified maximum take-off weight of the aircraft ;*

*- a parking fee corresponding to the use by aircraft greater than six tonnes of parking infrastructure and equipment, as well as, if necessary, additional services; the rates for this fee are based on the parking duration, the aircraft features and the parking area features, if any ;*

*- a passenger fee corresponding to the use of facilities designed to receive passengers and the public, as well as additional services, if any. The basis of this fee is the number of departing passengers. On the same aerodrome, the price applicable to the same category of passengers is identical for all terminals. However, for terminals put into service after August 1st, 2005, differentiated tariffs may be set according to the investment and operating costs relating to such terminals and the quality of services ;*

*- a fee for use of fixed facilities for the distribution of aircraft fuel ; the basis of this fee, payable by operators of these facilities, is the volume of distributed fuel.*

*Ancillary fees may be set for other services. The pricing conditions for ancillary fees may be set pursuant to an agreement when they correspond to services of a specific nature that are rendered to some users only.*

*For aerodromes servicing less than 100 000 passengers, the fee structuring is left to the aerodrome.*

*Airport fees and charges are available from the aerodrome operator.*

## 4.1.2 TAXES

Sans préjudice de l'existence d'une majoration d'embarquement gérée par la Direction Générale des Finances Publiques, pour le compte de la collectivité de Corse (considérée comme faisant partie de la France métropolitaine), et d'une majoration pour l'outre-mer gérée par la Direction Générale des Douanes et Droits Indirects, les taxes présentées sous cette rubrique sont collectées par la Direction Générale de l'Aviation Civile. Sous réserve de règles particulières, cette dernière en assure la gestion de l'assiette, leur contrôle, ainsi que leur recouvrement suivant des procédures, garanties et sanctions applicables aux autres impôts et taxes.

### 4.1.2.1 La taxe sur le transport aérien de passagers (TTAP)

La taxe sur le transport aérien de passagers, codifiée aux articles L. 422-13 à L. 422-40 du code des impositions sur les biens et services (CIBS), est assise sur le nombre de passagers embarqués ou débarqués.

Elle comprend les quatre tarifs suivants :

- le tarif de l'aviation civile (§ 4.1.2.1.1.) ;
- le tarif de solidarité (§ 4.1.2.1.2.) ;
- le tarif de sûreté et de sécurité (§ 4.1.2.1.3.) ;
- et le tarif de péréquation aéroportuaire (§ 4.1.2.1.4.).

#### 4.1.2.1.1 Le tarif de l'aviation civile

Le tarif de l'aviation civile, du par les entreprises de transport aérien public, est affecté au Budget Annexe « Contrôle et exploitation aériens » dont la gestion est confiée à la Direction générale de l'aviation civile. Le produit de ce tarif couvre le financement des missions d'intérêt général ou de nature régalienne mises en œuvre par cette administration.

Conformément aux dispositions de l'article L. 422-21 du code des impositions sur les biens et services, ce tarif est assis sur le nombre de passagers embarqués sur le territoire français, quelles que soient les conditions tarifaires accordées par le transporteur. Sont cependant exclues de cette base d'imposition :

- les personnels dont la présence à bord est directement liée au vol considéré, notamment les membres de l'équipage assurant le vol, les agents de sûreté ou de police,
- les enfants de moins de deux ans (à la date de l'embarquement) ,
- les passagers en transit direct effectuant un arrêt momentané sur l'aéroport et repartant par le même aéronef avec un numéro de vol au départ identique au numéro de vol de l'aéronef à bord duquel ils sont arrivés,
- les passagers reprenant leur vol après un atterrissage forcé en raisons d'incidents techniques, de conditions atmosphériques défavorables ou de tout autre cas de force majeure.

Cette taxe est exigible au titre de chaque vol commercial effectué à titre onéreux. Ne sont cependant pas considérées comme vols commerciaux de transport aérien public les opérations suivantes :

- les évacuations sanitaires d'urgence comprenant l'ensemble des vols qui s'inscrivent dans le cadre d'un service médical d'urgence, notamment le transport vital de sang, d'organes ou de médicaments
- les vols locaux (ou vols circulaires), c'est-à-dire ceux dont les points de décollage et d'atterrissage sont identiques.

Par ailleurs, sont exonérés de la taxe :

- les passagers en correspondance. Est considéré comme tel le passager qui remplit les trois conditions suivantes :

a) l'arrivée a lieu par voie aérienne sur l'aéroport considéré ou sur l'un des aéroports appartenant au même système aéroportuaire desservant la même ville ou agglomération (en pratique : l'ensemble constitué par les aéroports de Paris-Charles de Gaulle, Paris-Orly et Paris-Le Bourget),

b) le délai entre les heures programmées respectives de l'arrivée et du départ n'excède pas vingt-quatre heures,

c) l'aéroport de destination finale est distinct de celui de provenance et ne fait pas partie du même système aéroportuaire.

- les passagers effectuant des vols au départ de la France non soumis, en vertu d'un accord international conclu avec un Etat dont le territoire est contigu au territoire de la France, à l'autorisation délivrée par les autorités françaises en vertu des dispositions de l'article L 6412-3 du code des transports (en pratique, cette exonération s'applique aux passagers embarqués par les transporteurs aériens au départ de l'aéroport de Bâle-Mulhouse lorsque ces vols sont effectués sous droits de trafic délivrés par la Suisse).

## *4.1.2 TAXES*

*Without prejudice to the existence of a boarding charge managed by the French Directorate-General for Public Finances (Direction Générale des Finances Publiques) on behalf of the local authorities in Corsica (considered to be part of mainland France), and a boarding charge managed by the French administration (Direction Générale des Douanes et des Droits Indirects) on behalf of overseas territories, the taxes presented under this heading are collected by the French Civil Aviation Authority (Direction Générale de l'Aviation Civile - DGAC). Although special rules apply, the authority manages the assessment base, and controls and collects the taxes following the procedures, guarantees and penalties that apply to other taxes and levies.*

### *4.1.2.1 Tax on passengers air transport*

*The tax on passengers air transport, codified in articles L. 422-13 to L. 422-40 of the French code of taxes on goods and services (CIBS), is based on the number of passengers boarded or disembarked.*

*It includes the four following rates :*

*- civil aviation rate (§ 4.1.2.1.1.) ;*

*- solidarity rate (§ 4.1.2.1.2.) ;*

*- safety and security rate (§ 4.1.2.1.3) ;*

*- and the airport equalization rate (§ 4.1.2.1.4).*

#### *4.1.2.1.1 Aviation civil rate*

*Civil aviation rate, payable by airlines, is assigned to the annexed budget "Air Control and Operation" the management of which is the responsibility of the French Civil Aviation Authority. The revenue from this rate finances missions carried out by the authority that are of general interest or that are sovereign in nature.*

*In accordance with the provisions of article L. 422-21 of the "French code des impositions sur les biens et services", this rate is based on the number of passengers boarded in French territory, regardless of the fare conditions granted by the transporter. The following are nevertheless excluded from this rate basis :*

*- personnels whose presence on board is directly related with the flight considered, more specially crew members, security or police agents*

*- children below two (on the date of boarding),*

*- direct transit passengers, performing a temporary stop on the airport and reflying the same aircraft with a departure flight number identical to the flight number of the aircraft on arrival,*

*- passengers resuming the flight after a forced stop due to technical incidents, adverse weather conditions or any other "force majeure".*

*The rate is payable for each commercial flight for valuable consideration. Nevertheless, the following operations are not considered to be commercial public air-transport flights :*

*- emergency health evacuations including any round-trip flight for the purposes of an emergency medical service, including the vital transport of blood, organs or medicines,*

*- local (or circular) flights, i.e. those with the same take-off and landing points.*

*The following are also exempted from the rate :*

*- transit passengers. A passenger is considered to be in transit if he / she fulfills the following three conditions :*

*a) he/she arrived by air at the airport concerned, or in one of the airports belonging to the same system serving the same town or conurbation (in practice, the system comprising the airports of Paris-Charles de Gaulle, Paris-Orly and Paris-Le Bourget),*

*b) the interval between the scheduled arrival and departure times does not exceed twenty-four hours,*

*c) the final destination airport is not that of departure and is not part of the same airport system.*

*- passengers taking flights leaving from France that, under an international agreement made with a State whose territory is contiguous with that of France, are not subject to the authorization issued by the French Authorities under the provisions in Article L 6412-3 of the French Transport Code (Code des Transports). (In practice, this exemption applies to passengers boarded by airlines at Basel-Mulhouse airport when their flights are conducted under traffic rights granted by Switzerland.)*

© Service de l'Information Aéronautique, France

A compter du 1er avril 2025, le tarif est de :

- 5,14 € par passager embarqué dont la destination finale se situe en France, dans un autre Etat membre de l'Union européenne, dans un autre Etat partie à l'accord sur l'Espace économique européen, ou les territoires d'un État situé à moins de 1000 km à partir de l'aérodrome national de référence de la métropôle ou des territoires ultramarins. Ces Etats sont listés selon les aérordromes de départ aux articles A. 422-7 à A. 422-7-8 du CIBS.

- 9,25 € par passager embarqué vers d'autres destinations,

L'embarquement constitue le fait générateur de la taxe.

Les entreprises de transport aérien déclarent au plus tard le dernier jour du mois qui suit le mois ou le trimestre (lorsque le montant annuel de la taxe est inférieur à 12 000 €) au cours duquel les opérations taxables ainsi que les opérations exonérées ont été effectuées. Les déclarations effectuées suivant le modèle fourni par l'administration de l'aviation civile, mentionnent le nombre de passagers en fonction de leur destination finale, le nombre de passagers exonérés en correspondance. Cette déclaration, accompagnée du paiement de la taxe due, est adressée aux comptables du budget annexe "contrôle et exploitation aériens".

A compter du 1er janvier 2026, les délais de déclaration et de paiement seront avancés au 20 du mois suivant les vols pour la TTAP et la TTAM et au 20 du deuxième mois suivant les vols pour la TNSA.

Les périodes déclaratives (périodes de vols) restent inchangées : du 1er au dernier jour du mois.

A compter du 1er janvier 2026, le seuil maximal de 12 000 € pour les déclarations trimestrielles passe à 36 000 € incluant la TTAP et la TTAM.

A NOTER : les entreprises de transport aérien public embarquant des passagers au départ de France sous autorisation délivrée par un Etat limitrophe conformément à un accord international sont redevables d'une contribution spécifique établie en vue de couvrir le financement des missions d'intérêt général déployées par la DGAC en rapport avec ce trafic, à l'exclusion des missions financées par voie de redevances pour services rendus (redevances de navigation aérienne). Cette contribution est régie par des accords spécifiques conclue entre la France et cet Etat limitrophe. En pratique, cette contribution s'applique au transport aérien public de passagers sous droit de trafic suisse opéré au départ de l'aérodrome de Bâle-Mulhouse. Le montant de la contribution, de 2,39 € en 2025, est collecté par l'aéroport qui en reverse le produit au comptable public du budget annexe « Contrôle et exploitation aériens ».

*From 1 April 2025, the rate is:*

*- 5,14 € per boarded passenger with a final destination in France, in another Member State of the European Union, in another State that is party to the agreement on the European Economic Area, or the territories of other States whose located less than 1,000 km from the national reference aerodrome of the metropolitan territory or overseas territories. Those States are listes, according to the departure aerodromes, from article A. 422-7 to article A. 422-7-8 of the CIBS.*

*- 9,25 € per boarded passenger traveling to another destination,*

*Boarding is the event triggering the tax.*

*Airlines return the figures at the latest on the last day of the month following the month or (when the annual amount of tax is less than 12,000 €) the quarter during which taxable and exempt events took place. Returns are made using the template supplied by the Civil Aviation Authority, and give the number of passengers by final destination, the number of exempted transit passengers. This return, together with the payment for the tax due, is sent to the accountants for the Annexed Budget "Air Control and Operation".*

*From January 1, 2026, the declaration and payment deadlines will be brought forward to the 20th of the month following flights for the rates of air passengers tax.*

*The reporting periods (flight periods) remain unchanged : from the 1st to the last day of the month.*

*From January 1, 2026, the € 12,000 threshold for quaterly decalarations will rise to € 36,000 including air passagers tax and air cargo transport tax.*

*Note: Public airlines boarding passengers leaving from France under an authorization delivered by a bordering State under an international agreement are liable to pay a specific contribution established to finance general interest missions related to such traffic run by the DGAC, apart from missions financed by fees for services rendered (air navigation fees). This contribution is governed by specific agreements made between France and the bordering State. In practice, it applies to public air passenger transport under Swiss traffic rights leaving from Basel-Mulhouse airport. The amount of the contribution, 2,39 € in 2025, is collected by the airport which pays the income to the public accountant for the annexed budget "air Control and Operation".*

### 4.1.2.1.2 Le tarif de solidarité

Le tarif de solidarité est collecté par le comptable du budget annexe « Contrôle et exploitation aériens » qui reverse le produit dans un premier temps à l'Agence de financement des infrastructures de transport de France (AFITF), établissement public national à caractère administratif, dans la limite d'un plafond d'affectation fixé à 270 M€, puis dans un second temps, au budget général de l'État.

La taxe sur les billets d'avion (TSBA), en vigueur depuis le 1er juillet 2006 a été remplacée par un tarif de solidarité de la taxe sur le transport aérien de passagers. Elle est désormais régie, depuis le 1er janvier 2022, par l'article L. 422-22 du code des impositions sur les biens et services. Elle est due par les entreprises de transport aérien sous réserve des mêmes exclusions que pour le tarif de l'aviation civile.

Son assiette est définie par les seuls passagers embarqués, sous les mêmes règles, exceptions et exonérations que pour la tarif de l'aviation civile. Sont, en outre, spécifiquement exonérés du tarif de solidarité les passagers embarqués au départ des collectivités de Saint-Martin et de Saint-Barthélémy, de la Nouvelle-Calédonie et de la Polynésie française.

Son tarif est fixé en fonction d'une double condition : d'une part, en fonction de la destination finale du passager (passager hors correspondance) et, d'autre part, en fonction des conditions de service commercial et de confort accordées par le transporteur voire le cas échéant au recours à un aéronef d'affaires.

À compter du 1er mars 2025, les tarifs sont déterminés selon 3 zones de destinations finales : les destinations européennes ou assimilées ; les destinations intermédiaires et les destinations lointaines. Les Etats ou territoires sont listés, en fonction de l'aérodrome national de référence, de l'article A. 422-7 à l'article A. 422-7-8 du CIBS.

Par ailleurs, à partir du 1er mars 2025, un tarif de solidarité spécifique s'applique aux vols commerciaux d'aviation d'affaires. L'aviation d'affaires correspond au transport réalisé dans le cadre d'un service aérien non régulier, à bord d'un aéronef disposant d'une configuration opérationnelle maximale en sièges passagers inférieure ou égale à 19. Le montant des tarifs varient en fonction de la destination finale (européenne ou assimilée, intermédiaire et lointaines) et de la motorisation de l'aéronef (turbopropulseur ou turboréacteur).

### *4.1.2.1.2 Solidary rate*

*The solidarity rate on air tickets is collected by the accountant for the annexed budget "air Control and Operation" which pays the income : firstly to the French Transport Financing Infrastructure Agency (AFITF in French), a national public administrative body, within the limit of an allocation ceiling set at €270 million, and secondly, to the general budget of the State.*

*This former tax on airline tickets was introduced on 1 July 2006 and has been replaced by solidarity rate of tax on air passenger transport. This rate is now governed by the article L. 422-22 of the French code des impositions sur les biens et services. It is payable by airlines companies with the same exemptions as for civil aviation rate.*

*Its assessment base is defined simply by boarded passengers, with the same rules, exceptions and exemptions as for the civil aviation rate. In addition, boarding passengers leaving from the territories of St Martin and St Barthelemy, New Caledonia and French Polynesia are specifically exempted from this rate.*

*The rate is based on both criteria: firstly, the passenger's final destination (not a transit passenger) and secondly, the terms of business and the comfort provided by the airline company or even the use of a business aircraft.*

*Since March 1, 2025, rates are determined according to three final destination zones : european or similar destination, intermediate destination, and distant destination. The States or territories are listed, depending on the national reference aerodrome, from article A. 422-7 to article A. 422-7-8 of the CIBS.*

*Moreover, from March 1, 2025, a specific solidarity rate applies to commercial business aviation flights. Business aviation corresponds to transport carried out as part of a non-scheduled air service, on board an aircraft with a maximum operational configuration of passenger seats less than or equal to 19. The amount of the rates vary depending on the final destination (European or similar, intermediate and distant) and the engine of the aircraft (turboprop or turbojet).*

© Service de l'Information Aéronautique, France

Le tarif est de 7,4 € par passager embarqué dont la destination finale se situe en France, dans un autre Etat membre de l'Union européenne, d'un autre Etat partie à l'accord sur l'Espace économique européen ou autre Etat dont le principal aérodrome desservant sa capitale est situé à moins de 1 000 kms km de l'aérodrome national de référence de la métropole ou des territoires ultramarins. Les États ou territoires situés dans un rayon de 1 000 km au départ des territoires ultramarins, en fonction de l'aérodrome de référence sont listés aux articles A.422-7 à A. 422-7-8 du CIBS.

*The rate is 7,4 € per boarded passenger with a final destination in France, in another Member State of the European Union, in another State party to the agreement on the European Economic Area, or other State whose main aerodrome serving its capital is located less than 1,000 km from the national reference aerodrome of the metropolitan territory or overseas territories. States and territories within a radius of 1,000 km from overseas territories, depending on the reference aerodrome are listed according to the departure aerodromes of article A. 422-7 to article A. 422-7-8 of the CIBS.*

Le tarif est de 15 € lorsque la destination finale du passager est dite intermédiaire c'est-à-dire se situant dans un autre État ou territoire dont le principal aérodrome de la capitale est compris entre 1 000 et 5 500 kilomètres de l'aérodrome national de référence. Ces États ou territoires sont listés, en fonction de l'aérodrome de référence, aux articles A. 422-7 à l'article A. 422-7-8 du CIBS.

*The rate is 15 € when the passenger's final destination is said to be intermediate, i. e. located in another States or territories whose main capital aerodrome is between 1,000 and 5,500 kilometers from the national reference aerodrome. Those States and territories are listed according to the departure aerodromes of article A. 422-7 to article A. 422-7-8 of the CIBS.*

Le tarif est de 40 € lorsque la destination finale du passager est dite lointaine c'est-à-dire se situant dans un autre États ou territoires dont le principal aérodrome de la capitale est situé à plus de 5 500 kilomètres de l'aérodrome national de référence. Ces États ou territoires sont listés, en fonction de l'aérodrome de référence, aux articles A. 422-7 à l'article A. 422-7-8 du CIBS.

*The rate is 40 € when the passenger's final destination is said to be distant, i.e. located in another States or territories whose main capital aerodrome is located more than 5,500 kilometers from the national reference aerodrome. Those States and territories are listed according to the departure aerodromes of article A. 422-7 to article A. 422-7-8 of the CIBS.*

Ces tarifs sont portés respectivement à 30 € pour les destinations européennes et assimilées, à 80 € pour les destinations intermédiaires, et à 120 € pour les destinations lointaines lorsque le passager peut bénéficier sans supplément de prix à bord de services auxquels l'ensemble des passagers ne peut accéder gratuitement.

*These rates are increased respectively to €30 for European and similar destinations, to €80 for intermediate destinations, and to €120 for distant destinations when the passenger can benefit at no extra cost on board from services to which all passengers cannot access free of charge.*

Pour les vols à bord d'un aéronef d'affaires avec turbopropulseur, ces tarifs sont portés respectivement à 210 € pour les destinations européennes ou assimilées, 675 € pour les destinations intermédiaires, et 1025 € pour les destinations lointaines.

*These rates are increased respectively for flights on board a business aircraft with turboprop to €210 for European or similar destinations, €675 for intermediate destinations, €1025 for distant destinations.*

Pour les vols à bord d'un aéronef d'affaires avec turboréacteur, ces tarifs sont portés respectivement à 420 € pour les destinations européennes ou assimilées, 1015 € pour les destinations intermédiaires, et 2100 € pour les destinations lointaines,

*These rates are increased respectively for the service category of aircraft with turbojet engines to €420 for European and similar destinations, €1,015 for intermediate destinations, and €2,100 for distant destinations.*

Le tarif de solidarité est déclaré et payé dans les mêmes conditions et formalités que pour le tarif de l'aviation civile.

*The solidarity rate on air tickets is declared and paid subject the same conditions and formalities as civil aviation rate.*

### 4.1.2.1.3 Le tarif de sûreté et de sécurité

### *4.1.2.1.3 The safety and security rate*

Conformément aux dispositions de l'article L. 422-23 du code des impositions sur les biens et services, le tarif de sûreté et de sécurité est perçu au profit des personnes publiques ou privées exploitant des aérodromes ou groupements d'aérodromes dont le trafic embarqué ou débarqué s'élève, en moyenne sur les trois dernières années civiles connues, à plus de 5000 unités de trafic (UDT : 1 UDT est égale à un passager ou 100 kilogrammes de fret ou de courrier).

*In accordance with the provisions of article L. 422-23 of the Internal revenue code, the rate is collected on behalf of public or private entities operating aerodromes for which the boarded or unboarded traffic amounts, during the last known civil year , to more than, 5,000 traffic units (UDT: 1 UDT equals one passenger or 100 kilograms of cargo or mail).*

Constitue un groupement d'aérodromes, au sens des dispositions de l'article L. 422-23 précité, un ensemble constitué par plusieurs aérodromes relevant soit d'une même concession ou délégation de services public, soit des dispositions de l'article L. 6323-2 du code des transports mentionnant la liste des aérodromes confiés à Aéroport de Paris.

*A group of airports in the sense of the provisions in Article L. 422-23 quoted above is a group of several airports all of which either are part of the same public-service concession or delegation or fall within the provisions in article L. 6323-2 of the French Transport Code listing the airports belonging to the Aéroports de Paris.*

Le produit de ce tarif, collecté par le comptable public du budget annexe « Contrôle et exploitation aériens », est reversé à chaque exploitant aéroportuaire pour le financement des missions d'intérêt général que la loi met à sa charge en matière de sécurité-incendie-sauvetage, de lutte contre le péril animalier, de sûreté et des mesures effectuées dans le cadre des contrôles environnementaux.

*The income from this rate is collected by the Public Accountant for the Annexed Budget "Air Control and Operation" and paid to each airport operator to finance the general-interest missions for which it is legally responsible relating to security, firefighting and rescue, countering wildlife hazards, safety, and measures in relation to environmental controls.*

Le tarif, dû par les entreprises de transport aérien public, est assis sur le nombre de passagers de chaque aérodrome éligible. Les exceptions et exclusions d'assiette sont les mêmes que celles relatives à la taxe de l'aviation civile.

*The rate is paid by public airlines and is based on the number of passengers loaded on departure from each eligible airport. The exceptions and exclusions from the rate base are the same as those for civil aviation rate.*

Pour l'année 2025, le tarif applicable sur chaque aérodrome est fixé entre les valeurs inférieures et supérieures correspondant à la classe dont il relève :

*For the year 2025, the applicable rate on each aerodrome ranges within the values corresponding to the airport class:*

| **Classe**<br>*Class* | **Unités de trafic**<br>*Traffic units* | **Tarifs par passagers**<br>*Charge per passengers* | **Tarifs par tonne de fret ou de courrier**<br>*Charge per ton of freight or mail* |
|---|---|---|---|
| 1 | A partir de / *From* 20.000.001 | De / *From* 4,3 € à / *to* 11,5 € | 1 € |
| 2 | De / *From* 5.000.001 à / *to* 20.000.000 | De / *From* 3,5 € à / *to* 9,5 € | 1 € |
| 3 | De / *From* 5.001 à / *to* 5.000.000 | De / *From* 2,6 € à / *to* 20 € | 1 € |

Un arrêté, pris par le ministre chargé du budget et le ministre chargé de l'aviation civile, fixe la liste des aérodromes et groupements d'aérodromes concernés par classe et, au sein de chaque classe, le tarif applicable pour chaque aérodrome. Depuis le 1er janvier 2025, le tarif de « sûreté et de sécurité » applicable pour chaque aérodrome ou groupement d'aérodromes est mentionné aux articles A. 422-12 à A. 422-16 du CIBS.

*A decree passed by the Minister of budget and the Minister for Civil Aviation, determines the list of aerodromes concerned by the class and, within each class, the applicable rate for each aerodrome. Since January 1, 2025, the "safety and security" rate applicable for each aerodrome or group of aerodromes is mentioned in articles A. 422-12 to A. 422-16 of the CIBS.*

© Service de l'Information Aéronautique, France

Un abattement de 72 % s'applique à tout passager en correspondance au sens des mêmes dispositions que celles prévues pour la tarif de l'aviation civile.

*A 72 % reduction applies to any transit passenger, as defined in the provisions for civil aviation rate.*

← 4.1.2.1.4 Tarif de péréquation

*4.1.2.14 Equalization rate*

← En plus de ces tarifs, s'ajoute un tarif spécifique en vue de couvrir les besoins de financement des mêmes missions précédemment citées, au bénéfice des exploitants des aérodromes de classe 3 et de tout autre aérodrome n'appartenant à aucune classe précitée. Ce tarif est déterminé par arrêté conjoint des ministres chargés du budget et de l'aviation civile, dans la limite de 1,25 € : à compter du 1er avril 2025, ce tarif est fixé à 1,25 €.

*In addition to these rates, a rate increase is collected specifically to cover the financing of the missions referred to above, and paid to operators of Class-3 airports and to any other airport not belonging to a class referred to above. The rate is defined in a joint decree from the French budget Minister and the French Minister for Civil Aviation and may not exceed 1.25 € : on 1 April 2025, it was set to 1,25 €.*

← Jusqu'au 31 décembre 2025 inclus, les entreprises assujetties aux taxes sur le transport aérien de passagers et de marchandises doivent déclarer au plus tard le dernier jour du mois qui suit le mois ou le trimestre pour lequel la déclaration est établie, les éléments nécessaires à la liquidation de la taxe : le nombre de passagers, la masse de fret et de courrier exprimée en tonnes, embarqués le mois ou le trimestre précédent sur les vols effectués au départ de chacun des aérodromes concernés le nombre de passagers en correspondance exonérés.
A compter du 1er janvier 2026, ces mêmes entreprises assujetties et redevables doivent déclarer au plus tard à la date du 20 du mois qui suit le mois ou le trimestre pour lequel la déclaration est établie, les éléments nécessaires à la liquidation de la taxe.

*Until December 31, 2025 inclusive, companies subject to the tax on air passenger transport must declare, at the latest on the last day of the month following the month or quarter for which the declaration is established, the elements necessary for the liquidation of the tax: the number of taxable passengers according to the final destination zones, the number of tonnes of freight and mail, the number of exempt connecting passengers.*
*From January 1, 2026, these same taxable and liable companies must declare, no later than the 20th of the month following the month or quarter for which the declaration is established, the elements necessary for the liquidation of the tax.*

← Cette déclaration effectuée par voie électronique, accompagnée du paiement de la taxe due sous forme de prélèvement ou de virement, est adressée aux comptables du budget annexe de l'aviation civile.

*The tax return is made online, together with a direct debit or a bank transfer paying the tax due, and is addressed to the accountants for the annexed budget for civil aviation.*

← Jusqu'au 31 décembre 2025 inclus, les entreprises de transport aérien qui ont déclaré au cours de l'année précédente un montant de taxe égal ou inférieur à 12 000 €, sont admises à souscrire, à compter du premier trimestre civil de l'année qui suit, des déclarations trimestrielles. La déclaration trimestrielle doit être souscrite, au plus, tard le dernier jour du mois qui suit le trimestre au titre duquel elle est établie.

*Until 31 December 2025 inclusive, air transport companies that have declared during the previous year a tax amount equal to or less than €12,000 are authorized to submit quarterly returns starting from the first calendar quarter of the following year. The quarterly return must be submitted no later than the last day of the month following the quarter for which it is established.*

A compter du 1er janvier 2026, les entreprises de transport aérien qui ont déclaré au cours de l'année précédente un montant cumulé de taxe sur le transport aérien de passagers et de taxe sur le transport aérien de marchandises égal ou inférieur à 36 000 € peuvent souscrire à compter du premier trimestre civil de l'année qui suit, des déclarations trimestrielles. Lorsque le montant de 36 000 € au titre des deux taxes est dépassé, les redevables déclarent mensuellement les opérations précitées.

*Starting from 1 January 2026, air transport companies that have declared during the previous year a cumulative amount of tax on the air transport of passengers and tax on the air transport of goods equal to or less than €36,000 may submit quarterly returns starting from the first calendar quarter of the following year. When the amount of €36,000 for both taxes is exceeded, taxpayers must report the aforementioned transactions monthly.*

L'établissement public franco-suisse chargé de l'exploitation de l'aéroport de Bâle-Mulhouse, régi par une convention signée par la France et la Suisse le 4 juillet 1949, a mis en place, dès juin 1999, son propre dispositif de taxe d'aéroport en des termes similaires. Son tarif est fixé par le Conseil d'administration de cet établissement public ; son produit est perçu par l'agent comptable de cet établissement public. A compter du 1er janvier 2025, ce tarif a été fixé à 9,50 € par passager (9,30 CHF) et à 4,85 € par tonne de fret ou de courrier (4,75 CHF).

*The franco-swiss public establishment responsible for operating Basel-Mulhouse airport is governed by an agreement signed by France and Switzerland on 4 July 1949. In June 1999, it implemented its own airport-tax system in similar terms. The public establishment's rates are set by its board of directors; the revenue is collected by its accounting officer. Since 1 january 2025, the rate has been set at 9,50 € (9.30 CHF) per passenger, and at 4,85€ (4.75 CHF) per tonne of freight or mail.*

Informations accessibles sur www.euroairport.com

*Informations available at www.euroairport.com*

← 4.1.2.1.5 Les règles propres à certains territoires et aérodromes

*4.1.2.1.5 Specific rules to certain territories and aerodromes*

← 4.1.2.1.5.1 Aéroport de Bâle-Mulhouse

*4.1.2.1.5.1 Basel-Mulhouse airport*

← Pour tout embarquement au départ de l'aéroport de Bâle-Mulhouse à bord d'aéronefs exploités sous couvert d'une autorisation de trafic délivrée par la Confédération suisse, les tarifs de l'aviation civile et de solidarité prévus respectivement aux 1° et 2° de l'article L. 422-20 sont remplacés par un tarif unique fixé à 2,39 €, soit 2,40 CHF à compter du 1er juillet 2023.

*For any boarding departure from Basel-Mulhouse airport on board aircraft operated under cover of a traffic authorization issued by the Swiss Confederation, the civil aviation and solidarity rates provided for in 1° and 2° respectively of article L. 422-20 are replaced by a single rate set at €2.39, or CHF 2.40 from July 1, 2023.*

← 4.1.2.1.5.2 Aéroport Paris-Charles de Gaulle

*4.1.2.1.5.2 Paris-Charles de Gaulle airport*

← A compter du 1er avril 2026, tout embarquement ou débarquement à l'aéroport Paris-Charles de Gaulle et constitutif d'un fait générateur fait l'objet, lorsqu'il ne s'agit pas d'un embarquement ou débarquement en correspondance au sens de l'article L. 422-7, d'une majoration d'un montant fixé par arrêté conjoint des ministres chargés du budget et de l'aviation civile dans la limite supérieure de 1,4 euro.

*From April 1, 2026, any boarding or disembarkation at Paris-Charles de Gaulle airport and constituting a chargeable event is subject, when it is not a connecting boarding or disembarkation within the meaning of article L. 422 -7, of an increase whose amount is fixed by joint decree of the ministers responsible for the budget and civil aviation within the upper limit of 1.4 euros.*

← 4.1.2.1.5.3 Corse

*4.1.2.1.5.3 Corsica*

← Tout embarquement ou débarquement en Corse constitutif d'un fait générateur fait l'objet d'une majoration lorsqu'un billet a été émis à titre onéreux.

*Any embarkation or disembarkation in Corsica constituting a chargeable event is subject to a tax surcharge when a ticket has been issued for valuable consideration.*

← La majoration s'ajoute au prix demandé au passager. Son exigibilité intervient lorsque se produit son fait générateur déterminé par l'embarquement ou le débarquement du passager, quelles que soient les dates d'achat et/ou de paiement du billet par le client.

*The tax surcharge is added to the price of the passenger's ticket. The charge is triggered when the passenger boards or disembarks, irrespective of the dates when the customer bought and/or paid for the ticket.*

← La majoration est due par les entreprises de transport aérien à raison du nombre de passagers embarqués ou débarqués en Corse. Sont cependant exclus de l'assiette de cette taxe :

*The tax surcharge is payable by airlines based on the number of passengers boarding or disembarking in Corsica. The following are however excluded from the scope of this tax:*

- les enfants de moins de deux ans,

*- children under two,*

- les personnes munies de titres de transport gratuits ainsi que les membres de l'équipage et le personnel de bord,

- les personnes en transit direct (c'est-à-dire, effectuant un arrêt momentané sur l'aéroport et repartant par un aéronef dont le numéro de vol au départ est identique au numéro de vol de l'aéronef à bord duquel ils sont arrivés),

- les militaires voyageant en formations constituées.

Son tarif est fixé à 4,57 € par passager embarqué ou débarqué.

La majoration est déclarée par les redevables établis en métropole ou dans un autre Etat membre de l'Union européenne en même temps que la TVA auprès des services fiscaux compétents dont ils dépendent ; la taxe est donc déclarée sur un formulaire annexe à celui utilisé pour la TVA, tantôt au mois, tantôt à l'année en fonction du régime d'imposition applicable au redevable en matière de TVA (en fonction du chiffre d'affaires effectué).

Les redevables établis hors de l'Union européenne sont tenus de faire accréditer auprès des services fiscaux un représentant fiscal, qui, à l'instar de la TVA, procèdera pour le compte et au nom de ce redevable aux obligations déclaratives et contributives.

A compter du 1er janvier 2026, les majorations seront recouvrées par la DGAC et à ce titre, elle devront être déclarées selon les mêmes modalités que les autres tarifs de la TTAP.

4.1.2.1.5.4 Outre-mer

Tout embarquement en Guadeloupe, en Guyane, en Martinique, à Mayotte ou à La Réunion constitutif d'un fait générateur fait l'objet d'une majoration lorsqu'un billet a été émis à titre onéreux.

Le montant de la majoration est déterminé par la région où se produit l'embarquement dans la limite de 4,57 €. Il peut être modulé selon la distance du vol.

### 4.1.2.2 Taxe sur le transport aérien de marchandises

La taxe sur le transport aérien de marchandises, codifiée aux articles L. 422-41 à L. 422-48 du code des impositions sur les biens et services (CIBS), est assise sur la masse de fret ou de courrier à l'exclusion des contenants (exprimée en tonne) embarqués.

Le montant de la taxe est égal au produit de la masse mensuelle des marchandises, exprimée en tonnes, par la somme des termes suivants :

- Le tarif de l'aviation civile ;

- Le tarif de sûreté et de sécurité.

4.1.2.2.1 Montant des tarifs

Le tarif de l'aviation civile de la taxe sur le transport aérien de marchandises mentionné au 1° de l'article L. 422-45 du code des impositions sur les biens et services est unique quelle que soit la destination du fret ou du courrier.

Le tarif de l'aviation civile est égal, pour la période du 1er avril 2025 au 31 mars 2026, à 1,53 € par tonne.

S'agissant du fret ou du courrier, il est appliqué un tarif unique de sûreté et de sécurité quel que soit l'aéroport d'embarquement et quelle que soit la destination du fret ou du courrier. Il est invariablement fixé à 1 € par tonne embarquée (arrondie à la tonne inférieure).

4.1.2.2.2 Personnes imposables

La taxe sur le transport aérien de marchandises est due par toute entreprise de transport aérien public, quelle que soit sa nationalité et quel que soit son statut juridique.

4.1.2.2.3 Opérations exonérées

Est exonéré de la taxe tout embarquement au départ des lieux suivants :

- l'aéroport de Bâle-Mulhouse lorsque l'embarquement est effectué à bord d'aéronef opérant des services aérien sous couvert d'une autorisation de trafic délivrée par la Confédération suisse :

- les territoires des collectivités de Polynésie française et de Nouvelle-Calédonie.

*4.1.2.2.4 Opérations imposables*

Sont imposables les opérations :

- de fret et de courrier,

- sur des vols commerciaux,

- au départ de la France, quelles que soient la nature et la configuration des plates-formes (aéroports, aérodromes, hélisurfaces, hélistations.)

- et quelle que soit leur destination.

*- people with free travel tickets and members of the crew and cabin staff,*

*- people in direct transit (i.e. stopping briefly at the airport and leaving again on an aircraft with a flight number on departure identical to that of the aircraft on which they arrived),*

*- servicemen traveling in constituted units.*

*The amount is set at 4.57 € per boarding or disembarking passenger.*

*The tax surcharge is declared to their usual tax authorities by taxpayers in mainland France or in another member State of the European Union at the same time as VAT. It is therefore declared on a form appended to the one used for VAT, either each month or each year, depending on the VAT tax regime applicable to the taxpayer (based on turnover).*

*Taxpayers outside the European Union must use a tax representative accredited by the tax services, who as for VAT will discharge the taxpayer's obligations to declare and pay the tax in its name and on its behalf.*

*From January 1, 2026, the tax surcharge will be recovered by the DGAC and as such, they must be declared according to the same conditions as the other rates of the tax on passengers air transport.*

*4.1.2.1.5.4 Overseas territories*

*Any boarding in Guadeloupe, Guyana, Martinique, Mayotte or Reunion constituting a chargeable event is subject to a tax surcharge when a ticket has been issued for valuable consideration.*

*The amount of the increase is determined by the region where boarding occurs within the limit of €4.57. It can be modulated according to the distance of the flight.*

### *4.1.2.2 Tax on air cargo transport*

*The tax on the air cargo transport, codified in articles L. 422-41 to L. 422-48 of the French "code des impositions des biens et services", is based on the mass of freight or mail excluding containers (expressed in tonnes) loaded.*

*The amount of the tax is equal to the product of the monthly mass of goods, expressed in tonnes, by the sum of the following terms:*

*- The civil aviation rate ;*

*- The safety and security rate.*

*4.1.2.2.1 Amount of rates*

*The civil aviation rate of the tax on the air transport of goods is unique regardless of the destination of the freight or the mail.*

*The civil aviation rate is equal, for the period from April 1, 2025 to March 31, 2026, to €1.53 per tonne.*

*Regarding freight or mail, a single safety and security rate is applied regardless of the airport of embarkation and regardless of the destination of the freight or mail. It is invariably set at €1 per ton loaded (rounded down to the nearest ton).*

*4.1.2.2.2 Taxable persons*

*The tax on air cargo transport is payable by any public air transport company, whatever its nationality and whatever its legal status.*

*4.1.2.2.3 Exempt transactions*

*Any boarding from the following places is exempt from tax :*

*- Basel-Mulhouse airport when boarding is carried out on board an aircraft operating air services under cover of a traffic authorization issued by the Swiss Confederation:*

*- the territories of the communities of French Polynesia and New Caledonia.*

*4.1.2.2.4 Taxable transactions*

*The following transactions are taxable:*

*- freight and mail,*

*- on commercial flights,*

*- departing from France, whatever the nature and configuration of the platforms (airports, aerodromes, helipads, helipads.)*

*- and whatever their destination.*

© Service de l'Information Aéronautique, France

4.1.2.2.5 Modalités d'imposition

Le montant de la taxe est égal au produit de la masse mensuelle des marchandises, exprimée en tonnes, par la somme des termes suivants :

1° un tarif de l'aviation civile revalorisé annuellement à concurrence du taux de l'inflation prévisionnel associé à la loi de finances de l'année ;

2° un tarif de sûreté et de sécurité propre aux aérodromes et groupements d'aérodromes et groupements d'aérodromes des classes 1 à 3 de l'article L. 6328-2 du code des transports.

Les entreprises de transport aérien déclarent au plus tard le dernier jour du mois qui suit le mois ou le trimestre (lorsque le montant annuel de la taxe est inférieur à 12 000 €) au cours duquel les opérations taxables ainsi que les opérations exonérées ont été effectuées.

Les déclarations effectuées suivant le modèle fourni par l'administration de l'aviation civile, mentionnent la masse de fret et de courrier embarqués exprimée en tonne.

Cette déclaration, accompagnée du paiement de la taxe due, est adressée aux comptables du budget annexe "Contrôle et exploitation aériens".

A compter du 1er janvier 2026, les délais de déclaration et de paiement seront avancés au 20 du mois suivants les vols pour la TTAP et la TTAM.

Les périodes déclaratives (périodes de vols) restent inchangées : du 1er au dernier jour du mois.

A compter du 1er janvier 2026, le seuil maximal de 12 000 € pour les déclarations trimestrielles passe à 36 000 € incluant la TTAP et la TTAM.

*4.1.2.2.5 Taxation terms*

*The amount of the tax is equal to the product of the monthly mass of goods, expressed in tonnes, by the sum of the following terms:*

*1° a civil aviation rate revalued annually up to the forecast rate of inflation associated with the finance law of the year;*

*2° a safety and security rate specific to aerodromes and groups of aerodromes and groups of aerodromes in classes 1 to 3 of article L. 6328-2 of the transport code.*

*The airlines make their tax returns at the latest on the last day of the month following the month or quarter during which the taxable events took place.*

*These tax returns follow the template supplied by the civil aviation authority. They state the mass of freight and mail transported during the previous month or quarter for flights leaving from mainland France.*

*The tax return is made online, together with a bank transfer paying the tax due, and is addressed to the accountants for the annexed budget for civil aviation.*

*From January 1, 2026, the declaration and payment deadlines will be brought forward to the 20th of the month following flights for passengers and cargo taxes.*

*The reporting periods (flight periods) remain unchanged: from the 1st to the last day of the month.*

*From January 1, 2026, the € 12,000 threshold for quaterly decalarations will rise to € 36,000 including air passagers tax and air cargo transport tax.*

**4.1.2.3 Taxe sur les nuisances sonores aériennes**

La taxe sur les nuisances sonores aériennes (TNSA) est recouvrée par le service de gestion des taxes aéroportuaires (SGTA, service de la DGAC) qui en reverse le produit aux exploitants des aérodromes mentionnés à l'article L. 6360-1 du code des transports, en vue de financer les travaux liés à l'insonorisation des logements des riverains qui se situent dans le périmètre des plans de gêne sonores applicable à ces aérodromes.

Cette taxe met en œuvre le principe pollueur-payeur : le montant à acquitter par les compagnies aériennes est d'autant plus élevé que l'aéronef est bruyant et qu'il décolle aux heures les plus gênantes.

La TNSA est perçue par les exploitants d'aérodromes des groupes 1 à 3 au sens de l'article L. 6360-1 du code des transports :

- pour lesquels le nombre annuel des mouvements d'aéronefs de masse maximale au décollage supérieure ou égale à 20 tonnes a dépassé vingt mille lors de l'une des cinq années civiles précédentes ;

- ou pour lequel le nombre annuel des mouvements d'aéronefs de masse maximale au décollage supérieure ou égale à deux tonnes a dépassé cinquante mille lors de l'une des cinq années civiles précédentes, si les plans d'exposition au bruit ou de gêne sonore de cet aérodrome possèdent un domaine d'intersection avec les plans d'exposition au bruit ou de gêne sonore d'un aérodrome remplissant le critère précédent (cas concernant actuellement Paris-Le Bourget).

Sont concernés en 2025, les 10 aérodromes suivants : Beauvais-Tillé, Bordeaux-Mérignac, Marseille-Provence, Nantes-Atlantique, Nice-Côte d'Azur, Paris-Charles de Gaulle, Paris-Le Bourget, Paris-Orly et Toulouse-Blagnac, Lyon-Saint Exupéry.

La TNSA est due par tout exploitant d'aéronefs ou, à défaut, leur propriétaire. Elle ne s'applique néanmoins pas aux aéronefs de masse maximale au décollage inférieure à 2 tonnes ainsi qu'aux aéronefs d'Etat ou participant à des missions de protection civile ou de lutte contre l'incendie.

Le fait générateur de la taxe est constitué par le décollage d'aéronefs sur les aérodromes concernés.

L'assiette de la taxe est définie par le logarithme décimal de la masse maximale au décollage de l'aéronef, auquel s'applique des coefficients de modulations en fonction des caractéristiques acoustiques des aéronefs utilisés et de l'heure de décollage (facteurs qui sont pris en compte par l'application d'un coefficient de modulation dans un rapport de 0,5 à 120).

Sur cette assiette est appliquée un tarif propre à chaque aérodrome, tel que ce tarif est fixé par un arrêté conjoint des ministres chargés du budget et de l'aviation civile (pour chaque aérodrome, le tarif est établi en fonction des besoins de financement locaux).

Le tarif de la taxe est fixé par arrêté conjoint des ministres chargés du budget et de l'aviation civile, pour chaque aérodrome éligible, entre les limites inférieures et supérieures déterminées par l'article L. 422-54 du code des impositions sur les biens et services pour chaque groupe dont relève l'aérodrome concerné :

Groupe 1 : aérodromes Nantes-Atlantique de Paris-Charles de Gaulle, Paris-Orly et Paris-Le Bourget : de 20 à 75 € ;

Groupe 2 : aérodrome de Toulouse-Blagnac : de 10 à 20 € ;

***4.1.2.3 Tax on air transport noise pollution***

*The French tax on air transport noise pollution (Taxe sur les nuisances sonores aériennes - TNSA) is collected by the airport tax management service (SGTA) which pays the revenue to operators of airports meeting certain eligibility criteria (mentioned in article L. 6360-1 of the air transport code), in order to finance the soundproofing of nearby housing located within the boundary of the noise action plans that apply to these airports.*

*It is based on the "polluter pays" principle and is intended as restitution: the noisier the aircraft, and the more unsocial the hour it takes off, the higher is the rate.*

*The TNSA is collected by AD managers of groups 1 to 3 according to art. L. 6360-1 of the transport code :*

*- the annual number of take-offs by aircrafts - whose the maximum take-off mass (MTOM) is greater than or equal to 20 tons - exceeds 20,000 over one of the previous five calendar years ;*

*- or the annual number of aircraft movements - whose maximum take-off mass (MTOM) is at least two metric tons - has exceeded 50,000 movements over one of the five previous calendar years, and for which the "Noise exposure plan (PEB in France)" or "The Noise Disturbance Plan" (PGS in France)" intersects the "PEB" or "PGS" of another aerodrome that gathers all the characteristics defined in the previous paragraph (now Paris-Le Bourget airport is only concerned).*

*It applied to the following 10 airports in 2025 : Beauvais-Tillé, Bordeaux-Mérignac, Marseille-Provence, Nantes-Atlantique, Nice-Côte d'Azur, Paris-Charles de Gaulle, Paris-Le Bourget, Paris-Orly and Toulouse-Blagnac, Lyon-Saint Exupéry.*

*The TNSA is payable by all aircraft operators, or, failing that, their owners. Are not taxable aircraft whose maximum take-off mass (MTOM) is less than two tons; state-owned aircraft or those used for civilian rescue or firefighting.*

*The tariffable event for the tax is each take off of the aircraft from one of the aerodrome is subject to the tax.*

*The tax base is defined as the decimal logarithm of the aircraft's maximum take-off mass, adjusted for the noise characteristics of the aircraft used and the take-off time. These factors are taken into account by multiplying the initial value by a modulation coefficient of between 0.5 and 120.*

*The resulting figure is multiplied by a tax rate specific to each airport, determined by a joint decree from the French budget Minister and the French Minister of civil aviation. (The rate is set for each airport depending on the local financing needs.)*

*The rate is determined for each eligible airport by a joint decree from the French budget Minister and the French Minister of civil aviation. Lower and upper limits for each group of airports are defined in article L. 422-54 of the French code des impositions sur les biens et services :*

*Group 1: Paris-Charles de Gaulle, Paris-Orly, Paris-Le Bourget and Nantes-Atlantique airports: between 20 € and 75 €;*

*Group 2: Toulouse-Blagnac airports: between 10 € and 20 €;*

Groupe 3 : tout autre aérodrome dont le trafic excède le seuil légal précité : de 0 à 10 €.

La TNSA est déclarée au plus tard le dernier jour du deuxième mois qui suit le mois ou le trimestre au titre duquel les opérations taxables ont eu lieu.

Cette déclaration, conforme au modèle prescrit par l'administration, est effectuée par voie électronique et adressée, concomitamment à son paiement (par virement) au comptable public du budget annexe « Contrôle et exploitation aériens ».

A compter du 1er janvier 2026, les délais de déclaration et de paiement seront avancés au 20 du deuxième mois suivant les vols.

Les périodes déclaratives (périodes de vols) restent inchangées : du 1er au dernier jour du mois.

*Group 3: all other airports with traffic exceeding the legal threshold quoted above: between 0 € and 10 €.*

*The TNSA is declared at the latest on the last day of the second month following the month or quarter in which the taxable events took place.*

*The declaration, following the template required by the authorities, is made on line and addressed, together with the payment (by bank transfer) to the Public Accountant for the annexed budget "Air Control and Operation".*

*From January 1, 2026, the declaration and payment deadlines will be brought forward to the 20th of the second month following flights.*

*The reporting periods (flight periods) remain unchanged: from the 1st to the last day of the month.*

© Service de l'Information Aéronautique, France

# GEN 4.2 REDEVANCE DE ROUTE ET REDEVANCE POUR SERVICES TERMINAUX

*ROUTE CHARGE AND TERMINAL NAVIGATION CHARGE*

### 4.2.1 LA REDEVANCE DE ROUTE

#### 4.2.1.1 Définition

*Code de l'Aviation Civile Article R.134-1*

L'usage des installations et services en-route de navigation aérienne mis en œuvre par l'Etat dans l'espace aérien relevant de sa responsabilité au-dessus du territoire métropolitain et dans son voisinage donne lieu à rémunération sous forme d'une redevance, dite redevance de route.

Un arrêté conjoint du ministre chargé des finances et du ministre chargé de l'aviation civile assure la publication des règles relatives à la redevance pour services rendus, dite redevance de route, mentionnées à l'alinéa précédent.

#### 4.2.1.2 Comment est-elle calculée ?

*Arrêté du 21 décembre 2015 relatif aux dispositions générales des redevances de navigation aérienne, article 1 et 3*

La redevance (R) pour un vol donné dans une zone tarifaire donnée est égale au produit du taux unitaire (t) établi pour cette zone tarifaire et des unités de services (UDS) pour le vol concerné :

$$R = t \times UDS$$

Pour un vol donné, le nombre d'unités de services pour la redevance de route est égal au produit des coefficients « distance » et « poids » de l'aéronef en question.

#### 42121 Calcul du coefficient distance

*Arrêté du 21 décembre 2015 relatif aux dispositions générales des redevances de navigation aérienne, article 3 – Conditions d'application du système de redevances de route, article 5*

Le coefficient « distance » (d) est égal au quotient par cent du nombre mesurant la distance orthodromique, exprimée en kilomètres, entre le point d'entrée et le point de sortie de la zone tarifaire, selon la route réelle suivie telle qu'enregistrée par le gestionnaire de réseau.

Si les points d'entrée et de sortie d'un vol situés dans la zone tarifaire sont identiques, le coefficient «distance» est égal à la distance orthodromique entre ces points et le point le plus éloigné du plan de vol, multipliée par deux.

La distance à prendre en compte est diminuée de vingt kilomètres pour chaque décollage et atterrissage effectué dans la zone tarifaire.

#### 421211 Formule de la distance orthodromique

Soit deux points de la surface de la terre A et B de coordonnées géographiques :

latitude (A) = lat (A) et longitude (A) = long (A) respectivement latitude (B) = lat (B) et longitude (B) = long (B), et soit long = différence de longitude de B à A, on appelle distance orthodromique de A à B, et on la note ortho (A,B) :
ortho(A,B) = 60* arcos [ cos(lat (A)) * cos(lat (B)) * cos(long) + sin(lat (A)) * sin(lat (B)) ]

La distance orthodromique est obtenue en milles nautiques.

#### 42122 Calcul du coefficient poids

*Arrêté du 21 décembre 2015 relatif aux dispositions générales des redevances de navigation aérienne, article 3 – Conditions d'application du système de redevances de route, article 6*

Le coefficient « poids » (p), exprimé par un nombre comportant deux décimales, est égal à la racine carrée du quotient par cinquante du nombre arrondi à la première décimale correspondant à la masse maximale certifiée au décollage (MMD) de l'aéronef, exprimée en tonnes métriques telle qu'elle figure dans le manuel de vol de l'aéronef.

$$p = \sqrt{\frac{MMD}{50}}$$

D'où la formule générale de calcul de la redevance de route :

### *4.2.1 ROUTE CHARGE*

#### *4.2.1.1 Definition*

*Civil Aviation Code article R.134-1*

*The use of en-route air navigation facilities and services provided by the State in the airspace under its responsibility above and in the vicinity of the metropolitan territory shall be remunerated in the form of a charge, known as a route charge.*

*A joint order from the Minister in charge of Civil Aviation and the Minister in charge of Budget ensures the publication of the regulations relating to the charge for services provided, known as the route charge, mentioned in the foregoing paragraph.*

#### *4.2.1.2 How is it calculated?*

*Order of 21st December 2015 relating to general provisions of the air navigation charges, article 1 and 3*

*The charge (C) for a given flight in a given charging zone is equal to the product of the unit rate (u) established for this charging zone and service units (SU) for such a flight:*

$$C = u \times SU$$

*For a given flight, the number of service units (SU) for the route charge is equal to the product of the "distance" and "weight" factors of the aircraft.*

#### *42121 Calculation of the distance factor*

*Order of 21st December 2015 relating to general provisions of the air navigation charges, article 3 – Conditions of application of the route charges system, article 5*

*The "distance" factor (d) shall be equal to the division by one hundred of the number of kilometres in the great circle distance between the entry point and the exit point in the charging zone, in accordance with the real route such as registered by the Air Traffic Flow Management.*

*If the entry and exit points of a flight located in the charging zone are identical, the "distance" factor shall be equal to the great circle distance between those points and the most far away point of the flight plan, multiplied by two.*

*The distance to be taken into account shall be reduced by 20 kilometres for each take-off and landing in the charging zone.*

#### *421211 Formula of the great circle distance*

*Let A and B, two points of the surface of the Earth of geographic coordinates :*

*latitude (A) = lat (A) and longitude (A) = long (A) respectively latitude (B) = lat (b) and longitude (b) = long (B), and long = difference in longitude between B and A, the great circle distance from A to B, noted ortho (A, B) is equal to:*
*ortho (A, B) = 60 * arcos [cos (lat (A)) * cos (lat (B)) * cos (long) + sin (lat(A)) * sin (lat (B))]*

*The great circle distance is obtained in nautical miles.*

#### *42122 Calculation of the weight factor*

*Order of 21st December 2015 relating to general provisions of the air navigation charges, article 3 – Conditions of application of the route charges system, article 6*

*The "weight" factor (w), expressed as a figure taken to two decimals, shall be the square root of the division by fifty of the number rounded off the first decimal corresponding to the maximum certificated take-off weight (MTOW) of the aircraft, expressed in metric tons as shown in the flight manual of the aircraft.*

$$w = \sqrt{\frac{MTOW}{50}}$$

*Hence the calculation of the charge is :*

$$R = t \times \sqrt{\frac{MMD}{50}} \times d$$

Lorsque cette masse est inconnue, le coefficient « poids » est établi sur la base de la masse de la version la plus lourde du type de cet aéronef censée exister. Lorsqu'il existe plusieurs masses maximales au décollage certifiées pour un même aéronef, il est établi sur la base de la masse maximale au décollage la plus élevée.

Les exploitants d'aéronefs déclarent la composition de leur flotte et la masse maximale certifiée au décollage de chacun de leurs aéronefs à l'organisme chargé de la facturation dès qu'une modification survient et au moins une fois par an.

**4.2.1.2.3 Le taux unitaire**

Le taux unitaire de la redevance de route est fixé annuellement par arrêté conjoint du ministre chargé des transports et du ministre chargé des comptes publics. Il est publié au Journal officiel et peut être consulté sur le site Légifrance (https://www.legifrance.gouv.fr) sur le site d'Eurocontrol (https://www.eurocontrol.int) et dans le Guide des usagers publié sur le site du ministère chargé des transports :

https://www.ecologie.gouv.fr/redevances-navigation-aerienne

**4.2.1.3 Quels sont les vols exonérés ?**

*Arrêté du 21 décembre 2015 relatif aux dispositions générales des redevances de navigation aérienne, article 9*

Sont exonérés des redevances de navigation aérienne :

a. les vols effectués par des aéronefs dont la masse maximale au décollage autorisée est inférieure à deux tonnes métriques ;

b. les vols mixtes VFR/IFR dans les zones tarifaires dans lesquelles ils sont effectués exclusivement en VFR ;

c. les vols effectués exclusivement pour transporter, en mission officielle, les monarques régnants et leur proche famille, les chefs d'État, les chefs de gouvernement et les ministres des gouvernements ; dans tous les cas, l'exonération doit être corroborée par une indication appropriée du statut ou par une remarque adéquate sur le plan de vol ;

d. les vols de recherche et de sauvetage autorisés par l'organisme compétent adéquat ;

e. les vols militaires de l'État français et ceux des États ayant conclu avec la France des accords de réciprocité ;

f. les vols d'entraînement effectués exclusivement aux fins d'obtention d'une licence, ou d'une évaluation dans le cas du personnel navigant technique, lorsque cela est corroboré par une remarque adéquate sur le plan de vol ; les vols doivent être effectués exclusivement à l'intérieur de la zone tarifaire concernée et ne doivent pas servir au transport de passagers ou de marchandises, ni pour la mise en place ou le convoyage des aéronefs ;

g. les vols effectués exclusivement aux fins du contrôle ou d'essais d'équipements utilisés ou devant être utilisés comme aides au sol pour la navigation aérienne, à l'exclusion des vols de mise en place effectués par les aéronefs concernés ;

h. les vols se terminant à l'aéroport d'où l'aéronef a décollé et au cours desquels aucun atterrissage intermédiaire n'a été effectué (vols circulaires) ;

i. les vols VFR ;

j. les vols effectués par les douanes et la police.

**4.2.1.4 Facturation**

Les factures de redevance de route sont émises en milieu de mois par Eurocontrol et portent sur les vols du mois précédent. Chaque facture correspond à une période de vol d'un mois. Elle est accompagnée d'un relevé de vols (pro forma). Le relevé pro forma indique, par ordre chronologique, les vols pour lesquels des redevances de route ont été facturées. Pour chaque vol, le document indique le montant total de la redevance de route et, le cas échéant, le montant à déduire au titre des exonérations applicables. La somme nette des redevances figurant au bas du relevé pro forma (vols exonérés déjà déduits) est égale au montant des redevances de route comme indiqué sur la facture.

**4.2.1.5 Conditions de paiement de la RR**

*Condition d'application du système de redevances de route, annexe 2, clause 1*

$$C = t \times \sqrt{\frac{MTOW}{50}} \times d$$

*When this weight is unknown, the "weight" factor is calculated by taking the weight of the heaviest aircraft of the same type known to exist. When an aircraft has multiple certified maximum take-off weights, the weight factor shall be established on the basis of the highest maximum take-off weight.*

*Aircraft operators shall declare the composition of their fleet and the maximum certified take-off weight of each of their aircraft to the organisation responsible for invoicing as soon as a change occurs and at least once a year.*

***4.2.1.2.3 The unit rate***

*The unit rate of route charge is set annually by joint order of the Minister responsible for transport and the Minister responsible for public accounts. It can be consulted on the Légifrance website (https://www.legifrance.gouv.fr), on the Eurocontrol website (https://www.eurocontrol.int) or on the User's guide published on the website of the Minister responsible for transports :*

*https://www.ecologie.gouv.fr/en/air-navigation-charges*

***4.2.1.3 Exemptions***

*Order of 21st December 2015 relating to general provisions of the air navigation charges, article 9*

*The following flights are exempted from the payment of charges :*

*a. flights performed by aircraft of which the maximum take-off weight authorised is less than two (2) metric tons ;*

*b. mixed VFR/IFR flights in the charging zone where operated exclusively in VFR ;*

*c. flights performed exclusively for the transport, on official mission, of the reigning Monarch and his/her immediate family, Heads of State, Heads of Government, and Government Ministers. In all cases, this must be substantiated by the appropriate status indicator or remark on the flight plan ;*

*d. search and rescue flights authorised by the appropriate relevant body ;*

*e. military flights performed by military aircraft from French State and from states which have been subscribed a reciprocity agreement ;*

*f. training flights performed exclusively for the purpose of obtaining a licence, or a rating in the case of cockpit flight crew, and where this is substantiated by an appropriate remark on the flight plan. Flights must be performed solely within this charging zone. Flights must not serve for the transport of passengers and/or cargo, nor for positioning or ferrying of the aircraft ;*

*g. flights performed exclusively for the purpose of checking or testing equipment used or intended to be used as ground aids to air navigation, excluding positioning flights by the aircraft concerned ;*

*h. flights terminating at the aerodrome from which the aircraft has taken off and during which no intermediate landing has been made (circular flights) ;*

*i. VFR flights ;*

*j. customs and police flights.*

***4.2.1.4 Billing***

*The bills for route charges are issued by Eurocontrol in the middle of the month and relate to flights of the previous month. Each bill corresponds to a one-month flight period. It is accompanied by a Pro Forma statement. The Pro Forma statement lists, in chronological order, the flights for which route charges have been billed. For each flight the document shows the total amount of the route charge and the amount to be deducted in respect of applicable exemptions, if any. The net sum of the charges shown at the bottom of the Pro Forma statement (exempted flights already deducted) is equal to the amount of route charges as shown on the bill.*

***4.2.1.5 Terms of payment for the route charge***

*Conditions of application of the route charges system, annex 2, clause 1*

© Service de l'Information Aéronautique, France

Les montants facturés sont payables au siège d'Eurocontrol à Bruxelles.

Eurocontrol considère toutefois comme libératoires les paiements effectués à ses comptes auprès des établissements bancaires désignés par les organes compétents du système de redevances de route dans les États.

Le montant de la redevance est dû à la date de réalisation du vol. Le paiement doit être reçu par Eurocontrol dans les 30 jours suivant la date de facturation, au plus tard à la date d'exigibilité indiquée sur la facture.

*Condition d'application du système de redevances de route, annexe 2, clause 2*

Hormis le cas prévu au paragraphe 2 de la présente clause, les montants des redevances doivent être acquittés en euros.

Si le paiement est effectué à l'établissement bancaire désigné situé dans un État contractant, les usagers ressortissants de cet État peuvent s'acquitter en monnaie nationale convertible dudit État des montants des redevances qui leur sont facturés.

S'il est fait usage de la faculté visée au paragraphe qui précède, la conversion en monnaie nationale des montants en euros s'effectue au taux de change journalier de la date de valeur et du lieu de paiement pour les transactions commerciales.

*Condition d'application du système de redevances de route, annexe 2, clause 3*

Le paiement est réputé reçu par Eurocontrol à la date de valeur à laquelle les montants dus ont été crédités sur un compte bancaire désigné par Eurocontrol. La date de valeur est celle à laquelle Eurocontrol peut utiliser les fonds. Les frais bancaires relatifs au paiement des factures d'EUROCONTROL sont pris en charge par les usagers de l'espace aérien.

*Condition d'application du système de redevances de route, annexe 2, clause 4*

Les paiements doivent être assortis d'une indication des références, dates et montants en euros des factures réglées et des notes de crédit déduites. La nécessité d'indiquer les montants en euros des factures vaut également pour les usagers utilisant la possibilité de payer en monnaie nationale.

Lorsqu'un paiement n'est pas accompagné des indications visées au paragraphe 1 ci-dessus pour permettre son affectation à une ou des factures spécifiques, Eurocontrol affectera le paiement :

- aux plus anciennes des factures impayées et ensuite ;
- aux intérêts de retard.

*The amounts billed shall be payable at Eurocontrol's Headquarters in Brussels.*

*Eurocontrol will nevertheless consider payment into the accounts opened in its name with banking establishments in the Contracting or other States designated by the competent bodies of the Route Charges System as a discharge of the payer's liability.*

*The amount of the charge is due on the date of performance of the flight. The latest value date by which payment must be received by Eurocontrol shall be shown on the bill and is 30 days from the date of the bill.*

*Conditions of application of the route charges system, annex 2, clause 2*

*Except as provided in paragraph 2 of this clause, the amount of the charge shall be paid in euros.*

*Any user who is a national of a contracting State may, whenever payment is made by him into a designated banking establishment situated in the State of which he is a national, discharge the debt in the convertible currency of that State.*

*When a user avails himself of the facility referred to in the foregoing paragraph, the conversion into national currency of the euro amount shall be effected at the daily exchange rate used for commercial transactions for the value date and place of payment.*

*Conditions of application of the route charges system, annex 2, clause 3*

*Payment shall be deemed to have been received by Eurocontrol on the value date on which the amount due was credited into a designated bank account of Eurocontrol. The value date shall be the date on which Eurocontrol can use the funds. Bank charges in relation to the payment of Eurocontrol bills shall be borne by airspace user.*

*Conditions of application of the route charges system, annex 2, clause 4*

*Payments shall be accompanied by a statement giving the references, dates and Euro amounts in respect of bills paid and of any credit notes deducted. The requirement to show the amounts of bills in Euro shall apply also to users availing themselves of the facility to pay in national currency.*

*When a payment is not accompanied by the details specified in paragraph 1 above so as to allow its application to a specific bill or bills, Eurocontrol will apply the payment :*

*- first to the oldest bills unpaid, and then*
*- to the interest on late payment.*

### 4.2.15.1 Réclamations

*Condition d'application du système de redevances de route, annexe 2, clause 5*

Toute réclamation relative à une facture doit être adressée à Eurocontrol par écrit ou par moyen électronique préalablement agréé par Eurocontrol. La date limite à laquelle la réclamation doit parvenir à Eurocontrol, fixée à 60 jours à compter de la date de la facture, est indiquée sur cette dernière.

La date de dépôt des réclamations est la date de leur réception par Eurocontrol.

Les réclamations, dont l'objet doit être clairement précisé, doivent être accompagnées des pièces justificatives appropriées.

Le dépôt d'une réclamation par un usager n'autorise pas celui-ci à porter le montant contesté en déduction de la facture en cause, à moins qu'Eurocontrol ne l'y ait autorisé.

Si Eurocontrol et un usager sont débiteur et créancier l'un de l'autre, aucun paiement compensatoire ne peut être effectué sans l'accord préalable d'Eurocontrol.

### 4.2.15.1 *Claims*

*Conditions of application of the route charges system, annex 2, clause 5*

*Claims against bills must be submitted to Eurocontrol in writing or by an electronic medium previously approved by Eurocontrol. The latest date by which claims must be received by Eurocontrol is 60 days from the date of the bill and is shown on the bill.*

*The date of submission of claims shall be the date on which they are received by Eurocontrol.*

*Claims must be detailed and should be accompanied by any relevant supporting evidence.*

*Submission of a claim by a user shall not entitle him to make any deduction from the relevant bill unless so authorised by Eurocontrol.*

*When Eurocontrol and a user are mutually debtor and creditor no compensation payments shall be effected without Eurocontrol's prior agreement.*

### 4.2.15.2 Pénalités

*Condition d'application du système de redevances de route, annexe 2, clause 6*

Toute redevance qui n'a pas été acquittée à la date d'exigibilité est majorée d'un intérêt de retard à un taux décidé par les organes compétents et publié par les États contractants conformément aux dispositions de l'Article 10 des Conditions d'application. Cet intérêt, dit de retard, est un intérêt simple calculé au jour le jour sur le montant restant dû.

Cet intérêt est calculé et facturé en euros.

### 4.2.15.2 *Penalties*

*Conditions of application of the route charges system, annex 2, clause 6*

*Any charge which has not been paid by the latest date for payment shall be increased by the addition thereto of interest at a rate decided by the competent bodies, and published by the Contracting States in accordance with Article 10 of the Conditions of Application. The interest, entitled Interest on Late Payment, shall be simple interest calculated from day to day on the unpaid overdue amount.*

*The interest will be calculated and billed in euros.*

Le taux d'intérêt de retard applicable à la redevance de route est fixé annuellement par arrêté conjoint du ministre chargé des transports et du ministre chargé des comptes publics. Il est publié au Journal officiel et peut être consulté sur le site Légifrance (https://www.legifrance.gouv.fr) sur le site d'Eurocontrol (https://www.eurocontrol.int) et dans le Guide des usagers publié sur le site du ministère chargé des transports :

https://www.ecologie.gouv.fr/redevances-navigation-aerienne

*The interest rate imposed on late payment of the route charges is set annually by joint order of the Minister responsible for transport and the Minister responsible for public accounts. It can be consulted on the Légifrance website (https://www.legifrance.gouv.fr), on the Eurocontrol website (https://www.eurocontrol.int) or on the User's guide published on the website of the Minister responsible for transports :*

*https://www.ecologie.gouv.fr/en/air-navigation-charges*

**4.2.1.5.3 Mesures de recouvrement**

***4.2.1.5.3 Enforcement measures***

*Arrêté du 21 décembre 2015 relatif aux dispositions générales des redevances de navigation aérienne, annexe 3, clause 7*

Lorsque le débiteur ne s'est pas acquitté de la somme due, celle-ci peut faire l'objet d'un recouvrement forcé.

Les mesures à cet effet peuvent comprendre le déni de services, la rétention d'aéronefs ou d'autres mesures d'exécution conformes à la législation en vigueur.

Code des transports, article L6123-2, ordonnance n° 2010-1307 du 28 octobre 2010 article 5.

Après mise en demeure infructueuse du redevable de régulariser sa situation, la saisie conservatoire d'un aéronef exploité par le redevable ou lui appartenant peut être requise auprès du juge du lieu d'exécution de la mesure par les autorités et dans les situations suivantes : le ministre chargé des transports, en cas de non-paiement ou de paiement insuffisant de la redevance de route ou de la redevance pour services terminaux de la circulation aérienne.

L'ordonnance du juge de l'exécution est transmise aux autorités responsables de la circulation aérienne de l'aérodrome aux fins d'immobilisation de l'aéronef. L'ordonnance est notifiée au redevable et au propriétaire de l'aéronef lorsque le redevable est l'exploitant.

Les frais entraînés par la saisie conservatoire sont à la charge du redevable.

Le paiement des sommes dues entraîne la mainlevée de la saisie conservatoire.

Décret n° 2018-1274 du 26 décembre 2018 relatif aux redevances des services de navigation aérienne, article R.134-7-VII

Le ministre chargé de l'aviation civile peut décider de suspendre les services de navigation aérienne à l'encontre de tout usager qui n'a pas acquitté les redevances dues. Cette décision est prise à la demande du comptable du budget annexe "Contrôle et exploitation aériens".

A défaut du paiement total de la dette, ou à défaut de la conclusion d'un plan d'apurement, le ministre chargé de l'aviation civile peut décider de suspendre les services de navigation aérienne passé un délai de huit jours après avoir mis le redevable en demeure de régulariser sa situation. La décision prend effet immédiatement.

Cette décision ne peut être prise que pour les vols au départ.

La fourniture de ces services reste suspendue tant que le paiement total de la dette n'est pas intervenu ou qu'un plan d'apurement n'est pas conclu.

La suspension de ces services peut aussi être décidée dans les mêmes conditions dans le cas où un plan d'apurement précédemment conclu n'est pas respecté.

*Order of 21st December 2015 relating to general provisions of the air navigation charges, annex 3, clause 7*

*When a debtor has not paid the amount due, measures may be taken to enforce recovery.*

*These measures may include the denial of services, detention of aircraft or other enforcement measures in accordance with applicable law.*

*Transports code, article L6123-2, decree n° 2010-1307 of 28 October 2010, Article 5.*

*After a formal notice sent to the debtor in order to regularize its situation remains unsuccessful, detention of aircraft operated or owned by the debtor can be required by the relevant authority to the judge of the place where the measure is enforced and in the following situation : the minister in charge of the transport in case of non-payment or insufficient payment of route charges or terminal navigation charges.*

*The order of the execution judge is transmitted to the authorities in charge of air traffic services at the aerodrome for detention purposes. The order is notified to the debtor and to the owner of the aircraft when the debtor is the operator.*

*The detention costs are covered by the debtor.*

*The payment of the outstanding amount leads to the withdrawal of the aircraft detention.*

*Decree No. 2018-1274 of 26 December 2018 on air navigation service charges, Article R. 134-7-VII*

*The Minister responsible for civil aviation may decide to suspend air navigation services against any user who has not paid the fees due. This decision shall be taken at the request of the accounting officer of the budget for air traffic control and operations.*

*In the absence of full payment of the debt, or in the absence of a clearance plan, the Minister responsible for civil aviation may decide to suspend air navigation services after a period of eight days after having given notice to the debtor to regularise his situation. The decision shall take effect immediately.*

*This decision can only be made for departing flights.*

*The provision of these services remains suspended until full payment of the debt has been made or a clearance plan has been concluded.*

*The suspension of these services may also be decided under the same conditions in the event that a previously concluded clearance plan is not respected.*

**4.2.2 REDEVANCE POUR SERVICES TERMINAUX DE LA CIRCULATION AERIENNE METROPOLE**

***4.2.2 TERMINAL NAVIGATION CHARGE IN MAINLAND FRANCE***

**4.2.2.1 Définition**

***4.2.2.1 Definition***

*Code de l'Aviation Civile Article R.134-1*

*Civil Aviation Code Article R.134-1*

© Service de l'Information Aéronautique, France

L'usage des installations et services terminaux de navigation aérienne mis en œuvre par l'Etat à l'arrivée et au départ des aérodromes métropolitains dont l'activité dépasse un certain seuil donne lieu à rémunération sous forme d'une redevance, dite redevance pour services terminaux de la circulation aérienne en métropole, exigible à l'occasion de chaque vol au départ.

*The use of air navigation facilities and terminal services provided by the State on arrival and departure from metropolitan aerodromes whose activity exceeds a certain threshold gives rise to remuneration in the form of a charge, known as the terminal navigation charge in mainland France, payable for each departing flight.*

**4.2.2.2 Comment est-elle calculée ?**

**4.2.2.2 *How is it calculated ?***

*Arrêté du 21 décembre 2015 relatif aux dispositions générales des redevances de navigation aérienne, article 1 et 4*

La redevance (R) pour un vol donné dans une zone tarifaire donnée est égale au produit du taux unitaire (t) établi pour cette zone tarifaire et des unités de services (UDS) pour le vol concerné :

$$R = t \times UDS$$

Pour un vol donné, le nombre d'unités de services pour la RSTCA métropole est égal au coefficient « poids » de l'aéronef en question.

*Order of 21st December 2015 relating to general provisions of the air navigation charges, article 1 and 4*

*The charge (C) for a given flight in a given charging zone is equal to the product of the unit rate (u) established for this charging zone and service units (SU) for such a flight:*

$$C = u \times SU$$

*For a given flight, the number of service units (SU) for mainland TNC is equal to the "weight" factor of the aircraft.*

**4.2.2.2.1 Calcul du coefficient poids**

**4.2.2.2.1 *Calculation of the weight factor***

*Arrêté du 21 décembre 2015 relatif aux dispositions générales des redevances de navigation aérienne, article 4 et 3*

Le coefficient « poids » (p), exprimé par un nombre comportant deux décimales, est égal au quotient par cinquante du nombre arrondi à la première décimale correspondant à la masse maximale certifiée au décollage (MMD) de l'aéronef, exprimée en tonne métrique, telle qu'elle figure sur le manuel de vol de l'aéronef et affectée de l'exposant 0,7.

$$p = \left(\frac{MMD}{50}\right)^{0,7}$$

D'où la formule générale de calcul de la redevance terminale :

$$R = t \times \left(\frac{MMD}{50}\right)^{0,7}$$

Lorsque cette masse est inconnue, le coefficient « poids » est établi sur la base de la masse de la version la plus lourde du type de cet aéronef censée exister. Lorsqu'il existe plusieurs masses maximales au décollage certifiées pour un même aéronef, il est établi sur la base de la masse maximale au décollage la plus élevée. Les exploitants d'aéronefs déclarent la composition de leur flotte et la masse maximale certifiée au décollage de chacun de leurs aéronefs à l'organisme chargé de la facturation dès qu'une modification survient et au moins une fois par an.

*Order of 21st December 2015 relating to general provisions of the air navigation charges, article 4 and 3*

*The "weight" factor (w), expressed as a figure taken to two decimals, shall be the quotient, obtained by dividing by fifty of the number rounded off to the first decimal place corresponding to the maximum certificated take-off weight (MTOW) of the aircraft, expressed in metric tons, as shown in the flight manual of the aircraft and assigned the exponent 0,7.*

$$w = \left(\frac{MTOW}{50}\right)^{0,7}$$

*Hence the calculation of the charge is :*

$$C = u \times \left(\frac{MTOW}{50}\right)^{0,7}$$

*When this weight is unknown, the "weight" factor is calculated by taking the weight of the heaviest aircraft of the same type known to exist. When an aircraft has multiple certified maximum take-off weights, the weight factor shall be established on the basis of the highest maximum take-off weight. Aircraft operators shall declare the composition of their fleet and the maximum certified take-off weight of each of their aircraft to the organisation responsible for invoicing as soon as a change occurs and at least once a year.*

**4.2.2.2.2 Taux unitaires**

**4.2.2.2.2 *The unit rate***

Les taux unitaires de la redevance pour services terminaux de la circulation aérienne métropole sont fixés annuellement par arrêté conjoint du ministre chargé des transports et du ministre chargé des comptes publics. Ils sont publiés au Journal officiel et peuvent être consultés sur le site Légifrance (https://www.legifrance.gouv.fr) sur le site d'Eurocontrol (https://www.eurocontrol.int) et dans le Guide des usagers publié sur le site du ministère chargé des transports :

https://www.ecologie.gouv.fr/redevances-navigation-aerienne

*The unit rates of the terminal navigation charges in mainland France are set annually by joint order of the Minister responsible for transport and the Minister responsible for public accounts. They can be consulted on the Légifrance website (https://www.legifrance.gouv.fr), on the Eurocontrol website (https://www.eurocontrol.int) or on the User's guide published on the website of the Minister responsible for transports :*

*https://www.ecologie.gouv.fr/en/air-navigation-charges*

**4.2.2.3 Quels sont les vols exonérés**

**4.2.2.3 *Exemptions***

*Arrêté du 21 décembre 2015 relatif aux dispositions générales des redevances de navigation aérienne, article 9*

Sont exonérés des redevances de navigation aérienne :

a. les vols effectués par des aéronefs dont la masse maximale au décollage autorisée est inférieure à deux tonnes métriques ;

b. les vols mixtes VFR/IFR dans les zones tarifaires dans lesquelles ils sont effectués exclusivement en VFR ;

c. les vols effectués exclusivement pour transporter, en mission officielle, les monarques régnants et leur proche famille, les chefs d'État, les chefs de gouvernement et les ministres des gouvernements ; dans tous les cas, l'exonération doit être corroborée par une indication appropriée du statut ou par une remarque adéquate sur le plan de vol ;

d. les vols de recherche et de sauvetage autorisés par l'organisme compétent adéquat ;

e. les vols militaires de l'État français et ceux des États ayant conclu avec la France des accords de réciprocité ;

*Order of 21st December 2015 relating to general provisions of the air navigation charges, article 9*

*The following flights are exempted from the payment of charges :*

*a. flights performed by aircraft of which the maximum take-off weight authorised is less than two (2) metric tons ;*

*b. mixed VFR/IFR flights in the charging zone where operated exclusively in VFR ;*

*c. flights performed exclusively for the transport, on official mission, of the reigning Monarch and his/her immediate family, Heads of State, Heads of Government, and Government Ministers. In all cases, this must be substantiated by the appropriate status indicator or remark on the flight plan ;*

*d. search and rescue flights authorised by the appropriate relevant body ;*

*e. military flights performed by military aircraft from French State and from states which have been subscribed a reciprocity agreement ;*

f. les vols d'entraînement effectués exclusivement aux fins d'obtention d'une licence, ou d'une évaluation dans le cas du personnel navigant technique, lorsque cela est corroboré par une remarque adéquate sur le plan de vol ; les vols doivent être effectués exclusivement à l'intérieur de la zone tarifaire concernée et ne doivent pas servir au transport de passagers ou de marchandises, ni pour la mise en place ou le convoyage des aéronefs ;

g. les vols effectués exclusivement aux fins du contrôle ou d'essais d'équipements utilisés ou devant être utilisés comme aides au sol pour la navigation aérienne, à l'exclusion des vols de mise en place effectués par les aéronefs concernés ;

h. les vols se terminant à l'aéroport d'où l'aéronef a décollé et au cours desquels aucun atterrissage intermédiaire n'a été effectué (vols circulaires) ;

i. les vols VFR ;

j. les vols effectués par les douanes et la police.

*f. training flights performed exclusively for the purpose of obtaining a licence, or a rating in the case of cockpit flight crew, and where this is substantiated by an appropriate remark on the flight plan. Flights must be performed solely within this charging zone. Flights must not serve for the transport of passengers and/or cargo, nor for positioning or ferrying of the aircraft ;*

*g. flights performed exclusively for the purpose of checking or testing equipment used or intended to be used as ground aids to air navigation, excluding positioning flights by the aircraft concerned;*

*h. flights terminating at the aerodrome from which the aircraft has taken off and during which no intermediate landing has been made (circular flights);*

*i. VFR flights;*

*j. customs and police flights.*

### 4.2.2.4 Aérodromes soumis à l'application de la RSTCA métropole

*Arrêté du 21 décembre 2015 relatif aux dispositions générales des redevances de navigation aérienne, article 8*

Pour l'année N, sont soumis à la RSTCA pour la métropole et pour l'outre-mer, les aérodromes sur lesquels les services terminaux de navigation aérienne sont rendus par des agents de l'État et le trafic IFR non exonéré dépasse un certain seuil sur la période courant du mois de novembre de l'année N-4 au mois d'octobre de l'année N-1.

Pour la métropole, ce seuil est fixé à 420 unités de service, selon la formule de calcul des unités de service visée à l'article 4 de l'arrêté du 21 décembre 2015 (cf. également § 4.2.2.2 plus haut).

L'assujettissement d'un aérodrome ne peut avoir lieu que trois années après la mise en place du service.

La liste des aéroports assujettis à la redevance pour services terminaux de la circulation aérienne métropole est fixé annuellement par arrêté conjoint du ministre chargé des transports et du ministre chargé des comptes publics. Elle est publiée au Journal officiel et peut être consultée sur le site Légifrance (https://www.legifrance.gouv.fr) sur le site d'Eurocontrol (https://www.eurocontrol.int) et dans le Guide des usagers publié sur le site du ministère chargé des transports :

https://www.ecologie.gouv.fr/redevances-navigation-aerienne

### 4.2.2.4 Aerodromes subject to the terminal navigation charge in mainland France

*Order of 21st December 2015 relating to general provisions of the air navigation charges, article 8*

*For the year N, aerodromes on which terminal navigation services are provided by civil servants and non-exempted IFR traffic exceeds a given threshold from November of the year N-4 to October of the year N-1 shall be subject to the mainland and overseas terminal navigation charges.*

*In mainland France, the threshold is set to 420 service units, according to the formula of the service units endorsed in article 4 of the order of 21st December 2015 (see also § 4.2.2.2 above).*

*The aerodromes can be subject to terminal navigation charge only 3 years after the introduction of the services.*

*The list of aerodromes subject to the terminal navigation charges in mainland France is set annually by joint order of the Minister responsible for transport and the Minister responsible for public accounts. It can be consulted on the Légifrance website (https://www.legifrance.gouv.fr), on the Eurocontrol website (https://www.eurocontrol.int) or on the User's guide published on the website of the Minister responsible for transports :*

*https://www.ecologie.gouv.fr/en/air-navigation-charges*

### 4.2.2.5 Facturation

Les factures de redevance pour services terminaux de la circulation aérienne métropole sont émises en milieu de mois et portent sur les vols du mois précédent.

Chaque facture correspond à une période de vol d'un mois.

Elle est accompagnée d'un relevé de vols qui identifie chaque vol par :

- le jour du vol ;
- la référence du vol ou numéro de ligne ;
- le numéro de vol ou l'immatriculation ;
- l'heure de départ ;
- l'aérodrome de départ et d'arrivée ;
- le type de l'aéronef.

La facturation s'appuie sur la route réelle suivie telle qu'enregistrée par le gestionnaire de réseau et sur les masses maximales certifiées au décollage de chaque aéronef, déclarées par les usagers auprès des services d'Eurocontrol.

### 4.2.2.5 Billing

*The bills for mainland terminal navigation charge are issued in the middle of the month and relate to flights of the previous month.*

*Each bill corresponds to a one-month flight period.*

*It is accompanied by a statement of flight that identifies each flight by :*

*- day of the flight ;*
*- reference of the flight or line number ;*
*- flight number or aircraft registration ;*
*- time of departure ;*
*- arrival and departure aerodrome ;*
*- aircraft type.*

*Billing is based on the real route such as registered by the Air Traffic Flow Management and on the maximum certificated take-off weight for each aircraft, declared by the users to Eurocontrol services.*

### 4.2.2.6 Conditions de paiement de la RSTCA

*Convention de mandat relative à la RSTCA métropole, annexe 1, appendice 2, clause 1*

### 4.2.2.6 Terms of payment for the terminal navigation charge

*Mandate agreement relating the mainland terminal navigation charge, annex1 appendix 2, clause 1*

© Service de l'Information Aéronautique, France

Les montants facturés sont payables, en euros, sur le compte bancaire du Service central des redevances de route d'Eurocontrol mentionné sur la facture.

Le montant de la redevance est dû à la date de réalisation du vol. La date limite de valeur à laquelle Eurocontrol doit avoir reçu le paiement est indiquée sur la facture.

Le délai accordé aux usagers pour le paiement des redevances pour services terminaux, c'est-à-dire l'intervalle entre la date de facturation et l'échéance indiquée sur la facture, est identique au délai accordé aux usagers pour le paiement des redevances de route d'Eurocontrol.

*The amounts invoiced shall be payable, in euro, to the bank account of the Eurocontrol Central Route Charges Service mentioned on the invoice.*

*The amount of the charge is due on the date of performance of the flight. The value date by which payment must be received by Eurocontrol is shown on the bill.*

*The period allowed to users for the payment of terminal charges, i.e. the interval between the invoice date and the due date indicated on the invoice, shall be the same as the period allowed to users for the payment of Eurocontrol en-route charges.*

*Convention de mandat relative à la RSTCA métropole, annexe 1, appendice 2, clause 2*

Le paiement est réputé reçu par Eurocontrol à la date de valeur à laquelle le montant dû a été porté en compte par l'établissement bancaire désigné par Eurocontrol, tel que visé au paragraphe 1 de la clause 1. La date de valeur est celle à laquelle Eurocontrol peut utiliser les fonds.

*Convention de mandat relative à la RSTCA métropole, annexe 1, appendice 2, clause 3*

Les paiements doivent être assortis d'une indication des références, dates et montants des factures réglées et des notes de crédit éventuellement déduites.

Lorsqu'un paiement n'est pas accompagné des indications visées au paragraphe 1 ci-dessus pour permettre son imputation à une ou des factures spécifiques, Eurocontrol impute ce paiement :

- d'abord aux plus anciennes des factures impayées et ensuite ;
- aux intérêts de retard.

*Mandate agreement relating the mainland terminal navigation charge, annex1 appendix 2, clause 2*

*Payment shall be deemed to have been received by Eurocontrol on the value date on which the amount due was credited into a designated bank account of Eurocontrol. The value date shall be the date on which Eurocontrol can use the funds.*

*Mandate agreement relating the mainland terminal navigation charge, annex1 appendix 2, clause 3*

*Payments shall be accompanied by a statement giving the references, dates and euro amounts in respect of bills paid and of any credit notes deducted.*

*When a payment is not accompanied by the details specified in paragraph 1 above so as to allow its application to a specific bill or bills, Eurocontrol will apply the payment :*

*- first to the oldest bills unpaid, and then ;*

*- to the interest on late payment.*

### 42261 Réclamations

*Convention de mandat relative à la RSTCA métropole, annexe 1, appendice 2, clause 4*

Toute réclamation relative à une facture doit être adressée à Eurocontrol par écrit ou par un moyen électronique préalablement agréé par Eurocontrol.

La date limite à laquelle la réclamation doit parvenir à Eurocontrol, qui est la même que pour les redevances de route d'Eurocontrol (60 jours), est indiquée sur la facture.

La date de dépôt des réclamations est la date de leur réception par Eurocontrol.

Les réclamations, dont l'objet doit être clairement précisé, doivent être accompagnées des pièces justificatives appropriées.

Le dépôt d'une réclamation par un usager n'autorise pas celui-ci à porter le montant contesté en déduction de la facture en cause, à moins qu'Eurocontrol ne l'y ait autorisé.

Si Eurocontrol et un usager sont débiteur et créancier l'un de l'autre, aucun paiement compensatoire ne peut être effectué sans l'accord préalable d'Eurocontrol.

### 42261 *Claims*

*Mandate agreement relating the mainland terminal navigation charge, annex1 appendix 2, clause 4*

*Claims against bills must be submitted to Eurocontrol in writing or by an electronic medium previously approved by Eurocontrol.*

*The latest date by which claims must be received by Eurocontrol shall be shown on the bill and is 60 days from the date of the bill.*

*The date of submission of claims shall be the date on which the claims are received by Eurocontrol.*

*Claims must be detailed, and should be accompanied by any relevant supporting evidence.*

*Submission of a claim by a user shall not entitle him to make any deduction from the relevant bill unless so authorised by Eurocontrol.*

*When Eurocontrol and a user are mutually debtor and creditor no compensation payments shall be effected without Eurocontrol's prior agreement.*

### 42262 Pénalités

*Convention de mandat relative à la RSTCA métropole, annexe 1, appendice 2, clause 5*

Toute redevance qui n'a pas été acquittée à la date limite de paiement est majorée d'un intérêt. Cet intérêt, dit de retard, est un intérêt simple, calculé au jour le jour sur le montant restant dû.

Cet intérêt est calculé et facturé en euros. Le taux d'intérêt est le même que celui applicable au Système de redevances de route d'Eurocontrol et publié par la DGAC.

### 42262 *Penalties*

*Mandate agreement relating the mainland terminal navigation charge, annex1 appendix 2, clause 5*

*Any charge which has not been paid by the latest date for payment shall be subject of interest. This interest, known as late payment interest, is simple interest, calculated from day to day on the unpaid overdue amount.*

*The interest will be calculated and billed in euros. The interest rate is the same as that applicable to the Eurocontrol Route Charges System and published by the DGAC.*

### 42263 Mesures de recouvrement

### 42263 *Enforcement measures*

© Service de l'Information Aéronautique, France

*Arrêté du 21 décembre 2015 relatif aux dispositions générales des redevances de navigation aérienne, annexe 4, clause 7*

Lorsque le débiteur ne s'est pas acquitté de la somme due, celle-ci peut faire l'objet d'un recouvrement forcé. Les mesures à cet effet peuvent comprendre la saisie conservatoire ou d'autres mesures d'exécution conformes à la législation en vigueur.

*Order of 21st December 2015 relating to general provisions of the air navigation charges, annex 4, clause 7*

*When the debtor has not paid the amount due, measures may be taken to enforce recovery. The measures may include detention of aircraft or any other enforcement measures in accordance with applicable law.*

*Code des transports, article L6123-2, ordonnance n° 2010-1307 du 28 octobre 2010, article 5*

Après mise en demeure infructueuse du redevable de régulariser sa situation, la saisie conservatoire d'un aéronef exploité par le redevable ou lui appartenant peut être requise auprès du juge du lieu d'exécution de la mesure par les autorités et dans les situations suivantes : le ministre chargé des transports, en cas de non-paiement ou de paiement insuffisant de la redevance de route ou de la redevance pour services terminaux de la circulation aérienne.

L'ordonnance du juge de l'exécution est transmise aux autorités responsables de la circulation aérienne de l'aérodrome aux fins d'immobilisation de l'aéronef. L'ordonnance est notifiée au redevable et au propriétaire de l'aéronef lorsque le redevable est l'exploitant.

Les frais entraînés par la saisie conservatoire sont à la charge du redevable.

Le paiement des sommes dues entraîne la mainlevée de la saisie conservatoire.

*Transports code, Article L6123-2, Decree n° 2010-1307 of 28 October 2010, article 5*

*After a formal notice sent to the debtor in order to regularize its situation remains unsuccessful, detention of aircraft operated or owned by the debtor can be required by the relevant authority to the judge of the place where the measure is enforced and in the following situation: the minister in charge of the transport in case of non-payment or insufficient payment of route charges or terminal navigation charges.*

*The order of the execution judge is transmitted to the authorities in charge of air traffic services at the aerodrome for detention purposes. The order is notified to the debtor and to the owner of the aircraft when the debtor is the operator.*

*The detention costs are covered by the debtor.*

*The payment of the outstanding amount leads to the withdrawal of the aircraft detention.*

*Décret n° 2018-1274 du 26 décembre 2018 relatif aux redevances des services de navigation aérienne, article R.134-7-VII*

Le ministre chargé de l'aviation civile peut décider de suspendre les services de navigation aérienne à l'encontre de tout usager qui n'a pas acquitté les redevances dues. Cette décision est prise à la demande d'Eurocontrol ou du comptable du budget annexe "Contrôle et exploitation aériens".

A défaut du paiement total de la dette, ou à défaut de la conclusion d'un plan d'apurement, le ministre chargé de l'aviation civile peut décider de suspendre les services de navigation aérienne passé un délai de huit jours après avoir mis le redevable en demeure de régulariser sa situation. La décision prend effet immédiatement.

Cette décision ne peut être prise que pour les vols au départ.

La fourniture de ces services reste suspendue tant que le paiement total de la dette n'est pas intervenu ou qu'un plan d'apurement n'est pas conclu.

La suspension de ces services peut aussi être décidée dans les mêmes conditions dans le cas où un plan d'apurement précédemment conclu n'est pas respecté.

*Decree No. 2018-1274 of 26 December 2018 on air navigation service charges, Article R. 134-7-VII*

*The Minister responsible for civil aviation may decide to suspend air navigation services against any user who has not paid the fees due. This decision shall be taken at the request of Eurocontrol or of the accounting officer of the budget for air traffic control and operations.*

*In the absence of full payment of the debt, or in the absence of a clearance plan, the Minister responsible for civil aviation may decide to suspend air navigation services after a period of eight days after having given notice to the debtor to regularise his situation. The decision shall take effect immediately.*

*This decision can only be made for departing flights.*

*The provision of these services remains suspended until full payment of the debt has been made or a clearance plan has been concluded.*

*The suspension of these services may also be decided under the same conditions in the event that a previously concluded clearance plan is not respected.*

# ENR 1 REGLES ET PROCEDURES GENERALES

*GENERAL RULES AND PROCEDURES*

## ENR 1.1 REGLES GENERALES

*GENERAL RULES*

### 1.1.1 INTRODUCTION

En matière de circulation aérienne, la France applique les règlements d'exécution de la Commission européenne et les dispositions complémentaires des normes et pratiques recommandées de l'OACI, dont les différences significatives sont spécifiées en partie GEN 1.7 du présent AIP.

a. Règles de l'air européennes

Le règlement d'éxécution (UE) N° 923/2012 de la Commission du 26 septembre 2012 établissant les règles de l'air communes et des dispositions opérationnelles relatives aux services et procédures de navigation aérienne, dit « SERA » pour « Standardised European Rules of the Air » est applicable en France métropolitaine ainsi que dans les départements d'outre-mer, les collectivités d'outre-mer et en Nouvelle-Calédonie. Il est accessible à l'adresse suivante :

http://easa.europa.eu/document-library/regulations/commission-implementing-regulation-eu-no-9232012

Ce règlement européen s'applique aux usagers de l'espace aérien et aux aéronefs relevant de la circulation aérienne générale :

- opérés à destination, à l'intérieur ou au départ de l'Union ;
- portant les marques de nationalité et d'immatriculation d'un État membre de l'Union, et exploités dans tout espace aérien, dans la mesure où les dispositions du présent règlement ne sont pas contraires aux règles publiées par le pays sous la juridiction duquel se trouve le territoire survolé.

b. Règles nationales supplémentaires

Le règlement SERA est complété en France par les arrêtés suivants :

- l'arrêté du 11 décembre 2014 relatif à la mise en œuvre du règlement d'éxécution (UE) N° 923/2012 (FRA),
- l'arrêté du 10 octobre 1957 relatif au survol des agglomérations et des rassemblements de personnes ou d'animaux,
- l'arrêté du 17 novembre 1958 réglementant la circulation aérienne des hélicoptères,
- l'arrêté du 12 juillet 2019 relatif aux procédures générales de circulation aérienne pour l'utilisation des aérodromes par les aéronefs,
- l'arrêté du 4 mars 2022 établissant des règles applicables aux prestataires de services de la circulation aérienne,
- l'arrêté du 4 avril 2022 relatif au survol de certains aérodromes réservés à l'usage des administrations de l'Etat.

Ces arrêtés sont accessibles sur le site Internet :

https://www.legifrance.gouv.fr/.

Certains sont également publiés sur le site du Ministère, sous la rubrique « Réglementation » :

https://www.ecologie.gouv.fr/reglementation-circulation-aerienne-en-france

Ces règles nationales s'imposent aux pilotes des aéronefs évoluant en circulation aérienne générale dans l'espace aérien national et les espaces aériens placés sous juridiction française.

c. Conformité aux règles de l'air

En vol, sur l'aire de mouvement d'un aérodrome comme sur un site d'exploitation, un aéronef est exploité conformément aux règles générales établies dans le règlement d'exécution (UE) N° 923/2012, aux règles nationales supplémentaires et aux dispositions locales applicables.

Voir la partie ENR 1.2 sur les règles de vol à vue, et la partie ENR 1.3 sur les règles de vol aux instruments.

### *1.1.1 INTRODUCTION*

*Concerning air navigation, France applies European implementing rules and supplementary ICAO standards and recommended practices, and the significant differences between which are specified in part GEN 1.7 of this AIP.*

*a. European Rules of Air*

*Commission implementing Regulation (EU) N° 923/2012 of September 26th 2012 laying down the common rules of the air and operational provisions regarding services and procedures in air navigation, known as "SERA'" for "Standardized European Rules of the Air" is applicable to France and its overseas territories. This regulation is available following :*

*http://easa.europa.eu/document-library/regulations/commission-implementing-regulation-eu-no-9232012*

*This European regulation applies in particular to airspace users and aircraft engaged in general air traffic :*

*- operated to, within or from the Union ;*
*- bearing the nationality and registration marks of a Member State of the Union, and operating in any airspace to the extent that they do not conflict with the rules published by the country having jurisdiction over the territory overflown.*

*b. Additional national rules*

*The SERA regulations is supplemented in France by the following decrees :*

*- the order of December 11th 2014 on the implementation of Regulation (EU) N° 923/2012 (FRA),*
*- the order of October 10th 1957 on overflying agglomerations and gatherings of persons or animals,*
*- the order of November 17th 1958 regulating the air traffic of helicopters,*
*- the order of July 12th 2019 relating to general air traffic procedures for the use of aerodromes by aircraft,*
*- the order of March 4th 2022 on rules applicable to air traffic services providers,*
*- the order of April 4th 2022 on the overflight of certain aerodromes reserved for the use of State administrations.*

*All these orders are available on the website :*

*https://www.legifrance.gouv.fr/.*

*Some are also published on the Ministry's website under the heading "Regulations" :*

*https://www.ecologie.gouv.fr/reglementation-circulation-aerienne-en-france*

*These national rules are applicable to pilots of aircraft operating in general air traffic in national airspace and airspace under French jurisdiction.*

*c. Compliance with the rules of the air*

*In flight, on the movement area of an aerodrome as well as on an operating site, an aircraft is operated in accordance with the general rules laid down in implementing regulation (EU) N° 923/2012, additional national rules, local provisions applicable.*

*See ENR 1.2 on visual flight rules, and ENR 1.3 on instrument flight rules.*

© Service de l'Information Aéronautique, France

**Note importante :** Les règles décrites ci-dessous rappellent les règles nationales supplémentaires, sans préciser les règles européennes qui s'appliquent partout dans l'Union Européenne.

***Important note :*** *The rules outlined below recall the additional national rules, without specifying the European rules that apply throughout European Union.*

### 1.1.2 HAUTEURS MINIMALES

### *1.1.2 HAUTEURS MINIMALES*

Selon la règle SERA.3105, sauf pour les besoins du décollage ou de l'atterrissage, ou sauf autorisation des autorités compétentes, les aéronefs ne volent pas au-dessus des zones à forte densité, des villes ou autres agglomérations, ou de rassemblements de personnes en plein air, à moins qu'ils ne restent à une hauteur suffisante pour leur permettre, en cas d'urgence, d'atterrir sans mettre indûment en danger les personnes ou les biens à la surface.

*According to the rule SERA.3105, except for take-off or landing purposes, or unless authorized by the appropriate authorities, aircraft do not fly over high density areas, towns or other built-up areas, or gatherings of persons In the open air, unless they remain at a sufficient height to enable them, in the event of an emergency, to land without undue risk to persons or property on the surface.*

En France, les hauteurs minimales de survol établies par les règles SERA.5005 f), SERA.5015 b), FRA.5005 c) 5) et FRA.5005 f) 2) s'appliquent sans préjudice des hauteurs définies par l'arrêté du 10 octobre 1957 relatif au survol des agglomérations et des rassemblements de personnes ou d'animaux et par l'arrêté du 17 novembre 1958 portant réglementation de la circulation aérienne des hélicoptères.

*In France, the minimum overflight heights established by rules SERA.5005 f), SERA.5015 b), FRA.5005 c) 5) and FRA.5005 f) 2) apply without prejudice to the heights defined by the order of October 10, 1957 on overflying agglomerations and gatherings of persons or animals, and by the order of November 17th, 1958 regulating the air traffic of helicopters.*

L'autorité compétente chargée de délivrer les autorisations individuelles de survol en deçà des hauteurs minimales de survol est précisée par l'article R. 6211-4 du code des transports.

*The competent authority responsible for issuing individual overflight authorizations below the minimum overflight heights is specified in article R. 6211-4 of the French Transport Code.*

Les décrets et arrêtés relatifs aux parcs nationaux et aux réserves naturelles peuvent également établir des hauteurs minimales de survol (voir ENR 5.7-3).

*Decrees and orders relating to national parks and natural reserves can also provide with minimum overflight heights (see ENR 5.7-3).*

Les tableaux ci-dessous récapitulent les hauteurs minimales à respecter au-dessus d'installations et d'établissements d'une part, et des agglomérations et des rassemblements de personnes ou d'animaux d'autre part.

*The tables below summarize the minimum heights to be met above facilities and establishments on the one hand, and agglomerations and gatherings of people or animals on the other hand.*

#### 1.1.2.1 Survol des installations et des établissements

#### *1.1.2.1 Overflight of installations and sites*

| 1 200 m < Largeur < 3 600 m ou survol de tout rassemblement supérieur à 10 000 personnes<br>*1 200 m < Width < 3 600 m* | Tous les aéronefs motopropulsés<br>*Any motorized aircraft* | 1 000 (3 300)<br>*1 000 (3 300)* |
| Largeur > 3 600 m (2) ou survol de tout rassemblement supérieur à 100 000 personnes<br>*Width > 3 600 m (2)* | Tous les aéronefs motopropulsés<br>*Any motorized aircraft* | 1 500 (5 000)<br>*1 500 (5 000)* |

(1) Les agglomérations sont représentées sur la carte aéronautique au 1/500 000 OACI éditée par l'Institut Géographique National (IGN), par des symboles traduisant leur largeur moyenne / *Towns are represented on the ICAO 1/500 000 aeronautical chart published by the Institut Géographique National (IGN) (National Geographical Institute), by symbols expressing their average width.*
(2) Cas particulier : le survol de la ville de Paris est interdit sauf dérogation délivrée à titre exceptionnel / *Particular case : overflying of Paris is forbidden except exemption exceptionally granted.*

Pour les aéronefs non motopropulsés :

*Non-powered ACFT*

© Service de l'Information Aéronautique, France

Sauf pour les besoins du décollage ou de l'atterrissage et des manœuvres qui s'y rattachent, les aéronefs non motopropulsés ne voleront pas au-dessus des agglomérations et des rassemblements de personnes en plein air sauf s'ils restent à une hauteur suffisante pour permettre un atterrissage, sans que soient, indûment mis en danger les personnes et les biens à la surface ; cette hauteur ne sera pas inférieure à 300 mètres au-dessus de l'obstacle le plus élevé situé dans un rayon de 600 mètres autour de l'aéronef.

*Except for take-off or landing and related maneuvers, non-powered aircraft shall not fly over open-air agglomerations and gatherings unless they remain at a height sufficient to permit a landing without undue risk to persons and property on the surface ; Such height shall not be less than 300 meters above the highest obstacle within a radius of 600 meters around the aircraft.*

**Note importante :** L'attention des pilotes est attirée sur le fait que durant le jour et au-dessus du territoire français, la plupart des vols d'avion d'armes à basse altitude et grande vitesse sont effectués en-dessous de 1500 ft (450 m) ASFC durant les périodes suivantes : lundi à vendredi (jours fériés exceptés), de LS-30 à CS+30. En conséquence, il est recommandé aux pilotes VFR, pour autant que cela soit possible et permis, de conduire leur vol en croisière à partir de 1500 ft ASFC.

***Important note :*** *Most high speed low altitude military flights are carried out on French territory below 1500 ft ASFC (450 m) from Monday to Friday (except on public holidays), from SR-30 to SS+30. Therefore, VFR pilots are advised to cruise above 1500 ft ASFC whenever possible and allowed.*

## 1.1.3 PLANS DE VOL

## *1.1.3 FLIGHT PLANS*

Dépôts de plan de vol

Les dispositions des paragraphes c), d) et e) de la règle SERA.4001 ne s'appliquent pas dans l'espace aérien sous juridiction française ou dans lequel la France est chargée de fournir les services de la circulation aérienne, qui ne font pas partie de la région EUR de l'OACI.

Les dispositions qui y sont applicables sont les suivantes (FRA.4001 f) ) :

a) Un plan de vol est soumis à un bureau de piste des services de la circulation aérienne avant le départ ou transmis en cours de vol à l'organisme compétent des services de la circulation aérienne ou à la station radio de contrôle air-sol compétente, sauf si des dispositions ont été prises pour permettre le dépôt de plans de vol répétitifs.

b) Pour tout vol au cours duquel l'aéronef doit franchir des frontières ou tout vol appelé à bénéficier du contrôle de la circulation aérienne ou du service consultatif de la circulation aérienne, un plan de vol est déposé au moins soixante minutes avant le départ, ou, s'il est communiqué en cours de vol, en temps utile afin de parvenir à l'organisme ATS compétent au moins dix minutes avant l'heure prévue du passage de l'aéronef :

i. au point d'entrée prévu dans une région de contrôle ou dans une région à service consultatif ; ou

ii. au point d'intersection de sa route et d'une voie aérienne ou d'une route à service consultatif.

c) Toutefois, un plan de vol est déposé au moins trente minutes avant le départ pour les vols VFR intérieurs.

*Submission of a flight plan*

*The requirements laid down in points (c), (d), and (e) of rule SERA.4001 do not apply in airspace under French jurisdiction or where France provides air traffic services that is not part of the ICAO EUR region.*

*Instead, the applicable provisions are the following (FRA.4001 f) ) :*

*a) A flight plan shall be submitted, before departure, to an air traffic services reporting office or, during flight, transmitted to the appropriate air traffic services unit or air-ground control radio station, unless arrangements have been made for submission of repetitive flight plans.*

*b) A flight plan for any flight planned to operate across international borders or to be provided with air traffic control service or air traffic advisory service shall be submitted at least sixty minutes before departure, or, if submitted during flight, at a time which will ensure its receipt by the appropriate ATS unit at least ten minutes before the aircraft is estimated to reach:*

*i. the intended point of entry into a control area or advisory area; or*

*ii. the point of crossing an airway or advisory route.*

*c) However, a flight plan shall be submitted at least thirty minutes before departure for domestic VFR flights.*

Plans de vol obligatoires

En France, en supplément des exigences concernant l'obligation de plan de vol décrites dans SERA, le dépôt d'un plan de vol est requis pour :

i) les vols effectués conformément aux règles de vol aux instruments, à l'exception des vols d'hélicoptères effectuant du transport inter-hospitalier lorsqu'ils évoluent en espace aérien de classe G ;

ii) les vols effectués dans ou à destination de régions ou le long des routes mentionnées dans la publication d'information aéronautique comme nécessitant le dépôt d'un plan de vol ;

iii) les vols VFR qui évoluent au-dessus des étendues maritimes et s'éloignant de la côte d'une distance supérieure à la plus faible des deux distances suivantes :

- la distance maximale permettant à l'aéronef, un moteur en panne, d'atteindre une terre se prêtant à un atterrissage d'urgence ;

- la distance égale à quinze fois l'altitude de l'aéronef.

*Mandatory flight plans*

*In France, in addition to the flight plan requirements described in SERA, the submission of a flight plan is required for :*

*i) flights under instrument flight rules, except for helicopter flights engaged in inter-hospital transport when operating in Class G airspace ;*

*ii) flights to or from the regions or along the routes mentioned in the aeronautical information publication as requiring the filing of a flight plan ;*

*iii) VFR flights operating over the maritime areas and moving away from the coast by a distance greater than the lesser of the following two distances :*

*- the maximum distance permitting the aircraft, with an engine inoperative, to reach land suitable for emergency landing ;*

*- the distance equal to fifteen times the altitude of the aircraft.*

Renseignements

Lorsque le plan de vol est déposé avant le départ, il est rempli selon les modalités figurant à l'appendice 6 de l'annexe au règlement d'exécution (UE) n° 923/2012 ainsi que celles de la partie ENR 1.10 « Plans de vol ».

*Information*

*When the flight plan is submitted before departure, it is filled up according to the instructions of Appendix 6 to the Annex of implementing regulation N° 923/2012 and those of ENR 1.10 "Flight Plans".*

Décollage hors horaires ATS et activation du plan de vol

Lorsqu'un plan de vol a été déposé et en l'absence d'organisme des services de la circulation aérienne sur le lieu de départ, le commandant de bord indique son heure réelle de décollage, dès que possible après l'envol, à un organisme des services de la circulation aérienne.

*Take-off off ATS schedules and activation of the flight plan*

*Where a flight plan has been filed and in the absence of an air traffic control unit at the place of departure, the pilot-in-command shall indicate his actual take-off time, as soon as possible after the flight, to an organism rendering air traffic services.*

© Service de l'Information Aéronautique, France

Modifications au plan de vol

Les dispositions de la règle SERA.4015 ne s'appliquent pas dans l'espace aérien sous juridiction française ou dans lequel la France est chargée de fournir les services de la circulation aérienne, qui ne font pas partie de la région EUR de l'OACI.

Les dispositions qui y sont applicables sont les suivantes (FRA.4015) :

a) Sous réserve des dispositions de la règle SERA.8020, point b), toutes les modifications apportées à un plan de vol déposé en vue d'un vol IFR, ou d'un vol VFR effectué en tant que vol contrôlé, sont signalées dès que possible à l'organisme compétent des services de la circulation aérienne. Dans le cas des autres vols VFR, toute modification importante apportée à un plan de vol est signalée dès que possible à l'organisme compétent des services de la circulation aérienne.

b) Si les renseignements fournis avant le départ au sujet de l'autonomie et du nombre total de personnes à bord sont devenus erronés au moment du départ, ce fait constitue une modification importante au plan de vol et est, à ce titre, signalé.

Clôture d'un plan de vol

Le plan de vol peut être clôturé par téléphone au numéro indiqué dans les publications d'information aéronautique.

Un plan de vol peut notamment être clos en appelant le numéro du BRIA figurant en GEN 3.1.5.

## 1.1.4 POINTS DE PASSAGE AUX FRONTIERES (PPF)

En application du Règlement (UE) N° 2016/399, l'arrêté du 24 octobre 2017 relatif au franchissement des frontières par les personnes et les marchandises sur les aérodromes précise que, pour tout vol direct en provenance ou à destination d'un Etat ou d'un territoire n'appartenant pas à l'espace Schengen ne doit s'effectuer qu'au départ ou à destination d'un aérodrome ayant la qualité de Point de Passage Frontalier (PPF) et durant les heures d'ouverture du service chargé du contrôle aux frontières. La liste des aérodromes est consultable sur le site du SIA (Partie GEN 1.3 de l'AIP). Reportez-vous à la partie TXT, rubrique « Informations diverses - Douane, Police » associée à la carte VAC ou aux éventuels NOTAM, pour connaître les horaires d'ouverture du service chargé du contrôle aux frontières.

Note : L'espace Schengen est composé de 26 pays européens (dont 22 sont des États membres de l'UE) : Allemagne, Autriche, Belgique, Danemark, Espagne, Estonie, Finlande, France, Grèce, Hongrie, Islande, Italie, Lettonie, Liechtenstein, Lituanie, Luxembourg, Malte, Norvège, Pays-Bas, Pologne, Portugal, République tchèque, Slovaquie, Slovénie, Suède, Suisse.

## 1.1.5 PROCEDURES COMPLEMENTAIRES LIEES A L'USAGE DES TRANSPONDEURS

En l'absence d'instructions de l'ATS, le pilote sélectionne :

a) dans les régions d'information de vol de la France métropolitaine :

- le code 2000 lorsque l'aéronef est en vol IFR ;
- le code 7000 lorsque l'aéronef est en vol VFR ;

b) dans les espaces aériens d'outre-mer exploités par l'administration française :

- le code 2000.

## 1.1.6 PROCEDURES DE RADIOTELEPHONIE ET PHRASEOLOGIE

La phraséologie française utilisée en France est annexée à l'arrêté du 11 décembre 2014 relatif à la mise en œuvre du règlement d'exécution (UE) N° 923/2012.

La phraséologie anglaise utilisée en France est définie dans un moyen de conformité alternatif à l'AMC.14001 de la décision EASA « ED Decision 2016/23/R » Il est consultable dans la version consolidée du règlement SERA sur le site du Ministère, nommée « SERA complet » : https://www.ecologie.gouv.fr/politiques-publiques/reglementation-circulation-aerienne-france

*Changes to a flight plan*

*The requirements laid down by rule SERA.4015 do not apply in airspace under French jurisdiction or where France provides air traffic services that is not part of the ICAO EUR region.*

*Instead, the applicable provisions are the following (FRA.4015) :*

*a) Subject to the provisions of SERA.8020 (b) all changes to a flight plan submitted for an IFR flight, or a VFR flight operated as a controlled flight, shall be reported as soon as practicable to the appropriate air traffic services unit. For other VFR flights, significant changes to a flight plan shall be reported as soon as practicable to the appropriate air traffic services unit.*

*b) Information submitted prior to departure regarding fuel endurance or total number of persons carried on board, if incorrect at time of departure, constitutes a significant change to the flight plan and as such shall be reported.*

*Closing a Flight Plan*

*The flight plan may be closed by telephone at the number indicated in the aeronautical information publications.*

*In particular, a flight plan can be closed by calling the number of the BRIA in GEN 3.1.5.*

## *1.1.4 BORDER SEPARATION CLEARANCES*

*Pursuant to Regulation (EU) NR 2016/399, the Decree of 24 October 2017 on the crossing of frontiers by persons and goods at aerodromes specifies that, for any direct flights from or to a State or territory not belonging to the Schengen area shall only be carried out at or from an aerodrome which has the status of a Border Crossing Point (PPF) and during the opening hours of the service responsible for border control. The list of aerodromes is available on the website of the SIA (Part GEN 1.3 of the AIP). Please refer to the TXT.*

*Note : The Schengen area is made up of 26 European countries (22 of which are EU Member States) : Austria, Belgium, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Spain, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Czech Republic, Slovakia, Slovenia, Sweden, Switzerland.*

## *1.1.5 ADDITIONAL PROCEDURES RELATED TO THE USE OF TRANSPONDERS*

*In the absence of ATS instructions related to code setting, the pilot selects :*

*a) in the flight information regions of metropolitan France :*

*- code 2000 when the aircraft is in IFR flight ;*

*- code 7000 when the aircraft is in VFR flight ;*

*b) in overseas airspace operated by the French administration :*

*- code 2000.*

## *1.1.6 RADIOTELEPHONY PROCEDURES AND PHRASEOLOGY*

*The phraseology in French language used in France is annexed to the order of December 11th 2014 on the implementation of Regulation (EU) N° 923/2012.*

*The phraseology in English language used in France is an alternative mean of compliance to AMC.14001 of the EASA decision "ED Decision 2016/23 / R". It can be consulted in the consolidated version of SERA regulation on the Ministry's website, named "SERA Complet" : https://www.ecologie.gouv.fr/politiques-publiques/reglementation-circulation-aerienne-france*

© Service de l'Information Aéronautique, France

Un manuel édité par la DSNA récapitulant la phraséologie française et anglaise est disponible sur le site du Ministère ou sur le site du SIA.

**Note importante 1 :** En France, il est possible d'utiliser la langue française en radiotéléphonie sur tous les aérodromes, y compris les aéroports avec plus de 50 000 mouvements IFR internationaux par an.

**Note importante 2 :** En langue française et en dérogation à la règle de transmission des nombres (SERA.14035), un nombre peut être transmis comme on l'énonce dans la vie courante ou comme une suite de nombres.

Dès que la lisibilité des transmissions n'est pas satisfaisante ou en cas d'ambiguïté, la règle générale s'applique (SERA.14035).

Cette dérogation a été notifiée à la Commission, à l'AESA et portée à la connaissance de tous les Etats Membres.

Exemples :

- 45 : quarante-cinq
- 210 : deux cent dix / deux dix
- 1012 : mille douze
- 1217 : douze / dix-sept
- 5643 : cinquante-six / quarante-trois.

*Finally, a guide published by DSNA summarizing French and English phraseology is available on the Ministry's website or on the SIA website.*

***Important note 1 :*** *In France, it is possible to use the French language in radiotelephony on all aerodromes, including airports with more than 50 000 international IFR movements per year.*

***Important note 2 :*** *In the French language, and in derogation from the rule of transmission of numbers (SERA.14035), a number can be transmitted as it is expressed in everyday life or as a sequence of numbers.*

*Soon as the legibility of the transmissions is not satisfactory or in case of ambiguity, the general rule applies (SERA.14035).*

*This derogation was notified to the Commission, EASA and brought to the attention of all Member States.*

*Examples :*

- *45 : "quarante-cinq"*
- *210 : deux cent dix / deux dix*
- *1012 : mille douze*
- *1217 : douze / dix-sept*
- *5643 : cinquante-six / quarante-trois.*

## 1.1.7 PANNE DE COMMUNICATION RADIO (SERA.14083)

## *1.1.7 RADIO COMMUNICATION FAILURE (SERA.14083)*

Depuis le 1er mai 2025, les procédures à appliquer en cas de panne de communication radio sont celles dont dispose la règle SERA.14083 du règlement d'exécution (UE) n° 923/2012, modifié par le règlement d'exécution (UE) 2024/404.

*Since 1st May 2025, the radio communication failure procedures are those set out in rule SERA.14083 of implementing regulation (EU) N° 923/2012, amended by implementing regulation (UE) 2024/404.*

## 1.1.8 SERVICES LIES A LA METEOROLOGIE

## *1.1.8 SERVICES RELATED TO METEROLOGY*

En France, les renseignements AIRMET sont communiqués sous la forme de cartes de prévisions de temps significatif TEMSI. La carte TEMSI France est une carte schématique du temps significatif prévu à heure fixe, où ne sont portés que les phénomènes importants et les masses nuageuses. Elle est élaborée pour les vols à basse altitude.

*In France, AIRMET information is communicated in the form of TEMSI significant time forecast charts. The TEMSI France chart is a schematic chart of the significant weather provided at a fixed time, where only important phenomena and cloud masses are represented. It is designed for low-level flights.*

## 1.1.9 NAPPES D'HYDROCARBURES FLOTTANT SUR LA MER

## *1.1.9 OIL SLICKS FLOATING ON THE SEA*

L'instruction du 15 juillet 2002 relative à la recherche et à la répression de la pollution par les navires, engins flottants et plateformes préconise l'information de l'autorité responsable par les moyens les plus rapides de tout rejet constaté par les équipages d'aéronefs.

*The Instruction of 15th July 2002 relating to pollution search and repressive measures about ships, floatting tackles and platforms recommends informing the responsible authority by the fastest possible means of any discharge noticed by aircrews.*

## 1.1.10 PHENOMENES AEROSPATIAUX NON IDENTIFIES

## *1.1.10 UNIDENTIFIED AIRSPACE PHENOMENA*

**a.** Le Centre National d'Etudes Spatiales (CNES) a mis en place en son sein le Groupe d'Etudes et d'Informations sur les Phénomènes Aérospatiaux Non identifiés (GEIPAN).

**b.** Le système de recueil de l'information sur ces phénomènes nécessite la collaboration des services de la circulation aérienne (contrôleur) et des exploitants d'aéronefs (pilotes).

**c.** Il est donc demandé aux équipages témoins de phénomènes aérospatiaux inexplicables :

- d'en aviser immédiatement l'organisme de la circulation aérienne concerné afin que les enregistrements (radar, radiotéléphoniques et téléphoniques) soient conservés aux fins d'étude par le GEIPAN.

***a.*** *The National Space Research Centre (CNES) has formed a group within itself for the Study and Information about Unidentified Airspace Phenomena (GEIPAN).*

***b.*** *The method of collecting data on these phenomena requires thecooperation of air traffic control services (controllers) and of aircraft operators (pilots).*

***c.*** *Aircrews observing inexplicable airspace phenomena are thereforerequested :*

*- to provide GEIPAN with a report of the observed phenomenon, preferably using the following form which will be supplied to aircraft operators by GEIPAN.*

Centre National d'Etudes Spatiales
18, Avenue Edouard Belin
GEIPAN
31401 TOULOUSE Cedex 9
TEL : 05 61 27 48 01
E-mail : geipan@cnes.fr

## 1.1.11 SURVOL DES INCENDIES, DES INONDATIONS, ET D'AUTRES ZONES DE SINISTRES

1. Les incendies de forêt et de végétation sont susceptibles de remettre en cause la sécurité des aéronefs évoluant à leur proximité.

Outre les dangers dus à l'abaissement de la visibilité par la fumée et à la présence de fortes turbulences, il existe des risques élevés d'abordage avec les aéronefs engagés sur un incendie.

Les aéronefs de la sécurité civile chargés de la lutte contre les incendies, ou affrétés à cet effet, (en particulier les Canadair, les Dash 8, les hélicoptères bombardiers d'eau ou les avions de surveillance et de coordination) sont en effet amenés par la nature de leur mission à survoler les feux à basse et très basse altitude, dans des conditions de visibilité réduite, et les équipages doivent consacrer une attention particulièrement soutenue à la conduite de certaines phases de vol.

2. Pour l'application de SERA.3101, les navigateurs aériens constatant la présence d'une fumée ou d'un feu de forêt :

- s'écartent d'une distance d'au moins 5 NM du contour du feu ou à une hauteur d'au moins 1500 m (5000 ft) ;

- et font preuve de la plus grande vigilance à l'égard des aéronefs engagés sur l'incendie ou évoluant à proximité notamment pour les besoins du ravitaillement sur certains aérodromes, et d'écopage sur les plans d'eau.

3. Tout début d'incendie de forêt ou de végétation peut être utilement signalé par les équipages aux organismes des services de la circulation aérienne avec lesquels ils sont en contact.

4. Des aéronefs opérant pour le compte de l'Etat survolent également les inondations pour des missions d'observation qui leur demandent une attention soutenue. Des mesures particulières d'interdiction de survol peuvent alors être diffusées par la voie de l'information aéronautique.

5. Même en l'absence de telles mesures de restriction de survol, pour l'application de SERA.3101, les navigateurs aériens constatant la présence d'une zone inondée s'en écartent et portent une attention particulière à la circulation aérienne environnante, notamment aux aéronefs en intervention.

6. Ces recommandations, en particulier les distances et hauteurs d'éloignement, trouvent également à s'appliquer dans le cas de tout autre sinistre, par exemple les tempêtes, inondations, accidents industriels, éruptions volcaniques ou tremblements de terre, régulièrement survolés par des aéronefs, y compris des drones, déployés par l'organisation des secours.

## 1.1.12 ZONES INTERDITES A LA CAPTATION DE DONNÉES (ZICAD)

L'article L. 6224-1 du code des transports définit les zones interdites à la captation aérienne de données (ZICAD) comme des zones où sont interdits la captation, l'enregistrement, la transmission, la conservation, l'utilisation ou la diffusion de données recueillies, depuis un aéronef, par un appareil photographique ou cinématographique ou par tout autre capteur de télédétection. Il existe un arrêté fixant la liste des zones interdites à la captation et au traitement des données recueillies depuis un aéronef qui est régulièrement mis à jour. Les ZICAD peuvent aussi être visualisées sur : https://www.geoportail.gouv.fr

## *1.1.11 OVERFLIGHT OF FIRES, FLOODS AND OTHER DISASTER-STRICKEN AREAS*

*1. Forest and vegetation fires may jeopardize the safety of ACFT flying in their vicinity.*

*In addition to dangers due to reduced visibility by smoke and the presence of severe turbulence, there is a high risk of collision with rescue ACFT called in to fly over the fire.*

*Civilian Protection ACFT in charge of fire-fighting, or chartered thereof (in particular Canadair, Dash 8, water bomber helicopters or surveillance and coordination ACFT) are, by the very nature of their tasks, called upon to fly over fires at low and very low altitude, in low-visibility conditions, while crews have to pay particular attention to certain phases of the flight.*

*2. In accordance with SERA.3101, flight crew who notice smoke or a forest fire shall :*

*- keep a distance of at least 5 NM from the outline of the fire or a height of at least 1500 m (5000 ft) ;*

*- exercise the utmost vigilance regarding the movements of ACFT in action on the scene of a fire or flying in its vicinity, including for the purposes of refuelling on certain aerodromes or scooping on bodies of water.*

*3. Any forest fire outbreak may be usefully reported by flight crew to the air traffic services units they are in contact which.*

*4. Aircraft operating on behalf of the State also fly over flooded areas on observation missions that require their undivided attention. Specific no-fly restrictions may therefore be issued via aeronautical information.*

*5. Even in the absence of such overflight restrictions, in accordance with SERA.3101, pilots who observe a flooded area must avoid it and pay particular attention to surrounding air traffic, especially to aircraft involved in emergency operations.*

*6. These recommendations, in particular the recommended distances and altitudes to be maintained, also apply in the event of any other disaster – such as storms, floods, industrial accidents, volcanic eruptions or earthquakes – over which aircraft, including drones, deployed by emergency services, regularly fly.*

## *1.1.12 AREAS WHERE DATA COLLECTION IS FORBIDEN (ZICAD)*

*Article L. 6224-1 of the French Transport Code defines ZICAD (zones interdites à la captation aérienne de données) as areas where the capture, recording, transmission, conservation, use or dissemination of data collected from an aircraft, by photographic or cinematographic equipment or by any other remote sensing sensor, is prohibited. A regularly updated decree sets out the list of areas prohibited from capturing and processing data collected from aircraft, which can also be displayed on the website : https://www.geoportail.gouv.fr*

PAGE LAISSEE INTENTIONNELLEMENT VIDE / Page intentionally left blank

# ENR 1.10 PLANIFICATION DES VOLS

*FLIGHT PLANNING*

**1.10.1 La base réglementaire**

Les exigences réglementaires relatives aux plans de vol sont définies par:

• Le règlement (CE) N°1033/2006 modifié de la commission du 4 juillet 2006 définissant les règles en matière de procédures applicables aux plans de vol durant la phase préalable au vol dans le ciel unique européen, (ce règlement s'applique aux vols IFR) ;

• Le règlement d'exécution (UE) N° 923/2012 modifié de la commission du 26 septembre 2012 établissant les règles de l'air communes et des dispositions opérationnelles relatives aux services et procédures de navigation aérienne ;

• L'arrêté du 11 décembre 2014 modifié relatif à la mise en œuvre du règlement d'exécution (UE) N° 923/2012;

• L'arrêté du 4 mars 2022 établissant des règles applicables aux prestataires de services de la circulation aérienne.

Un plan de vol (PLN) est un ensemble de renseignements spécifiés au sujet d'un vol projeté ou d'une partie d'un vol, transmis aux organismes des services de la circulation aérienne.

On distingue alors :

• Le plan de vol déposé (FPL) : Le plan de vol tel qu'il a été déposé auprès d'un organisme ATS par le pilote ou son représentant désigné, ne comportant pas de modifications ultérieures : voir §1.10.2

• Le plan de vol répétitif (RPL) : Un plan de vol concernant une série de vols dont les caractéristiques de base sont identiques et qui sont effectués de façon régulière et fréquente, qu'un exploitant remet aux organismes ATS pour que ceux-ci le conservent et l'utilisent de manière répétitive. : voir §1.10.3

***1.10.1 The regulatory basis***

*Regulatory requirements for flight plans are defined by:*

*• The Commission Regulation (EC) No 1033/2006 of 4 July 2006, as amended, laying down the requirements on procedures for flight plans in the pre-flight phase for the single European sky (this regulation applies to IFR flights);*

*• The Commission Implementing Regulation (EU) No 923/2012 of 26 September 2012, as amended, laying down common rules of the air and operational provisions regarding services and procedures in air navigation;*

*• the Order of 11 December 2014, as amended, on the implementation of Implementing Regulation (EU) No 923/2012;*

*• The Order of 4 March 2022 establishing rules applicable to air traffic service providers*

*A flight plan (PLN) is a set of specified information relative to an intended flight or portion of a flight of an aircraft, provided to the air traffic services units;*

*We then distinguish:*

*• The Filed Flight Plan (FPL): The flight plan as filed with an ATS unit by the pilot or his designated representative, without any subsequent changes: see §1.10.2*

*• Repetitive Flight Plan (RPL): A flight plan for a series of frequently recurring, regularly operated individual flights with identical basic features, submitted by an operator for retention and repetitive use by ATS units.: see §1.10.3*

**1.10.2 Les procédures de soumission de plan de vol**

Un plan de vol est soumis à un bureau de piste des services de la circulation aérienne avant le départ ou transmis en cours de vol à l'organisme compétent des services de la circulation aérienne ou à la station radio de contrôle air-sol compétente sauf si les dispositions ont été prises pour permettre le dépôt de plan de vol répétitifs.

Un service centralisé de traitement et de diffusion des plans de vol IFR a été institué sous l'autorité du centre des opérations du gestionnaire de réseau (NMOC) géré par l'agence EUROCONTROL. Ce service est assuré dans une partie de la Région EUR de l'OACI au moyen d'un système intégré de traitement initial des plans de vol (IFPS). Cette région est appelée « zone IFPS » (IFPZ). Les plans de vol devront suivre les règles édictées par le NMOC (Voir le NM Flight Planning Requirements – Guidelines : https://www.eurocontrol.int/publication/nm-flight-planning-requirements-guidelines).

***1.10.2 procedures for the submission of a Flight plan***

*A flight plan shall be submitted to an air traffic services reporting office (ARO) prior to departure or transmitted during the flight to the competent air traffic services unit or the competent air-to-ground radio station, unless arrangements have been made for the submission of repetitive flight plans.*

*A centralised service for the processing and dissemination of IFR flight plans has been established under the authority of the Network Manager Operations Centre (NMOC) managed by EUROCONTROL. This service is provided in part of the ICAO EUR Region through an integrated Initial Flight Plan Processing System (IFPS). This region is called the IFPS Zone (IFPZ). Flight plans must follow the rules set out by the NMOC (See NM Flight Planning Requirements – Guidelines: https://www.eurocontrol.int/publication/nm-flight-planning-requirements-guidelines)..*

**1.10.2.1 Dépôt du plan de vol**

***1.10.2.1 Submission of flight plan***

**1.10.2.1.1 Exigences de dépôts**

***1.10.2.1.1 submission requirements***

Les cas dans lesquels les plans de vol sont requis sont décrites dans :

• ENR 1.2 pour les vols VFR ;

• ENR 1.3 pour les vols IFR.

*The cases where flight plans are required are described in:*

*• ENR 1.2 for VFR flights;*

*• ENR 1.3 for IFR flights.*

**1.10.2.1.2 Délais de dépôt :**

Lorsqu'il est déposé avant le départ, un plan de vol (FPL) n'est pas communiqué plus de 120 heures avant l'heure estimée de départ du poste de stationnement (EOBT).

De plus, le préavis de dépôt de plans de vol VFR est limité à un maximum de 24 heures avant l'heure estimée de départ du poste de stationnement (EOBT).

Par application de FRA.4001 d) :

• Un vol au cours duquel l'aéronef doit franchir une frontière du territoire français fait l'objet d'un plan de vol déposé au moins 60 mn avant le départ.

• Pour un vol VFR intérieur, le plan de vol est déposé au moins 30 minutes avant le départ.

***1.10.2.1.2 Deadlines for submission:***

*When filed before departure, a flight plan (FPL) is not communicated more than 120 hours before the estimated off block time (EOBT).*

*In addition, the notice of filing VFR flight plans is limited to a maximum of 24 hours before the estimated off block time (EOBT).*

*By application of FRA.4001 d):*

*• A flight during which the aircraft must cross a border of French territory is the subject of a flight plan filed at least 60 minutes before departure.*

*• For a domestic VFR flight, the flight plan is submitted at least 30 minutes before departure.*

**1.10.2.1.3 Moyens de communication d'un FPL**

***1.10.2.1.3 Means of communication of an FPL***

Les plans de vol déposés (FPL) sont communiqués par le commandant de bord ou son représentant :

i. Directement à l'organisme NMOC, uniquement pour les vols IFR ou contenant une portion IFR et entrant dans la zone IFPS (IFPZ), la survolant ou la quittant, par un message normalisé sur le réseau RSFTA ou sur le réseau SITA en indiquant les adresses IFPS indiqué à l'ENR1.11 ; ou

*Submitted flight plans (FPLs) are communicated by the pilot-in-command or his representative:*

*i. Directly to the NMOC, only for IFR flights or flights containing an IFR portion and entering, flying over or leaving the IFPS zone (IFPZ), by a standardized message on the AFTN network or on the SITA network indicating the IFPS addresses indicated in ENR1.11; or*

© Service de l'Information Aéronautique, France

ii. via le site internet du SIA (https://www.sia.aviation-civile.gouv.fr) à la rubrique : «Préparation de vol SOFIA Briefing » ou directement via le site SOFIA Briefing (https://sofia-briefing.aviation-civile.gouv.fr), la création d'un compte étant obligatoire pour déposer un plan de vol ; ou

iii. Directement au BNIA de Bordeaux pour les vols au départ de la France Métropolitaine ou, à ses horaires d'ouvertures, au BRIA d'Ajaccio pour les vols au départ de Corse. Les coordonnées des BNIA/BRIA sont disponibles dans la partie GEN 3.1 et également sur le site du SIA à la rubrique « Préparation de vol /Assistance BRIA ».

iv. En appelant le numéro +331 56 301 301 (numéro gratuit) qui permet une mise en relation avec l'organisme adéquat des services de l'aviation civile de France métropolitaine, quel que soit le lieu de l'appel en France métropolitaine ; ou

v. Pendant le vol (AFIL) ; le pilote commandant de bord transmet le plan de vol à l'organisme intéressé de la circulation aérienne par les moyens de communication air-sol utilisés par cet organisme. Lorsque la transmission de plan de vol ne peut être effectuée, le commandant de bord adresse le plan de vol à une station de radiocommunication air-sol en demandant qu'il soit retransmis à l'organisme intéressé de la circulation aérienne.

L'équipage peut également transmettre un plan de vol abrégé en l'air par radiotéléphonie pour la traversée d'un espace aérien contrôlé, ou d'autres régions ou d'itinéraires désignés par l'autorité compétente. Ce plan de vol abrégé contient normalement, au minimum : l'indicatif d'appel, le type d'aéronef, le point d'entrée, le point de sortie et le niveau.

Dans tous les cas, et quel que soit le moyen de transmission du plan de vol, le commandant de bord doit s'assurer de respecter les délais de dépôt associés à son vol. Préalablement au départ, le commandant de bord s'assure également que son plan de vol est déposé auprès des organismes ATS, validé et accepté (réception d'un message ACK pour tout vol IFR, appel à l'organisme ATS pour les vols VFR) par ces organismes ATS. Enfin, le commandant de bord est également responsable du respect des termes du plan de vol déposé, notamment les trajectoires/altitudes volées.

Note 2.1. - Les plans de vol concernant des aéronefs qui doivent évoluer à la fois selon les règles de la circulation aérienne générale (CAG) et celles de la circulation aérienne militaire (CAM) sont qualifiés de « mixtes ». Tous les plans de vol mixtes doivent également être envoyés au Bureau d'Information des Vols Centralisé (BIVC) qui traitera la partie du vol effectuée en CAM. Ainsi, les adresses obligatoires à utiliser pour les PLN mixtes au-dessus de la France sont précisées en ENR 1.11.

*ii. via the SIA website (https://www.sia.aviation-civile.gouv.fr) under the heading: "Preflight Briefing SOFIA Briefing" or directly via the SOFIA Briefing website (https://sofia-briefing.aviation-civile.gouv.fr), the creation of an account is mandatory to submit in a flight plan; or*

*iii. Directly at the ARO/BNIA of Bordeaux for flights departing from the Metropolitan France or, at its opening hours, at the ARO/BRIA of Ajaccio for flights departing from Corsica. The contact details of the BNIA/BRIA are available in part GEN 3.1 and also on the SIA website under the heading "Preflight Briefing / ARO Assistance".*

*iv. by calling the number +331 56 301 301 (toll-free number) which allows a connection with the appropriate body of civil aviation services of metropolitan France, regardless of the place of the call in metropolitan France; or*

*v. During flight (AFIL); the pilot-in-command may transmit the flight plan to ATS unit concerned by the air-to-ground communication means used by that unit. Where the flight plan cannot be transmitted, the pilot-in-command shall send the flight plan to an air-to-ground radio station, requesting that it be retransmitted to the relevant ATS unit.*

*The crew may also transmit an abbreviated flight plan in during flight by radiotelephony for the crossing of controlled airspace, or other regions or routes designated by the competent authority. This short flight plan normally contains, at a minimum: the call sign, aircraft type, entry point, exit point and level.*

*In all cases, and regardless of the means of transmission of the flight plan, the pilot-in-command must ensure that the submission deadlines associated with his flight are respected. Prior to departure, the pilot-in-command also ensures that his flight plan is submitted to the ATS units, validated and accepted (receipt of an ACK message for any IFR flight, call to the ATS unit for VFR flights) by these ATS units. Finally, the pilot is also responsible for compliance with the terms of the flight plan filed, including trajectories/altitudes to be flown.*

*Note 2.1. - Flight plans for aircraft that must operate according to both general air traffic (GAT/CAG) and military air traffic (OAT/CAM) rules are referred to as "mixed". All mixed flight plans must also be sent to the Centralized Flight Information Office (BIVC) which will process the part of the flight carried out in OAT/CAM. Thus, the mandatory addresses to be used for mixed PLNs above France are specified in ENR 1.11.*

**1.10.2.2. Rédaction du plan de vol**

**1.10.2.2.1 Formulaire de plan de vol déposé**

### 1.10222 Généralités

Le format de plan de vol est conforme au plan de vol OACI décrit dans les Procédures pour les services de navigation aérienne – Gestion du Trafic aérien » (PANS-ATM, doc 4444 de l'OACI).

### *1.10222 General*

*The flight plan format is in accordance with the ICAO flight plan described in the Procedures for Air Navigation Services – Air Traffic Management" (PANS-ATM, ICAO doc 4444).*

© Service de l'Information Aéronautique, France

Certaines restrictions ou exigences supplémentaires sont néanmoins applicables, d'une part, en vertu de spécificités de la région EUR de l'OACI décrites dans le doc 7030 (précédées de la mention « [EUR] » dans le texte qui suit) et, d'autre part, en vertu de spécificités du système ATM français (précédées de la mention « [FR] » dans le texte qui suit).

Toutes les heures sont exprimées en temps universel coordonné (UTC) et sont mentionnées par un groupe de 4 chiffres.

Toutes les durées estimées sont exprimées par un groupe de 4 chiffres (heures et minutes).

La partie ombrée précédant le champ 3 est réservée aux organismes COM et ATS.

**1.10223 Adressage et insertion des données dans les champs**

Les adresses à indiquer dans le champ « destinataires » du formulaire du §1.10.2.2.1 ci-dessus sont disponibles dans la partie ENR 1.11.

Les données du plan vol sont insérées dans les champs 7, 8, 9, 10, 13, 15, 16, 18 et 19 du formulaire du §1.10.2.2.1 ci-dessus selon les procédures qui suivent.

CHAMP 7 : Identification de l'aéronef (7 caractères maximum)

L'identification de l'aéronef est indiquée en insérant l'une des données suivantes, en utilisant 7 caractères alphanumériques au maximum, sans trait d'union ni signe :

1. L'indicatif OACI de l'exploitant d'aéronefs suivi de l'identification du vol (exemples : KLM511, NGA213, JTR25) lorsqu'en radiotéléphonie l'indicatif d'appel à utiliser par l'aéronef se compose de l'indicatif téléphonique OACI de l'exploitant d'aéronefs suivi de l'identification du vol (exemples : KLM 511, NIGERIA 213, JESTER 25) ; ou

2. La marque de nationalité ou commune et marque d'immatriculation de l'aéronef (exemples : EIAKO, 4XBCD, N2567GA) dans les cas listés ci-dessous :
a. Lorsqu'en radiotéléphonie l'indicatif d'appel à utiliser par l'aéronef se compose de cette seule identification (exemple : CGAJS), ou est précédé de l'indicatif téléphonique OACI de l'exploitant d'aéronef (exemple : BLIZZARD CGAJS) ; ou
b. Lorsque l'aéronef n'est pas doté de radio ; ou

3. Pour les compagnies autorisées, l'indicatif à deux lettres de l'exploitant d'aéronef suivi du numéro de vol et d'un digramme de deux lettres (exemple : IT354AB).

Note 2.2.3.1 - Les indicatifs OACI et les indicatifs téléphoniques des exploitants d'aéronefs sont donnés dans le document 8585 de l'OACI - «Indicatifs des exploitants d'aéronefs et des administrations et services aéronautiques».

Note 2.2.3.2 - Pour les vols d'entraînement IFR qui comportent plusieurs segments consécutifs ("touch & go") faisant l'objet de plans de vols différents, les indicatifs mentionnés, en case 7 de deux plans de vols successifs doivent être différents (cette contrainte est liée à l'usage du mode S).

CHAMP 8 : Règles de vol et type de vol (un ou deux caractères)

1. Règles de vol

Les règles de vol sont indiquées en appliquant la procédure suivante :

a) Indiquer au moyen de l'une des lettres ci-après la catégorie de règles de vol que le pilote compte appliquer :
- I : pour un vol entièrement en régime IFR;
- V : pour un vol entièrement en régime VFR;
- Y : pour un vol débutant en régime IFR et pour lequel les règles de vol changent ensuite une ou plusieurs fois ;
- Z : pour un vol débutant en régime VFR et pour lequel les règles de vol changent ensuite une ou plusieurs fois ; et

b) Préciser dans le champ 15 les points où un changement de règles de vol est prévu.

2. Type de vol

Le type de vol est indiqué au moyen de l'une des lettres suivantes, lorsque l'autorité ATS compétente l'exige :

- S : pour transport aérien régulier ;
- N : pour transport aérien non régulier ;
- G : pour aviation générale ;
- M : pour aviation militaire (voir également la note 2.5 ci-après)
- X : pour autres types de vol.

Pour la lettre X, préciser le type de vol après STS dans le champ 18, ou lorsqu'il est nécessaire d'indiquer une autre raison pour motiver un traitement particulier de la part des organismes ATS, indiquer la raison après l'indicateur RMK dans le champs 18

Note 2.2.3.3. - Les exploitants des aéronefs d'Etat, y compris les aéronefs des services de douane, de sécurité publique et de sécurité civile, indiquent le type de vol au moyen de la lettre M.

**CHAMP 9 : Nombre d'aéronefs, type d'aéronef et catégorie de turbulence de sillage**

*some additional restrictions or requirements are nevertheless applicable, on the one hand, by virtue of the specificities of the EUR region of ICAO described in doc 7030 (preceded by the mention '[EUR]' in the following text) and, on the other hand, by virtue of specificities of the French ATM system (preceded by the mention '[FR]' in the following text).*

*All times are coordinated universal time (UTC) and are reported by a group of 4 digits.*

*All estimated durations are expressed by a group of 4 digits (hours and minutes).*

*The shaded part preceding field 3 is reserved for COM and ATS units*

***1.10223 Addressing and inserting data into fields***

*The addresses to be indicated in the "addressees" field of the form in §1.10.2.2.1 above are available in part ENR 1.11..*

*The flight plan data is inserted in fields 7, 8, 9, 10, 13, 15, 16, 18 and 19 of the form in §1.10.2.2.1 above according to the following procedures.*

*FIELD 7: Aircraft Identification (maximum 7 characters)*

*Aircraft identification is indicated by inserting one of the following data, using a maximum of 7 alphanumeric characters, without a hyphen or sign:*

*1. The ICAO designator for the aircraft operator followed by the flight identification (examples: KLM511, NGA213, JTR25) when in radiotelephony the call sign to be used by the aircraft consists of the ICAO telephony designator of the aircraft operator followed by the flight identification (examples: KLM 511, NIGERIA 213, JESTER 25) ; or*

*2. The nationality or common mark and registration mark of the aircraft (examples: EIAKO, 4XBCD, N2567GA) in the cases listed below:*
*a. When in radiotelephony the call sign to be used by the aircraft consists of this identification alone (example: CGAJS), or is preceded by the ICAO telephony designator of the aircraft operator (example: BLIZZARD CGAJS); or*
*b. When the aircraft is not equipped with a radio; or*

*3. For authorized companies, the aircraft operator's two-letter code followed by the flight number and a two-letter diagraph (example: IT354AB).*

*Note 2.2.3.1 - - ICAO designators and telephony designators of aircraft operators are given in ICAO document 8585 - " Designators for Aircraft Operating Agencies, Aeronautical Authorities and Services ".*

*Note 2.2.3.2 - For IFR training flights that have several consecutive segments ("touch & go") subject to different flight plans, the callsigns mentioned, in field 7 of two successive flight plans must be different (this constraint is related to the use of mode S).*

*FIELD 8: Flight rules and flight type (one or two characters)*

*1. Flight rules*

*Flight rules are indicated by applying the following procedure:*

*a) Indicate by one of the following letters the category of flight rules that the pilot intends to apply:*
*- I: for a flight entirely in IFR regime;*
*- V: for a flight entirely in VFR regime;*
*- Y: for a flight starting in IFR regime and for which the flight rules then change one or more times;*
*- Z: for a flight starting in VFR mode and for which the flight rules then change one or more times; and*

*b) Specify in field 15 the points where a change in flight rules is planned.*

*2. Flight type*

*The type of flight shall be indicated by one of the following letters, where required by the competent ATS authority:*

*- S: for scheduled air transport;*
*- N: for non-scheduled air transport;*
*- G: for general aviation;*
*- M: for military aviation (see also note 2.5 below)*
*- X: for other types of flight.*

*For the letter X, specify the type of flight after STS in field 18, or where it is necessary to indicate another reason for special treatment by the ATS unit, indicate the reason after the RMK indicator in field 18*

*Note 2.2.3.3. - Operators of State aircraft, including customs, public security and civil security aircraft, shall indicate the type of flight by means of the letter M.*

***FIELD 9: Number of aircraft, aircraft type and wake turbulence category***

© Service de l'Information Aéronautique, France

1. Nombre d'aéronefs (1 ou 2 caractères) : Insérer le nombre d'aéronefs s'il y en a plus d'un.

2. Type d'aéronef (de 2 à 4 caractères) : Le type d'aéronef est indiqué de la manière suivante :
a) Insérer l'indicatif approprié tel qu'il est spécifié dans le document 8643 de l'OACI « Indicatifs de type d'aéronef » ; ou
b) Si tel indicatif n'a pas été attribué ou en cas de vol en formation groupant des aéronefs de plusieurs types, insérer ZZZZ et spécifier, chaque type d'aéronefs précédé du nombre d'aéronefs correspondants, à la suite de l'indicateur TYP/ du champ 18.

3. Catégorie de turbulence de sillage de l'aéronef (1 caractère) : elle est mentionnée à l'aide de l'une des lettres suivantes après la barre oblique (/) :

J — SUPER, pour indiquer un type d'aéronef désigné en tant que tel dans le Doc 8643, Indicatifs de types d'aéronef ;

H — GROS PORTEUR, pour les aéronefs dont la masse maximale certifiée au décollage est supérieure ou égale à 136000 kg, sauf dans le cas des aéronefs appartenant à la catégorie SUPER ;

M — MOYEN TONNAGE, pour les aéronefs dont la masse maximale certifiée au décollage est inférieure à 136000 kg, mais supérieure à 7000 kg ;

L — FAIBLE TONNAGE, pour les aéronefs dont la masse maximale certifiée au décollage est inférieure ou égale à 7000 kg.

**CHAMP 10 : Equipement et possibilités**

Les possibilités relatives à un équipement sont effectives lorsque les conditions suivantes sont satisfaites :

1. L'équipement nécessaire est présent à bord et est en état de fonctionner; et
2. L'équipage de conduite possède les qualifications correspondant à cet équipement ; et
3. Le cas échéant, l'équipage possède une autorisation délivrée par l'autorité compétente.

**CHAMP 10-a : Equipements de radiocommunication, de navigation et d'approche (COM/NAV/APP), et possibilités connexes**

L'équipement de radiocommunication, de navigation et d'approche, et les possibilités connexes sont indiqués comme suit :

1. N : si aucun équipement COM/NAV/APP correspondant à la route à parcourir ne se trouve à bord ou si l'équipement est hors de fonctionnement; ou

2. S : si l'équipement type COM/NAV/APP correspondant à la route à parcourir se trouve à bord et en état de fonctionner (voir Note 2.2.3.4) ; puis

3. Insérer un ou plusieurs des caractères alphanumériques figurant dans les points a) à d) ci-dessous pour indiquer l'équipement COM/NAV/APP en état de fonctionner et les possibilités disponibles

a) Equipements et possibilités de radiocommunication

| Descripteur | Type d'équipement |
|---|---|
| E1 | FMC WPR ACARS |
| E2 | D-FIS ACARS |
| E3 | PDC ACARS |
| M1 | ATC RTF SATCOM (INMARSAT) |
| M2 | ATC RTF SATCOM (MTSAT) |
| M3 | ATC RTF SATCOM (Iridium) |
| J1 | CPDLC ATN VDL Mode 2 (voir Note 2.2.3.6) |
| J2 | CPDLC FANS 1/A HFDL |
| J3 | CPDLC FANS 1/A VDL Mode 4 |
| J4 | CPDLC FANS 1/A VDL Mode 2 |
| J5 | CPDLC FANS 1/A SATCOM (INMARSAT) |
| J6 | CPDLC FANS 1/A SATCOM (MTSAT) |
| J7 | CPDLC FANS 1/A SATCOM (Iridium) |
| H | HF RTF |
| V | VHF RTF |
| Y | VHF avec possibilité d'espacement 8,33 kHz entre les canaux |
| U | UHF RTF |
| P1 à P2 | Réservés aux RCP (voir Note 2.2.3.10) |

b) Equipements et possibilités de navigation

*1. Number of aircraft (1 or 2 characters): Insert the number of aircraft if there is more than one.*

*2. Aircraft type (2 to 4 characters): The aircraft type is indicated as follows:*
*a) Insert the appropriate designator as specified in ICAO document 8643 "Aircraft type designators"; or*
*b) If no such designator has been assigned or in the case of a formation flight grouping aircraft of several types, insert ZZZZ and specify, following indicator TYP/ in field 18, each aircraft type preceded by the corresponding number of aircraft.*

*3. Aircraft wake turbulence category (1 character): is indicated using one of the following letters after the slash (/):*

*J — SUPER, to indicate an aircraft type designated as such in Doc 8643, Aircraft Type designators;*

*H — WIDE, for aircraft with a maximum certified take-off weight of 136000 kg or more, except in the case of aircraft belonging to the SUPER category;*

*M — MEDIUM, for aircraft with a maximum certified take-off weight of less than 136000 kg but more than 7000 kg;*

*L — LIGHT, for aircraft with a maximum certified take-off weight of 7000 kg or less.*

***FIELD 10: Equipment and capabilities***

*The capabilities relating to equipment are effective when the following conditions are met:*

*1. The necessary equipment is present on board and is serviceable; and*
*2. The flight crew shall have the qualifications corresponding to this equipment; and*
*3. Where applicable, the crew shall have an authorisation issued by the competent authority.*

***FIELD 10-a: Radiocommunication, Navigation and Approach Equipment (COM/NAV/APP), and Related capabilities***

*Radiocommunication, navigation and approach equipment and associated capabilities are identified as follows:*

*1. N: if no COM/NAV/APP equipment corresponding to the route to be flown is on board or if the equipment is unserviceable; or*

*2. S: if the COM/NAV/APP type equipment corresponding to the route to be flown is on board and serviceable (see Note 2.2.3.4); then*

*3. Insert one or more of the alphanumeric characters in points (a) to (d) below to indicate the COM/NAV/APP serviceable equipment and the available capabilities*

*a) Radiocommunication equipment and capabilities*

| *Descriptor* | *Type of equipment* |
|---|---|
| *E1* | *FMC WPR ACARS* |
| *E2* | *D-FIS ACARS* |
| *E3* | *PDC ACARS* |
| *M1* | *ATC RTF SATCOM (INMARSAT)* |
| *M2* | *ATC RTF SATCOM (MTSAT)* |
| *M3* | *ATC RTF SATCOM (Iridium)* |
| J1 | CPDLC ATN VDL Mode 2 (see Note 2.2.3.6) |
| J2 | CPDLC FANS 1/A HFDL |
| J3 | CPDLC FANS 1/A VDL Mode 4 |
| J4 | CPDLC FANS 1/A VDL Mode 2 |
| J5 | CPDLC FANS 1/A SATCOM (INMARSAT) |
| J6 | CPDLC FANS 1/A SATCOM (MTSAT) |

b) Equipment and navigation possibilities

© Service de l'Information Aéronautique, France

| Descripteur | Type d'équipement |
|---|---|
| C | Loran C |
| D | DME |
| F | ADF |
| G | GNSS Si le plan prévoit qu'une partie quelconque du vol se déroulera en IFR, cette mention indique des récepteurs GNSS conformes aux exigences de l'Annexe 10, Volume I (voir Note 2. 2.3.5) |
| I | Navigation par inertie |
| O | VOR |
| R | Approuvé PBN (voir note 2.2.3.7) |
| T | TACAN |
| W | Approuvé RVSM |
| X | Approuvé MNPS |

[EUR] Lorsque le descripteur W est utilisé, l'immatriculation de l'aéronef est indiquée dans le champ 18 du plan de vol.

[EUR] Pour un vol en formation d'aéronefs d'Etat, les exploitants n'inscriront pas la lettre « W » dans le champ 10 du plan de vol, quel que soit le statut d'homologation RVSM des aéronefs concernés.

**c) Equipements et possibilités d'aide à l'approche**

| Descripteur | Type d'équipement |
|---|---|
| A | Système d'atterrissage GBAS |
| B | LPV (APV avec SBAS) |
| K | MLS |
| L | ILS |

**d) Autres équipements se trouvant à bord ou autres possibilités**

| Descripteur | Type d'équipement |
|---|---|
| Z | Autre équipement se trouvant à bord ou autres possibilités - autres que ceux précisés aux points a) à c) ci-dessus (voir Note 2.2.3.8) |

Les caractères alphanumériques ne figurant pas dans les listes des points a) à d) ci-dessus sont réservés.

Note 2.2.3.4 . — Si la lettre S est utilisée, l'équipement type est considéré comme se composant de VHF RTF, VOR et ILS.

Note 2. 2.3.5 . — Si la lettre G est utilisée, les types de renforcement GNSS externe, le cas échéant, sont précisés dans le champ 18 à la suite de NAV/, séparés par des espaces

Note 2. 2.3.6 . — Voir la norme RTCA/EUROCAE «Interoperability Requirements Standard for ATN Baseline 1 (ATN B1 INTEROP Standard – DO 280B/ED-110B)» pour les services de liaison de données concernant les autorisations et l'information ATC, la gestion des communications ATC et la vérification de microphone ATC.

Note 2.2.3.7. — Si la lettre R est utilisée, les performances de navigation qui peuvent être atteintes sont précisées dans le champ 18 à la suite de PBN/. Des éléments indicatifs sur l'application de la navigation fondée sur les performances à un tronçon de route, une route ou une région donnés sont disponibles dans le document 9613 de l'OACI — « Manuel de la navigation fondée sur les performances (PBN) ».

Note 2.2.3.8. — Si la lettre Z est utilisée, préciser dans le champ 18 l'autre équipement transporté, ou les autres possibilités, à la suite de COM/, NAV/ ou DAT/, en fonction de l'équipement. Les exemptions concernant RNAV, CPDLC et 8.33kHz sont à préciser en indiquant à la fois la lettre 'Z' en champ 10a et en insérant l'indicateur d'exemption approprié dans le champ 18, respectivement sous NAV/, DAT/ ou COM/ comme détaillé dans l'IFPS Users Manual et en particulier :
o Insérer EXM833 à la suite de COM/ ;
o Insérer RNAVX ou RNAVINOP selon qu'il convient, à la suite de NAV/;
o Insérer CPDLCX à la suite de DAT/.

Note 2.2.3.9. — Des renseignements sur les moyens de navigation sont fournis à l'ATC aux fins d'autorisation et d'acheminement

Note 2.2.3.10.— Des éléments indicatifs sur l'application de la communication basée sur la performance, qui prescrit la RCP d'un service de la circulation aérienne fourni dans une zone donnée, figurent dans le Performance-based Communication and Surveillance (PBCS) Manual (Doc 9869).

**CHAMP 10-b : Equipement de surveillance et possibilités connexes**

L'équipement de surveillance et les possibilités connexes sont indiqués comme suit :

| *Descriptor* | *Type of equipment* |
|---|---|
| *C* | *Loran C* |
| *D* | *Dme* |
| *F* | *Adf* |
| *G* | *GNSS If any portion of the flight is planned to be conducted under IFR, this indication refers to GNSS receivers that comply with the requirements of Annex 10, Volume I (see Note 2. 2.3.5)* |
| *I* | *Inertial navigation* |
| *O* | *Vor* |
| *R* | *PBN approved(see note 2.2.3.7)* |
| *T* | *TACAN* |
| *W* | *RVSM Approved* |
| *X* | *MNPS Approved* |

*[EUR] When the W descriptor is used, the aircraft registration is indicated in field 18 of the flight plan.*

*[EUR] For a formation flight of state aircraft, operators will not enter the letter "W" in field 10 of the flight plan, regardless of the RVSM approval status of the aircraft concerned.*

**c) Equipment and possibilities to assist with the approach**

| *Descriptor* | *Type of equipment* |
|---|---|
| *A* | *GBAS Landing System* |
| *B* | *LPV (APV with SBAS)* |
| *K* | *MLS* |
| *L* | *ILS* |

***d) Other equipment on board or other capabilities***

| *Descriptor* | *Type of equipment* |
|---|---|
| Z | Other equipment carried or other capabilities - other than that specified in points (a) to (c) above (see Note 2.2.3.8) |

*Alphanumeric characters not included in the lists of items (a) to (d) above are reserved.*

*Note 2.2.3.4 . — If the letter S is used, the standard equipment is considered to consist of VHF RTF, VOR and ILS.*

*Note 2. 2.3.5 . — If the letter G is used, the types of external GNSS augmentation, if any, are specified in field 18 following NAV/ , separated by spaces*

*Note 2. 2.3.6 . — See RTCA/EUROCAE 'Interoperability Requirements Standard for ATN Baseline 1 (ATN B1 INTEROP Standard – DO 280B/ED-110B) for datalink services ATC clearance and information/ ATC communications management/ ATC microphone check.*

*Note 2.2.3.7. — If the letter R is used, the navigation performance that can be achieved is specified in field 18 following PBN/. Guidance material on the application of performance-based navigation to a specific route segment, route or area is available in ICAO Document 9613 — "Performance-Based Navigation Manual (PBN)".*

*Note 2.2.3.8. — If the letter Z is used, specify in Item 18 the other equipment carried or other capabilities, preceded by COM/, NAV/ and/or DAT, as appropriate. The exemptions for RNAV, CPDLC and 8.33kHz are to be specified by indicating both the letter 'Z' in field 10a and by inserting the appropriate exemption indicator in field 18, respectively under NAV/, DAT/ or COM/ as detailed in the IFPS Users Manual and in particular:*
*o Insert EXM833 after COM/;*
*o Insert RNAVX or RNAVINOP as appropriate, following NAV/;*
*o Insert CPDLCX after DAT/.*

*Note 2.2.3.9. — Information on navigation capability is provided to ATC for clearance and routing purposes*

*Note 2.2.3.10.— Guidance material on the application of performance-based communication, which prescribes RCP to an air traffic service in a specific area, is contained in the Performance-based Communication and Surveillance (PBCS) Manual (Doc 9869)).*

***FIELD 10-b: Surveillance Equipment and capabilities***

*surveillance equipment and associated capabilities are identified as follows:*

© Service de l'Information Aéronautique, France

Après le dernier caractère inséré en champ 10-a, insérer une barre oblique (/) puis, insérer :
1) N : s'il n'y a pas d'équipement de surveillance à bord correspondant à la route à suivre, ou si l'équipement n'est pas en état de fonctionner ; ou
2) un ou plusieurs des caractères alphanumériques des points a) à d) ci-dessous, jusqu'à un maximum de 20 caractères (incluant lettres et chiffes), pour indiquer l'équipement et les possibilités de surveillance qui se trouvent à bord et qui sont en état de fonctionner :

**a) Équipement SSR modes A et C**

| Descripteur | Type d'équipement |
|---|---|
| A | Transpondeur — mode A (4 chiffres — 4 096 codes) |
| C | Transpondeur — mode A (4 chiffres — 4 096 codes) et mode C |

**b) Équipement et possibilités SSR mode S**

| Descripteur | Type d'équipement |
|---|---|
| E | Transpondeur — mode S, avec possibilité de transmission de l'identification de l'aéronef, de l'altitude-pression et de squitters longs (ADS-B) |
| H | Transpondeur — mode S, avec possibilité de transmission de l'identification de l'aéronef, de l'altitude-pression et possibilité de surveillance enrichie |
| I | Transpondeur — mode S, avec possibilité de transmission de l'identification de l'aéronef mais non de l'altitude-pression |
| L | Transpondeur — mode S, avec possibilité de transmission de l'identification de l'aéronef, de l'altitude-pression et de squitters longs (ADS-B) et possibilité de surveillance enrichie |
| P | Transpondeur — mode S, avec possibilité de transmission de l'altitude-pression mais non de l'identification de l'aéronef |
| S | Transpondeur — mode S, avec possibilité de transmission de l'identification de l'aéronef et de l'altitude-pression |
| X | Transpondeur — mode S, sans possibilité de transmission ni de l'identification de l'aéronef, ni de l'altitude-pression |

Note 2.2.3.11. — La possibilité de surveillance enrichie est la capacité de l'aéronef à transmettre en liaison descendante, au moyen d'un transpondeur mode S, des données provenant de l'aéronef

**c) Equipement et possibilités ADS-B**

| Descripteur | Type d'équipement |
|---|---|
| B1 | ADS-B avec possibilité ADS-B "out" sur fréquence spécialisée 1090 MHz |
| B2 | ADS-B avec possibilité ADS-B "out" et "in" sur fréquence spécialisée 1090 MHz |
| U1 | Possibilité ADS-B "out" utilisant l'UAT |
| U2 | Possibilité ADS-B "out" et "in" utilisant l'UAT |
| V1 | Possibilité ADS-B "out" utilisant la VDL mode 4 |
| V2 | Possibilité ADS-B "out" et "in" utilisant la VDL mode 4 |

**d) Equipement et possibilités ADS-C**

| Descripteur | Type d'équipement |
|---|---|
| D1 | ADS-C avec possibilités FANS 1/A |
| G1 | ADS-C avec possibilités ATN |

Les caractères alphanumériques ne figurant pas dans les listes des points a) à d) ci-dessus sont réservés.

Note 2.2.3.12. — Les applications de surveillance supplémentaires devraient être indiquées dans le champ 18 à la suite de SUR/.

**CHAMP 13 : Emplacement et heure de départ (huit caractères)**

L'emplacement et l'heure de départ sont indiqués comme il suit :

1. Insérer l'emplacement de départ comme il suit :

a) si le départ est effectué depuis un aérodrome auquel un indicateur d'emplacement OACI de quatre lettres a été attribué, insérer cet indicateur (voir le document 7910 de l'OACI — « Indicateurs d'emplacement ») ; ou

b) si le départ est effectué depuis un aérodrome auquel aucun indicateur d'emplacement OACI n'a été attribué, insérer les lettres ZZZZ et indiquer en champ 18, à la suite de DEP/, le nom en clair, suivi d'un espace et de l'emplacement géographique de l'aérodrome ou ;

*After the last character inserted in field 10-a, insert a forward slash (/) and then insert:*
*1) N: if there is no monitoring equipment on board corresponding to the route to be followed, or if the equipment is not in working order; or*
*2) one or more of the alphanumeric characters in points (a) to (d) below, up to a maximum of 20 characters (including letters and figures), to indicate the equipment and monitoring capabilities on board that are in working order:*

***a) SSR equipment modes A and C***

| *Descriptor* | *Type of equipment* |
|---|---|
| *A* | Transponder — mode A (4 digits — 4 096 codes) |
| C | Transponder — mode A (4 digits — 4,096 codes) and mode C |

***b) Equipment and possibilities SSR mode S***

| *Descriptor* | *Type of equipment* |
|---|---|
| *E* | *Transponder — mode S, including aircraft identification, pressure-altitude and extended squitter (ADS-B) capability* |
| *H* | *Transponder — S mode, including aircraft identification, pressure-altitude and enhanced surveillance capability* |
| *I* | *Transponder — mode S, including aircraft identification, but no pressure-altitude capability* |
| *L* | *Transponder — mode S, including aircraft identification, pressure-altitude, extended squitter (ADS-B) and enhanced surveillance capability* |
| *P* | *Transponder — mode S, including pressure-altitude, but no aircraft identification capability* |
| *S* | *Transponder — mode S, including both pressure altitude and aircraft identification capability* |
| *X* | *Transponder — mode S, with neither aircraft identification nor pressure-altitude capability* |

*Note 2.2.3.11. — Enhanced surveillance capability is the aircraft's ability to transmit downlink data from the aircraft by means of a mode S transponder*

***c) ADS-B equipment and capabilities***

| *Descriptor* | *Type of equipment* |
|---|---|
| *B1* | *ADS-B with dedicated 1 090 MHz ADS-B "out" capability* |
| *B2* | *ADS-B with dedicated 1 090 MHz ADS-B "out" and "in" capability* |
| *U1* | *ADS-B "out" capability using UAT* |
| *U2* | *ADS-B "out" and "in" capability using UAT* |
| *V1* | *ADS-B "out" capability using VDL mode 4* |
| *V2* | *ADS-B "out" and "in" capability using VDL mode 4* |

***d) ADS-C equipment and capabilities***

| *Descriptor* | *Type of equipment* |
|---|---|
| *D1* | *ADS-C with FANS 1/A capabilities* |
| *G1* | *ADS-C with ATN capabilities* |

*Alphanumeric characters not included in the lists of items (a) to (d) above are reserved.*

*Note 2. 2.3.12. — Additional equipment or surveillance capabilities should be indicated in field 18 after SUR/.*

***FIELD 13: Location and time of departure (eight characters)***

*1. Insert the departure location as follows:*

*a) if the departure is from an aerodrome to which a four-letter ICAO location indicator has been assigned, insert this indicator (see ICAO document 7910 — "Location indicators"); or*

*b) if the departure is from an aerodrome to which no ICAO location indicator has been assigned, insert the letters ZZZZ and indicate in field 18, after DEP/, the name in clear, followed by a space and the geographical location of the aerodrome or;*

c) si l'aéronef n'a pas décollé d'un aérodrome, insérer les lettres ZZZZ et indiquer en champs 18, à la suite de DEP/, l'emplacement du premier point de la route ou la radioborne

d) si le plan de vol est reçu d'un aéronef en vol, insérer les lettres AFIL et indiquer en champ 18, à la suite de DEP/, l'indicateur d'emplacement OACI de quatre lettres de l'organisme ATS auprès duquel des données de plan de vol complémentaires peuvent être obtenues ;

2. à la suite de l'emplacement de départ indiqué conformément au 1) ci-dessus, insérer sans espace intermédiaire l'heure de départ selon les instructions qui suivent :

a) si le plan de vol est déposé avant le départ, insérer l'heure estimée de départ du poste de stationnement (EOBT) ; ou

b )si le plan de vol est reçu d'un aéronef en vol, insérer l'heure effective ou estimée de passage au premier point de la route auquel s'applique le plan de vol.

*c) if the aircraft has not taken off from an aerodrome, insert the letters ZZZZ and indicate in fields 18, following DEP/, the location of the first point of the route or the marker radio beacon*

*d) if the flight plan is received from an aircraft in flight, insert the letters AFIL and indicate in field 18, following DEP/, the four-letter ICAO location indicator of the ATS unit from which additional flight plan data can be obtained;*

*2. following the departure location indicated in accordance with (1) above, insert the departure time without intermediate space according to the following instructions:*

*a) if the flight plan is submitted before departure, insert the estimated off block time (EOBT); or*

*b)if the flight plan is received from an aircraft in flight, insert the actual or estimated time over the first point of the route to which the flight plan applies*

**CHAMP 15 : Route**

**1. Règles de désignation**

Les données du plan de vol concernant la route sont insérées dans le champ 15, en utilisant uniquement les conventions décrites au paragraphe « conventions d'écriture » ci-après et en séparant toutes les subdivisions du champ 15 par un espace.

Il faut indiquer la première vitesse de croisière comme dans 1.1) et le premier niveau de croisière comme dans 1.2), sans espace intermédiaire, puis, à la suite de la flèche, indiquer la description de la route comme en 1.3)

Ces données sont constituées de la séquence d'éléments suivants :

1.1) la vitesse vraie (cinq caractères maximum), pour la première partie ou la totalité de la « croisière » sous l'une des formes suivantes :

a) en nœuds au moyen de la lettre N suivie de 4 chiffres (N0485 pour 485kts), ou

b) en kilomètres par heure au moyen de la lettre K suivie de 4 chiffres (K0830 pour 830km/h), ou

c) en nombre de Mach vrai, lorsque l'autorité ATS compétente le prescrit, au moyen de la lettre M suivie de 3 chiffres représentant le produit par 100 du nombre de Mach arrondi au centième (exemple : M082 pour Mach 0,82).; puis, sans espace intermédiaire.

***FIELD 15: Route***

***1. Designation rules***

*The flight plan data for the route are inserted in field 15, using only the conventions described in the paragraph « writing conventions" below and separating all subdivisions of field 15 by a space.*

*The first cruising speed as in 1.1) and the first cruising level as in 1.2) must be indicated, without intermediate space, and then, after the arrow, indicate the description of the route as in 1.3)*

*This data consists of the following sequence of elements:*

*1.1) the true airspeed (maximum five characters), for the first part or the whole of the "cruise" in one of the following forms:*

*a) in knots by means of the letter N followed by 4 digits (N0485 for 485kts), or*

*b) in kilometres per hour by means of the letter K followed by 4 digits (K0830 for 830km/h), or*

*c) in true Mach number, where so required by the competent ATS authority, to the nearest hundredth of unit Mach, expressed as M followed by 3 digits (example: M082 for Mach 0,82).; then, without intermediate space.*

**1.2) le niveau de croisière (cinq caractères maximum) prévu pour la première partie ou la totalité de la route à parcourir sous l'une des formes suivantes :**

a) en niveau de vol exprimé par la lettre F suivie de 3 chiffres (exemple: F085 et F330 pour FL85 et FL330) ; ou

b) en niveau métrique standard en dizaines de mètres, lorsque l'autorité ATS compétente le prescrit, exprimé par la lettre S suivie de 4 chiffres (exemple : S0450 et S1130 et pour 4500 mètres et 11300 mètres), ou

c) en altitude en centaines de pieds exprimée par la lettre A suivie de 3 chiffres (exemples : A045 ; A100 pour de 4500 ft et 10 000 ft), ou

d) en altitude en dizaines de mètres exprimée par la lettre M suivie de 4 chiffres (exemple : M0840 pour 8400 mètres), ou

e) dans le cas d'un vol VFR non contrôlé, utiliser la mention VFR :

***1.2. the level of cruising (maximum five characters) provided for the first part or all of the route to be travelled in one of the following forms:***

*a) in flight level expressed by the letter F followed by 3 digits (example: F085 and F330 for FL85 and FL330); or*

*b) in standard metric level in tens of metres, where so required by the competent ATS authority, expressed by the letter S followed by 4 digits e.g. S0450 and S1130 and for 4500 m and 11300 m), or*

*c) in altitude in hundreds of feet expressed by the letter A followed by 3 digits (examples: A045; A100 for 4500 ft and 10 000 ft), or*

*d) in altitude in tens of metres expressed by the letter M followed by 4 digits (example: M0840 for 8400 meters), or*

*e) in the case of an uncontrolled VFR flight, use the letters VFR*

**1.3) la description de la route, y compris les changements de vitesse, de niveau de croisière et de règles de vol :**

a) pour les parties du vol effectuées sur des routes ATS désignées, appliquer successivement les points suivants :

i. Aérodrome de départ

o 1er cas : si l'aérodrome de départ se trouve sur la première route ATS utilisée ou y est relié : Insérer l'indicatif de la route ATS concernée ; puis appliquer le point ii ci-dessous ;

o 2ème cas : si l'aérodrome de départ n'est ni situé sur la première route ATS utilisée ni relié à celle-ci, les lettres DCT suivies du point où l'aéronef rejoindra la première route ATS, puis l'indicatif de la route ATS, puis appliquer le point ii ci-dessous ;

ii. Insérer chaque point où il est prévu qu'un changement de vitesse ou de niveau de croisière commence, ou qu'un changement de route ATS ou de règles de vol est effectué, suivi dans chacun des cas

• De l'indicatif du tronçon de route ATS suivant, même si cet indicatif n'est pas différent du précédent, ou

• De DCT si le vol jusqu'au point suivant aura lieu en dehors d'une route désignée, à moins que les deux points ne soient définis par des coordonnées géographiques.;

Note 2.2.3.13 — Lorsqu'une transition est prévue entre une route ATS inférieure et une route ATS supérieure, et que l'orientation de ces routes est la même, il n'est pas nécessaire d'insérer le point de transition s'il n'est pas prévu en ce point d'autre changement qu'un changement de route.

***1.3) a description of the route, including changes in speed, cruising level and flight rules:***

*a) for those parts of the flight operated on designated ATS routes, apply successively the following points:*

*i. Departure aerodrome*

*o 1st case: if the aerodrome of departure is on the first ATS route used or is connected to it: Insert the designator of the ATS route concerned; then apply point ii below;*

*o 2nd case: if the aerodrome of departure is neither located on nor connected to the first ATS route used, the letters DCT followed by the point where the aircraft will join the first ATS route, then the ATS route designator, then apply point ii below.*

*ii. Insert each point where a change of speed or cruising level is expected to begin, or a change of ATS route or flight rules is to be made, followed in each case*

*• the designator of the next ATS route section, even if that designator is not different from the previous one, or*

*• DCT if the flight to the next point will take place outside a designated route, unless both points are defined by geographical coordinates.*

*Note 2. 2.3.13 — Where a transition is planned between a lower ATS route and an upper ATS route, and the routes are oriented in the same direction, it is not necessary to insert the transition point if no change of route is foreseen at that point other than a change of route.*

© Service de l'Information Aéronautique, France

b) pour les parties du vol effectuées en dehors des routes ATS désignées, appliquer les points suivants :

i. indiquer des points normalement séparés par des intervalles ne dépassant pas 30 minutes de vol ou 370 km (200 NM), notamment chaque point où il est prévu un changement de vitesse ou de niveau, un changement de route, ou un changement de règles de vol ; ou

ii. lorsque l'autorité ATS compétente l'exige, définir la route par des points définis comme suit :

o La route, pour les vols en majeure partie orientés est-ouest entre 70°N et 70°S, par des points significatifs choisis à intervalles d'un demi-degré ou d'un degré de latitude sur des méridiens espacés de 10 degrés. Pour les vols hors de ces latitudes, les routes seront définies par des points significatifs sur des parallèles, normalement à intervalles de 20 degrés de longitude. Dans la mesure du possible, la distance entre deux points consécutifs de la route correspond au maximum à une heure de vol. Des points significatifs supplémentaires peuvent être choisis selon les besoins;

o Pour les vols en majeure partie orientés nord-sud, définir les routes par des points significatifs choisis à intervalles d'un degré de longitude sur des parallèles spécifiés espacés de 5 degrés.

iii. insérer DCT entre les points successifs à moins que ces deux points ne soient définis par des coordonnées géographiques ou par un relèvement et une distance.

*b) for those parts of the flight that are conducted outside designated ATS routes, apply the following:*

*i. indicate points normally not more than 30 minutes flying time or 370 km (200 NM) apart, including each point where a change of speed or level, a change of route, or a change of flight rules is planned; or*

*ii. where required by the competent ATS authority, define the route by points defined as follows:*

*o the track, for flights predominantly operating in an east-west direction between 70°N and 70°S, by reference to significant points formed by the intersections of half or whole degrees of latitude with meridians spaced at intervals of 10 degrees of longitude .. For flights operating in areas outside those latitudes the tracks shall be defined by significant points formed by the intersection of parallels of latitude with meridians normally spaced at 20 degrees of longitude. The distance between significant points shall, as far as possible, not exceed one hour's flight time. Additional significant points shall be established as deemed necessary;*

*o For flights operating predominantly in a north-south direction, define tracks by reference to significant points formed by the intersection of whole degrees of longitude with specified parallels of latitude which are spaced at 5 degrees.*

*iii. insert DCT between successive points unless these two points are defined by geographical coordinates or by a bearing and distance.*

**2.1. Conventions d'écriture pour les routes et points**

**2.1) Routes ATS (2 à 7 caractères)**

Indicatif codé attribué à la route ou au tronçon de route, y compris, s'il y a lieu, l'indicatif codé attribué à l'itinéraire normalisé de départ ou d'arrivée (exemples : BCN1, B1, R14, UB10, KODAP2A).

Note 2.2.3.14 - Les routes ATS comprennent les itinéraires normalisés de départ et d'arrivée qui sont alors indiqués par leur indicatif codé, le cas échéant

Note. 2.2.3.15- Les dispositions relatives à l'application des indicatifs de route se trouvent dans le règlement d'exécution (UE) 2017/373 modifié, établissant des exigences communes relatives aux prestataires de services de gestion du trafic aérien et de services de navigation aérienne/Annexe 11 Partie FPD/appendice 1/sections II et III.

2.2) Points définissant la route (maximum 2 à 11 caractères) :

Un point de la route est défini :

a) par un indicatif codé de 2 à 5 caractères, s'il s'agit d'un point significatif (exemple : LN, MAY, HADDY) ; ou, dans les autres cas

b) par son emplacement géographique exprimé :

i. en degrés seulement (7 caractères) : 2 chiffres indiquant la latitude en degrés, suivis de la lettre « N » pour une latitude Nord ou de la lettre « S » pour une latitude Sud, puis 3 chiffres indiquant la longitude, suivis de la lettre « E » pour une longitude Est ou de la lettre « W » une longitude Ouest. Les nombres sont à compléter au besoin par des zéros (exemple: un point de latitude 6° Nord et de longitude 78° Ouest s'écrit 06N078W); ou

ii. en degrés et minutes (11 caractères) : 4 chiffres indiquant la latitude en degrés et en dizaines de minutes et minutes, suivis de la lettre « N » pour une latitude Nord ou de la lettre « S » pour une latitude Sud, puis 5 chiffres indiquant la longitude en degrés et en dizaines de minutes et minutes, suivis de la lettre « E » pour une longitude Est ou de la lettre « W » une longitude Ouest. Les nombres sont à compléter au besoin par des zéros (exemple : un point de latitude 46°2' Nord et de longitude 78°5' Ouest s'écrit 4602N07805W) ; ou

iii par la combinaison d'un relèvement à partir d'un point significatif et d'une distance par rapport à ce point et désigné par l'indicatif codé du point significatif, suivi de 3 chiffres donnant en degrés magnétiques le relèvement à partir de ce point ; suivis de 3 chiffres donnant en milles marins la distance par rapport à ce point. Les nombres sont à compléter au besoin par des zéros. : par exemple, un point situé dans le relèvement de 180° magnétiques et à 40 milles marins du VOR « DUB » devrait être indiqué par DUB180040.

***2.1. Writing conventions for routes and points***

***2.1) ATS routes (2 to 7 characters)***

*Coded designator assigned to the route or route segment, including, where applicable, the coded designators assigned to the standard route of departure or arrival (examples: BCN1, B1, R14, UB10, KODAP2A).*

*Note 2.2.3.14 - ATS routes include standard departure and arrival routes which are then indicated by their coded designators, if applicable*

*Note. 2.2.3.15- Provisions on the application of route designators can be found in Implementing Regulation (EU) 2017/373 as amended, laying down common requirements for providers of air traffic management and air navigation services/Annex 11 Part FPD/Appendix 1/Sections II and III.*

*2.2) Points defining the route (maximum 2 to 11 characters):*

*A point on the route is defined:*

*a) by a coded indicator of 2 to 5 characters, if it is a significant point (example: LN, MAY, HADDY); or, in other cases*

*b)by its expressed geographical location:*

*i. in degrees only (7 characters): 2 digits indicating latitude in degrees, followed by the letter "N" for a north latitude or the letter "S" for a south latitude, then 3 digits indicating longitude, followed by the letter "E" for an east longitude or the letter "W" a west longitude. The numbers are to be completed if necessary, by zeros (example: a point of latitude 6 ° North and longitude 78 ° West is written 06N078W); or*

*ii. in degrees and minutes (11 characters): 4 digits indicating the latitude in degrees and in tens of minutes and minutes, followed by the letter "N" for a north latitude or the letter "S" for a south latitude, then 5 digits indicating the longitude in degrees and in tens of minutes and minutes, followed by the letter "E" for an east longitude or the letter "W" a west longitude. The numbers are to be completed if necessary, by zeros (example: a point of latitude 46°2' North and longitude 78°5' West is written 4602N07805W); or*

*iii by the combination of an increase from a significant point and a distance from that point and designated by the coded indicative of the significant point, followed by 3 digits giving in magnetic degrees the rise from that point; followed by 3 digits giving in nautical miles the distance from that point. The numbers are to be completed if necessary by zeros.: for example, a point located in the 180° magnetic bearing and 40 nautical miles from the VOR "DUB" should be indicated by DUB180040.*

**2.3) Changement de vitesse ou de niveau (maximum 21 caractères)**

Un changement de vitesse a lieu lorsque la vitesse vraie de l'aéronef varie d'au moins 5% ou lorsque son Mach varie de 0,01 ou plus.

Un changement de vitesse ou de niveau s'écrit en insérant :

a) le point où le changement de vitesse ou de niveau doit commencer, écrit comme indiqué au 2.2) ci-dessus ; suivi d'une barre oblique (/), puis

b) la vitesse de croisière et le niveau de croisière écrits dans cet ordre, sans espace intermédiaire et en respect des conventions respectivement des paragraphes 1.1) et 1.2) ci-dessus, même lorsqu'une seule de ces quantités est concernée par un changement.

***2.3) Change of speed or level (maximum 21 characters)***

*A speed change occurs when the true airspeed of the aircraft varies by at least 5% or when its Mach varies by 0.01 or more.*

*A change of speed or level is written by inserting:*

*(a)the point at which the speed or level change is to begin, written as indicated in 2(2) above; followed by a slash (/), then*

*b)the cruising speed and cruising level written in that order, without intermediate space and in accordance with the conventions of paragraphs 1(1) and 1 respectively. (2) above, even where only one of those quantities is affected by a change.*

© Service de l'Information Aéronautique, France

Examples: LN/N0284A045
MAY/N0305F180
HADDY/N0420F330
4602N07805W/N0500F350
46N078W/M082F330 DUB180040/N0350M0840

**2.4) Changement de règles de vol (maximum 3 caractères)**

Un changement de règles de vol s'écrit en insérant le point où est prévu le changement de règles de vol, écrit exactement comme aux 2.2) ou 2.3) ci-dessus ; suivi d'un espace, puis les lettres :

i. VFR pour le passage du vol IFR au vol VFR ; ou

ii. IFR pour le passage du vol VFR au vol IFR.

Exemples : LN VFR LN/N0284A050 IFR

2.5) Croisière ascendante (maximum 28 caractères)

Une croisière ascendante est indiquée en insérant :

a) la lettre C ; suivie d'une barre oblique (/), puis

b) le point où il est prévu d'amorcer une croisière ascendante, exprimé exactement comme au 2.2) ci-dessus ; suivi d'une barre oblique (/), puis

c) la vitesse à maintenir au cours de la croisière ascendante, exprimée exactement comme au 1.1) ci-dessus ; suivie d'une barre oblique (/), puis

d) les deux niveaux qui définissent la tranche d'espace à occuper au cours de la croisière ascendante, ou le niveau au-dessus duquel la croisière ascendante est prévue suivi des lettres PLUS, sans espace intermédiaire, chaque niveau étant exprimé exactement comme au 1.2) ci-dessus.

Exemples : C/48N050W/M082F290F350 C/48N050W/M082F290PLUS C/52N050W/M220F580F620

**CHAMP 16 : Aérodrome de destination et durée totale estimée —Aérodromes de dégagement à destination**

Le champ 16 est rempli comme suit :

1) Aérodrome de destination et durée totale estimée :

a) indiquer l'aérodrome de destination selon les instructions qui suivent :

i. si l'aérodrome de destination possède un indicateur d'emplacement OACI de quatre lettres, insérer cet indicateur (voir le document 7910 de l'OACI — « Indicateurs d'emplacement ») ; ou

ii. si aucun indicateur d'emplacement OACI n'a été attribué à cet aérodrome, insérer les lettres ZZZZ et indiquer en champ 18, à la suite de DEST/, le nom en clair de l'aérodrome, suivi d'un espace et l'emplacement de l'aérodrome sous forme de coordonnées géographiques ; puis

b) insérer, sans espace intermédiaire, la durée totale estimée du vol.

Note 2.2.3.16. — Dans le cas d'un plan de vol communiqué par un aéronef en vol, la durée totale estimée est la durée estimée à partir du premier point de la route auquel s'applique le plan de vol jusqu'au point où le plan de vol prend fin.

2) Les aérodromes de dégagement à destination (2 au maximum) sont indiqués de la façon suivante, pour chacun des aérodromes concernés :

a) si l'aérodrome de dégagement à destination possède un indicateur d'emplacement OACI de quatre lettres, insérer cet indicateur (voir le document 7910 de l'OACI — « Indicateurs d'emplacement ») ; ou

b) si aucun indicateur d'emplacement n'a été attribué à cet aérodrome, insérer les lettres ZZZZ et indiquer au champ 18, à la suite de ALTN/, le nom et l'emplacement de l'aérodrome

**CHAMP 18 : Renseignements divers**

**Note 2.2.3.17. — L'emploi d'indicateurs ne figurant pas dans la liste ci-après peut se traduire par le rejet, le traitement incorrect ou la perte de données.**

Le trait d'union et la barre oblique ne sont utilisés que comme il est prescrit ci-dessous

Les renseignements divers sont indiqués en insérant :

1) 0 si aucun renseignement n'est donné dans ce champ ; ou

2) tous autres renseignements nécessaires, dans l'ordre ci-après, au moyen de l'indicateur approprié choisi parmi ceux qui sont définis ci-dessous, suivi d'une barre oblique et des renseignements à donner :

a) STS/ puis, sans espace intermédiaire, l'un des descripteurs suivants pour indiquer le motif du traitement spécial de la part des services ATS (exemple : mission de recherche et sauvetage)

| Descripteur | Motif de traitement spécial par les services ATS |
|---|---|
| ALTRV | Vol effectué conformément à une réservation d'altitude |

*Examples: LN/N0284A045*
*MAY/N0305F180*
*HADDY/N0420F330*
*4602N07805W/N0500F350*
*46N078W/M082F330*
*DUB180040/N0350M0840*

***2.4) Change of flight rules (maximum 3 characters)***

*A flight rules change is written by inserting the point where the flight rules change is provided, written exactly as in 2.2) or 2.3) above; followed by a space, then the letters:*

*i. VFR for the transition from IFR flight to VFR flight; or*

*ii. IFR for the transition from VFR to IFR flight.*

*Examples: LN VFR LN/N0284A050 IFR*

*2.5) cruise climb (maximum 28 characters)*

*A cruise climb is indicated by inserting:*

*a) the letter C; followed by a forward slash (/), then*

*b) the point at which it is planned to initiate a cruise climb, expressed exactly as in 2.2) above; followed by a slash (/), then*

*c) the speed to be maintained during the cruise climb, expressed exactly as in 1. 1) above; followed by a slash (/), then*

*d) the two levels that define the layer to be occupied during the cruise climb, or the level above which the cruise climb is planned followed by the letters PLUS, without intermediate space, each level being expressed exactly as in 1. 2) above.*

*Examples: C/48N050W/M082F290F350 C/48N050W/M082F290PLUS C/52N050W/M220F580F620*

***FIELD 16: Destination aerodrome and total estimated elapsed time — destination alternate aerodromes***

*Field 16 is completed as follows:*

*1) Destination aerodrome and estimated total duration:*

*a) indicate the aerodrome of destination in accordance with the following instructions:*

*i. if the destination aerodrome has a four-letter ICAO location indicator, insert this indicator (see ICAO document 7910 — "Location indicators"); or*

*ii. if no ICAO location indicator has been assigned to that aerodrome, insert the letters ZZZZ and indicate in field 18, following DEST/, the clear name of the aerodrome, followed by a space and the location of the aerodrome in the form of geographical coordinates; then*

*b) insert, without intermediate space, the total estimated elapsed time of the flight.*

*Note 2. 2.3.16. — For a flight plan received from an aircraft in flight, the total estimated elapsed time is the estimated time from the first point of the route to which the flight plan applies to the termination point of the flight plan.*

*2) The destination alternate aerodrome(s) (maximum 2) shall be indicated as follows, for each of the aerodromes concerned*

*a) if the aerodrome at destination has a four-letter ICAO location indicator, insert this indicator (see ICAO document 7910 — 'Location indicators'); or*

*b) if no location indicator has been assigned to that aerodrome, insert the letters ZZZZ and indicate in field 18, after ALTN/, the name and location of the aerodrome*

***FIELD 18: Other Information***

***Note 2.2.3.17. — The use of indicators not listed below may result in the rejection, incorrect processing or loss of data.***

*The hyphen and slash are only used as prescribed below*

*Miscellaneous information is indicated by inserting:*

*1) 0 if no other information is given in this field; or*

*2) any other necessary information, in the sequence shown hereunder, in the form of the appropriate indicator selected from those defined hereunder followed by an oblique stroke and the information to be recorded:*

*a)STS/ then, without intermediate space, one of the following descriptors to indicate the reason for special treatment by ATS (e.g., search and rescue mission):*

| *Descriptor* | *Reason for special treatment by ATS units* |
|---|---|
| *ALTRV* | *Flight operated in accordance with an altitude reservation* |

© Service de l'Information Aéronautique, France

| | |
|---|---|
| ATFMX | Vol exempté des mesures ATFM par l'autorité ATS compétente. |
| FFR | Lutte incendie |
| FLTCK | Vérification en vol de l'étalonnage d'aides de navigation |
| HAZMAT | Vol transportant des marchandises dangereuses |
| HEAD | Vol avec statut « Chef d'Etat ». |
| HOSP | Vol sanitaire déclaré par les autorités médicales |
| HUM | Vol effectué dans le cadre d'une mission humanitaire |
| MARSA | Military Authority Assumes Responsability for Separation of Aircraft : vol pour lequel la responsabilité de la séparation par rapport aux vols militaires incombe à un organisme militaire |
| MEDEVAC | Vol d'évacuation sanitaire (urgence vitale). |
| NONRVSM | Vol sans possibilité RVSM prévoyant d'utiliser un espace aérien RVSM |
| SAR | Vol participant à une mission de recherche et sauvetage. |
| STATE | Vol participant à une opération des services militaires, de douane, de sécurité publique et de sécurité civile |

| | |
|---|---|
| *ATFMX* | *Flight exempted from ATFM measures by the competent ATS authority.* |
| *FFR* | *Firefighting* |
| *FLTCK* | *flight check for calibration of navaids;* |
| *HAZMAT* | *flight carrying hazardous material;* |
| *HEAD* | *Flight with "Head of State" status.* |
| *HOSP* | *Medical flight declared by medical authorities* |
| *HUM* | *flight operating on a humanitarian mission* |
| *MARSA* | *Military Authority Assumes Responsibility for Separation of Aircraft: flight for which a military entity assumes responsibility for separation of military aircraft;* |
| *MEDEVAC* | *life critical medical emergency evacuation;* |
| *NONRVSM* | *non-RVSM capable flight intending to operate in RVSM airspace* |
| *SAR* | *flight engaged in a search and rescue mission;* |
| *STATE* | *Flight engaged in an operation of the military, customs, public security and civil security services* |

Les autres motifs de traitement spécial de la part des services ATS sont indiqués à la rubrique RMK/.

[EUR] Les descripteurs HEAD, SAR, MEDEVAC et FFR donnent lieu à une exemption de créneau de régulation de trafic (ATFCM) pour le vol concerné.

[EUR] Vol sans possibilité RVSM : Sauf pour le vol à l'intérieur de l'espace aérien « UTA FRANCE Transition RVSM EUR/NAT » défini dans la partie ENR 2.1, les exploitants d'aéronefs sans possibilité RVSM établiront leurs plans de vol de façon à utiliser un autre espace aérien que l'espace aérien RVSM

• Les exploitants d'aéronefs d'Etat sans possibilité RVSM qui prévoient d'utiliser l'espace aérien RVSM utilisent le descripteur NONRVSM.

• Les exploitants d'aéronefs civils sans possibilité RVSM n'utilisent pas le descripteur NONRVSM (voir également l'IFPS USERS MANUAL au (5) de sa section 47 – « Error Messages »). Ces aéronefs doivent éviter les espaces RVSM.

Lorsque plusieurs motifs de traitements spécifiques de la part des services ATS sont requis par l'exploitant d'aéronef, et lorsque parmi ceux-ci figurent « MEDEVAC, FFR, SAR, HOSP ou HEAD », l'un de ces motifs figure en première position.

b) PBN/ : indication des possibilités RNAV et RNP. Inscrire le plus grand nombre possible des descripteurs ci-dessous qui s'appliquent au vol, jusqu'à un maximum de 8, c.-à-d. maximum de 16 caractères.

i. Spécifications de navigation RNAV (navigation de surface)

*Other reasons for special treatment by ATS are listed under RMK/.*

*[EUR] The descriptors HEAD, SAR, MEDEVAC and FFR give rise to exemption to air traffic regulation slot (ATFCM) for the flight concerned.*

*[EUR] Vol without RVSM possibility: Except for flight within the airspace "UTA FRANCE Transition RVSM EUR/NAT" defined in part ENR 2.1, aircraft operators without RVSM possibility will establish their flight plans in such a way as to use an airspace other than RVSM airspace*

*• Operators of state aircraft without RVSM capability who plan to use RVSM airspace use the NONRVSM descriptor.*

*• Civil aircraft operators without RVSM capability do not use the NONRVSM descriptor (see also the IFPS USERS MANUAL in (5) section 47 – "Error Messages"). These aircraft must avoid RVSM spaces.*

*Where several reasons for specific processing by the ATS services are required by the aircraft operator, and where these include 'MEDEVAC, FFR, SAR, HOSP or HEAD', one of those reasons is in first place.*

*b)PBN/: indication of the RNAV and RNP capabilities. Enter as many of the descriptors below as apply to the flight , up to a maximum of 8, i.e., maximum of 16 characters.*

*i. RNAV Specifications (area Navigation)*

| **Descripteur** | **Spécification de navigation** |
|---|---|
| A1 | RNAV 10 (RNP 10) |
| B1 | RNAV 5 tous capteurs permis |
| B2 | RNAV 5 GNSS |
| B3 | RNAV 5 DME/DME |
| B4 | RNAV 5 VOR/DME |
| B5 | RNAV 5 INS ou IRS |
| B6 | RNAV 5 LORAN C |
| C1 | RNAV 2 tous capteurs permis |
| C2 | RNAV 2 GNSS |
| C3 | RNAV 2 DME/DME |
| C4 | RNAV 2 DME/DME/IRU |
| D1 | RNAV 1 tous capteurs permis |
| D2 | RNAV 1 GNSS |
| D3 | RNAV 1 DME/DME |
| D4 | RNAV 1 DME/DME/IRU |

| ***Descriptor*** | ***Navigation Specification*** |
|---|---|
| *A1* | *RNAV 10 (RNP 10)* |
| *B1* | *RNAV 5 all sensors allowed* |
| *B2* | *RNAV 5 GNSS* |
| *B3* | *RNAV 5 DME/DME* |
| *B4* | *RNAV 5 VOR/DME* |
| *B5* | *RNAV 5 INS or IRS* |
| *B6* | *RNAV 5 LORAN C* |
| *C1* | *RNAV 2 all sensors allowed* |
| *C2* | *RNAV 2 GNSS* |
| *C3* | *RNAV 2 DME/DME* |
| *C4* | *RNAV 2 DME/DME/IRU* |
| *D1* | *RNAV 1 all sensors allowed* |
| *D2* | *RNAV 1 GNSS* |
| *D3* | *RNAV 1 DME/DME* |
| *D4* | *RNAV 1 DME/DME/IRU* |

[EUR] Les opérateurs d'aéronefs approuvés B-RNAV indiquent les équipements et possibilités correspondant à la RNAV5

[EUR] Les opérateurs d'aéronefs approuvés P-RNAV ne reposant pas uniquement sur les moyens VOR/DME pour la détermination de la position indiquent les équipements et possibilités correspondant à la RNAV1.

Note 2.2.3.18. — Pour indiquer un équipement P-RNAV reposant uniquement sur des moyens VOR/DME pour la détermination de la position, les opérateurs insèrent la lettre 'Z' dans le champ 10 du plan de vol et le descripteur « EURPRNAV » après l'indicateur NAV/ dans le champ 18.

ii. Spécifications de navigation RNP (qualité de navigation requise)

*[EUR] B-RNAV approved aircraft operators shall indicate the equipment and capabilities corresponding to RNAV5*

*[EUR] Operators of P-RNAV approved aircraft not relying solely on VOR/DME means for the determination of position shall indicate the equipment and capabilities corresponding to RNAV1.*

*Note 2. 2.3.18. — To indicate P-RNAV equipment based solely on VOR/DME means for position determination, operators insert the letter 'Z' in field 10 of the flight plan and the descriptor 'EURPRNAV' after the NAV/ indicator in field 18.*

*ii. RNP specifications (required navigation performance)*

© Service de l'Information Aéronautique, France

| Descripteur | Spécifications de navigation |
|---|---|
| L1 | RNP 4 |
| O1 | RNP 1 de base tous capteurs permis |
| O2 | RNP 1 de base GNSS |
| O3 | RNP 1 de base DME/DME |
| O4 | RNP 1 de base DME/DME/IRU |
| S1 | RNP APCH |
| S2 | RNP APCH avec BARO-VNAV |
| T1 | RNP AR APCH avec RF (autorisation spéciale requise) |
| T2 | RNP AR APCH sans RF (autorisation spéciale requise) |

Les combinaisons alphanumériques ne figurant pas dans les tableaux des points i et ii ci-dessus sont réservées.

c) NAV/ : renseignements significatifs ayant trait à l'équipement de navigation, autre que ce qui est précisé à la rubrique PBN/. Indiquer le renforcement GNSS à cette rubrique, en plaçant un espace entre les méthodes de renforcement (exemple : NAV/GBAS SBAS).

[EUR] Insérer RNAVX (aéronef non équipé RNAV) ou RNAVINOP (plus de capacité B-RNAV à la suite de panne ou dégradation) comme détaillé dans l'IFPS Users Manual en spécifiant au préalable en champ 10a la lettre 'Z'.

[EUR] Insérer EURPRNAV pour indiquer que l'aéronef est approuvé P-RNAV lorsque la détermination de la position repose uniquement sur des moyens VOR/DME.

d) COM/ : équipements ou possibilités de communications non spécifiées dans le champ 10-a.

[EUR] Insérer EXM833 (exemption d'emport d'équipement 8.33) comme détaillé dans l'IFPS Users Manual en spécifiant au préalable en champ 10a la lettre 'Z'.

e) DAT/ : équipements ou possibilités de données non spécifiées dans le champ 10-a.

[EUR] Insérer CPDLCX lorsque l'aéronef est non équipé CPDLC et a reçu une exemption, en insérant au préalable la lettre 'Z' dans le champ 10-a (voir IFPS Users Manual pour plus de détails).

f) SUR/ : équipements ou possibilités de surveillance non spécifiées dans le champ 10-b.

g) DEP/ : renseignements sur l'emplacement de départ, si le groupe ZZZZ figure dans le champ 13, ou de l'organisme ATS auprès duquel des données de plan de vol complémentaire peuvent être obtenues, si AFIL figure dans le champ 13.

1. si le départ est effectué depuis un aérodrome figurant dans la publication d'information aéronautique pertinente, inscrire le nom et l'emplacement de cet aérodrome ; sinon,

2. si l'aérodrome de départ ne figure pas dans la publication d'information aéronautique, inscrire l'emplacement de départ par :

• Les coordonnées géographiques de cet aérodrome, exprimées en degrés et minutes (11 caractères) : 4 chiffres indiquant la latitude en degrés et en dizaines de minutes et minutes suivis de la lettre « N » (Nord) ou de la lettre « S » (Sud), puis 5 chiffres indiquant la longitude en degrés et en dizaines de minutes et minutes, suivis de la lettre « E » (Est) ou de la lettre « W » (Ouest). Les nombres sont à compléter au besoin par des zéros ; exemple : 4620N07805W (11 caractères)

• Combinaison du relèvement et distance par rapport au point significatif le plus proche, comme suit : identification du point significatif, puis 3 chiffres donnant en degrés magnétiques le relèvement par rapport à ce point, puis 3 chiffres donnant en milles marins la distance par rapport à ce point. Les nombres sont à compléter au besoin par des zéros : par exemple, un point situé dans le relèvement de 180° magnétiques et à 40 milles marins du VOR « DUB » devrait être indiqué sous la forme DUB180040.

• Premier point de la route (nom ou LAT/LONG) ou radioborne, si l'aéronef n'a pas décollé d'un aérodrome

h) DEST/ : nom et emplacement de l'aérodrome de destination, si le groupe ZZZZ figure dans le champ 16. Dans le cas d'un aérodrome ne figurant pas dans la publication d'informatique aéronautique pertinente, indiquer l'emplacement de l'aérodrome en fonction soit de la latitude et de la longitude, soit du relèvement à partir du point significatif le plus proche et de la distance par rapport à ce point, comme il est décrit à la rubrique DEP/ ci-dessus.

i) DOF/ : 6 chiffres indiquant la date de départ du vol (sous la forme YYMMDD, où YY représente l'année, MM le mois et DD le jour).

j) REG/ : marque de nationalité ou commune, suivie de la marque d'immatriculation de l'aéronef, si l'identification de l'aéronef ainsi définie diffère de celle indiquée dans le champ 7.

| *Descriptor* | *Navigation Specifications* |
|---|---|
| *L1* | *RNP 4* |
| *O1* | *Basic RNP 1 all sensors allowed* |
| *O2* | *Basic RNP 1 GNSS* |
| *O3* | *Basic RNP 1 DME/DME* |
| *O4* | *Basic RNP 1 DME/DME/IRU* |
| *S1* | *RNP APCH* |
| *S2* | *RNP APCH with BARO-VNAV* |
| *T1* | *RNP AR APCH with RF (special authorisation required)* |
| *T2* | *RNP AR APCH without RF (special authorisation required)* |

*Alphanumeric combinations not listed in the tables in points i and ii above are reserved.*

*c) NAV/: Significant data related to navigation equipment, other than specified in PBN/, as required by the appropriate ATS authority. Indicate GNSS augmentation under this indicator, with a space between two or more methods of augmentation, (example: NAV/GBAS SBAS).*

*[EUR] Insert RNAVX (aircraft not equipped with RNAV) or RNAVINOP (no more B-RNAV capacity as a result of failure or degradation) as detailed in the IFPS Users Manual by specifying in advance in field 10a the letter 'Z'.*

*[EUR] Insert EURPRNAV to indicate that the aircraft is P-RNAV approved when the determination of position is based solely on VOR/DME means.*

*d) COM/: communication equipment and capacities not specified in field 10-a.*

*[EUR] Insert EXM833 (exemption for 8.33 equipment carrying) as detailed in the IFPS Users Manual by specifying in advance in field 10a the letter 'Z'.*

*e)DAT/: data communication equipments and capabilities not specified in field 10-a.*

*[EUR] Insert CPDLCX when the aircraft is not equipped with CPDLC and has received an exemption, by inserting the letter 'Z' in field 10-a beforehand (see IFPS Users Manual for details).*

*f)SUR/: surveillance equipment and capabilities not specified in field 10-b.*

*g)DEP/: information on the departure location, if the ZZZZ group is listed in field 13, or the ATS organization from which additional flight plan data can be obtained, if AFIL is listed in field 13.*

*1. if the departure is from an aerodrome listed in the relevant aeronautical information publication, enter the name and location of that aerodrome; otherwise*

*2. if the aerodrome of departure is not included in the aeronautical information publication, enter the place of departure by:*

*• The geographical coordinates of this aerodrome, expressed in degrees and minutes (11 characters): 4 digits indicating the latitude in degrees and tens and unit of minutes followed by the letter "N" (North) or the letter "S" (South), then 5 digits indicating the longitude in degrees and tens and unit of minutes , followed by the letter "E" (East) or the letter "W" (West). The numbers are to be completed if necessary by zeros; Example: 4620N07805W (11 characters)*

*• Combination of the bearing and distance from the nearest significant point, as follows: identification of the significant point, then 3 digits giving in degrees magnetic the bearing from this point, then 3 digits giving in nautical miles the distance from this point. The numbers should be supplemented if necessary, by zeros: for example, a point located in the 180° magnetic and 40 nautical miles of the VOR "DUB" should be indicated in the form DUB180040.*

*• First point of the route (name or LAT/LONG) or marker radio beacon, if the aircraft has not taken off from an aerodrome*

*h)DEST/: name and location of the destination aerodrome, if the ZZZZ group is listed in field 16. In the case of an aerodrome not listed in the relevant aeronautical information publication, indicate the location of the aerodrome in relation to either latitude and longitude or the bearing from and distance from the nearest significant point, as described in DEP/ above.*

*i)DOF/: 6 digits indicating the date of departure of the flight (in the form YYMMDD, where YY represents the year, MM the month and DD the day).*

*j) REG/: nationality or common mark, followed by the registration mark of the aircraft, if the identification of the aircraft thus defined differs from that indicated in field 7.*

© Service de l'Information Aéronautique, France

[FR] A la suite de l'indicateur REG/, il n'est possible de préciser qu'une seule identification d'aéronef telle que définie ci-dessus. Dans le cas d'un plan de vol relatif à des aéronefs évoluant en formation, seule l'identification du leader est précisée.

k) EET/ : points significatifs ou limites de FIR et durées estimées cumulatives de vol jusqu'à ces points ou limites de FIR lorsque ces indications sont exigées en vertu d'accords régionaux de navigation aérienne ou spécifiées par l'autorité ATS compétente.

Exemples : EET/CAP0745 XYZ0830, EET/EINN0204

l) SEL/ : indicatif SELCAL si l'aéronef est doté de l'équipement correspondant.

m) TYP/ : type(s) d'aéronef, précédé(s) au besoin, sans espace, du (des) nombre(s) d'aéronefs et séparé(s) par un espace, si le groupe ZZZZ figure dans le champ 9.

Exemple : TYP/2F15 5F5 3B2

n) CODE/ : adresse de l'aéronef (exprimée sous la forme d'un code alphanumérique à six caractères hexadécimaux). Exemple : l'adresse d'aéronef «F00001» est l'adresse la plus basse du bloc spécifique géré par l'OACI.

[EUR] Ce champ est renseigné lorsqu'il est prévu que le vol utilisera les CPDLC via le réseau de télécommunications aéronautiques (ATN).

[EUR] RVR/ : la RVR minimale exigée pour le vol.

Lorsqu'une information est portée dans ce champ, elle peut être utilisée aux fins de la gestion des courants de trafic aérien.

p) DLE / : retard ou attente en route. Indiquer le ou les points significatifs de la route où l'on prévoit qu'il se produira un retard, suivis de 4 chiffres indiquant en heures et minutes la durée du retard (hhmm).

Exemple : DLE/MDG0030

[FR] L'indicateur DLE/ du champ 18 n'est pas traité dans les systèmes ATM déployés en France. Pour faire mention d'une attente en-route, en zone IFPS exclusivement, il est nécessaire de faire usage de l'indicateur STAY qui demeure en vigueur et dont les modalités d'utilisation sont précisées dans le document IFPS Users Manual (STAY/ en champ 15 associé de STAYINFO/ en champ 18, cf. IFPS Users Manual).

q) OPR/ : indicatif OACI ou nom de l'exploitant d'aéronefs, s'il diffère de l'identification de l'aéronef donnée dans le champ 7.

r) ORGN/ : adresse RSFTA de 8 lettres de l'expéditeur ou autres coordonnées appropriées, dans les cas où l'identification de l'expéditeur du plan de vol risque de ne pas être facile à établir, si l'autorité ATS compétente l'exige.

Note 2.2.3.19 — Dans certaines régions, les centres de réception des plans de vol peuvent insérer ORGN/ et l'adresse RSFTA de l'expéditeur automatiquement

s) PER/ : renseignements sur les performances de l'aéronef, sous la forme d'une lettre unique figurant dans le document 8168 de l'OACI — « Procédures pour les services de navigation aérienne — Exploitation technique des aéronefs, Volume I — Procédures de vol », si l'autorité ATS compétente le prescrit.

t) ALTN/ : nom de l'aérodrome ou des aérodromes de dégagement à destination, si le groupe ZZZZ figure dans le champ 16. Dans le cas d'un aérodrome ne figurant pas dans la publication d'information aéronautique pertinente : emplacement de l'aérodrome en fonction soit de la latitude et de la longitude, soit du relèvement à partir du point significatif le plus proche et de la distance par rapport à ce point, comme il est décrit à la rubrique DEP/ ci-dessus.

u) RALT/ : indicateur d'emplacement OACI de quatre lettres de l'aérodrome ou des aérodromes de dégagement en route, conformément au document 7910 de l'OACI — « Indicateurs d'emplacement », ou nom de cet aérodrome ou ces aérodromes, si aucun indicatif n'a été attribué. Dans le cas d'un aérodrome ne figurant pas dans la publication d'information aéronautique pertinente, emplacement de l'aérodrome en fonction soit de la latitude et de la longitude, soit du relèvement à partir du point significatif le plus proche et de la distance par rapport à ce point, comme il est décrit à la rubrique DEP/ ci-dessus.

v) TALT/ : indicateur d'emplacement OACI de quatre lettres de l'aérodrome ou des aérodromes de dégagement au décollage, conformément au document 7910 de l'OACI — « Indicateurs d'emplacement », ou nom de cet ou ces aérodromes si aucun indicatif n'a été attribué. Dans le cas d'un aérodrome ne figurant pas dans la publication d'information aéronautique pertinente, emplacement de l'aérodrome en fonction soit de la latitude et de la longitude, soit du relèvement à partir du point significatif le plus proche et de la distance par rapport à ce point, comme il est décrit à la rubrique DEP/ ci-dessus.

w) RIF/ : détails sur la route menant au nouvel aérodrome de destination suivis de l'indicateur d'emplacement OACI de quatre lettres de cet aérodrome. La nouvelle route doit faire l'objet d'une modification d'autorisation en cours de vol.

Exemples : RIF/DTA HEC KLAX, RIF/ESP G94 CLA YPPH

*[FR] Following the REG/ indicator, it is only possible to specify one aircraft identification as defined above. In the case of a flight plan relating to aircraft operating in formation, only the identification of the leader shall be specified.*

*k) EET/: significant points or FIR boundary designators and accumulated estimated elapsed time from the take-off to such points or FIR boundary where such indications are required under regional air navigation agreements or specified by the competent ATS authority.*

*Examples: EET/CAP0745 XYZ0830, EET/EINN0204*

*l) SEL/: SELCAL designator if the aircraft is equipped with the corresponding equipment.*

*m) TYP/: aircraft type(s), preceded, if necessary, without space, by the number(s) of aircraft and separated by a space, if the ZZZZ group is shown in field 9.*

*Example: TYP/2F15 5F5 3B2*

*n) CODE/: address of the aircraft (expressed as an alphanumerical code of six hexadecimal characters). Example: The aircraft address "F00001" is the lowest aircraft address in the specific block managed by ICAO.*

*[EUR] This field is filled in when it is expected that the flight will use the CPDLC via the aeronautical telecommunications network (ATN).*

*[EUR] RVR/: the minimum RVR required for the flight.*

*When information is entered in this field, it may be used for air traffic flow management.*

*p) DLE / : enroute delay or holding . Indicate the significant point(s) on the route where a delay is expected to occur, followed by 4 digits indicating in hours and minutes the duration of the delay (hhmm).*

*Example: DLE/MDG0030*

*[FR] The DLE/ indicator in field 18 is not processed in ATM systems deployed in France. To mention an enroute holding,, in IFPS zone only, it is necessary to make use of the STAY indicator which remains in force and whose terms of use are specified in the IFPS Users Manual document (STAY/ in field 15 associated with STAYINFO/ in field 18, see IFPS Users Manual).*

*q) OPR/: ICAO designator or name of the aircraft operator, if different from the aircraft identification given in field 7.*

*r) ORGN/: the originator's 8 letter AFTN address or other appropriate contact details, in cases where the originator of the flight plan may not be easy to establish, if the competent ATS authority so requires.*

*Note 2. 2.3.19 — In some regions, flight plan reception centres may insert ORGN/identifier and originator's AFTN address automatically*

*s) PER/: aircraft performance data, in the form of a single letter contained in ICAO document 8168 — 'Procedures for air navigation services — Aircraft operation, Volume I — Flight procedures', if so required by the competent ATS authority.*

*t) ALTN/: name of the destination alternate aerodrome(s), if the ZZZZ group is included in field 16. In the case of an aerodrome not included in the relevant aeronautical information publication: location of the aerodrome based on either latitude and longitude or the bearing from and distance from the nearest significant point, as described in DEP/ above.*

*u) RALT/: four-letter ICAO location indicator of the en-route alternate aerodrome (s) , in accordance with ICAO document 7910 — "Location indicators", or name of such aerodrome or aerodromes, if no area code has been assigned. In the case of an aerodrome not included in the relevant aeronautical information publication, the location of the aerodrome according to either latitude and longitude or the bearing from and distance from the nearest significant point, as described in DEP/ above.*

*v) TALT/: four-letter ICAO location indicator of the take-off alternate aerodrome (s), in accordance with ICAO document 7910 — "Location indicators", or name of such aerodrome(s) if no area code has been assigned. In the case of an aerodrome not included in the relevant aeronautical information publication, the location of the aerodrome according to either latitude and longitude or the bearing from and distance from the nearest significant point, as described in DEP/ above.*

*w) RIF/: details on the route to the revised destination aerodrome followed by the four-letter ICAO location indicator of that aerodrome. The revised route must be subject to reclearance in flight.*
*Examples: RIF/DTA HEC KLAX, RIF/ESP G94 CLA YPPH*

© Service de l'Information Aéronautique, France

x) RMK/ : toute autre remarque en langage clair exigée par l'autorité ATS compétente ou jugée nécessaire.

[EUR] RFP/ : Indicateur du numéro de l'itération de remplacement de plan de vol. Indiquer sous RFP/ la lettre "Q" suivie d'un chiffre indiquant le numéro de l'itération de remplacement de plan de vol soumis. Pour l'usage détaillé de cet indicateur, se référer à l'IFPS Users Manual.

Exemple : « RFP/Q2 » signifie « Plan de vol de remplacement n°2 (i.e. seconde substitution) »

[EUR] EUR/PROTECTED : indique que le plan de vol ne sera pas rendu visible sur le portail NOP du NMOC. Cet indicateur ne doit pas être inclus dans les plans de vol adressés à un autre organisme que l'IFPS. Pour l'usage détaillé de cet indicateur, se référer à l'IFPS Users Manual.

**CHAMP 19 : Renseignements complémentaires**

**1. Autonomie**

À la suite de E/, insérer un groupe de 4 chiffre donnant l'autonomie en heures et minutes.

2. Personnes à bord

À la suite de P/ :

a) indiquer le nombre total de personnes (passagers et membres d'équipage) présentes à bord, lorsque ce renseignement est exigé par l'autorité ATS compétente ; ou

b) insérer les lettres TBN signifiant « à notifier », si ce nombre n'est pas connu au moment du dépôt.

3. radio et balise de secours

À la suite de R/, biffer une ou plusieurs des lettres qui suivent selon le cas

a) La lettre U, s'il n'y a pas de poste portatif à fréquence UHF 243,0 MHz;
b) La lettre V, s'il n'y a pas de poste portatif à fréquence VHF 121,5 MHz;
c) La lettre E, s'il n'y a pas de balise d'urgence (ELT/PLB).

Si la lettre E n'est pas biffée, préciser en case 19 – champ Remarques (N/) le type de balise ELT/PLB parmi les types ELT/AF, ELT/AP, ELT/AD, ELT/S, PLB, présentés ci-dessous :

i. ELT (Emergency Locator Transmitter ou émetteur de localisation d'urgence), équipement spécifique à l'aéronautique qui peut être mis en marche automatiquement à l'impact, ou déclenché manuellement :

o ELT/AF : A pour activation Automatique, F pour Fixe car attaché de façon permanente à l'aéronef.
o ELT/AP : A pour activation Automatique, P pour Portatif car bien qu'attaché de façon rigide à un aéronef, peut être aisément enlevé de l'aéronef.
o ELT/AD : A pour activation Automatique, D pour largable car bien qu'attaché de façon rigide à un aéronef, peut être largué et mis en marche automatiquement par l'impact et, dans certains cas, par des détecteurs hydrostatiques. Le largage manuel est aussi prévu.
o ELT/S : pour activation manuelle de Survie, qui peut être enlevé d'un aéronef, qui est rangé de manière à faciliter sa prompte utilisation dans une situation d'urgence et qui est mis en marche manuellement par des survivants.

ii. PLB (Personal Locator Beacon ou balise de localisation personnelle) une balise de détresse autre qu'un ELT, autonome et portable, non spécifique à l'aéronautique, qui est mise en marche manuellement par des survivants.

**4. Equipement de survie**

À la suite de S/, biffer une ou plusieurs des lettres qui suivent selon le cas :

a) Toutes les lettres, s'il n'y a pas d'équipement de survie à bord ;
b) La lettre P, s'il n'y a pas d'équipement de survie en milieu polaire à bord;
c) La lettre D, s'il n'y a pas d'équipement de survie en milieu désertique à bord ;
d) La lettre M, s'il n'y a pas d'équipement de survie en mer à bord ;
e) La lettre J, s'il n'y a pas d'équipement de survie dans la jungle à bord.

5. Gilets de sauvetage

À la suite de J/, biffer une ou plusieurs des lettres qui suivent selon le cas:

a) toutes les lettres, s'il n'y a pas de gilet de sauvetage à bord ;
b) la lettre L, si les gilets de sauvetage ne comportent pas de lampes ;
c) la lettre F, si les gilets de sauvetage ne sont pas pourvus de fluorescéine;
d) lettre U ou V, ou ces deux lettres, comme au 1) — « Radio » — ci-dessus, pour indiquer le cas échéant l'équipement radio des gilets de sauvetage.

**6. Canots**

À la suite de D/, indiquer les éléments relatifs aux canots de la façon suivante :

a) S'il n'y a pas de canot à bord : biffer les lettres D et C ; ou

*x) RMK/: any other plain language remarks required by the competent ATS authority or deemed necessary.*

*[EUR] RFP/ : Indicator of the flight plan replacement iteration number. Indicate under RFP/ the letter "Q" followed by a number indicating the number of the submitted flight plan replacement iteration. For detailed use of this indicator, refer to the IFPS Users Manual.*

*Example: "RFP/Q2" stands for "Replacement Flight Plan #2 (i.e. second substitution)"*

*[EUR] EUR/PROTECTED: indicates that the flight plan will not be made visible on the NMOC NOP portal. This indicator should not be included in flight plans sent to an unit other than IFPS. For detailed use of this indicator, refer to the IFPS Users Manual.*

***FIELD 19: Supplementary Information***

***1. endurance***

*Following E/, insert a group of 4 digits giving endurance in hours and minutes.*

*2. Persons on board*

*Following P/:*

*a) indicate the total number of persons (passengers and crew) on board, where such information is required by the competent ATS authority; or*

*b) insert the letters TBN meaning "to be notified", if this number is not known at the time of filing.*

*3. Radio and emergency beacon*

*After R/, cross out one or more of the following letters as appropriate*

*a) the letter U, if there is no portable station with a 243.0 MHz UHF frequency;*
*b) the letter V, if there is no portable station with a VHF frequency of 121.5 MHz;*
*c) the letter E, if there is no emergency beacon (ELT/PLB).*

*If the letter E is not crossed out, specify in field 19 – Remarks field (N/) the type of ELT/PLB among the types ELT/AF, ELT/AP, ELT/AD, ELT/S, PLB, presented below:*

*i. ELT (Emergency Locator Transmitter), aeronautical-specific equipment that can be started automatically on impact, or triggered manually:*

*o ELT/AF: A for Automatic activation, F for Fixed because permanently attached to the aircraft.*
*o ELT/AP: A for Automatic activation, P for Portable because although rigidly attached to an aircraft, can be easily removed from the aircraft.*
*o ELT/AD: A for Automatic activation, D for droppable because although rigidly attached to an aircraft, can be dropped and started automatically by impact and, in some cases, by hydrostatic detectors. Manual dropping is also planned.*
*o ELT/S: for manual activation of Survival, which can be removed from an aircraft, is stowed in such a way as to facilitate its prompt use in an emergency situation and is started manually by survivors.*

*ii. PLB (Personal Locator Beacon) an emergency beacon other than an ELT, autonomous and portable, non-aeronautical specific, which is manually activated by survivors.*

***4. Survival equipment***

*After S/ , cross out one or more of the following letters, as appropriate:*

*a) all letters, if there is no survival equipment on board;*
*b) the letter P, if there is no polar survival equipment on board;*
*c) the letter D, if there is no desert survival equipment on board;*
*d) the letter M, if there is no maritime survival equipment on board;*
*e) the letter J, if there is no jungle survival equipment on board.*

*5. Life jackets*

*After J/, cross out one or more of the following letters, as appropriate:*

*a) all letters, if there is no lifejacket on board;*
*b) the letter L, if the lifejackets do not have lamps;*
*c) the letter F, if the lifejackets are not provided with fluorescein;*
*d) letter U or V, or both, as in (1) — "Radio" — above, to indicate, where appropriate, the radio equipment of the life jackets.*

***6. dinghies***

*Following D/, indicate the elements relating to the dinghiesas follows:*

*a) if there is no dinghies on board: cross out the letters D and C; or*

© Service de l'Information Aéronautique, France

b) Si des canots sont à bord, indiquer leurs caractéristiques comme il suit:

i. NOMBRE : indiquer le nombre de canots transportés ;
ii. CAPACITE : indiquer le nombre total des personnes pouvant prendre place à bord de tous les canots transportés ;
iii. COUVERTURE : biffer la lettre C, si les canots ne sont pas couverts ;
iv. COULEUR : indiquer la couleur des canots.

*b) if dinghies are on board, indicate their characteristics as follows:*

*i. NUMBER: indicate the number of dinghies carried;*
*ii. CAPACITY: indicate the total number of persons who may board all the dinghies carried;*
*iii. COVER: cross out the letter C, if the dinghiesare not covered;*
*iv. COLOR: indicate the color of the dinghies.*

**7. Couleurs et marques de l'aéronef**

À la suite de A/, indiquer la couleur de l'aéronef et ses marques significatives.

***7. Aircraft colours and markings***

*After A/ , indicate the colour of the aircraft and its significant markings.*

**8. Remarques relatives à l'équipement de survie.**

À la suite de N/, indiquer tout autre équipement de survie se trouvant à bord et toute autre remarque concernant l'équipement de survie, ou biffer la lettre N en l'absence de remarques.

***8. remarks on Survival equipment.***

*After N/ , indicate any other survival equipment on board and any other remarks concerning survival equipment, or cross out the letter N if no remarks are made.*

**9. Pilote**

À la suite de C/, indiquer le nom du pilote commandant de bord.

***9. Pilot***

*After C/, indicate the name of the pilot-in-command.*

Entité déposant le plan de vol

Insérer en langage clair, dans le champ « DEPOSE PAR », le nom de l'organisme, du service ou de la personne qui dépose le plan de vol.

*Entity submitting the flight plan*

*Insert in plain language, in the "DEPOSIT BY" field, the name of the organization, department or person filing the flight plan.*

**1.10.2.3 Restrictions, limitations et informations particulières**

***1.10.2.3 Restrictions, limitations and special information***

**1.10.2.3.1 Respect des règles d'utilisation et de disponibilité de l'espace aérien**

Les plans de vol à destination, en provenance, ou traversant l'espace aérien français (FIR/UIR, CTA/TMA, CTR, ...) doivent respecter les restrictions définies dans le document de disponibilité des routes (RAD).

Ce document de référence européen commun contenant toutes les règles d'utilisation et de disponibilité de l'espace aérien français est disponible via https://www.nm.eurocontrol.int/RAD/index.html.

Pour répondre à la complexité des restrictions RAD, tout projet de route doit respecter a minima les règles de la parité des niveaux de vol et peut être testé dans l'outil du NM sur le NOP Portal -> Free Text Editor https://www.public.nm.eurocontrol.int/PUBPORTAL.

Des informations complémentaires sur le RAD en France peuvent être obtenues en contactant la DSNA/DO/RAD Team à l'adresse do-rad@aviation-civile.gouv.fr.
La publication à l'AUP/UUP des zones militaires auxquelles certaines de ces restrictions sont associées permet un traitement volumique des plans de vol IFR.

***1.10.2.3.1 adherence to airspace utilization rules and availability***

*Flight plans to, from or through French airspace (FIR/UIR, CTA/TMA, CTR, etc.) must comply with the restrictions defined in the route availability document (RAD).*

*This common European reference document containing all airspace utilisation rules and availability of French airspace is available via https://www.nm.eurocontrol.int/RAD/index.html.*

*To meet the complexity of RAD restrictions, any routes project must comply at least with the rules of parity of flight levels and be tested in the NM tool on the NOP Portal -> Free Text Editor https://www.public.nm.eurocontrol.int/PUBPORTAL*

*Further information on RAD in France can be obtained by contacting the DSNA/DO/RAD Team at do-rad@aviation-civile.gouv.fr*
*The publication in the AUP/UUP of the military zones with which some of these restrictions are associated allows for volume processing of IFR flight plans.*

**1.10.2.3.2 outils de visualisation pour la mise en œuvre d'Espaces en cheminement libre (FRA)**

Les procédures de planification particulières pour le FRA sont en ENR 1.3

Un portail FRA@DSNA (https://fra.dsna.fr) est accessible depuis le site de la DSNA (https://dsna.fr).

Il donne accès à un outil de visualisation des routes planifiables dans les espaces FRA de la DSNA, avec possibilités de filtrage.

Il est ouvert sans démarche supplémentaire à tous ceux possédant déjà un identifiant et un mot de passe pour le portail CDM@DSNA.

Pour les usagers désirant s'inscrire :

- Aller sur https://cdm.dsna.fr
- Cliquer sur « Sign in » en bas de page
- Compléter le formulaire d'inscription
- Une fois le mot de passe obtenu, aller sur https://fra.dsna.fr et se connecter avec l'identifiant et le mot de passe nouvellement créé.

***1.10.2.3.2 Visualization tool for the implementation of the Free Routing Airspace (FRA)***

*The specific planning procedures for FRA are in ENR 1.3.*

*A FRA@DSNA portal (https://fra.dsna.fr) is available on the DSNA website (https://dsna.fr).*

*Access is granted without additional step to all those who already have a login and password for the CDM@DSNA portal.*

*For users wishing to register :*

*- Go to https://cdm.dsna.fr*
*- Click on "Sign in" at the bottom of the page*
*- Complete the registration form*
*- Once the password obtained, go to https://fra.dsna.fr and use the newly created login and password.*

**1.10.2.3.3 Flight plan Buffer Zone (FBZ) – zone tampon de plan de vol**

Pour chaque zone pertinente, une FBZ a été établie à des fins de planification des vols IFR uniquement. Dans pareil cas, les restrictions portent sur la FBZ et non sur la zone elle-même, permettant de bénéficier d'un tampon géographique et/ou temporel. Les plans de vol peuvent être déposés jusqu'à la limite de la FBZ lorsqu'elle est active. La route décrite dans le champ 15 du formulaire de plan de vol, devrait considérer la trajectoire nominale entre deux points selon la route la plus courte du grand cercle (orthodromie). Une FBZ quand elle est active, bloque les routes IFR impactant le volume concerné et implique l'utilisation d'une route de contournement.

La zone concernée et la ou les FBZ associées ainsi que les modalités d'activation sont décrites en ENR5.2 et sont publiées dans l'AUP/UUP, de même que les restrictions associées.

***1.10.2.3.3 Flight plan Buffer Zone (FBZ)***

*When applicable, for each relevant area, an FBZ has been established for IFR flight planning purposes only. In such cases, the restrictions relate to the FBZ and not to the area itself, allowing for a geographical and/or temporal buffer. Flight plans can be filed up to the limit of the FBZ when it is active. The route described in field 15 of the flight plan form should consider the nominal track between two points according to the great circle shortest route (orthodromy). An FBZ when active, blocks IFR routes impacting the volume concerned and implies the use of a bypass route.*

*The area concerned and the associated FBZ(s) and the activation procedures are described in ENR5.2 and are published in the AUP/UUP, together with the associated restrictions.*

**1.10.2.3.4 No Planning Zone (NPZ) – zone de non-planification**

Des NPZ sont publiables dans l'espace aérien Free Route français. Une NPZ est un volume d'espace aérien défini à l'intérieur duquel la planification des trajectoires FRA DCT est soit interdite, soit autorisée uniquement pour les exceptions décrites en ENR2.2.

***1.10.2.3.4 No Planning Zone (NPZ)***

*NPZs can be published in French Free Route airspace. An NPZ is a defined airspace volume within which the planning of FRA DCT trajectories is either prohibited or permitted only for the exceptions described in ENR2.2.*

© Service de l'Information Aéronautique, France

Les usagers de l'espace aérien peuvent éviter ces zones en planifiant via des points significatifs appropriés autour de la NPZ ou selon les conditions décrites. La planification d'un vol à travers la NPZ concernée entraînera un message de rejet par l'IFPS, sauf si les conditions définies sont remplies.

**1.10.3 Le système de plan de vol répétitif (RPL)**

Depuis le 21 mars 2020, le service de gestion des plans de vol répétitifs (RPL) n'est plus assuré par le Network Manager (Eurocontrol).
Les opérateurs doivent remplir des PLN pour chaque vol conformément au §1.10.2.

**1.10.4 Les changements apportés au plan de vol soumis**

Toutes les modifications apportées à un plan de vol déposé en vue d'un vol IFR, ou d'un vol VFR effectué en tant que vol contrôlé, sont signalées dès que possible à l'organisme compétent des services de la circulation aérienne.
Dans le cas des autres vols VFR, toute modification importante apportée à un plan de vol est signalée dès que possible à l'organisme compétent des services de la circulation aérienne.
Les messages de mouvement, les messages de coordination, les messages complémentaires permettent également la transmissions d'informations actualisées sur les plans de vol. Ces messages ainsi que leur adressage sont décrits en ENR1.11.

**1.10.5 Planifications particulières**

**1.10.5.1 Vols au départ ou à l'arrivée d'aérodromes coordonnés.**

**1.10.5.1.1 Vols concernés**

Certains aérodromes sont dits « à facilitation d'horaires » ou « coordonnés » au sens du règlement communautaire n°95/93 du 18 janvier 1993 modifié. Ils sont désignés comme tel par arrêté du ministre chargé de l'aviation civile. Sur un aéroport coordonné, tout atterrissage et tout décollage d'un aéronef en régime de vol IFR doit, sauf en cas de force majeure, d'atterrissage d'urgence, de vols d'Etat ou humanitaires, faire l'objet d'une attribution préalable de créneau horaire aéroportuaire par l'association COHOR. Les créneaux aéroportuaires doivent être mis à jour par les exploitants d'aéronefs en fonction des changements apportés à leur demande initiale.

La DGAC a mis en place pour ces aéroports un système de contrôle de la cohérence entre les plans de vols déposés et les créneaux aéroportuaires attribués par le coordonnateur. Afin de faciliter ce contrôle, pour les vols d'aviation d'affaires et d'aviation générale, il est obligatoire de renseigner le champ 18 du plan de vol avec le numéro d'identification communiqué par COHOR lors de l'attribution du créneau aéroportuaire correspondant.

Le format de dépôt est le suivant : RMK/ASL<numéro d'identification >

Le numéro d'identification est celui communiqué par le coordonnateur lors de l'attribution du créneau aéroportuaire. Il est constitué de 14 caractères alphanumériques, dont les 4 premiers sont le code OACI de l'aéroport pour lequel le créneau aéroportuaire a été délivré.

Exemple : RMK/ASLLFMDA000000901

Si le vol relie deux aéroports coordonnés, les numéros d'identification délivrés par le coordonnateur pour chacun des aéroports doivent être renseignés dans le champ 18 suivant le format ci-dessous :
RMK/ASLLFMND123456789
RMK/ASLLFMDA901234567

Les vols d'aviation d'affaires et d'aviation générale pour lesquels le plan de vol ne mentionnera pas de numéro d'identification feront l'objet d'une vérification auprès de l'exploitant par l'organisme COHOR et pourront, le cas échéant, être suspendus. Un message sera alors envoyé à l'adresse origine du plan de vol, au nom de la Direction générale de l'aviation civile.

Les vols entrepris en violation du règlement communautaire n°95/93 susmentionné et de l'article R.132-4 du code de l'aviation civile (vols sans créneau aéroportuaire correspondant) s'exposent à une amende administrative de 7500 euros, doublée en cas de récidive conformément à l'article R.160-1 dudit code.

**1.10.5.1.2 Renseignements complémentaires**

Coordonnées de COHOR : Site web : www.cohor.org

Email : slots@cohor.org

TEL : +33 1 49 75 88 10

Adresse postale :

2 rue du Commandant Mouchotte
Bât.522 ORLYTECH
91550 PARAY VIEILLE POSTE

Horaires : du lundi au vendredi, de 08:30 à 17:30 (Heures locales).

***1.10.3 Repetitive flight plan (RPL) system***

*Since 21 March 2020, the repetitive flight plan (RPL) management service is no longer provided by the Network Manager (Eurocontrol).*
*Operators must complete PLNs for each flight in accordance with §1.10.2.*

***1.10.4 Changes to the submitted flight plan***

*All changes to a flight plan filed for an IFR flight, or a VFR flight as a controlled flight, shall be reported as soon as possible to the competent air traffic services unit.*
*In the case of other VFR flights, any significant changes to a flight plan shall be reported as soon as possible to the competent air traffic services unit.*
*Movement messages, coordination messages, complementary messages also allow the transmission of up-to-date information on flight plans. These messages and their addressing are described in ENR1.11.*

***1.10.5 Special planning***

***1.10.5.1 Flights to or from coordinated aerodromes.***

***1.10.5.1.1 Affected flights***

*Some aerodromes are called "schedule facilitated" or "coordinated" as defined in the Community Regulation No. 95/93 of 18 January 1993 as amended. They are designated as such by an Order of the Minister responsible for civil aviation. On a coordinated airport, any landing and take-off of an aircraft in IFR flight must, except in cases of force majeure, emergency landing, state or humanitarian flights, be the subject of a prior allocation of airport slot by the COHOR association. Airport slots must be updated by aircraft operators based on changes to their initial application.*

*The French CAA (DGAC) has set up a system for checking the consistency between the flight plans submitted and the airport slots allocated by the coordinator for these airports. In order to facilitate this control, for business and general aviation flights, it is mandatory to fill in field 18 of the flight plan with the identification number communicated by COHOR when allocating the corresponding airport slot.*

*The filing format is: RMK/ASL<identification number>*

*The identification number shall be provided by the coordinator when the airport slot is allocated. It consists of 14 alphanumeric characters, the first 4 of which are the ICAO code of the airport for which the airport slot was issued.*

*Example: RMK/ASLLFMDA000000901*

*If the flight connects two coordinated airports, the identification numbers issued by the coordinator for each of the airports must be entered in field 18 in the format below:*
*RMK/ASLLFMND123456789*
*RMK/ASLLFMDA901234567*

*Business and general aviation flights for which the flight plan does not include an identification number will be checked with the operator by COHOR and may, if necessary, be suspended. A message will then be sent to the original address of the flight plan, on behalf of the french CAA (DGAC).*

*Flights undertaken in violation of the above-mentioned Community Regulation No. 95/93 and Article R.132-4 of the Civil Aviation Code (flights without a corresponding airport slot) are subject to an administrative fine of 7500 euros, doubled in the event of a repeat infringement in accordance with Article R.160-1 of the said Code.*

***1.10.5.1.2 Additional information***

*CONTACT DETAILS OF COHOR: Website: www.cohor.org*

*Opening hours: Monday to Friday, from 08:30 to 17:30 (Local time).*

© Service de l'Information Aéronautique, France

Pour les vols d'aviation d'affaires et d'aviation générale, le créneau aéroportuaire peut être obtenu par l'intermédiaire d'un assistant aéroportuaire qui communiquera le numéro d'identification à reporter dans le champ 18 du plan de vol. La liste et les contacts des assistants aéroportuaires traitant les vols d'aviation générale et d'aviation d'affaire est disponible pour chacun des aéroports coordonnés sur le site internet de COHOR (www.cohor.org).

*For business and general aviation flights, the airport slot can be obtained through an airport assistant (ground handler) who will communicate the identification number to be reported in field 18 of the flight plan. The list and contacts of airport ground handler for general and business aviation flights is available for each of the coordinated airports on the COHOR website (www.cohor.org).*

**1.10.5.2 Vols circulaires en régime de vol IFR au-dessus du FL 145**

**1.10.5.2.1 Caractéristique des vols concernés**

Les vols concernés sont les vols en régime de vol IFR, au-dessus du FL 145, dont l'aérodrome de départ et l'aérodrome de destination sont identiques (vols circulaires). La trajectoire des vols circulaires en régime de vol IFR au-dessus du FL 145 peut se révéler incompatible avec les flux de trafic aérien habituels. Ces vols font l'objet d'une étude d'intégration dans le trafic aérien dans le cadre de la procédure de coordination préalable avec les organismes français de la circulation aérienne décrite ci-après. Cette procédure ne s'applique pas aux vols effectués après des travaux de maintenance afin de restituer le certificat de navigabilité qui relèvent de la circulation d'essais et de réception (voir § 1.10.5.3).

***1.10.5.2 IFR circular flights over FL 145***

***1.10.5.2.1 Characteristic of the flights concerned***

*The flights concerned are flights in IFR, over FL 145, whose departure aerodrome and destination aerodrome are identical (circular flights). The trajectory of circular flights in IFR over FL 145 may be incompatible with usual air traffic flows. These flights are subject of an assessment for integration into air traffic as part of the prior coordination procedure with French ATS units described below. Note 5.2.1 - This procedure does not apply to flights carried out after maintenance work in order to restore the certificate of airworthiness which are part of the test and acceptance air traffic (see § 1.10.5.3).*

**1.10.5.2.2 Procédure de coordination préalable avec les organismes français de la circulation aérienne :**

Deux jours ouvrés avant le vol, au plus tard à 12h00 locales (sauf accord particulier entre un exploitant aérien et un organisme ATS), l'exploitant aérien fait une demande de vol circulaire par courriel à l'organisme de la circulation aérienne concerné :

***1.10.5.2.2 Prior coordination procedure with French air traffic units:***

*Two working days before the flight, no later than 12:00 local time (unless otherwise agreed between an air operator and an ATS unit), the air operator shall make a circular flight request by email to the air traffic organization concerned:*

© Service de l'Information Aéronautique, France

Si plusieurs centres de contrôle sont impactés, la demande doit être transmise à la Direction des Opérations de la DSNA (DSNA/DO/DOM2/pôle GEF) : do-2u-exomil@aviation-civile.gouv.fr) qui coordonnera l'activité avec les centres concernés.

Eléments à communiquer lors la demande :
- Indicatif d'appel ;
- Type d'aéronef ;
- Date et heure estimée de décollage ;
- Route et niveaux de vol demandés ;
- Durée du vol ;
- Profil du vol dans le plan vertical ;
- Vitesses d'évolution ;
- Nature de la mission et objectif du vol circulaire ;
- Numéro de téléphone du demandeur.

En fonction des contraintes identifiées, les organismes de la circulation aérienne peuvent demander à l'exploitant d'effectuer des modifications de route, de niveaux de vol ou d'horaires. Les modifications effectuées en accord avec les organismes de la circulation aérienne assurent l'exploitant aérien du bon déroulement des opérations envisagées

A noter que si aucune demande n'a été faite au préalable, le vol ou les demandes d'évolutions particulières pourront être refusés en temps réel par les contrôleurs de la circulation aérienne. Faute d'une préparation coordonnée, ce vol peut affecter négativement la charge de travail des organismes de la circulation aérienne. À cet égard, l'exploitant d'aéronef s'expose à une sanction telle que mentionnée à l'article R. 160-1 du code de l'aviation civile et rappelée à l'ENR 1.10.6.

*If several ATC units are impacted, the request must be sent to the Directorate of Operations of the DSNA (DSNA/DO/DOM2/GEF pole): do-2u-exomil@aviation-civile.gouv.fr) which will coordinate the activity with the centers concerned.*

*Elements to communicate when requesting:*
*- Call sign;*
*- Aircraft type;*
*- Estimated date and time of take-off;*
*- Route and flight levels requested;*
*- Duration of the flight;*
*- Flight profile in the vertical plane;*
*- Rates of evolution;*
*- Nature of the mission and objective of the circular flight;*
*- Applicant's telephone number.*

*Depending on the constraints identified, air traffic services units may ask the operator to make changes to the route, flight levels or schedules. Amendments made in agreement with air traffic services units shall ensure that the air operator runs smoothly the operations considered.*

*It should be noted that if no request has been made beforehand, the flight or requests for special changes may be refused in real time by air traffic controllers. Without coordinated preparation, this flight can negatively affect the workload of air traffic units. In this regard, the aircraft operator is liable to a penalty as mentioned in Article R. 160-1 of the Civil Aviation Code and recalled in ENR 1.10.6.*

### 1.10.5.3 Vols effectués après des travaux de maintenance afin de restituer le certificat de navigabilité

#### 1.10.5.3.1 Introduction

Les vols devant être exécutés après des travaux de maintenance, intervention ou chantier effectués en atelier sur les aéronefs dans la perspective de restituer aux aéronefs leur certificat de navigabilité peuvent, par leur caractère particulier, être refusés par les organismes civils de contrôle aérien.

Ces vols doivent alors être effectués, partiellement ou totalement, sous la responsabilité des Centres de Contrôle Essais-Réception (CCER) de la DGA : «DGA Essais en vol » (DGA EV) organisme relevant de la Direction Générale de l'Armement.

Le dispositif de contrôle aérien de DGA EV est constitué de sept CCER implantés sur divers sites du Ministère des Armées ou du Ministère chargé des transports, dont notamment trois des cinq centres en route de la navigation aérienne (CRNA). Ces centres de contrôle sont situés à Aix-en-Provence (CRNA/Sud-Est), à Bordeaux (CRNA/Sud-Ouest), à Brest (CRNA/Ouest), à Cazaux (centre militaire de contrôle de Cazaux), à Istres (centre militaire de contrôle d'Istres), à Mont de Marsan (centre de détection et de contrôle de l'armée de l'air), à Toulouse (Approche de Toulouse Blagnac).

#### 1.10.5.3.2 Procédure d'agrément

Conformément aux dispositions de l'article D. 131-4 du code de l'aviation civile, les nouveaux utilisateurs potentiels des services de la circulation aérienne d'essais-réception (CER) doivent déposer une demande afin d'obtenir l'agrément du directeur de DGA Essais en vol (DGA EV) pour effectuer un vol en CER.

Cette demande doit être adressée à :
DGA Essais en vol
Base d'essais d'Istres
Division CER
13128 Istres Armées

#### 1.10.5.3.3 Planification des vols

Conformément aux conditions générales d'utilisation des services de la CER (diffusées lors de la procédure d'agrément), toute activité doit être programmée et s'inscrire dans le cadre d'un contrat entre la DGA EV et l'exploitant.

Les demandes de vol doivent être adressées par télécopie à la Cellule de Coordination de la division CER à Istres. Cet organisme est chargé de la planification de toute l'activité contrôlée par les centres de contrôle essai réception (CCER) à l'intérieur ou à l'extérieur d'espaces aériens spécifiques Coordonnateurs / Coordinators

TEL : 04 42 48 36 67 ou / or TEL : 04 42 48 36 68
Fax : 04 42 48 35 92

Chaque demande doit être obligatoirement accompagnée d'un profil de vol.

### *1.10.5.3 Flights carried out after maintenance work in order to restore the certificate of airworthiness*

#### *1.10.5.3.1 Introduction*

*Flights to be carried out after maintenance, intervention or workshop work carried out on aircraft with a view to restoring to the aircraft their certificate of airworthiness may, by their particular nature, be refused by civil air traffic control units.*

*These flights must then be carried out, partially or totally, under the responsibility of the Test-Reception Control Centers (CCER) of the DGA: "DGA Flight Tests" (DGA EV) body under the Directorate General of Armaments.*

*DGA EV's air traffic control system consists of seven CCER located on various sites of the Ministry of the Armed Forces or the Ministry of Transport, including three of the five en route control centres (CRNA). These control centers are located in Aix-en-Provence (CRNA/South-East), Bordeaux (CRNA/South-West), Brest (CRNA/West), Cazaux (Cazaux military control center), Istres (Istres military control center), Mont de Marsan (air force detection and control center), Toulouse (Toulouse Blagnac approach).*

#### *1.10.5.3.2 Approval procedure*

*In accordance with the provisions of Article D. 131-4 of the Civil Aviation Code, potential new users of Air Traffic Type-Approval (REB) services must apply for approval from the Director of DGA Flight Tests (DGA EV) to conduct a CER flight.*

*This request should be addressed to:*
*DGA Essais en vol*
*Base d'essais d'Istres D*
*ivision CER*
*13128 Istres Armées*

#### *1.10.5.3.3 Flight planning*

*In accordance with the general conditions of use of the CER services (disseminated during the authorisation procedure), any activity must be scheduled and be part of a contract between the DGA EV and the operator.*

*Flight requests must be sent by fax to the Coordination Cell of the REC Division in Istres. This body is responsible for planning all activity controlled by test reception control centres (RECCs) inside or outside specific airspaces Coordonnateurs / Coordinators*

*TEL: +33(0)4 42 48 36 67 or / or TEL: +33( 0)4 42 48 36 68*
*Fax:+33( 0)4 42 48 35 92*

*Each request must be accompanied by a flight profile.*

© Service de l'Information Aéronautique, France

En fonction de la localisation des aérodromes de départ et de destination, et en fonction de la nature des opérations à effectuer en vol, le vol est :
- Soit pris en charge totalement par le contrôle de la circulation aérienne d'essais-réception (CER) ;
- Soit pris en charge successivement par les organismes civils de contrôle (d'aérodrome et d'approche) et par le contrôle de la circulation aérienne d'essais-réception.

*Depending on the location of the departure and destination aerodromes, and depending on the nature of the operations to be carried out in flight, the flight:*
*- is fully supported by air traffic control test-reception (CER);*
*- is taken over successively by the civilian control units (aerodrome and approach) and by air traffic control of test-reception.*

Dans tous les cas, un plan de vol doit être déposé. Pour la phase du vol exécutée avec le contrôle CER, le contenu du plan de vol est arrêté au moment de la demande de planification du vol avec la Cellule de Coordination.

*In all cases, a flight plan must be filed. For the phase of the flight executed with the CER control, the content of the flight plan is decided at the time of the request for flight planning with the Coordination Cell.*

Les demandes doivent respecter les délais suivants

*Applications must meet the following deadlines*

| | |
|---|---|
| Programmation journalière / *Daily planning* | A J-1 avant 16h00 locales */ At D-1 before 1600 (local time)* |
| Programmation hebdomadaire / *Weekly planning* | Le jeudi avant 16h00 locales pour la semaine suivante<br>*On Thursday before 1600 (local time) for the next week* |
| Vols du lundi ou premier jour consécutif à une journée non ouvrée.<br>*Flights on Monday and for the first dayafter a non-working day.* | Dernier jour ouvrable avant 12h00 locales<br>*Last working day before 1200 (local time)* |
| Vols du samedi devant être effectués entre 09h00 et 13h00 locales.<br>*Flights on Saturday between 0900 and 1300 (local time).* | Le jeudi avant 13h00 locales / *On Thursday before 1300 (local time)* |

La programmation des vols est arrêtée au plus tard à 18h00 locales par la Cellule de Coordination. Cette programmation est alors diffusée à l'ensemble des usagers et des organismes de contrôle de la CER concernés.

*The scheduling of flights is stopped no later than 18:00 local time by the Coordination Cell. This programming is then broadcast to all users and supervisory bodies of the CER concerned.*

Note 5.3.1 : les demandes de vols nécessitant l'utilisation d'espaces particuliers soumis à réservation au niveau national, devront être déposées à J-2 auprès de la Cellule de Coordination.

*Note 5. 3.1: requests for flights requiring the use of particular spaces subject to reservation at the national level, must be submitted to the Coordination Unit on D-2.*

**1.10534 Entretien téléphonique avant le vol**

Pour chaque vol, un entretien téléphonique est obligatoire entre le commandant de bord (ou son représentant) et le chef de quart du premier centre de contrôle essais-réception (CCER) concerné par le vol. Les numéros de téléphone sont fournis par la Cellule de Coordination.

Lors de cet entretien, sont confirmés :
- Le code transpondeur ;
- La fréquence radio principale de travail ;
- La fréquence radio secondaire ;
- Le profil de vol ;
- Le secteur de travail ;
- Tous les éléments concourant à la bonne conduite et à la sécurité du vol.

***1.10534 Pre-flight telephone interview***

*For each flight, a telephone interview is mandatory between the pilot in command (or his representative) and the manager-on-duty of the first test-reception control centre (CCER) concerned by the flight. Telephone numbers are provided by the Coordination Unit.*

*During this interview, the following are confirmed:*
*- The transponder code*
*- the main radio frequency of work;*
*- secondary radio frequency;*
*- the flight profile;*
*- the sector of work;*
*- all elements contributing to the good conduct and safety of the flight.*

**1.10.6 Sanctions**

En application des dispositions de l'article R.160-1 du code de l'aviation civile, le ministre chargé de l'aviation civile peut prononcer une amende administrative à l'encontre d'un transporteur aérien ou de tout autre exploitant d'aéronef civil pour des manquements à certaines dispositions du règlement (UE) N° 255/2010 de la Commission du 25 mars 2010 établissant des règles communes relatives à la gestion des courants de trafic aérien, notamment dans les cas suivants :

- Plan de vol mentionnant une exemption de créneau de départ ATFM pour un motif abusif ou en méconnaissance de l'article 7, paragraphe 1, du règlement (UE) n°255/2010.
- Plan de vol ne rendant pas compte du profil de vol prévu.
- Plusieurs plans de vol déposés pour un même vol.

***1.10.6 Sanctions***

*Pursuant to the provisions of Article R. 160-1 of the Civil Aviation Code, the Minister responsible for civil aviation may impose an administrative fine on an air carrier or any other civil aircraft operator for failure to comply with certain provisions of Commission Regulation (EU) No 255/2010 of 25 March 2010 establishing common rules on the management of air traffic flows, in particular in the following cases:*

*- Flight plan mentioning an ATFM departure slot exemption for an abusive reason or in breach of Article 7(1) of Regulation (EU) No 255/2010.*
*- Flight plan that does not reflect the planned flight profile.*
*- Several flight plans filed for the same flight.*

PAGE LAISSEE INTENTIONNELLEMENT VIDE / Page intentionally left blank

# ENR 1.11 ADRESSAGE DES MESSAGES DE PLAN DE VOL

*ADDRESSING OF FLIGHT PLAN MESSAGES*

**1.11 Destinataires des messages de plans de vol**

**1.11.1 Principe général d'adressage**

Les destinataires des plans de vol et des messages associés sont identifiés par le pilote commandant de bord ou son représentant, lors de la rédaction du plan de vol - voir ENR 1.10.2.2.

Un plan de vol est adressé :

- Au centre de contrôle régional ou centre d'information de vol chargé de l'ATS dans la région de contrôle ou d'information de vol dans laquelle est situé l'aérodrome de départ ;
- À tous les centres chargés de chaque région d'information de vol ou région supérieure d'information de vol le long de la route ;
- À la tour de contrôle ou à l'organisme AFIS de l'aérodrome de destination;
- Aux centres de gestion de la circulation chargés des organismes ATS situés sur la route.

Lorsque le plan de vol signale une éventuelle demande de modification de clairance en cours de vol (RIF), le message FPL est également transmis aux autres centres intéressés et à la tour de contrôle ou à l'organisme AFIS du nouvel aérodrome de destination.

L'adresse comprend une série d'indicateurs de destinataires, à raison d'un indicateur par destinataire auquel le message doit être remis.

Chaque indicateur de destinataire est formé d'une séquence de huit lettres comprenant, dans l'ordre :

1) Un indicateur d'emplacement L'indicateur d'emplacement OACI de quatre lettres attribuées au lieu du destinataire note 1

2) Un indicatif de trois lettres
- Soit l'indicatif OACI de trois lettres désignant l'administration aéronautique, le service aéronautique ou l'exploitant d'aéronef auquel ou à laquelle le message est adressé note 2;
- Soit, lorsqu'aucun indicatif n'a été attribué, l'un des indicatifs suivants :
o YXY lorsque le destinataire est un service ou un organisme militaire ;
o ZZZ lorsque le destinataire est un aéronef en vol ;
o YYY dans tous les autres cas.

Note 1 – Une liste d'indicateurs d'emplacement OACI figure dans le Doc 7910 - Indicateurs d'emplacement

Note 2 : Une liste des indicatifs OACI de trois lettres figure dans le Doc 8585 (Indicatifs des exploitants d'aéronefs et des administrations et services aéronautiques).

1) Une lettre
- La lettre X ; ou
- L'indicatif d'une lettre désignant le service ou la section de l'organisme auquel le message est adressé.

Les indicatifs de trois lettres (du point 2) ci-après sont utilisés pour adresser les messages aux organismes ATS :

- Centre responsable d'une région d'information de vol ou d'une région supérieure d'information de vol (qu'il s'agisse d'un ACC ou d'un FIC) :
o Dans le cas d'un vol VFR : ZFZ
o Pour les organismes français hors zone IFPS, dans le cas d'un vol IFR : ZQZ
o Pour les organismes de la zone IFPS, dans le cas d'un vol IFR : adresse de l'organisme NMOC, qui centralise les plans de vol pour cette zone (se reporter à §1.11.2).
- Tour de contrôle d'aérodrome ou organisme AFIS : ZTZ.
- Bureau de piste des services de la circulation aérienne : ZPZ.
- D'autres indicatifs à trois lettres désignant des organismes ATS ne doivent pas être utilisés à cette fin.

Un service centralisé de traitement et de diffusion des plans de vol IFR a été institué sous l'autorité de du centre des opérations du gestionnaire de réseau (NMOC) géré par l'agence EUROCONTROL. Ce service est assuré dans une partie de la Région EUR de l'OACI au moyen d'un système intégré de traitement initial des plans de vol (IFPS). Cette région est appelée « zone IFPS » (IFPZ).

Les dépôts de plans de vols traversant les espaces français (FIR/UIR, ACC/UAC ou CTA/UTA) doivent respecter les règles propres à chaque région survolée.

**1.11.2 Adresses des plans de vol**

**1.11.2.1 pour les plans de vol IFR**

Tout plan de vol pour un vol IFR au départ, ou à destination ou survolant la France métropolitaine doit être adressé a minima à l'IFPS.

***1.11 Addressing of Flight Plans messages***

***1.11.1 General principle of addressing***

*The recipients of the flight plans and associated messages are identified by the pilot-in-command or his representative when drawing up the flight plan - see ENR 1.10.2.2.*

*A flight plan is sent:*

*- The Area Control Centre (ACC) or Flight Information Centre (ACC) in charge of ATS in the flight control area or Flight information region in which the aerodrome of departure is located;*
*- To all centres in charge of each flight information region or upper flight information region along the route;*
*- The control tower or AFIS units of the destination aerodrome;*
*- Traffic management centres responsible for ATS units located on the route.*

*When the flight plan indicates a possible request for an in-flight clearance change (RIF), the FPL message is also transmitted to the other centres concerned and to the control tower or AFIS organisation of the new aerodrome of destination.*

*The address includes a series of recipient indicators, as one for each recipient to whom the message is to be delivered.*

*Each recipient indicator consists of an eight-letter sequence comprising, in order:*

*1) A location indicator - The four-letter ICAO location indicator assigned to the recipient location – note 1*

*2) A three-letter call sign - Either the ICAO code of three letters designating the aeronautical administration, aeronautical service or aircraft operator to whom the message is addressed – note 2;*
*- Or, when no indicator has been assigned, one of the following callsigns:*
*o YXY when the recipient is a military service or organization;*
*o ZZZ when the recipient is an aircraft in flight;*
*o YYY in all other cases.*

*Note1: A list of ICAO location indicators can be found in Doc 7910 - Location indicators*

*Note 2: A list of three-letter ICAO callsigns can be found in Doc 8585 (Aircraft Operator and Aeronautical Administration and Service Callsigns).*

*1) A letter*
*- The letter X; or*
*- The indicative of a letter designating the department or section of the organization to which the message is addressed.*

*The following three-letter codes (from point 2) are used to address messages to ATS agencies:*

*- Centre responsible for a flight information region or an upper flight information region (whether an ACC or a FIC):*
*o In the case of a VFR flight: ZFZ*
*o For French organisations outside the IFPS zone, in the case of an IFR flight: ZQZ*
*o For organizations in the IFPS zone, in the case of an IFR flight: address of the NMOC organization, which centralizes the flight plans for this area (see §1.11.2).*
*- Aerodrome control tower or AFIS organization: ZTZ.*
*- Air Traffic Services Runway Office: ZPZ.*
*- Other three-letter codes designating ATS organizations should not be used for this purpose.*

*A centralised service for the processing and dissemination of IFR flight plans has been set up under the authority of the Network Manager Operations Centre (NMOC) managed by EUROCONTROL. This service is provided in part of the ICAO EUR Region through an integrated Initial Flight Plan Processing System (IFPS). This region is called the IFPS Zone (IFPZ).*

*The submission of flight plans for flights crossing French airspace (FIR/UIR, ACC/UAC or CTA/UTA) must comply with the rules specific to each region overflown.*

***1.11.2 Addressing of flight plans***

***1.11.2.1 for IFR flight plans***

*Any flight plan for an IFR flight to, from or over metropolitan France must be sent at least to IFPS.*

© Service de l'Information Aéronautique, France

| **Reseau** / *Network* | **Adresse des organismes IFPS** *Address of IFPS bodies* | |
|---|---|---|
| RSFTA | EUCHZMFP | EUCBZMFP |
| SITA | BRUEP7X | PAREP7X |

L'IFPS assure la diffusion du plan de vol accepté à tous les organismes ATS compétents, dans sa zone de responsabilité.

Pour assurer la cohérence entre les données de plan de vol diffusées à l'intérieur de l'IFPZ et les données de plans de vol diffusés en dehors de l'IFPZ, le NMOC a établi une fonction de « ré-adressage ». Cette fonction est destinée principalement aux vols qui commencent dans l'IFPZ et qui en sortent.

Toutefois, l'entité déposant les plans de vol devrait s'assurer que les plans de vol et toutes les modifications qui y sont apportées sont bien déposés, validés et adressés à tous les organismes ATS compétents de la route.

*IFPS ensures the dissemination of the accepted flight plan to all relevant ATS units in its area of responsibility.*

*To ensure consistency between flight plan data disseminated within the IFPZ and flight plan data disseminated outside the IFPZ, the NMOC has established a "re-addressing" function. This function is intended mainly for flights that start in and leave the IFPZ.*

*However, the entity submitting the flight plans should ensure that the flight plans and any amendments thereto are filed, validated and sent to all relevant ATS bodies on the route.*

**1.11.2.2 pour les plans de vol VFR**

L'adresse des plans de vol VFR doit respecter le principe suivant :

- Code OACI de l'AD de départ + ZPZX, puis
- Code OACI de l'AD de destination + ZTZX
- Code OACI des FIR traversées + ZFZX
- LFYNZPZX (BNIA / ARO France)
- Code OACI des SIV rattachés aux aérodromes de départ et de destination + ZTZX – Note 3
- Code OACI des SIV traversés +ZTZX– Note 3
- Adresses spécifiques mentionné au 1.11.2.3

Note 3 :
le code OACI du SIV correspond au code de l'aérodrome auquel le SIV est rattaché

***1.11.2.2 for VFR flight plans***

*The address of VFR flight plans must respect the following principle:*

*- ICAO code of the starting AD + ZPZX, then*
*- ICAO code of destination AD + ZTZX*
*- ICAO code for crossed FIR + ZFZX*
*- LFYNZPZX (BNIA / ARO France)*
*- ICAO code for SIVs attached to departure and destination aerodromes + ZTZX – note 3*
*- ICAO code of crossed SIVs +ZTZX – note 3*
*- Specific addresses as mentioned in §1.11.2.3*

*Note 3:*
*The ICAO code of the SIV corresponds to the code of the aerodrome to which the SIV is attached*

**1.11.2.3 Adresses particulières**

Les autres adresses ci-dessous seront utilisées pour les vols VFR, en fonction des aérodromes concernés par le vol.

***1.11.2.3 Specific addresses***

*The other addresses below will be used for VFR flights, depending on the aerodromes involved in the flight.*

**1.11.3 Vols particuliers**

**1.11.3.1 Vols IFR/VFR**

Les vols IFR ou VFR (Y ou Z) seront soumis au BRIA territorialement compétent. Les vols contenant des portions exécutées en IFR seront acheminés à l'IFPS.

**1.11.3.2 Vols mixtes militaire/civil**

Les plans de vol concernant des aéronefs qui doivent évoluer à la fois selon les règles de la circulation aérienne générale (CAG) et celles de la circulation aérienne militaire (CAM) sont qualifiés de « mixtes ».

Tous les plans de vol mixtes doivent être envoyés.

- Aux organismes civils conformément aux adresses en §1.11.2, ainsi que
- Au Bureau d'Information des Vols Centralisé (BIVC) qui traitera la partie du vol effectuée en CAM, en utilisant l'adresse LFXOYXYX pour le BIVC.

Pour ces vols mixtes CAM/CAG, dès lors que le PLN est conforme aux règles militaires et à celles de l'IFPS, l'opérateur recevra deux messages d'acceptation de ces deux entités (ACP du BIVC et ACK de l'IFPS). Une fois ces deux messages reçus il sera autorisé à opérer son vol.

**1.11.3.3 Vols avec escale**

Dans le cas d'un vol avec escales pour chaque étape duquel les plans de vol sont déposés au premier aérodrome de départ, on applique la procédure suivante :

1) Pour un vol dont le point de départ est en territoire français, les plans de vol des escales intermédiaires situées en France doivent être envoyés directement par le bureau de piste où ils sont déposés à tous les organismes concernés par le vol.

2) Pour les escales intermédiaires situées en territoire étranger, les plans de vol correspondants sont envoyés aux seuls bureaux de piste intéressés qui sont chargés de les transmettre aux organismes concernés.

3) Pour un vol dont le point de départ n'est pas situé sur le territoire français, les plans de vol des escales intermédiaires situées en France ne sont envoyés par l'organisme étranger qu'aux seuls bureaux de piste intéressés, qui dès réception du message plan de vol, prennent les mêmes dispositions que si le plan de vol avait été déposé localement (Procédure conforme aux dispositions OACI en vigueur).

**1.11.4 Messages de mouvement**

***1.11.3 Special flights***

***1.11.3.1 IFR/VFR flights***

*IFR, VFR, Y or Z flights will be subject to the territorially competent ATS reporting Office (ARO – BRIA/BNIA). Flights containing portions executed in IFR will be routed to IFPS.*

***1.11.3.2 Mixed military/civilian flight***

*Flight plans for aircraft that must operate according to both general air traffic (GAT) and military air traffic (CAM/OAT) rules are referred to as "mixed".*

*All mixed flight plans must be sent.*

*- To civilian organizations in accordance with the addresses in §1.11.2, as well as*
*- To the Centralized Flight Information Office (BIVC) which will process the part of the flight carried out in CAM/OAT, using the LFXOYXYX address for the BIVC.*

*For these mixed OAT/GAT flights, as long as the PLN complies with military and IFPS rules, the operator will receive two acceptance messages from these two entities (BIVC ACP and IFPS ACK). Once these two messages are received he will be authorized to operate his flight.*

***1.11.3.3 Flights with stopovers***

*In the case of a flight with stopovers for each step of which the flight plans are deposited at the first aerodrome of departure, the following procedure shall be applied:*

*1) For a flight whose point of departure is in french territory, the flight plans of the intermediate stopovers located in France must be sent directly by the ARO where they are deposited to all the bodies concerned by the flight.*

*2) For intermediate stopovers located in foreign territory, the corresponding flight plans shall be sent only to the ARO concerned, which shall be responsible for transmitting them to the bodies concerned.*

3) For a flight whose point of departure is not located in the territory french, the flight plans of the intermediate stopovers located in France are sent by the foreign organization only to the ARO concerned, which upon receipt of the flight plan message, make the same arrangements as if the flight plan had been filed locally (Procedure in accordance with the ICAO provisions in force).

***1.11.4 Movement messages***

© Service de l'Information Aéronautique, France

Les messages concernant les mouvements aériens prévus ou réels d'aéronefs sont fondés sur les derniers renseignements fournis aux organismes des services de la circulation aérienne par le pilote, l'exploitant ou son représentant désigné, ou obtenus par un moyen de surveillance ATS. Les messages de plan de vol déposé et les messages de mise à jour associés comprennent les messages ci-dessous :

*Messages concerning the intended or actual movement of aircraft shall be based on the latest information furnished to ATS units by the pilot, the operator or its designated representative, or derived from an ATS surveillance system. Filed flight plan messages and associated update messages include the following messages:*

**1.11.4.1 Messages de plan de vol déposé (FPL)**

Voir §1.11.2.

***1.11.4.1 Filed Flight Plan (FPL)***

*See §1.11.2*

**1.11.4.2 Messages de retard (DLA)**

Si une notification de retard n'a pas été faite dans les soixante minutes qui suivent l'heure estimée de départ du poste de stationnement (EOBT), un nouveau plan de vol devra être déposé.
Un message DLA est émis lorsque le départ d'un aéronef pour lequel des données de base de plan de vol (FPL) ont été transmises est différé ou retardé de plus de 30 minutes (60 minutes pour les vols non contrôlés) par rapport à l'EOBT comprise dans les données de base de plan de vol.

Le message DLA sera transmis par l'organisme de la circulation aérienne desservant l'aérodrome de départ à tous les destinataires des données de base de plan de vol.
Conformément au règlement (CE) N°1033/2006, qui fait référence au doc 7030/EUR de l'OACI, et à l'IFPS Users manual, tout retard de l'EOBT supérieur à 15 minutes, pour tout vol IFR à l'intérieur de l'IFPZ, est communiqué à l'IFPS.

***1.11.4.2 Delay Messages (DLA)***

*If a notification of delay has not been made within sixty minutes of the estimated off-block time (EOBT), a new flight plan must be filed.*
*A DLA message is transmitted when the departure of an aircraft for which basic flight plan data (FPL) has been sent is delayed by more than 30 minutes (60 minutes for uncontrolled flights) to the estimated off-block time (EOBT) contained in the basic flight plan.*

*The DLA message will be transmitted by the air traffic unit serving the departure aerodrome to all recipients of the basic flight plan.*
*In accordance with Regulation (EC) No 1033/2006, which refers to ICAO doc 7030/EUR, and the IFPS Users manual, any delay in the EOBT exceeding 15 minutes, for any IFR flight within IFPZ, is communicated to IFPS.*

**1.11.4.3 Messages de modification (CHG)**

Un message CHG est émis lorsqu'il faut apporter une modification quelconque aux données de base faisant partie des données FPL précédemment émises. Ce message CHG est adressé aux destinataires des données de base de plan de vol qui sont affectés par la modification. Les données de base du plan de vol révisées appropriées sont communiquées aux entités concernées qui ne les ont pas reçues précédemment.
Les changements d'identification de l'aéronef, d'aérodrome de départ, ou d'aérodrome de destination nécessitent l'envoi d'un nouveau plan de vol.

***1.11.4.3 Change Messages (CHG)***

*A CHG message is transmitted when any changes need to be made to the basic flight plan that is part of the previously issued FPL data. This CHG message is addressed to the recipients of the basic flight plan who are affected by the change. The appropriate revised flight plan data shall be communicated to the entities concerned that have not previously received them.*
*Changes in aircraft identification, departure aerodrome, or destination aerodrome require the sending of a new flight plan.*

**1.11.4.4 Messages d'annulation de plan de vol (CNL)**

Un message CNL est émis lorsqu'un vol pour lequel des données de base de plan de vol ont été diffusées précédemment est annulé. L'organisme ATS desservant l'aérodrome de départ transmet ce message CNL aux organismes ATS qui ont reçu des données de base de plan de vol.

***1.11.4.4 Flight Plan Cancellation (CNL) Messages***

*A CNL message is issued when a flight for which basic flight plan data has been previously released is cancelled. The ATS organization serving the departure aerodrome transmits this CNL message to the ATS organizations that have received basic flight plan data.*

**1.11.4.5 Messages de départ (DEP)**

Sauf dispositions contraires d'un accord régional de navigation aérienne, un message DEP est émis immédiatement après le décollage d'un aéronef pour lequel des données de base de plan de vol ont été diffusées précédemment.
En France métropolitaine les messages DEP ne sont pas émis pour les vols qui décollent sous régime IFR. L'activation du plan de vol est assurée par l'émission d'un message FSA (First System Activation) vers le NMOC.
Le cas échéant, le message DEP est transmis par l'organisme ATS qui dessert l'aérodrome de départ à tous les destinataires des données pour les vols en VFR.

***1.11.4.5 Departure Messages (DEP)***

*Unless otherwise provided for in a regional air navigation agreement, a DEP message shall be issued immediately after take-off of an aircraft for which basic flight plan has been previously disseminated.*
*In metropolitan France, DEP messages are not issued for flights taking off under IFR. The activation of the flight plan is ensured by the issuance of an FSA (First System Activation) message to the NMOC.*
*Where appropriate, the DEP message shall be transmitted by the ATS unit serving the aerodrome of departure to all recipients of the data for VFR flights.*

**1.11.4.6 Messages d'arrivée (ARR)**

Lorsqu'un compte rendu d'arrivée est reçu par l'organisme ATS qui dessert l'aérodrome d'arrivée, cet organisme adresse un message ARR :

a) Dans le cas d'un atterrissage à l'aérodrome de destination :

o Au centre de contrôle régional ou d'information de vol dans la région duquel est situé l'aérodrome d'arrivée, si ce centre l'exige ; et

o À l'organisme de la circulation aérienne de l'aérodrome de départ qui a émis le message de plan de vol, si ce message comprenait une demande de message ARR ;

b) Dans le cas d'un atterrissage sur un aérodrome de dégagement ou sur un autre aérodrome :

o Au centre de contrôle régional ou d'information de vol dans la région duquel est situé l'aérodrome d'arrivée ;
o À la tour de contrôle ou à l'organisme AFIS de l'aérodrome de destination ;
o Au bureau de piste de l'aérodrome de départ, au BNIA/BRIA ; et
o Au centre de contrôle régional ou d'information de vol chargé de chaque région d'information de vol ou région supérieure d'information de vol que, d'après le plan de vol, l'aéronef aurait traversée s'il n'avait pas été dérouté.

Lorsqu'un aéronef en vol contrôlé dont les radiocommunications ont été interrompues a atterri, l'organisme ATS qui dessert l'aérodrome adresse un message ARR :

***1.11.4.6 Arrival Messages (ARR)***

*When an arrival report is received by the ATS organization serving the aerodrome of arrival, that organization sends an ARR message:*

*a) In the case of a landing at the destination aerodrome:*

*o The ACC or FIC in whose region the aerodrome of arrival is located, if that centre so requires; and*

*o To the air traffic organization of the aerodrome of departure that issued the flight plan message, if that message included a request for an ARR message;*

*b) In the case of a landing at a clearance aerodrome or another aerodrome:*

*o At the ACC or FIC in whose region the aerodrome of arrival is located;*
*o The control tower or AFIS organization of the destination aerodrome;*
*o At the ARO of the departure aerodrome, at the BNIA/BRIA ; and*
*o At the ACC or FIC responsible for each flight information region or upper flight information region that, according to the flight plan, the aircraft would have passed through had it not been diverted.*

*When a controlled aircraft with interrupted radiocommunications has landed, the ATS organization serving the aerodrome shall send an ARR message:*

a) Dans le cas d'un atterrissage à l'aérodrome de destination :
o À tous les organismes de la circulation aérienne intéressés par le vol pendant l'interruption des radiocommunications ;
o À tous les autres organismes de la circulation aérienne qui ont pu être alertés ;

b) Dans le cas d'un atterrissage sur un aérodrome autre que l'aérodrome de destination :
o À l'organisme ATS qui dessert l'aérodrome de destination ; cet organisme adresse ensuite un message ARR aux autres organismes ATS intéressés ou alertés, comme en a) ci-dessus.

*a) In the case of a landing at the destination aerodrome:*
*o To all air traffic organizations interested in the flight during the interruption of radiocommunications;*
*o To all other air traffic organizations that may have been alerted;*

*b) In the case of a landing at an aerodrome other than the destination aerodrome:*
*o To the ATS organization that serves the destination aerodrome; this organization then sends an ARR message to other interested or alerted ATS organizations, as in (a) above.*

**1.11.4.7 Messages d'accusé de réception et de traitement des plans de vol (ACK)**

Chaque message FPL, DLA, CHG et CNL, transmis par un organisme français métropolitain, donne lieu, pour les vols IFR, à un message de réponse adressé par l'organisme français chargé du traitement initial des plans de vol au BNIA/BRIA de rattachement de l'aérodrome de départ et à l'expéditeur si ce dernier n'est pas le bureau de piste de l'aérodrome de départ.

***1.11.4.7 Flight Plan Acknowledgement and Processing (ACK) Messages***

*Each FPL, DLA, CHG and CNL message, transmitted by a metropolitan French unit, gives rise, for IFR flights, to a response message sent by the french body responsible for the initial processing of flight plans to the BNIA/BRIA/ARO of attachment of the aerodrome of departure and to the sender if the latter is not the ARO of the aerodrome of departure.*

**1.11.5 Messages de coordination**

Les messages de coordination ne sont pas en principe transmis sur le RSFTA. Ils sont généralement transmis par communications vocales directes(téléphone) ou par liaisons entre ordinateurs. Les messages de coordination comprennent :

***1.11.5 Coordination messages***

*Coordination messages are not in principle transmitted on the AFTN. They are usually transmitted by direct voice communications (telephone) or by links between computers. Coordination messages include:*

**1.11.5.1 Messages de plan de vol en vigueur (CPL)**

A moins que l'on ait déjà diffusé des données de base de plan de vol (FPL ou RPL) qui seront complétées par des données de coordination dans le message d'estimation, un message CPL est transmis pour chaque vol contrôlé par chaque centre de contrôle régional au centre de contrôle régional suivant et du dernier centre de contrôle régional à la tour de contrôle ou à l'organisme AFIS de l'aérodrome de destination.

Un message CPL est transmis suffisamment tôt pour que chaque organisme intéressé de la circulation aérienne reçoive les renseignements au moins 20 minutes, à moins qu'un délai différent soit convenu, avant l'heure à laquelle on estime que l'aéronef franchira le point de transfert de contrôle ou le point limite à partir duquel il sera placé sous le contrôle de cet organisme.

***1.11.5.1 Current Flight Plan (CPL)***

*Unless basic flight plan data (FPL) has already been released, which will be supplemented by coordination data in the estimate message, a CPL message shall be transmitted for each controlled flight by each ACC to the next ACC and from the last ACC to the control tower or AFIS body at the destination aerodrome.*

*A CPL message shall be transmitted in sufficient time for each interested air traffic organization to receive the information at least 20 minutes, unless a different period is agreed, before the time at which it is estimated that the aircraft will pass through the point of transfer of control or the limit point from which it will be placed under the control of that organization.*

**1.11.5.2 Messages d'estimation (EST)**

Lorsque les données de base de plan de vol d'un vol ont été communiquées, un message EST est adressé par chaque centre de contrôle régional ou d'information de vol au centre de contrôle régional ou d'information de vol suivant le long de la route.

Un message EST est émis suffisamment tôt pour que l'organisme intéressé de la circulation aérienne reçoive les renseignements au moins 20 minutes avant l'heure à laquelle on estime que l'aéronef franchira le point de transfert de contrôle ou le point limite à partir duquel il sera placé sous le contrôle de cet organisme

***1.11.5.2 Estimate messages (EST)***

*Where the basic flight plan data of a flight have been communicated, an EST message shall be sent by each ACC or FIC to the next ACC or FIC along the route.*

*An EST message shall be issued in sufficient time for the interested air traffic organization to receive the information at least 20 minutes before the time at which it is estimated that the aircraft will pass through the transfer of control point or the boundary point from which it will be placed under the control of that organization*

**1.11.5.3 Messages de coordination (CDN)**

Lorsqu'un organisme accepteur désire proposer de modifier les données de coordination qui figurent dans un message CPL ou EST précédemment reçu, il adresse un message CDN à l'organisme transféreur pendant le processus de coordination. Si l'organisme transféreur désire proposer de modifier les données qui figurent dans un message CDN reçu de l'organisme accepteur, il transmet un message CDN à l'organisme accepteur.

Le processus ci-dessus se répète jusqu'à ce que le processus de coordination se termine par la transmission d'un message d'acceptation (ACP) par l'un des deux organismes intéressés.

***1.11.5.3 Coordination messages (CDN)***

*A CDN message shall be transmitted during the coordination dialogue by an accepting unit to the transferring unit when the former wishes to propose a change to coordination data as contained in a previously received CPL or EST message. If the transferring unit wishes to propose to modify the data contained in a CDN message received from the accepting unit, it sends a CDN message to the accepting unit.*

*The above process is repeated until the coordination process ends with the transmission of a Message of Acceptance (ACP) by one of the two interested units.*

**1.11.5.4 Les messages d'acceptation (ACP)**

Pour indiquer que les données contenues dans un message CPL ou EST sont acceptées, l'organisme accepteur adresse un message ACP à l'organisme transféreur. L'organisme accepteur ou l'organisme transféreur transmet un message ACP pour indiquer qu'il accepte les données reçues dans un message CDN et que le processus de coordination est terminé.

***1.11.5.4 Acceptance messages (ACP)***

*Unless special arrangements have been made between the air traffic control units concerned, an ACP message shall be transmitted by an accepting unit to the transferring unit. The accepting or transferring unit transmits an ACP message to indicate that it accepts the data received in a CDN message and that the coordination process has been completed.*

**1.11.5.5 Messages d'information (ABI)**

Le message ABI est transmis par liaison entre ordinateurs d'un centre donneur à un centre accepteur dans le but de garantir la cohérence de la banque de données de plans de vol du centre accepteur avec le vol en cours et de mettre à jour le plan de vol du centre accepteur.

***1.11.5.5 Information messages (ABI)***

*The ABI message is transmitted through communication between computers from a transferring centre to an accepting centre in order to guarantee the consistency of the flight plan data bank of the accepting centre with the current flight and to update the flight plan of the accepting centre.*

**1.11.5.6 Les messages d'activation (ACT)**

***1.11.5.6 Activation messages (ACT)***

© Service de l'Information Aéronautique, France

Le message ACT est transmis par liaison entre ordinateurs et permet d'activer le vol dans le centre accepteur. Si le contrôleur accepteur accepte le vol dans les conditions de l'activation (notamment estimée et niveau de vol), ce message remplace la coordination téléphonique entre les contrôleurs ; sinon, l'initiative de l'appel est à la charge du contrôleur accepteur

*The ACT message is transmitted by link between computers and allows the flight to be activated in the accepting center. If the accepting controller accepts the flight under the conditions of activation (including estimated and flight level), this message replaces the telephone coordination between the controllers; otherwise, the initiative of the call is the responsibility of the accepting controller*

**1.11.5.7 Les messages de traitement logique (LAM)**

Le message LAM ne sera utilisé qu'entre ordinateurs ATC. Les ordinateurs ATC transmettront un message LAM en réponse à un message CPL ou EST, ou à un autre message approprié, qui est reçu et traité au point que la teneur opérationnelle sera reçue par le contrôleur compétent.
L'absence de réception du message LAM par le centre donneur entraîne chez celui-ci une alarme indiquant le risque d'absence de réception du message ACT par le centre accepteur. Cette alarme implique une initiative de coordination téléphonique de la part du centre donneur.

***1.11.5.7 Logical acknowledgment messages (LAM)***

*An LAM is be used only between ATC computers. An ATC computer shall transmit an LAM in response to a CPL or EST or other appropriate message which is received and processed up to the point where the operational content will be received by the appropriate controller.*
*Failure by the donor centre to receive the LAM message results in an alarm indicating the risk of the ACT/EST message not being received by the accepting centre. This alarm involves a telephone coordination initiative from the transferring centre.*

**1.11.6 Messages complémentaires**

Les messages complémentaires comprennent :

***1.11.6 Supplementary messages***

*Supplementary messages include:*

**1.11.6.1 Messages de demande de plan de vol (RQP)**

Un message de demande de plan de vol (RQP) sera émis lorsqu'un organisme ATS désirera obtenir des données de plan de vol. Cela peut se produire à réception d'un message concernant un aéronef pour lequel aucune donnée de base de plan de vol n'a été précédemment reçue.
Le message RQP sera transmis à l'organisme ATS transféreur qui a émis un message EST ou au centre qui a émis un message de mise à jour auquel ne correspond aucune donnée de base de plan de vol disponible.
Si aucun message n'a été reçu, mais qu'un aéronef établisse des communications radiotéléphoniques et demande à bénéficier des services de la circulation aérienne, le message RQP sera transmis à l'organisme ATS précédent situé le long de la route du vol.

***1.11.6.1 Request Flight Plan (RQP) Messages***

*A request flight plan (RQP) message shall be transmitted when an ATS unit wishes to obtain flight plan data. This might occur upon receipt of a message concerning an aircraft for which no corresponding basic flight plan data had been previously received.*
*The RQP message shall be transmitted to the transferring ATS unit which originated an EST message, or to the centre which originated an update message for which no corresponding basic flight plan data are available.*
*If no message has been received at all, but an aircraft establishes radiotelephony (RTF) communications and requires air traffic services, the RQP message shall be transmitted to the previous ATS unit along the route of flight.*

**1.11.6.2 Messages de demande de plan de vol complémentaire (RQS)**

Un message de demande de plan de vol complémentaire (RQS) est émis lorsqu'un organisme de la circulation aérienne désire obtenir des données de plan de vol complémentaire.
Ce message est adressé au bureau de piste des services de la circulation aérienne de l'aérodrome de départ ou, éventuellement au dépositaire du FPL dans le cas d'un plan de vol déposé en cours de vol, à l'organisme ATS spécifié dans le message de plan de vol.

***1.11.6.2 Request Complementary Flight Plan (RQS) Messages***

*A request supplementary flight plan (RQS) message shall be transmitted when an ATS unit wishes to obtain supplementary flight plan data.*
*The message shall be transmitted to the air traffic services reporting office at the departure aerodrome or in the case of a flight plan submitted during flight, to the ATS unit specified in the flight plan message.*

**1.11.6.3 Messages de plan de vol complémentaire (SPL)**

Un message SPL est adressé par le bureau de piste des services de la circulation aérienne de l'aérodrome de départ, ou par l'organisme auprès duquel a été déposé le plan de vol, aux organismes de la circulation aérienne qui demandent des renseignements destinés à compléter ceux qui ont déjà été transmis dans un message CPL ou FPL.
Lorsqu'il est acheminé par le RSFTA, ce message porte le même indicateur de priorité que le message de demande.

***1.11.6.3 Supplementary Flight Plan (SPL) messages***

*An SPL message shall be transmitted by the ATS reporting office at the departure aerodrome to ATS units requesting information additional to that already transmitted in a CPL or FPL message.*
*When transmitted by the AFTN, the message shall be assigned the same priority indicator as that in the request message.*

# ENR 1.12 INTERCEPTION DES AERONEFS CIVILS

*INTERCEPTION OF CIVIL AIRCRAFT*

**1.12.1** À l'exception du service d'interception et d'escorte fourni sur demande à un aéronef, l'interception des aéronefs civils est régie par les règlements et directives administratives applicables adoptés par les États contractants conformément à la convention relative à l'aviation civile internationale, et notamment à l'article 3, alinéa d), en vertu duquel les États contractants s'engagent à tenir dûment compte de la sécurité de la navigation des aéronefs civils lorsqu'ils établissent des règlements pour leurs aéronefs d'État.

***1.12.1*** *Except for intercept and escort service provided on request to an aircraft, interception of civil aircraft shall be governed by appropriate regulations and administrative directives issued by Member States in compliance with the Convention on International Civil Aviation, and in particular Article 3(d) under which ICAO Contracting States undertake, when issuing regulations for their State aircraft, to have due regard for the safety of navigation of civil aircraft.*

**1.12.2** Les circonstances suivantes peuvent être envisagées :

**a)** recherche de l'identité d'un aéronef.

**b)** conduire un aéronef en dehors d'une zone déterminée.

**c)** inviter l'aéronef intercepté à atterrir pour des raisons de sécurité sur un aérodrome désigné.

***1.12.2*** *The following circumstances may be considered:*

***a)*** *investigate the identity of an aircraft.*

***b)*** *lead an aircraft from a particular area.*

***c)*** *an intercepted aircraft may be invited to land for security reasons on a designated aerodrome.*

**1.12.3** L'application stricte du plan de vol et des procédures de contrôle, ainsi que le maintien d'un service d'écoute sur la fréquence appropriée du contrôle de la circulation aérienne rend l'interception et le recours au code des signaux visuels extrêmement improbables en ce qui concerne les aéronefs civils, notamment lorsque ceux-ci se conformeront aux ordres qui pourraient leur être transmis.

***1.12.3*** *Adherance to flight plans and ATC procedures and the maintenance of a listening watch on the appropriate ATC frequency, make the possibility of interception and resort of visual signals highly improbable as regards civil aircrafts, notably if they comply with the instructions given.*

**1.12.4** Le pilote commandant de bord d'un aéronef civil intercepté :

**a)** obéit immédiatement aux instructions de l'aéronef intercepteur, en interprétant les signaux visuels et en y répondant conformément aux spécifications figurant dans les tableaux du paragraphe 1.12.6.

**b)** avise, si possible, l'organisme compétent des services de la circulation aérienne.

**c)** essaie d'établir des radiocommunications avec l'aéronef intercepteur ou avec l'organisme approprié de contrôle d'interception, en lançant un appel général sur la fréquence d'urgence 121.500 MHz, en indiquant l'identité de l'aéronef intercepté et la nature du vol, et, si le contact n'a pas été établi et si cela est possible, en répétant cet appel sur la fréquence d'urgence 243 MHz.

**d)** s'il est doté d'un transpondeur SSR, émet le groupe codé 7700 sur le mode A, à moins qu'il ne reçoive des instructions contraires de l'organisme compétent des services de la circulation aérienne.

**e)** s'il est doté d'un équipement ADS-B ou ADS-C, active la fonction d'urgence appropriée, si une telle fonction est disponible, à moins qu'il ne reçoive des instructions contraires de l'organisme compétent des services de la circulation aérienne.

Si des instructions reçues par radio et émanant d'une source quelconque sont contraires à celles qui ont été données par l'aéronef intercepteur au moyen de signaux visuels, l'aéronef intercepté doit demander immédiatement des éclaircissements, tout en continuant de se conformer aux instructions visuelles données par l'aéronef intercepteur.

Si des instructions reçues par radio et émanant d'une source quelconque sont contraires à celles qui ont été données par radio par l'aéronef intercepteur, l'aéronef intercepté doit demander immédiatement des éclaircissements, tout en continuant de se conformer aux instructions radio données par l'aéronef intercepteur.

***1.12.4*** *The pilot-in-command of a civil aircraft, when intercepted, shall:*

***a)*** *immediately follow the instructions given by the intercepting aircraft, interpreting and responding to visual signals in accordance with the specifications in tables of point 1.12.6.*

***b)*** *notify, if possible, the appropriate air traffic services unit.*

***c)*** *attempt to establish radiocommunication with the intercepting aircraft or with the appropriate intercept control unit, by making a general call on the emergency frequency 121.500 MHz, giving the identify of the intercepted aircraft and the nature of the flight, and if no contact has been established and if practicable, repeating this call on the emergency frequency 243 MHz.*

***d)*** *if equipped with SSR transponder, select Mode A, Code 7700, unless otherwise instructed by the appropriate air traffic services unit.*

***e)*** *if equipped with ADS-B or ADS-C, select the appropriate emergency functionality, if available, unless otherwise instructed by the appropriate air traffic services unit.*

*If any instructions received by radio from any sources conflict with those given by the intercepting aircraft by visual signals, the intercepted aircraft shall request immediate clarification while continuing to comply with the visual instructions given by the intercepting aircraft.*

*If any instructions received by radio from any sources conflict with those given by the intercepting aircraft by radio, the intercepted aircraft shall request immediate clarification while continuing to comply with the radio instructions given by the intercepting aircraft.*

**1.12.5** Si le contact radio est établi pendant l'interception, mais qu'il est impossible de communiquer dans une langue commune, on doit essayer de communiquer les instructions, accusés de réception des instructions et renseignements essentiels en utilisant les expressions conventionnelles et leur prononciation figurant dans le tableau au paragraphe 1.12.7, et en transmettant chaque expression deux fois.

***1.12.5*** *If radio contact is established during interception but communication in a commom language is not possible, attempts shall be made to convey instructions, acknowledgement of instructions and essential information by using the phrases and pronunciations in table of point 1.12.7 and transmitting each phrase twice.*

© Service de l'Information Aéronautique, France

## 1.12.6 SIGNAUX A UTILISER EN CAS D'INTERCEPTION — *1.12.6 SIGNALS FOR USE IN THE EVENT OF INTERCEPTION*

| SIGNAUX DE L'AÉRONEF INTERCEPTEUR ET RÉPONSES DE L'AÉRONEF INTERCEPTÉ | | | | |
|---|---|---|---|---|
| **Séries** | **Signaux de l'INTERCEPTEUR** | **Signification** | **Réponse de l'INTERCEPTÉ** | **Signification** |
| 1 | **DE JOUR et DE NUIT :** Balancer l'appareil et faire clignoter à intervalles irréguliers les feux de navigation (et les feux d'atterrissage dans le cas d'un hélicoptère) après s'être placé légèrement au-dessus et en avant, et normalement à gauche, de l'aéronef intercepté (ou à sa droite, si l'intercepté est un hélicoptère) puis, après réponse, effectuer un lent virage à palier, normalement vers la gauche (ou vers la droite dans le cas d'un hélicoptère), pour prendre le cap voulu.<br><br>**Note 1 :** les conditions météorologiques ou le relief peuvent exiger que l'intercepteur inverse les positions et le sens du virage indiqués ci-dessus dans la série 1.<br>**Note 2 :** si l'aéronef intercepté ne peut évoluer aussi rapidement que l'intercepteur, ce dernier devrait exécuter une série de circuits en hippodrome et balancer l'appareil chaque fois qu'il dépasse l'aéronef intercepté. | Vous avez été intercepté. Suivez moi. | **DE JOUR et DE NUIT :** Balancer l'appareil, faire clignoter à intervalles irréguliers les feux de navigation et suivre. | Compris, j'obéis. |
| 2 | **DE JOUR et DE NUIT :** Exécuter une manoeuvre brusque de dégagement consistant en un virage en montée de 90° ou plus, sans couper la ligne de vol de l'aéronef intercepté. | Vous pouvez continuer. | **DE JOUR et DE NUIT :** Balancer l'appareil. | Compris, j'obéis. |
| 3 | **DE JOUR et DE NUIT :** Abaisser le train d'atterrissage (si l'aéronef en est doté), allumer les phares d'atterrissage fixes et survoler la piste d'atterrissage en service ou, si l'aéronef intercepté est un hélicoptère/aéronef à capacité de décollage et d'atterrissage verticaux (VTOL), survoler l'aire d'atterrissage des hélicoptères/aéronefs à capacité VTOL. Dans le cas d'hélicoptères/d'aéronefs à capacité VTOL, l'hélicoptère/l'aéronef à capacité VTOL intercepteur exécute une approche et se met en vol stationnaire près de l'aire d'atterrissage. | Atterrissez sur cet aérodrome. | **DE JOUR et DE NUIT :** Abaisser le train d'atterrissage (si l'aéronef en est doté), allumer les phares d'atterrissage fixes, suivre l'aéronef intercepteur et si, après le survol de la piste d'atterrissage pour hélicoptère/aéronef à capacité VTOL, il est jugé possible d'atterrir en toute sécurité, procéder à l'atterrissage. | Compris, j'obéis. |

| SIGNAUX DE L'AÉRONEF INTERCEPTÉ ET RÉPONSES DE L'AÉRONEF INTERCEPTEUR | | | | |
|---|---|---|---|---|
| **Séries** | **Signaux de l'INTERCEPTÉ** | **Signification** | **Réponse de l'INTERCEPTEUR** | **Signification** |
| 4 | **DE JOUR et DE NUIT :** Rentrer le train d'atterrissage (si l'aéronef en est doté) et faire clignoter les phares d'atterrissage en passant au-dessus de la piste d'atterrissage en service ou de l'aire d'atterrissage pour hélicoptères/aéronefs à capacité VTOL à une hauteur supérieure à 300 m (1 000 ft), mais inférieure à 600 m (2 000 ft) [dans le cas d'un hélicoptère, à une hauteur supérieure à 50 m (170 ft), mais inférieure à 100 m (330 ft)] au-dessus du niveau de l'aérodrome, et continuer à exécuter des circuits autour de la piste en service ou de l'aire d'atterrissage pour hélicoptères/aéronefs à capacité VTOL. S'il est impossible de faire clignoter les phares d'atterrissage, faire clignoter tous les autres feux utilisables. | Il m'est impossible d'atterrir sur cet aérodrome. | **DE JOUR et DE NUIT :** S'il désire que l'aéronef intercepté le suive vers un autre aérodrome, l'intercepteur rentre son train d'atterrissage (si l'aéronef en est doté) et fait les signaux de la série 1 prescrits pour l'intercepteur.<br><br>S'il décide de laisser partir l'aéronef intercepté, l'intercepteur fait les signaux de la série 2 prescrits pour l'intercepteur. | Compris, suivez-moi.<br>Compris, vous pouvez continuer. |
| 5 | **DE JOUR et DE NUIT :** Allumer et éteindre régulièrement tous les feux disponibles, mais d'une manière qui permette de les distinguer de feux à éclats. | Il m'est impossible d'obéir. | **DE JOUR et DE NUIT :** Utiliser les signaux de la série 2 prescrits pour l'aéronef intercepteur. | Compris. |
| 6 | **DE JOUR et DE NUIT :** Faire clignoter de façon irrégulière tous les feux disponibles. | En détresse. | **DE JOUR et DE NUIT :** Utiliser les signaux de la série 2 prescrits pour l'aéronef intercepteur. | Compris. |

| - | - | - | DESCEND | DEE-SEND | Je demande à descendre / *I require descent* |

(1) Dans la deuxième colonne, les syllabes à accentuer sont soulignées.
(2) L'indicatif d'appel à donner est celui qui est utilisé dans les communications radiotéléphoniques avec les organismes de la circulation aérienne et qui correspond à l'identification de l'aéronef dans le plan de vol.
(3) Les circonstances peuvent parfois rendre impossible, ou peu souhaitable, l'emploi de l'expression **«HIJACK»** .

*(1) In the second column, syllables to be emphasised are underlined.*
*(2) The call sign required to be given is that used in radiotelephony communications with air traffic services units and corresponding to the aircraft identification in the flight plan.*
*(3) Circumstances may not always permit, nor make desirable, the use of the phrase* ***'HIJACK'*** *.*

**1.12.8** Signaux visuels employés pour avertir un aéronef qu'il vole sans autorisation dans une zone interdite ou réglementée ou qu'il vole dans une zone dangereuse ou qu'il est sur le point de pénétrer dans une zone interdite, réglementée ou dangereuse.

De jour ou de nuit : une série de projectiles tirés du sol à des intervalles de dix secondes produisant à l'éclatement des étoiles ou des feux rouges et verts, indique à un aéronef qu'il vole sans autorisation dans une zone interdite ou réglementée, ou qu'il vole dans une zone dangereuse, ou qu'il est sur le point de pénétrer dans une zone interdite, réglementée ou dangereuse et qu'il doit prendre les dispositions qui s'imposent.

***1.12.8*** *Visual signals used to warn unauthorized aircraft flying in or about to enter a restricted, prohibited or danger area.*

*By day or night: a series of projectiles discharges from the ground at intervals of ten secondes, each showing, on bursting, red and green lights or stars will indicate to an unauthorized aircraft that it is flying in or about to enter a restricted, prohibited or danger area, and that the aircraft is to take such remedial action as may be necessary.*

© Service de l'Information Aéronautique, France

# ENR 1.13 INTERVENTION ILLICITE

*UNLAWFUL INTERFERENCE*

Un aéronef qui est l'objet d'une intervention illicite s'efforce de régler le transpondeur sur le code 7500 et d'aviser l'organisme ATS compétent de toutes circonstances importantes associées à cette intervention et de tout écart par rapport au plan de vol en vigueur qu'exigeraient les circonstances afin de permettre à cet organisme ATS de lui accorder la priorité et de réduire le plus possible toute incompatibilité avec la circulation des autres aéronefs. Si les circonstances le justifient, il convient d'utiliser plutôt le code 7700.

An aircraft which is being subjected to unlawful interference shall endeavour to set the transponder to Code 7500 and notify the appropriate ATS unit of any significant circumstances associated therewith and any deviation from the current flight plan necessitated by the circumstances, in order to enable the ATS unit to give priority to the aircraft and to minimise conflict with other aircraft. If circumstances so warrant, Code 7700 should be used instead.

Si un pilote a sélectionné le code mode A 7500 et si l'ATC lui a demandé de confirmer ce code, le pilote devrait, selon les circonstances, soit confirmer soit ne pas répondre du tout. Si le pilote ne répond pas, l'ATC devrait considérer que cela confirme que l'utilisation du code 7500 n'est pas une sélection incorrecte due à une inadvertance.

If a pilot has selected Mode A Code 7500 and has been requested to confirm this code by ATC, the pilot should, according to circumstances, either confirm this or not reply at all. If the pilot does not reply, ATC should take this as confirmation that the use of Code 7500 is not an inadvertent false code selection.

Le pilote commandant de bord d'un aéronef qui est l'objet d'une intervention illicite cherche à atterrir dès que possible à l'aérodrome approprié le plus proche ou à l'aérodrome désigné par l'autorité compétente, sauf si la situation à bord l'en empêche.

If an aircraft is subjected to unlawful interference, the pilot-in-command shall attempt to land as soon as practicable at the nearest suitable aerodrome or at a dedicated aerodrome assigned by the competent authority, unless considerations aboard the aircraft dictate otherwise.

Les procédures ci-après constituent des éléments indicatifs destinés aux aéronefs qui sont l'objet d'une intervention illicite et qui ne sont pas en mesure d'en aviser un organisme ATS.

The following procedures are intended as guidance for use by aircraft when unlawful interference occurs and the aircraft is unable to notify an ATS unit of this fact.

a) Si le pilote commandant de bord ne peut se rendre à un aérodrome, il devrait essayer de poursuivre le vol sur la route et au niveau de vol qui lui ont été assignés, au moins jusqu'à ce qu'il soit en mesure d'en aviser un organisme ATS, jusqu'à ce qu'il soit à portée d'un radar ou d'une station ADS-B.

a) If the pilot-in-command cannot proceed to an aerodrome, they should attempt to continue flying on the assigned track and at the assigned cruising level at least until able to notify an ATS unit or until within radar or ADS-B coverage.

b) Lorsqu'un aéronef qui est l'objet d'un acte d'intervention illicite doit s'écarter de la route ou du niveau de croisière qui lui ont été assignés sans pouvoir établir de contact radiotéléphonique avec les services de la circulation aérienne, le pilote commandant de bord devrait, chaque fois que cela est possible :

b) When an aircraft subjected to an act of unlawful interference must depart from its assigned track or its assigned cruising level without being able to make radiotelephony contact with ATS, the pilot-in-command should, whenever possible:

1) essayer de diffuser des avertissements sur le canal VHF en service ou la fréquence VHF d'urgence et sur d'autres canaux appropriés, sauf si la situation à bord l'en empêche. Il faudrait aussi utiliser d'autres équipements comme les transpondeurs de bord et les liaisons de données, lorsqu'il est utile de le faire et lorsque les circonstances le permettent ; et

1) attempt to broadcast warnings on the VHF channel in use or the VHF emergency frequency, and other appropriate channels, unless considerations aboard the aircraft dictate otherwise. Other equipment such as on-board transponders and data links should also be used when it is advantageous to do so and circumstances permit; and

2) poursuivre le vol conformément aux procédures spéciales pour les événements imprévus en vol, lorsque de telles procédures ont été établies et promulguées dans les Procédures complémentaires régionales (Doc 7030) ; ou

2) proceed in accordance with applicable special procedures for in-flight contingencies, where such procedures have been established and promulgated in the Regional Supplementary Procedures (Doc 7030); or

3) si aucune procédure régionale applicable n'a été établie, poursuivre le vol à un niveau qui, par rapport aux niveaux de croisière normalement utilisés pour le vol IFR, diffère :

3) if no applicable regional procedures have been established, proceed at a level which differs from the cruising levels normally used for an IFR flight by:

i) de 150 m (500 ft), s'il se trouve dans une région où un minimum de séparation verticale de 300 m (1 000 ft) est appliqué ; ou

i) 150 m (500 ft) in an area where a vertical separation minimum of 300 m (1 000 ft) is applied; or

ii) de 300 m (1 000 ft), s'il se trouve dans une région où un minimum de séparation verticale de 600 m (2 000 ft) est appliqué.

ii) 300 m (1 000 ft) in an area where a vertical separation minimum of 600 m (2 000 ft) s applied.

# ENR 1.14 INCIDENTS DE LA CIRCULATION AERIENNE

*AIR TRAFFIC INCIDENTS*

**Compte rendu d' évènement lié à la sécurité de la circulation aérienne**

Un pilote peut établir un compte rendu d' évènement lié à la sécurité lorsqu'il estime que la sécurité de son aéronef a été ou aurait pu être compromise par :

- un risque de collision avec un autre aéronef ( évènement dit « AIRPROX »),
- un risque de collision avec le relief,
- un risque de collision sur l'aire de manœuvre,
- un évènement en rapport avec le fonctionnement ou l'utilisation des installations,
- un évènement en rapport avec les services rendus.

Le pilote qui établit un compte rendu d' évènement adresse un message initial par voie de communication air-sol, à l'organisme de la circulation aérienne avec lequel il est en contact.

Si cette transmission n'est pas possible, le message initial doit être adressé dans les meilleurs délais (de préférence dès le premier atterrissage qui suit l' évènement ), par téléphone, télécopie ou courriel à l'organisme chargé de fournir les services de la circulation aérienne dans l'espace où a eu lieu l' évènement .

Un compte-rendu détaillé de confirmation doit ensuite être adressé le plus rapidement possible, et au plus tard dans un délai de deux semaines, par courrier électronique ou postal à :

- la Direction des Opérations (DO-EC) si la DSNA est concernée :
DO-analyse-incident@aviation-civile.gouv.fr

- la DSAC-IR compétente dans la région où s'est produit l' évènement si la DSNA n'est pas concernée.

Dans le cadre de l'analyse d'un évènement lié à la sécurité, lorsque l'organisme de la circulation aérienne concerné estime nécessaire d'obtenir des informations sur les circonstances d'un vol, il en fait la demande au pilote si possible, et, dans tous les cas, à l'exploitant ou au propriétaire de l'aéronef. Celui-ci doit alors faire parvenir ses commentaires et explications en réponse dès que possible, et au plus tard dans un délai de deux semaines à compter de la date de la demande.

Le résultat des investigations et des analyses ainsi que, le cas échéant, les mesures correctives prises pour assurer la sécurité des usagers et améliorer le service rendu, sont portés à la connaissance du notifiant dès que possible et, au plus tard, dans un délai de trois mois à compter de la date de connaissance de l' évènement par l'organisme de la circulation aérienne.

Un modèle de formulaire de compte rendu d'incident de circulation aérienne est fourni ci-dessous.

D'autres modèles sont disponibles sur le site du Ministère :
https://www.ecologique-solidaire.gouv.fr/notifier-incident

Leur utilisation reste facultative, et ils peuvent être accompagnés de précisions sur papier libre.

**Air Traffic Safety Event Report**

Pilots can write a safety-related event report whenever they think that the safety of their aircraft has been or could have been threatened by:

- a risk of collision with another aircraft ("AIRPROX" event),
- a risk of collision with the terrain,
- a risk of collision in the maneuvring area,
- an event related to the operation or use of installations,
- an event related to services provided.

Pilots writing an event report use air-ground communication to send the first message to the air traffic authority with which they are in contact.

If this means of communication is not possible, the first message must be sent by phone, by fax or email, as soon as possible (preferably as soon as the aircraft lands after the event), to the authority in charge of providing air traffic services in the airspace where the event occurred.

A detailed confirmation report must then be sent as quickly as possible, and within two weeks at the latest, by email or post to:

- the Operations Directorate (DO-EC) if the DSNA [Direction des Services de la Navigation Aérienne / French Air Navigation Services Department] is concerned:
DO-analyse-incident@aviation-civile.gouv.fr

- the DSAC-IR [Direction des services de l'aviation civile interrégionale / French Inter-regional Directorate of Civil Aviation Services] of the region where the event occurred if the DSNA is not concerned.

As part of the analysis of a safety-related event, when the concerned air traffic authority deems it necessary to obtain information about the circumstances of the flight, it will make a request to the pilot if possible, and in all cases, to the aircraft owner or operator. The latter must then send his comments and explanations as soon as possible, and within two weeks at the latest, as from the date of the request.

The findings of the investigations and analyses, as well as the corrective measures taken to ensure the safety of users and improve the service provided where necessary, are brought to the attention of the notifying party as soon as possible, and no later than three months as from the date on which the air traffic authority was informed of the event.

A template of an air traffic incident report form is provided below.

Other templates are available on the French Ministry's website:
https://www.ecologique-solidaire.gouv.fr/notifier-incident

The use of these forms remains optional, and they may be accompanied by further details on a separate sheet of paper.

# ENR 1.2 REGLES DE VOL A VUE

*VISUAL FLIGHT RULES*

### 1.2.1 INTRODUCTION

Les règles de vol à vue (VFR) sont établies par les dispositions de la partie 5 (« Conditions météorologiques de vol à vue, règles de vol à vue, règles de vol VFR spécial et règles de vol aux instruments ») de l'annexe au règlement d'exécution (UE) N° 923/2012 modifié établissant les règles de l'air communes et des dispositions opérationnelles relatives aux services et procédures de navigation aérienne (SERA). Le règlement européen est accessible à l'adresse suivante :

http://easa.europa.eu/document-library/regulations/commission-implementing-regulation-eu-no-9232012

En complément de celles établies par le règlement SERA, les règles qui suivent sont applicables en France aux usagers de la circulation aérienne générale circulant conformément aux règles de vol à vue et sont issues de l'arrêté du 11 décembre 2014 modifié relatif à la mise en œuvre du règlement d'exécution (UE) N° 923/2012 (FRA).

Pour plus d'informations sur la mise en œuvre de ce règlement en France, veuillez consulter :

https://www.ecologie.gouv.fr/reglementation-circulation-aerienne-en-france

Note importante : Les règles décrites ci-dessous rappellent les règles nationales supplémentaires, sans préciser de façon exhaustive les règles européennes qui s'appliquent partout dans l'Union Européenne.

### *1.2.1 INTRODUCTION*

*Visual Flight Rules (VFR) are established by the provisions of Part 5 ("Visual Meteorological Conditions, Visual Flight Rules, Special VFR Flight Rules and Instrument Flight Rules" in the Annex to amended commission implementing regulation (EU) NR 923/2012 laying down the common rules of the air and operational provisions regarding services and procedures in air navigation (SERA). The European regulation can be accessed at the following address :*

*http://easa.europa.eu/document-library/regulations/commission-implementing-regulation-eu-no-9232012*

*In addition to those laid down in SERA regulation the following rules apply in France to general air traffic users operating under visual flight rules and are established by the amended order of December 11th 2014 on the implementation of Regulation (EU) NR 923/2012 (FRA).*

*For more information on the implementation of this regulation in France, please consult :*

*https://www.ecologie.gouv.fr/reglementation-circulation-aerienne-en-france*

*Important note: The rules outlined below recall the additional national rules, without exhaustively specifying the European rules that apply throughout European Union.*

### 1.2.2 CONDITIONS METEOROLOGIQUES DE VOL A VUE ET LIMITATIONS DE VITESSE

Les conditions météorologiques de vol à vue définies par le règlement SERA sont rappelées dans le tableau suivant.

### *1.2.2 VISUAL METEOROLOGICAL CONDITIONS AND SPEED LIMITATIONS*

*The visual meteorological conditions defined in SERA regulation are set out in the following table.*

<table>
<tr><td></td><td>Espace aérien contrôlé<br>Controlled airspace</td><td colspan="2">Espace aérien non contrôlé<br>Not controlled airspace</td></tr>
<tr><td>Classe d'espace aérien<br>Airspace class</td><td>A B C D E</td><td>F G<br>Au dessus du plus haut des 2 niveaux /<br>Above the highest of the 2 levels :<br>3000 ft AMSL ou /or 1000 ft ASFC</td><td>F G<br>A et au dessous du plus haut des 2 niveaux /<br>At and below the highest of the 2 levels :<br>3000 ft AMSL ou /or 1000 ft ASFC</td></tr>

<tr><td colspan="4">(2) ou 3 050 m (10 000 ft) si l'altitude de transition est supérieure à cette valeur.<br>(2) or 3 050 m (10 000 ft) if the transition altitude is higher than 10 000 ft.</td></tr>
</table>

### 1.2.3 PLANS DE VOL

Les dispositions générales concernant le plan de vol sont spécifiées dans la partie ENR 1.1 GENERALITES et celles concernant les modalités de remplissage en ENR 1.10 PLANS DE VOL.

#### 1.2.3.1 Dépôt

Pour un vol VFR intérieur, le plan de vol est déposé au moins 30 minutes avant le départ.

#### 1.2.3.2 Clôture

### *1.2.3 FLIGHT PLANS*

*The general provisions concerning the flight plans are specified in the section ENR 1.1 GENERAL and those relative to conditions of filing flight plans in ENR 1.10 FLIGHT PLANS.*

#### *1.2.3.1 Submission*

*For a domestic VFR flight, the flight plan is submitted at least 30 minutes before departure.*

#### *1.2.3.2 Closing*

© Service de l'Information Aéronautique, France

Un plan de vol relatif à un vol VFR peut être clos pendant le vol lorsqu'il n'est pas ou plus obligatoire. Cependant, il reste obligatoire pendant toute la durée d'un vol qui franchit une frontière.

*A flight plan for a VFR flight may be closed during flight when it is not or is no longer compulsory. However, it remains mandatory for the duration of a flight crossing a border.*

### 1.2.4 VOL VFR SPECIAL (FRA.5005 b))

### *1.2.4 SPECIAL VFR FLIGHT (FRA.5005 b))*

#### 1.2.4.1 VFR spécial en zone de contrôle

#### *1.2.4.1 VFR special in control zone*

Une clairance VFR spécial est nécessaire pour pénétrer ou évoluer dans une zone de contrôle, quand le pilote estime que les conditions météorologiques de vol à vue ne sont pas réunies ou ne vont plus l'être.

*Special VFR clearance is required to enter or operate in a control zone when the pilot estimates that visual meteorological conditions are not met or are no longer to be met.*

#### 1.2.4.2 VFR Spécial de nuit

#### *1.2.4.2 VFR Special night*

Selon SERA.5010 a), les vols VFR spécial peuvent être effectués de jour uniquement sauf autorisation contraire de l'autorité compétente. En France, pour les hélicoptères seulement (FRA.5010 a) ), un pilote peut recevoir une clairance VFR spécial de nuit s'il évolue à une vitesse indiquée inférieure à 140 nœuds et qu'il peut maintenir les conditions suivantes :

*According to SERA.5010 a), special VFR flights may be carried out by day only unless otherwise authorized by the competent authority. In France, for helicopters only (FRA.5010 a) ), a pilot may receive a special VFR clearance by night if he is operating at a specified speed of less than 140 kts and can maintain the following conditions :*

- l'aéronef évolue hors des nuages et en vue du sol ;

*- the aircraft is evolving out of the clouds and in view of the ground ;*

- la visibilité en vol est égale à 4000 mètres ou plus ;

*- in-flight visibility is 4000 meters or more ;*

- le plafond est au moins égal à 1000 pieds.

*- the ceiling is at least 1000 ft.*

### 1.2.5 VOL VFR DE NUIT (en application de SERA 5005 c))

### *1.2.5 NIGHT VFR FLIGHT (in application of SERA 5005 c))*

Les vols VFR de nuit sont autorisés en France sous certaines conditions.

*Night VFR flights are permitted in France under certain conditions.*

#### 1.2.5.1 Préambule

#### *1.2.5.1 Preamble*

Dans la présente partie, un vol est considéré comme évoluant aux abords d'un aérodrome s'il est effectué :

*In this Part, a flight is considered to operate at the vicinity of an aerodrome if it is carried out :*

a) à l'intérieur des limites latérales d'une zone de contrôle (CTR) et éventuellement dans un volume défini localement dans les limites d'une TMA jointive et porté à la connaissance des usagers par la voie de l'information aéronautique ; ou

*a) within the lateral limits of a control zone (CTR) and possibly within a volume defined locally within the boundaries of a contiguous TMA and communicated to the users by means of aeronautical information ; or*

b) en l'absence de zone de contrôle :

*b) in the absence of a control area :*

- à l'intérieur d'une zone réglementée établie dans le but de protéger la circulation d'aérodrome de l'aérodrome auquel elle est associée, ou

*- within a restricted area established to protect the aerodrome traffic of the aerodrome with which it is associated, or*

- à une distance de l'aérodrome inférieure à 12 kilomètres (6,5 milles marins) de l'aérodrome.

*- at a distance of less than 12 kilometers (6.5 nautical miles) from the aerodrome.*

#### 1.2.5.2 Plan de vol

#### *1.2.5.2 Flight Plan*

Pour rappel des règles de l'air européennes, lors d'un vol VFR de nuit, un plan de vol doit être déposé si l'aéronef quitte les abords d'un aérodrome.

*As a reminder of European rules of the air, during a night VFR flight, a flight plan must be filed if the aircraft leaves the vicinity of an aerodrome.*

#### 1.2.5.3 Niveau minimal (FRA.5005 c) 5))

#### *1.2.5.3 Minimum level (FRA.5005 c) 5))*

1.2.5.3.1 Aéronefs autres que les hélicoptères

*1.2.5.3.1 Aircraft other than helicopters*

Le niveau minimal pour un vol VFR de nuit effectué hors itinéraire publié, au-delà des abords d'un aérodrome, est, pour les aéronefs autres que les hélicoptères, fixé à :

*The minimum level for a night VFR flight conducted outside the published route beyond an aerodrome shall be, for aircraft other than helicopters, fixed at :*

i) au-dessus de régions accidentées ou montagneuses, 600 mètres (2000 pieds) au-dessus de l'obstacle le plus élevé situé dans un rayon de 8 km autour de la position estimée de l'aéronef ;

*i) over high terrain or mountainous areas, 600 meters (2000 ft) above the highest obstacle within a radius of 8 km around the estimated position of the aircraft ;*

ii) ailleurs que dans les régions spécifiées au i), 450 mètres (1500 pieds) au-dessus de l'obstacle le plus élevé situé dans un rayon de 8 km autour de la position estimée de l'aéronef.

*ii) 450 meters (1500 ft) above the highest obstacle within 8 km of the estimated position of the aircraft, other than in the areas specified in (i).*

1.2.5.3.2 Cas spécifique des ballons

*1.2.5.3.2 Specific case of balloons*

Dans le cas de vols de ballons, l'obstacle à considérer est le plus élevé situé dans un rayon équivalent à la distance parcourue en 10 mn de vol autour de la position estimée de l'aéronef.

*In the case of balloon flights, the obstacle to be considered is the highest within a radius equivalent to the distance travelled in 10 minutes of flight around the estimated position of the aircraft.*

1.2.5.3.3 Cas spécifique des hélicoptères

*1.2.5.3.3 Specific case of helicopters*

Le niveau minimal pour le vol VFR de nuit en hélicoptère effectué hors itinéraire publié est fixé à 300 mètres (1000 pieds) au-dessus de l'obstacle le plus élevé dans un rayon équivalent à une minute de vol autour de la position estimée de l'aéronef.

*The minimum level for night VFR by helicopter flight outside any published route is set at 300 meters (1000 ft) above the highest obstacle within a radius equivalent to one minute of flight around the estimated position of the aircraft.*

Excepté lorsqu'il suit un itinéraire spécifiant une altitude de vol, le pilote est responsable du franchissement des obstacles.

*Except when following a route specifying a flight altitude, the pilot is responsible for obstacle clearance.*

#### 1.2.5.4 Aérodromes de départ et de destination

#### *1.2.5.4 Aerodromes of departure and destination*

Un vol VFR de nuit est effectué au départ et à destination d'aérodromes portés à la connaissance des usagers par la voie de l'information aéronautique.

*A night VFR flight shall be made to and from approved aerodromes communicated to the users by means of aeronautical information.*

En outre, les vols d'hélicoptères en VFR de nuit peuvent être effectués au départ ou à destination d'hélisurfaces sur lesquelles l'exploitant d'hélicoptère s'est assuré qu'il peut effectuer son vol en sécurité.

*In addition, night helicopter VFR flights can be operated at departure or destination of helisurfaces on which the helicopter operator has ensured that he can safely fly.*

© Service de l'Information Aéronautique, France

**1.2.5.5 Itinéraires : FRA.5005 c) 5) ter**

Des itinéraires VFR de nuit peuvent être publiés dans les espaces aériens de classe B, C ou D. Un vol VFR de nuit contrôlé peut être effectué hors itinéraires, sur demande du pilote et acceptation de l'organisme de contrôle.

Dans les espaces aériens de classe E ou G, des itinéraires VFR de nuit peuvent être publiés. Leur suivi est obligatoire, lorsqu'ils sont définis en dérogation à une règle particulière d'application générale comme celle relative aux hauteurs minimales de survol ; il est recommandé dans les autres cas. Le caractère obligatoire ou recommandé de l'itinéraire est porté à la connaissance des usagers par la voie de l'information aéronautique.

***1.2.5.5 Routes: FRA.5005 c) 5) ter***

*Night VFR routes may be published in Class B, C or D airspace. A controlled night VFR flight may be carried out off-route, upon pilot request and acceptance by the ATC unit.*

*In Class E or G airspace, night VFR routes may be published. Such routes are mandatory when they are defined in derogation from a particular rule of general application such as that relating to minimum heights of overflight. The use of these routes is recommended in other cases. The mandatory or recommended nature of the VFR route is indicated through aeronautical information.*

**1.2.6 HAUTEURS MINIMALES DE SURVOL**

Les dispositions mentionnées en ENR 1.1.2 s'appliquent.

**En outre (FRA.5005 f) 2)) :**

a) Les planeurs effectuant des vols de pente, les ballons et les planeurs ultralégers peuvent évoluer à une hauteur inférieure à la hauteur minimale fixée par les dispositions de SERA.5005 f) 2) sous réserve de n'entraîner aucun risque pour les personnes ou les biens à la surface.

b) Dans le cadre d'un vol d'instruction, la hauteur minimale fixée par les dispositions de SERA 5005 f) 2) est abaissée à 50 m (150 ft) pour les entraînements aux atterrissages forcés.

Les aéronefs mentionnés au a) et b) maintiennent en permanence une distance de 150 m par rapport à toute personne, tout véhicule, tout navire à la surface et tout obstacle artificiel.

***1.2.6 MINIMUM OVERFLIGHT HEIGHTS***

Provisions mentioned in ENR 1.1.2 apply.

***In addition (FRA.5005 f) 2)):***

*a) Gliders flying on slopes, balloons and ultra light gliders may fly at a height lower than the minimum height set by SERA.5005 (f) (2), at the condition they do not put at risk persons or property on the surface.*

*b) In the case of an instruction flight, the minimum height set by the provisions of SERA 5005 (f) (2) shall be reduced to 50 m (150 ft) for forced landings.*

*Aircraft referred to in a) and b) shall maintain a distance of 150 m from any person, vehicle, surface ship and artificial obstruction at all times.*

**1.2.7 CALAGE ALTIMETRIQUE ET NIVEAUX DE CROISIERE**

Sauf indication contraire figurant dans les autorisations du contrôle de la circulation aérienne, les vols VFR dans la phase de croisière en palier à une hauteur supérieure à 900 m (3 000 ft) au-dessus du sol ou de l'eau sont effectués à l'un des niveaux de croisière correspondant à leur route, spécifiés dans le tableau des niveaux de croisière ci-dessous (voir aussi Appendice 3 de SERA).

Les niveaux de croisière (SERA.3105) auxquels doit être effectué un vol ou une partie d'un vol sont exprimés :

a) en niveaux de vol, pour les vols effectués à un niveau égal ou supérieur au niveau de vol le plus bas utilisable ou, le cas échéant, à un niveau supérieur à l'altitude de transition ;

b) en altitudes, pour les vols effectués à une altitude inférieure au niveau de vol le plus bas utilisable ou, le cas échéant, à une altitude égale ou inférieure à l'altitude de transition.

Pour plus de renseignements sur les procédures de calage altimétrique qui peuvent varier selon les régions, se référer à la partie ENR 1.7 de l'AIP.

***1.2.7 ALTIMETER SETTING AND CRUISING LEVELS***

*Except where otherwise indicated in air traffic control clearances, VFR flights in level cruising flight when operated above 900 m (3000 ft) from the ground or water, shall be conducted at a cruising level appropriate to the track as specified in the following table of cruising levels (see also in Appendix 3.of SERA).*

*The cruising levels (SERA.3105) at which a flight or a portion of a flight is to be conducted shall be in terms of :*

*(a) flight levels, for flights at or above the lowest usable flight level or, where applicable, above the transition altitude ;*

*(b) altitudes, for flights below the lowest usable flight level or, where applicable, at or below the transition altitude.*

*For more information on altimeter setting procedures that may vary by region, refer to ENR 1.7 of the AIP.*

**1.2.8 RADIOCOMMUNICATIONS**

**1.2.8.1 Régions et routes nécessitant une écoute permanente (FRA.5005 i)**

Les régions à l'intérieur ou à destination desquelles et les routes le long desquelles un vol VFR garde une écoute permanente des communications vocales air-sol sont publiées dans l'information aéronautique.

***1.2.8 RADIOCOMMUNICATIONS***

***1.2.8.1 Regions and routes requiring permanent monitoring (FRA.5005 i)***

*Regions within or to which and the routes along which a VFR flight maintains a permanent listening of air-to-ground voice communications are published in aeronautical information.*

**1.2.8.2 Fréquence commune d'auto-information pour l'utilisation des plates-formes ULM situées hors des aérodromes**

La fréquence commune d'auto-information 125.335 MHz est utilisable sur les plates-formes ULM situées hors des aérodromes, exclusivement dans la circulation des plates-formes ULM (pour les manoeuvres liées aux décollages et atterrissages, ainsi que pour la circulation à la surface).

Afin d'éviter le brouillage d'autres stations utilisant la même fréquence, en aucun cas cette fréquence n'est utilisée au-delà d'un plafond de 3000 ft ASFC.

- Les activités d'ULM siégeant sur un aérodrome sans ATS, y compris lorsqu'il dispose d'une aire ULM dédiée, doivent utiliser la fréquence assignée à l'aérodrome dans le cadre de l'auto-information ou à défaut la fréquence commune d'auto-information 123.500 MHz ;

- Les activités d'ULM établies sur une plate-forme située à proximité d'un aérodrome doivent le cas échéant utiliser dans le cadre de l'auto-information la fréquence ayant fait l'objet d'un accord avec l'organisme fournissant les services de la circulation aérienne sur l'aérodrome ou l'exploitant de l'aérodrome, ou figurant dans l'arrêté préfectoral de création. Les usagers peuvent prendre connaissance de la fréquence utilisable sur la plate-forme ULM en consultant le site de la FFPLUM (https://basulm.ffplum.fr/).

- En dehors des cas précités, seule la fréquence 125.335 MHz peut être utilisée dans la circulation des plates-formes ULM.

***1.2.8.2 Common air to air frequency usable on ULM platforms in metropolitan France located outside aerodromes***

*The common universal communication (UNICOM) air to air frequency 125.335 MHz is usable on ULM platforms outside aerodromes, exclusively in ULM platform traffic (for maneuvres related to take-offs and landings, as well as for ground traffic).*

*In order to avoid interference from other stations using the same frequency, under no circumstances is this frequency used above a ceiling of 3000 ft ASFC.*

*- ULM operations based at an aerodrome without ATS, including those with a dedicated ULM area, must use the frequency assigned to the aerodrome for air to air communication or, failing that, the common air to air frequency 123.500 MHz ;*

*- ULM activities established on a platform located in the vicinity of an aerodrome must, where applicable, use the frequency agreed with the organisation providing air traffic services at the aerodrome or the aerodrome operator, or included in the prefectural order creating the aerodrome, for air to air communication purposes. Users can find out the frequency to be used on the ULM platform by consulting the FFPLUM website (https://basulm.ffplum.fr/)*

*- Apart from the aforementioned cases, only the 125.335 MHz frequency can be used in ULM platform traffic.*

**1.2.9 SURVOLS MARITIMES**

Si un aéronef évolue selon les règles de vol à vue à une distance supérieure à la plus faible des deux distances suivantes :

1° La distance maximale permettant à l'aéronef, un moteur en panne, d'atteindre une terre se prêtant à un atterrissage d'urgence ;

2° La distance égale à quinze fois l'altitude de l'aéronef ;

Le vol doit être conforme aux règles suivantes :

- Le pilote doit déposer un plan de vol.

- Le pilote garde une écoute permanente des communications vocales air-sol sur le canal de communication approprié de l'organisme des services de la circulation aérienne qui assure le service d'information de vol et il rend compte, selon les besoins, de sa position audit organisme

- Les aéronefs évoluant dans ces régions suivent les itinéraires obligatoires publiés en ENR 3.3 ou sur les cartes aéronautiques. Toutefois ils peuvent évoluer en dehors de ces itinéraires après avoir obtenu une autorisation des organismes fournissant les services de la circulation aérienne.

Par ailleurs l'attention des usagers de l'espace aérien est attirée sur le développement de projets d'exploitation d'ailes volantes de tractage permettant l'assistance à la propulsion des navires.

De tels dispositifs sont constitués d'une aile de type « parapente » de grandes dimensions reliée à la proue du navire par un câble rétractable, qui peut évoluer entre 100 et 700 mètres au-dessus du niveau de la mer.

Afin de limiter le risque de collision entre un aéronef et une aile de tractage dans l'ensemble des espaces aériens maritimes, la DGAC recommande aux pilotes conduisant des vols au-delà de 5 NM des côtes terrestres et en-dessous de 3000 pieds au-dessus du niveau moyen de la mer, de faire preuve d'une vigilance particulière quant à la présence potentielle d'ailes de tractage et du câble les reliant à leur navire.

Dans tous les cas, il revient au pilote d'un aéronef de prendre les mesures propres à éviter un abordage, y compris en ce qui concerne les risques avec des navires conformément à la règle SERA.3230.

***1.2.9 MARITIME OVERFLIGHT***

*If an ACFT is operating under visual flight rules at a distance greater than the lower of the following two distances :*

*1° The maximum distance permitting the ACFT, an engine inoperative, to reach land suitable for emergency landing ;*

*2° The distance equal to fifteen times the altitude of the ACFT ;*

*The flight shall comply with the following rules :*

*- The pilot shall file a flight plan.*

*- The pilot shall maintain continuous air-ground voice communication watch on the appropriate communication channel of, and report its position as necessary to, the air traffic services unit providing flight information service.*

*- ACFT operating in these regions follow the mandatory routes published in ENR 3.3 or on aeronautical charts. However, they may evolve outside of these routes after obtaining authorization from the air traffic services agencies.*

*In addition, airspace users' attention is drawn to the development of projects involving the use of flying wings for towing ships.*

*Such devices consist of a large paraglider-type wing connected to the bow of the ship by a retractable cable, that can fly between 100 and 700 meters above sea level.*

*In order to limit the risk of collision between an aircraft and a tow wing in all maritime airspace, DGAC recommends that pilots flying beyond 5 NM from the coastline and below 3,000 feet above mean sea level exercise particular vigilance with regard to the potential presence of tow wings and the cable connecting them to their vessel.*

*In all cases, it is the responsibility of he aircraft pilot to take appropriate measures to avoid a collision, including with regard to risks involving ships in accordance with rule SERA.3230.*

**1.2.10 ITINERAIRES OBLIGATOIRES (FRA.5006)**

Lorsque les caractéristiques propres à certaines régions le justifient pour assurer la sécurité des vols ou afin de faciliter la fourniture du service d'alerte, des itinéraires obligatoires peuvent être établis par décision du ministre chargé de l'aviation civile. Ces itinéraires sont portés à la connaissance des usagers de l'espace aérien en ENR 3.3 ou sur les cartes aéronautiques.

***1.2.10 MANDATORY ROUTES (FRA.5006)***

*When justified by the specific characteristics of certain regions to ensure flight safety or to facilitate the provision of the alerting service, mandatory routes may be established by decision of the Minister responsible for civil aviation. These routes are published in ENR 3.3 or on aeronautical charts.*

**1.2.11 FRANCHISSEMENT DES FRONTIERES DE LA FRANCE METROPOLITAINE SELON LES REGLES DE VOL A VUE (VFR)**

En rappel de la règle SERA.4001 b) 5), un plan de vol est déposé avant tout vol au cours duquel l'aéronef doit franchir des frontières.

Le point de franchissement de la frontière doit être inscrit en case 15 du plan de vol. Par ailleurs, il convient de reporter en case 18 après l'abréviation EET/, le temps estimé nécessaire pour arriver à ce point. (voir ENR 1.10).

***1.2.11 CROSSING THE BORDERS OF METROPOLITAN FRANCE ACCORDING TO VISUAL FLIGHT RULES (VFR)***

*As a recall of SERA.4001 b) 5), a flight plan shall be submitted prior to operating any flight across international borders.*

*The border crossing point must be entered in case 15 of the flight plan. In addition, the time estimated to arrive at this point should be entered in case 18 after the abbreviation EET /. (See ENR 1.10).*

**1.2.11.1 Contact radio**

***1.2.11.1 Radio contact***

© Service de l'Information Aéronautique, France

1211.1.1 Entrée dans l'espace aérien français

Un aéronef motopropulsé ne peut pénétrer à l'intérieur de l'espace aérien métropolitain, selon les règles de vol à vue, que s'il est équipé de moyens de radiocommunications. Lors du franchissement de la frontière, le pilote de l'aéronef établit une communication radiotéléphonique bilatérale avec un organisme de la circulation aérienne. Si la liaison ne peut être établie au franchissement de la frontière, le pilote l'établit pendant la suite du vol.

*1211.1.1 Entry into French airspace*

*A motor-propelled aircraft can only enter metropolitan airspace under visual flight rules if it is equipped with radio communication equipment. When crossing the border, the aircraft pilot establishes a two-way radiotelephone link with an air traffic control unit. If the link cannot be established at the border crossing, the pilot establishes it during the rest of the flight. If, for reasons beyond his control, he is unable to do so, he contacts the local air traffic authorities and the relevant customs and police services as soon as he lands.*

1211.12 Organisme à contacter

Le contact radiotéléphonique doit être établi en priorité avec le centre d'information de vol (FIC) ou le secteur d'information de vol (SIV) compétent.

En cas d'impossibilité d'établir, au passage de la frontière, le contact radio avec le FIC ou le SIV concerné, le pilote doit contacter de préférence les organismes de la circulation aérienne implantés sur les aérodromes suivants.

Aérodromes frontaliers concernés :

*1211.12 Contact organization*

*Radiotelephone contact must be established in priority with the Flight Information Center (FIC) or the relevant Flight Service Area (SIV).*

*If it is not possible to establish radio contact with the relevant FIC or SIV at the border crossing, the pilot should preferably contact the air traffic service units at the following aerodromes.*

*Border Aerodromes concerned :*

**1.2.11.2 Compte rendu de passage de la frontière**

Le message de compte rendu, qui est obligatoire, comporte les éléments suivants :

- indicatif de l'aéronef ;
- provenance / destination ;
- indication "passage frontière" ;
- position / altitude / heure.

Si le message "passage frontière" n'a pu être transmis au passage de la frontière, il doit être complété par la position et l'altitude de l'aéronef au moment de la transmission du message.

***1.2.11.2 Border Crossing Report***

*The reporting message, which is mandatory, contains the following elements :*

*- aircraft code ;*
*- origin / destination ;*
*- indication "border crossing" ;*
*- position / altitude / time.*

*If the "border crossing" message could not be transmitted at the border crossing, it must be completed by the position and altitude of the aircraft at the time of transmission of the message.*

**1.2.11.3 Impossibilité de contact**

Si pour des raisons indépendantes de sa volonté il n'y parvient pas, il se met dès l'atterrissage en rapport avec les organismes locaux de la circulation aérienne et les services de douane et de police compétents, ou à défaut avec le CRNA concerné :

***1.2.11.3 Impossibility of contact***

*If, for reasons beyond his control, he is unable to do so, he contacts the local air traffic authorities and the relevant customs and police services as soon as he lands, or failing that, the area control service unit :*

**1.2.13 EVOLUTIONS A PROXIMITE DES AEROGENERATEURS**

Les éoliennes génèrent des turbulences de sillage qui peuvent constituer un risque pour les aéronefs, en particulier lorsqu'ils volent à faible altitude et à faible vitesse, par exemple au décollage et à l'atterrissage. Les turbulences générées par les pales en rotation, dont l'intensité est proportionnelle au diamètre du rotor et à la force du vent, peuvent ainsi affecter la stabilité des petits aéronefs évoluant volant à proximité des éoliennes.

Une étude a conclu que le risque le plus élevé de perturbation pour les avions légers se situe à une distance comprise entre 4 à 7 fois le diamètre du rotor dans la direction sous le vent par rapport à l'éolienne. Les turbulences de sillage des éoliennes peuvent ainsi être évitées en évoluant à une altitude plus élevée que celle de l'éolienne (pale en position haute) ou, dans le cas contraire, à une distance supérieure à 9 fois le diamètre rotor derrière l'éolienne dans la direction sous le vent. Dans le cas le plus défavorable d'un rotor de 300 mètre de diamètre, cette distance équivaut à 2 700 m (1.46 NM).

***1.2.13 FLYING NEAR WIND TURBINES***

*Wind turbines generate wake turbulence that can pose a risk to aircraft, particularly when flying at low altitude and low speed, such as during takeoff and landing. The turbulence generated by rotating blades, whose intensity is proportional to the diameter of the rotor and the strength of the wind, can thus affect the stability of small aircraft flying near wind turbines.*

*A study concluded that the highest risk of disruption for light aircraft is at a distance of between 4 and 7 times the rotor diameter downwind of the wind turbine. Wake turbulence from wind turbines can therefore be avoided by flying at a higher altitude than the wind turbine (blade in the up position) or, if this is not possible, at a distance greater than 9 times the rotor diameter behind the wind turbine in the downwind direction. In the worst-case scenario of a rotor with a diameter of 300 meters, this distance is equivalent to 2,700 m (1.46 NM).*

© Service de l'Information Aéronautique, France

# ENR 1.3 REGLES DE VOL AUX INSTRUMENTS

*INSTRUMENT FLIGHT RULES*

### 1.3.1 RÈGLES APPLICABLES À TOUS LES VOLS IFR

#### 1.3.1.1 Introduction

Les règles de vol aux instruments (IFR) sont fixées par les dispositions de la partie 5 (« Conditions météorologiques de vol à vue, règles de vol à vue, règles de vol VFR spécial et règles de vol aux instruments ») de l'annexe au règlement (UE) n°923/2012 de la commission du 26 septembre 2012 établissant les règles de l'air communes et des dispositions opérationnelles relatives aux services et procédures de navigation aérienne (SERA). Le règlement européen est accessible à l'adresse suivante :

http://easa.europa.eu/document-library/regulations/commission-implementing-regulation-eu-no-9232012

En complément de celles établies par le règlement (UE) n°923/2012, les règles qui suivent sont applicables en France aux usagers de la circulation aérienne générale circulant conformément aux règles de vol aux instruments. Elles sont issues de l'arrêté du 11 décembre 2014 relatif à la mise en œuvre du règlement d'exécution n°923/2012 (FRA).

Note importante : Les règles décrites ci-dessous rappellent les règles nationales supplémentaires, sans préciser de façon exhaustive les règles européennes qui s'appliquent partout dans l'Union Européenne.

#### 1.3.1.2 Plans de vol (FRA.4001 b) 3))

En France, le dépôt d'un plan de vol est requis pour les vols effectués conformément aux règles de vol aux instruments.

Toutefois, les vols d'hélicoptères effectuant du transport inter hospitalier peuvent déroger à cette règle.

#### 1.3.1.3 Niveau minimal

Les dispositions mentionnées en ENR 1.1.2 s'appliquent.

### 1.3.2 RÈGLES APPLICABLES AUX VOLS IFR À L'INTÉRIEUR DE L'ESPACE AÉRIEN CONTRÔLÉ

#### 1.3.2.1 Limitation de vitesse en espace aérien contrôlé

Les vols IFR évoluant à une altitude inférieure à 3 050 m (10 000 ft) AMSL sur une route ATS ou un itinéraire normalisé de départ et d'arrivée ou en guidage radar appliquent une limitation de la vitesse air indiquée (IAS) à 250 nœuds, sauf clairance contraire explicite à l'initiative du contrôleur.

Toutefois, une vitesse supérieure à 250 nœuds est possible, après accord du contrôle aérien, pour les aéronefs qui, pour des raisons techniques ou de qualité de vol, ne peuvent maintenir une vitesse inférieure ou égale à 250 nœuds.

Note : Lorsque l'altitude de transition est inférieure à 3 050 m (10 000 ft) AMSL, le niveau de vol 100 devrait être utilisé au lieu de 10 000 ft AMSL.

### 1.3.3 RÈGLES APPLICABLES AUX VOLS IFR HORS DE L'ESPACE AÉRIEN CONTRÔLÉ

#### 1.3.3.1 Niveau minimal (FRA.5025 a))

Outre le respect de la hauteur minimum de survol des agglomérations, installations et des rassemblements de personnes fixée par la réglementation (voir ENR 1.1.2), sauf pour les besoins du décollage, de l'atterrissage et des manœuvres qui s'y rattachent, un vol IFR doit être effectué à un niveau supérieur ou égal au niveau défini en SERA.5015 b) et au plus haut des deux niveaux suivants : 900 m (3 000 pieds) au-dessus du niveau moyen de la mer et 300 m (1 000 pieds) au-dessus de la surface.

Une possibilité de dérogation à cette règle est offerte pour les vols d'hélicoptères effectuant du transport inter hospitalier, dans les conditions définies par l'autorité compétente.

#### 1.3.3.2 Communications (FRA.5025 b))

Un aéronef en vol IFR évoluant en espace aérien de classe G garde l'écoute des communications vocales air-sol sur le canal de communication approprié, et établit, s'il y a lieu, des communications bilatérales avec l'organisme des services de la circulation aérienne assurant le service d'information de vol.

### 1.3.4 PROCÉDURES GÉNÉRALES DE L'ESPACE AÉRIEN EN CHEMINEMENT LIBRE (FRA)

#### 1.3.4.1 Zone d'application

Les procédures en espace FRA sont applicables à l'intérieur des cellules FRA définies à l'ENR 2.2.5.

#### 1.3.4.2 Règles de vol

#### 1.3.4.2.1 Généralités

Dans les cellules FRA, les vols IFR sont soumis aux procédures définies à l'ENR 1.1 "Règles générales" et au RAD publié par Eurocontrol.

### *1.3.1 RULES APPLICABLE TO ALL IFR FLIGHTS*

#### *1.3.1.1 Introduction*

*Instrument Flight Rules (IFR) shall be determined by the provisions of Part 5 ("Meteorological Requirements for Visual Flight, Visual Flight Rules, Special VFR Flight Rules and Instrument Flight Rules" in Annex To Commission Regulation (EU) NR 923/2012 of 26 September 2012 establishing common rules of the air and operational provisions for air navigation services and procedures (SERA). The European regulation can be accessed at the following address :*

*http://easa.europa.eu/document-library/regulations/commission-implementing-regulation-eu-no-9232012*

*In addition to those laid down in Regulation (EU) NR 923/2012, the following rules shall apply in France to general air traffic users operating in accordance with instrument flight rules. They are the result of the order of December 11th 2014 on the implementation of Regulation (EU) NR 923/2012 (FRA).*

*Important note: The rules outlined below recall the additional national rules, without exhaustively specifying the European rules that apply throughout European Union.*

#### *1.3.1.2 Flight plans (FRA.4001 b) 3))*

*In France, a flight plan is required for any IFR flight.*

*However, helicopters under IFR carrying out inter-hospital transport may derogate from this rule.*

#### *1.3.1.3 Minimum level*

*Provisions mentioned in ENR 1.1.2 apply.*

### *1.3.2 RULES APPLICABLE TO IFR FLIGHTS WITHIN CONTROLLED AIRSPACE*

#### *1.3.2.1 Speed limitation in controlled airspace*

*IFR flights operating at an altitude of less than 3 050 m (10 000 ft) AMSL on an ATS route or a standard route of departure and arrival or under radar guidance shall apply an airspeed limit (IAS) of 250 knots unless cleared otherwise.*

*However, a speed of more than 250 knots is permitted, subject to the approval of the air traffic control, for aircraft which for technical or flight quality reasons, cannot maintain speed lower or equal to 250 knots.*

*Note : When the transition altitude is lower than 3 050 m (10 000 ft) AMSL, flight level 100 should be used instead of 10 000 ft AMSL.*

### *1.3.3 RULES APPLICABLE TO IFR FLIGHTS OUTSIDE CONTROLLED AIRSPACE*

#### *1.3.3.1 Minimum level (FRA.5025 a))*

*In addition to respecting the minimum flight height for the agglomerations, installations and gatherings of persons set by regulation (see ENR 1.1.2), except for take-off, landing and related manoeuvres, an IFR flight shall be operated at a level higher or equal to the level defined in SERA.5015 b) and to the highest of the following levels : 900 m (3000 ft) above mean sea level and 300 m (1000 ft) above ground.*

*An exemption to this rule may be granted to helicopters under IFR carrying out inter-hospital transport, subject to conditions defined by the competent authority.*

#### *1.3.3.2 Communications (FRA.5025 b))*

*An aircraft flying under IFR in G class airspace shall maintain an air-ground voice communication watch on the appropriate communication channel and establish bilateral communication, as necessary, with the air traffic services unit providing flight information service.*

### *1.3.4 FREE ROUTE AIRSPACE (FRA) GENERAL PROCEDURES*

#### *1.3.4.1 Area of application*

*FRA airspace procedures are applicable in the FRA cells defined in ENR 2.2.5.*

#### *1.3.4.2 Flight rules*

#### *1.3.4.2.1 General*

*In FRA cells, IFR flights are subject to the procedures defined in ENR 1.1 "General Rules" and in the RAD published by Eurocontrol.*

© Service de l'Information Aéronautique, France

Les utilisateurs des cellules FRA doivent planifier leurs trajectoires en utilisant les points significatifs publiés en ENR 4.1 "Aides de radionavigation en route" ou ENR 4.4 "Indicatifs codés des points significatifs" de l'AIP France. La fonction de ces points significatifs (FRA (E), FRA (X), FRA (I), FRA (D) ou FRA (A)) est mentionnée en colonne "Observations". Les segments entre les points sont décrits par la mention "DCT".

Limitation des DCT : à l'intérieur des cellules FRA, la limitation de distance ne s'applique pas aux DCT.

*FRA cells users must plan their trajectories using significant points published in ENR 4.1 "Radionavigation aids en route" or ENR 4.4 "Named codes designators for significant points" of the AIP France. The function of these significant points (FRA (E), FRA (X), FRA (I), FRA (D) or FRA (A)) is mentioned in column "Remarks". Segments between points will be indicated by means of "DCT" instructions.*

*DCT limitation : Inside FRA cells, distance limitation does not apply to DCT.*

**1.3.4.2.2 Survol**

Les aéronefs en survol dans une cellule FRA de l'UIR France doivent planifier leur vol obligatoirement depuis un point d'entrée FRA (E) vers un point de sortie FRA (X) hormis lorsque la planification transfrontalière entre les cellules FRA autorise l'usage de points intermédiaires FRA (I) (paragraphe 1.3.4.2.4).

***1.3.4.2.2 Overflight***

*Aircraft flying over a FRA cell of the UIR France must plan their flight compulsorily from a FRA entry point (E) to a FRA exit point (X), except where crossborder flight planning between FRA (I) intermediate points is allowed in the route description (paragraph 1.3.4.2.4).*

**1.3.4.2.3 Accès de / vers un aérodrome**

Les aéronefs à l'arrivée d'un aérodrome doivent planifier leur vol d'un point FRA (E) ou (I) vers un point FRA (A).

Les aéronefs au départ d'un aérodrome doivent planifier leur vol d'un point FRA (D) vers un point FRA (X) ou (I).

Les aéronefs qui évoluent exclusivement dans un seul espace FRA à l'intérieur de l'UIR France peuvent planifier leur vol d'un point FRA (D) vers un point FRA (A) via d'éventuels points FRA (I).

***1.3.4.2.3 Access from / to an aerodrome***

*Aircraft arriving from an aerodrome must plan their flight from a FRA (E) or (I) point to a FRA point (A).*

*Aircraft departing from an aerodrome must plan their flight from a FRA point (D) to a FRA point (X) or (I).*

*Aircraft operating exclusively in a single FRA airspace within the UIR France can plan their flight from a FRA point (D) to a FRA point (A) via possible FRA points (I).*

**1.3.4.2.4 FRA transfrontalier**

La planification transfrontalière entre cellules FRA est autorisée selon les critères définis dans le RAD :

1. entre la cellule LFFRAE et LSASFRA, LFFRANE et EDYYFRA,

2. entre la cellule LFFRANE et LSASFRA, EDYYFRA, LFFRAE et LFFRAC,

3. et entre la cellule LFFRAC, LFFRANE et LSASFRA.

Les vols entre ces espaces n'ont pas l'obligation de planifier via un point (E), (X) ou (EX). La planification via un point (I) situé proche de la frontière et publié à l'ENR 4.1 ou ENR 4.4 est suffisant.

***1.3.4.2.4 Cross-border FRA***

*Specific restrictions on the use of FRA intermediate points (I) between the FRA areas are defined in the RAD. Crossborder planning is only available:*

*1. between LFFRAE and LSASFRA, LFFRANE and EDYYFRA,*

*2. between LFFRANE and LSASFRA, EDYYFRA, LFFRAE and LFFRAC,*

*3. and between LFFRAC, LFFRANE and LSASFRA.*

*Flights between these areas are not required to file a FRA horizontal entry or exit point (E, X), rather the use of a FRA intermediate point (I), that is situated near the boundary and published in ENR 4.1 or ENR 4.4 is possible.*

**1.3.4.3 Espaces réservés**

***1.3.4.3 Reserved areas***

**1.3.4.3.1 Contournement des espaces réservés**

Les exploitants d'aéronefs planifient leur vol en espace FRA conformément aux informations publiées à l'AUP/UUP (en tenant notamment compte des espaces réservés durant les heures d'activités programmées).

***1.3.4.3.1 Bypassing reserved areas***

*Aircraft operators plan their flight in FRA airspace in accordance with the information published in the AUP/UUP (considering temporary reserved areas during scheduled operating hours).*

**1.3.4.3.2 Procédures additionnelles**

Le champ 15 des plans de vols déposés pour évoluer à l'intérieur de l'espace FRA doit respecter la table des niveaux de croisière publiée à l'ENR 1.7 "Tableau des niveaux de croisières".

Un changement de niveau sur un point autre qu'un point significatif n'est pas autorisé.

La parité des niveaux de croisière (FL PAIR ou IMPAIR) est choisie en fonction de la parité décrite pour les points FRA (E), FRA (X), et FRA (EX) comme indiqué dans le tableau ci-dessous :

***1.3.4.3.2 Additional procedures***

*Field 15 of the flight plans filed to evolve within the FRA space must respect the table of cruise levels published in ENR 1.7 "Table of cruising levels".*

*A level change on a point other than a significant point is not allowed.*

*Direction of cruising levels (EVEN or ODD FL) is chosen according to the direction described for points FRA (E), FRA (X), and FRA (EX) as shown in the table below:*

**Parité des niveaux de croisière (FL) dans une cellule FRA**
*Direction of cruising levels (FL) in a FRA cell*

| FLs pour / *for* FRA (E) | FLs pour / *for* FRA (X) | FLs à l'intérieur d'une cellule FRA<br>*FL inside a FRA cell* |
|---|---|---|
| PAIR / *EVEN* | PAIR / *EVEN* | FLs PAIRS pour tous les segments DCT<br>*EVEN FLs for all DCT segments* |
| IMPAIR / *ODD* | IMPAIR / *ODD* | FLs IMPAIRS pour tous les segments DCT<br>*ODD FLs for all DCT segments* |
| PAIR / *EVEN* | IMPAIR / *ODD* | Un changement d'un FL PAIR à un FL IMPAIR doit être planifié à l'intérieur de la cellule FRA<br>*A change from an EVEN to an ODD FL must be planned inside the FRA cell* |
| IMPAIR / *ODD* | PAIR / *EVEN* | Un changement d'un FL IMPAIR à un FL PAIR doit être planifié à l'intérieur de la cellule FRA<br>*A change from an ODD FL to an EVEN FL must be planned inside the FRA cell* |

# ENR 1.4 CLASSIFICATION DE L'ESPACE AERIEN ATS

*ATS AIRSPACE CLASSIFICATION*

**1.4.1 Classification des espaces aériens à l'intérieur desquels les organismes français assurent les services de la circulation aérienne.**

Conformément au réglement d'exécution (UE) N° 923/2012, les espaces aériens à l'intérieur desquels les organismes français assurent les services de la circulation aérienne sont classés en fonction des services rendus aux vols VFR et aux vols IFR, comme indiqué dans le tableau ci-dessous.

***1.4.1 Classification of airspaces within which French organism provide air traffic services.***

*In compliance with European regulation (UE) NR 923/2012, airspaces within which French organism provide air traffic services are classified, according to, the types of services provided to VFR flights and IFR flights, as depicted in the following table.*

| **CLASSES D'ESPACES** *Airspace class* | **VOLS ADMIS** *Authorized flights* | **SERVICES FOURNIS PAR LES ORGANISMES DE LA CIRCULATION AERIENNE** *Services provided by air traffic services units* | | | **OBLIGATION CONTACT RADIO BILATERAL** *Bilateral radio contact mandatory* | **SOUMIS A CLAIRANCE** *Subject to clairance* | **LIMITATION DE VITESSE (1)** Speed *limitation (1)* |
|---|---|---|---|---|---|---|---|
| | | **SEPARATION** *Separation* | **INFORMATION** *Information* | **ALERTE** *Alert* | | | |
| **A** | **IFR** | Séparation/ *Separation* IFR / *IFR* | Oui / *Yes* | Oui / *Yes* | Oui / *Yes* | Oui / *Yes* | 250 kt sauf clairance contraire / *unless otherwise instructed by control* ( 2 ) |
| **C** | **IFR** | Séparation/ *Separation* IFR / *IFR* | Oui / *Yes* | Oui / *Yes* | Oui / *Yes* | Oui / *Yes* | 250 kt sauf clairance contraire / *unless otherwise instructed by control* ( 2 ) |
| | **VFR** | Séparation/ *Separation* VFR / IFR | Oui / *Yes* | Oui / *Yes* | Oui / Yes | Oui / Yes | 250 kt ( 3 ) |
| **D** | **IFR** | Séparation/ *Separation* IFR / IFR | Oui / *Yes* | Oui / *Yes* | Oui / *Yes* | Oui / *Yes* | 250 kt ( 3 ) |
| | **VFR** | NON / *NO* | Oui / *Yes* | Oui / *Yes* | Oui / *Yes* | Oui / *Yes* | 250 kt ( 3 ) |
| | **VFR S (CTR)** | Séparation/ Separation VFR S / IFR | Oui / Yes | Oui / *Yes* | Oui / *Yes* | Oui / *Yes* | 250 kt ( 3 ) |
| **E** | **IFR** | Séparation/ Separation IFR / IFR | Oui dans la mesure du possible *Yes if possible* | Oui / *Yes* | Oui / *Yes* | Oui / *Yes* | 250 kt ( 3 ) |
| | **VFR** | Non / *No* | Oui dans la mesure du possible *Yes if possible* | Oui dans la mesure du possible *Yes if possible* | Non / *No* | Non / *No* | 250 kt ( 3 ) |
| **G** | **IFR** | Non / *No* | Oui sur demande *Yes on request* | Oui / Yes | Oui / *Yes* | Non / *No* | 250 kt ( 3 ) |
| | **VFR** | Non / *No* | Oui sur demande *Yes on request* | Oui / Yes | Non / *No* | Non / *No* | 250 kt ( 3 ) |

VFR S = VFR Spécial / *Special VFR.*

(1) sous FL 100 (ou 10 000 ft si TA>10000 ft AMSL) / *below FL 100 (or 10 000 ft if TA>10 000 ft AMSL).*

(2) En classe A et C, les vols IFR évoluant à une altitude inférieure à 3 050m (10 000 ft) AMSL sur une route ATS ou un itinéraire normalisé de départ et d'arrivée ou en guidage radar appliquent une limitation de la vitesse air indiquée (IAS) à 250 nœuds, sauf clairance contraire explicite à l'initiative du contrôleur.
• Toutefois, une vitesse supérieure à 250 nœuds est possible, après accord du contrôle aérien, pour les aéronefs qui, pour des raisons techniques ou de qualité de vol, ne peuvent maintenir une vitesse inférieure ou égale à 250 nœuds.
• Note : Lorsque l'altitude de transition est inférieure à 3 050 m (10 000 ft) AMSL, le niveau de vol 100 devrait être utilisé au lieu de 10 000 ft AMSL. *In Class A and C, IFR flights operating at an altitude of less than 3 050m (10 000 ft) AMSL on an ATS route or a standard departure and arrival route or in radar guidance apply a specified air speed limitation (IAS) at 250 knots, unless explicitly agreed otherwise by the controller.*
*• However, a speed exceeding 250 knots is possible, after approval of the air traffic control, for aircraft which, for technical reasons or flight quality, cannot maintain a speed less than or equal to 250 knots.*
*• Note: When the transition altitude is less than 3 050 m (10 000 ft) AMSL, flight level 100 should be used instead of 10 000 ft AMSL.*

(3) La limitation de la vitesse air indiquée (IAS) à 250 kts s'applique à tous les vols en dessous de 3 050 m (10 000 ft) AMSL, sauf dans les cas approuvés par l'autorité compétente pour les types d'aéronef qui, pour des raisons techniques ou liées à la sécurité, ne peuvent maintenir cette vitesse.
*The indicated air speed limitation (IAS) of 250 kts applies to all flights below 3 050 m (10 000 ft) AMSL, except in cases approved by the competent authority for aircraft types which , for technical or safety reasons, can not maintain this speed.*

Notes importante sur l'information de vol :

(1) Les informations relatives aux risques de collision comprennent uniquement les activités connues qui constituent des risques pour l'aéronef concerné. La disponibilité de ces informations auprès des services de la circulation aérienne peut parfois être incomplète (par exemple les limites dans la couverture radar ou radio, le contact radio facultatif par les pilotes, les limites de la précision des informations rapportées par les pilotes ou des informations de niveau non confirmées) et, par conséquent, les services de la circulation aérienne ne sont pas en mesure d'accepter l'obligation de les émettre à tout moment ou de se porter garants de leur exactitude (GM1 SERA.9005(b)(2) PORTEE DU SERVICE d'INFORMATION DE VOL, INFORMATION RELATIVE AUX RISQUE DE COLLISION ).

*Important notes on flight information :*

*(1) Information relating to collision hazards includes only known activities that constitute risks to the aircraft concerned. The availability of such information to air traffic services may sometimes be incomplete (e.g. limitations in radar or radio coverage, optional radio contact by pilots, limitations in the accuracy of reported information by pilots, or unconfirmed level of information) and, therefore, air traffic services cannot assume responsibility for its issuance at all times or for its accuracy. (GM1 SERA.9005(b)(2) Scope of flight information service, INFORMATION RELATED TO COLLISION HAZARDS).*

© Service de l'Information Aéronautique, France

(2) Lorsque des organismes de services de la circulation aérienne assurent à la fois le service d'information de vol et le service du contrôle de la circulation aérienne, le service de contrôle de la circulation aérienne a priorité sur le service d'information de vol chaque fois que le service du contrôle de la circulation aérienne l'exigera. (SERA 9001).

*(2) Where air traffic services units provide both flight information service and air traffic control service, the provision of air traffic control service shall have precedence over the provision of flight information service whenever the provision of air traffic control service so requires. (SERA.9001).*

L'une des classes décrites ci-dessus est attribuée aux espaces aériens contrôlés à l'intérieur desquels les organismes français assurent les services de la circulation aérienne.

*One of these classes above mentionned is assigned to controlled airspace within which French units ensure air traffic services.*

La classification de ces espaces est précisée en :

*The airspace's classification is specified in chapter :*

- ENR 2.1 pour :

*- ENR 2.1 for :*

- ENR 2.1.1 : les régions d'information de vol de l'espace inférieur (FIR) et de l'espace supérieur (UIR),
- ENR 2.1.2 : la région inférieure de contrôle (LTA),
- ENR 2.1.2 : la région supérieure d'information de vol (UIR),
- ENR 2.1.2 : la région supérieure de contrôle (UTA),
- ENR 2.1.2 : les régions de contrôle (CTA),
- ENR 2.1.3 : les régions de contrôle terminales (TMA).
- ENR 3.1 pour les AWY.
- AD 2.17 pour les zones de contrôle :

*- ENR 2.1.1 : flight information regions within lower area (FIR) and upper area (UIR),*
*- ENR 2.1.2 : lower traffic area (LTA),*
*- ENR 2.1.2 : upper flight information region (UIR),*
*- ENR 2.1.2 : upper control area (UTA),*
*- ENR 2.1.2 : control areas (CTA),*
*- ENR 2.1.3 : terminal control areas (TMA).*
*- ENR 3.1 for the AWY.*
*- AD 2.17 for the control zones :*

Les exigences réglementaires relatives aux RMZ, TMZ et RMZ-TMZ s'appliquent en sus de celles liées à la classification du ou des espaces aériens des services de la circulation aérienne dans lesquels elles s'inscrivent.

*The regulatory requirements concerning RMZ, TMZ and RMZ-TMZ apply in addition to those bound to the classification of ATS airspaces which they are situated in.*

Ainsi, la classe d'espace indiquée dans la description des RMZ, TMZ ou RMZ-TMZ aux chapitres ENR 2.2, AD 1.7.1 et, AD 2.17 correspond à celle de l'espace aérien des services de la circulation aérienne dans lequel s'inscrit la zone considérée.

*Thus, the airspace class given in the description of RMZ, TMZ or RMZ-TMZ in chapters ENR 2.2, AD 1.7.1, AD 2.17 is that of the ATS airspace the zone concerned is situated in.*

Les vols VFR qui sont effectués dans des parties d'espace aérien de classe E ou G et les vols IFR qui sont effectués dans des parties d'espace aérien de classe G publiées comme étant une RMZ ou RMZ-TMZ gardent une écoute permanente des communications vocales air-sol et établissent des communications bilatérales, le cas échéant, sur le canal de communication approprié, sauf application d'autres dispositions prescrites par l'organisme de la circulation aérienne pour cet espace aérien spécifique. Avant qu'un aéronef ne pénètre dans une RMZ ou RMZ-TMZ, un appel initial contenant la désignation de la station appelée, l'indicatif d'appel, le type d'aéronef, la position, le niveau et les intentions de vol, est émis par les pilotes sur le canal de communication approprié.

*VFR flights operating in parts of Classes E or G airspace and IFR flights operating in parts of Class G airspace published as a RMZ or RMZ-TMZ shall maintain continuous air-ground voice communication watch and establish two-way communication, as necessary, on the appropriate communication channel, unless in compliance with alternative provisions prescribed for that particular airspace by the ATS unit. Before entering a RMZ or RMZ-TMZ, an initial call containing the designation of the station being called, call sign, type of aircraft, position, level, the intentions of the flight, shall be made by pilots on the appropriate communication channel.*

Tous les vols effectués dans un espace aérien publié comme étant une TMZ ou RMZ-TMZ utilisent des transpondeurs SSR capables de fonctionner en mode A et C ou en mode S, sauf application d'autres dispositions prescrites par l'organisme de la circulation aérienne pour cet espace aérien spécifique.

*All flights operating in airspace published as a TMZ or RMZ-TMZ shall operate SSR transponders capable of operating on Modes A and C or on Mode S, unless in compliance with alternative provisions prescribed for that particular airspace by the ATS unit.*

## 1.4.2 REGIONS D'INFORMATION DE VOL ESPACE INFÉRIEUR (FIR)

## *1.4.2 FLIGHT INFORMATION REGIONS LOWER AIRSPACE (FIR)*

1 Les régions d'information de vol de France métropolitaine sont définies entre la surface et FL 195. Elles sont classées G à l'exclusion des régions et des zones de contrôle.

*1 Flight information regions above Metropolitan France are defined between the surface and FL 195. They are classified G except control region and areas.*

2 La région inférieure de contrôle (LTA) située entre le plus élevé des deux niveaux suivants FL 115 ou 3000 ft ASFC et le FL 195 à l'exclusion, sauf mention contraire :

*2 Lower traffic area (LTA) situated between the hightest levels FL 115 or 3000 ft ASFC and FL 195 and except, unless otherwise mentioned :*

- des régions de contrôle terminales et des voies aériennes,

*- terminal control area and airways,*

- des régions de contrôle (CTA), des zones transfrontalières (CBA), des zones réservées temporaires (TRA) et des zones de ségrégation temporaire (TSA).

*- control traffic areas (CTA), cross-border areas (CBA), temporary reserved areas (TRA) and temporary segregated areas (TSA).*

- des zones réglementées, dangereuses et interdites, est classée D à l'exception des volumes situés au-dessus des régions montagneuses décrits ci-dessous qui sont classés E.

*- restricted, dangerous and prohibited areas, is classified D except volumes situated above mountainous regions which are classified E.*

3 Les limites des volumes situés au-dessus des régions montagneuses mentionnés au paragraphe 2 sont définies comme suit :

*3 The limits of the volumes situated above mountainous regions mentionned in paragraph 2 are defined as follow :*

### 3.1 Au dessus des ALPES :

### *3.1 Above ALPS :*

3.1.1 Limites latérales

*3.1.1 Lateral limits*

- frontière franco-italienne,
- bordure Nord TMA NICE,
- bordure Nord AWY R16/A3,
- bordure est TMA 6 Lyon,

*- french-italian frontier,*
*- North limits of TMA NICE,*
*- North limits of R 16 and A3,*
*- East limits TMA 6 Lyon,*

© Service de l'Information Aéronautique, France

43°43'40"N, 006°40'19"E - 43°41'26"N, 006°42'48"E
43°56'10"N, 006°37'52"E - 44°03'53"N, 006°39'07"E
44°12'32"N, 006°13'20"E

3.3.2 Limite supérieure
FL 135.

4 Cas particulier de l'espace aérien classé D dans la LTA :
Les vols de la circulation aérienne militaire peuvent évoluer dans l'espace visé selon les dispositions suivantes:

4.1 Vols de la circulation aérienne militaire de type «V» :

1) Dans les portions de la LTA dans lesquelles les centres de contrôle d'approche de la DSNA rendent les services de la circulation aérienne, les vols de la circulation aérienne militaire de type « V » demandent une clairance pour y pénétrer. Ces vols, dès lors qu'ils ont obtenu une clairance auprès de l'organisme du contrôle aérien concerné, reçoivent les services identiques à ceux que reçoivent les vols VFR dans un espace de même classe d'espace.

En outre, lorsqu'un croisement doit être effectué à vue, ils maintiennent impérativement une route suffisamment éloignée des autres aéronefs. Cette mesure est destinée à renforcer la sécurité et à éviter le déclenchement des systèmes automatiques d'anticollision qui sont aujourd'hui généralisés sur les flottes commerciales. L'attention des pilotes est attirée sur le fait qu'il n'y a pas d'uniformité dans la limite verticale des portions de LTA dans lesquelles les centres de contrôle d'approche rendent le service du contrôle de la circulation aérienne, le plafond pouvant aller soit jusqu'au FL145 soit jusqu'au FL195.

*- South and East of broken line 45°04'00"N*
*- 005°23'23"E, 44°59'25"N - 005°24'17"E, 45°00'00"N - 005°31'16"E, 45°06'24"N - 005°46'25"E, 45°19'50"N - 005°56'14"E, 45°24'46"N - 005°55'03"E, 45°27'21"N - 005°58'49"E, 45°38'12"N - 005°56'42"E,*

*3.1.2 Upper limit of different parts of class E LTA :*
*- LTA France partie 3 Alpes 1 : FL 195*
*- LTA France partie 3 Alpes 2 Vercors : FL 125*
*- LTA France partie 3 Alpes 3 Belledonne : FL 145*
*- LTA France partie 3 Alpes 4 Bauges : FL 125*
*- LTA France partie 3 Alpes 5 Vanoise : FL 175*
*- LTA France partie 3 Alpes 6 Mont Blanc : FL 175*
*- LTA France partie 3 Alpes 7 Aravis : FL 135.*

*3.1.3 Mont-Blanc :*

*In the vicinity of Mont-Blanc, within LTA France, partie 3 Alpes 6 Mont Blanc lateraf limits, the airspace is classified as follows :*

*- G : from the surface up to the highest level between FL 115 and 3000 ft ASFC ;*
*- E : from the highest level between FL 115 or 3000 ft ASFC up to FL 175 ;*
*- D : from FL 175 up to FL 195.*

*Nota : where 3000 ft ASFC is higher than FL 175 , airspace class G upper limit is FL 175.*

***3.2 Above PYRENEES :***

*3.2.1 Lateral limits*
*- French-spanish frontier*
*- East limits of AWY R 299,*
*- South limits of TMA BIARRITZ, PYRENÉES, and TOULOUSE,*
*- South-South West limits of MONTPELLIER SIV and West from B384 AWY.*

*3.2.2 Upper limits*
*- FL 195*

***3.3 Above Le Verdon :***

*3.3.1 Lateral limits*
*44°12'32"N, 006°13'20"E - 43°45'40"N, 006°13'20"E*
*43°43'40"N, 006°40'19"E - 43°41'26"N, 006°42'48"E*
*43°56'10"N, 006°37'52"E - 44°03'53"N, 006°39'07"E*
*44°12'32"N, 006°13'20"E*

*3.3.2 Upper limits*
*FL 135.*

*4 The particular case of airspace classified D in LTA :*
*Military flights may be carried out in the above said airspace in compliance with the following :*

*4.1 «V» type military air traffic flights :*

*(1) "V" type military air traffic flights shall request an authorisation to enter within portions of LTA where approach control centres of the DSNA provide air traffic services. When those flights have obtained such an authorisation, they are provided with the air traffic services that a VFR flight would have benefited from in accordance with the same airspace classification.*

*Moreover, when a visual crossing has to be conducted, both pilots shall maintain a route sufficiently far from other aircraft. This measure is intended to enhance safety and prevent the triggering of automatic collision avoidance systems which are now widely implemented on commercial fleets. The attention of the pilots is drawn to the fact that there is no uniformity in the vertical limit of the portions of LTA in which the approach control centers provide the service of air traffic control, the ceiling is either up to FL145 or to FL195.*

© Service de l'Information Aéronautique, France

2) Dans les autres portions de la LTA, seuls les vols de la circulation aérienne militaire de type « V » qui sont en contact avec CAM INFO afin de bénéficier du service d'information de vol dans la limite des possibilités des CDC peuvent y pénétrer. Ils affichent alors le code transpondeur 0400 et évitent, dans la mesure du possible, les niveaux correspondant à des limites verticales d'espaces publiés (FL 115, plafond TMA, …). En outre, lorsqu'un croisement doit être effectué à vue, ils maintiennent impérativement une route suffisamment éloignée des autres aéronefs. Cette mesure est destinée à renforcer la sécurité et à éviter le déclenchement des systèmes automatiques d'anticollision qui sont aujourd'hui généralisés sur les flottes commerciales. En dernier ressort, la prévention des abordages repose sur l'application des règles de l'air par l'ensemble des aéronefs de chaque circulation.

*(2) In the other portions within the LTA, only "V" type military air traffic flights which are in contact with CAM INFO in order to benefit from the flight information service within the limits of the CDC's possibilities shall enter it. Then they display the transponder code 0400 and avoid, as far as possible, the levels corresponding to the vertical limits of published spaces (FL 115, TMA ceiling, etc.). Moreover, when a visual crossing has to be conducted, they shall maintain a route sufficiently far from other aircraft. This measure is intended to enhance safety and prevent the triggering of automatic collision avoidance systems which are now widely implemented on commercial fleets. As a last resort, collision prevention relies on the application of the rules of the air by all aircraft accordingly to the air traffic type they belong to.*

4.2 Vols de la circulation aérienne militaire de type «I»

Les vols de la circulation aérienne militaire de type «I» sont contrôlés dans l'espace visé par les centres de contrôle militaires.

La traversée des routes aériennes s'effectue sans coordination sous contrôle radar.

La pénétration dans les régions terminales de contrôle s'effectue, le cas échéant, dans les conditions prévues par protocoles entre les organismes concernés de la circulation aérienne militaire.

*4.2 Type «I» military flights*

*Type «I» militaty flights will be controlled in the said airspace by military control centers.*

*Crossing airways shall be carried out without coordination but under radar control.*

*Entering the terminal control areas is executed under the conditions laid down by conventions between the relevant air traffic control agencies.*

## 2 REGIONS D'INFORMATION DE VOL ESPACE SUPERIEUR (UIR)

La région d'information de vol est classée :

- C du FL 195 au FL 660. Cet espace contrôlé est désigné région supérieure de contrôle (UTA).
- G au-dessus du FL 660.

## *2 FLIGHT INFORMATION REGION UPPER AISPACE (UIR)*

*Upper information region is classified :*

*- C from FL 195 to FL 660, this controlled airspace is called Upper Traffic Area (UTA).*
*- G over FL 660.*

© Service de l'Information Aéronautique, France

# ENR 1.5 PROCEDURES D'ATTENTE, D'APPROCHE ET DE DEPART

*HOLDING, APPROACH AND DEPARTURE PROCEDURES*

## 1.5.1 GENERALITES

a) La règlementation française applicable aux procédures de vol aux instruments est fixée par l'arrêté du 24 janvier 2022 relatif à l'établissement et à la conception des procédures de vol aux instruments.

https://www.legifrance.gouv.fr/jorf/id/JORFTEXT000045076573

Ce texte national complète les dispositions règlementaires du règlement d'exécution (UE) 2017/373 de la Commission du 1er mars 2017 établissant des exigences communes relatives aux prestataires de services de gestion du trafic aérien et de services de navigation aérienne ainsi que des autres fonctions de réseau de la gestion du trafic aérien, et à leur supervision, modifié notamment par le règlement d'exécution (UE) 2020/469 de la Commission du 14 février 2020.

Les critères de conception des procédures de vol aux instruments et les règles de détermination des minimums opérationnels associés à certaines procédures d'approche sont fixés par décision du ministre chargé de l'aviation civile.

Un moyen acceptable de conformité pour la conception des procédures et la détermination des minimums opérationnels est le document national intitulé : « Recueil des critères pour la conception des procédures de vol aux instruments et des règles de détermination des minimums opérationnels associés ».

Ce recueil est publié sur le site du ministère chargé de l'aviation civile :

https://www.ecologique-solidaire.gouv.fr/procedures-aux-instruments

Les procédures peuvent également être conçues en application des critères fixés dans le document OACI N° 8168, volume II (PANS-OPS), ou dans le document OACI N° 9905 (manuel RNP-AR).

b) Les critères français de conception des procédures de vol aux instruments figurant dans le recueil mentionné ci-dessus s'inspirent largement du document OACI N° 8168, volume II (PANS-OPS).
Les critères généraux sont similaires.

Des différences existent entre les deux documents au sujet des procédures particulières. Ces différences sont signalées dans la partie GEN 1.7 de l'AIP.

Les procédures de vol aux instruments conçues en application du document OACI N° 8168 sont portées à la connaissance des usagers au moyen d'une annotation spécifique sur les cartes aéronautiques.

Les règles françaises de cartographie sont définies dans l'arrêté du 6 juillet 2018 relatif aux cartes aéronautiques :

https://www.legifrance.gouv.fr/eli/arrete/2018/7/6/TRAA1813148A/jo/texte

Ces règles sont définies sur la base des dispositions de l'Annexe 4 de l'OACI. Les différences sont signalées dans la partie GEN 1.7 de l'AIP.

Enfin, il est rappelé que les règles d'utilisation des aérodromes par les aéronefs en IFR sont définies dans l'arrêté du 12 juillet 2019 relatif aux procédures générales de circulation aérienne pour l'utilisation des aérodromes par les aéronefs :

https://www.legifrance.gouv.fr/affichTexte.do?cidTexte=JORFTEXT000038864224&categorieLien=id

### 1.5.1.1 Catégories d'aéronef et vitesses indiquées associées

Les aéronefs étant classés par catégorie, les catégories prises en compte pour la protection des procédures sont précisées sur chaque carte d'approche aux instruments.

## *1.5.1 GENERAL*

*a) The French regulation on instrument flight procedures is set in the 24th of January 2022 order relating to the establishment and design of instrument flight procedures.*

*https://www.legifrance.gouv.fr/jorf/id/JORFTEXT000045076573*

*This national document completes and supplements Commission implementing regulation (EU) 2017/373 of 1 March 2017 laying down common requirements for providers of air traffic management / air navigation services and other air traffic management network functions and their oversight, amended in particular by Commission implementing regulation (EU) 2020/469 of 14 February 2020.*

*The design criteria for instrument flight procedures and the rules for determining the operational minima to be published for some approach procedures area defined in a decision from the minister in charge of civil aviation.*

*One acceptable means of compliance for the design of instrument flight procedures and determination of operational minima is the national document entiled : "Recueil des critères pour la conception des procédures de vol aux instruments et des règles de détermination des minimums opérationnels associés" (Criteria for instrument flight procedure design and rules for operational minima determination).*

*This document is published on the website of the ministry in charge of civil aviation :*

*https://www.ecologique-solidaire.gouv.fr/procedures-aux-instruments*

*Procedures may also be designed in accordance with the criteria set in ICAO document NR 8168 volume II (PANS-OPS) or in ICAO document NR 9905 (RNP-AR Manual).*

*b) French criteria for instrument flight procedures design set in the national document mentioned here above stem from ICAO document NR 8168, volume II (PANS-OPS).*
*General criteria are very similar but some differences exist for specific procedures.*

*These differences are indicated in part GEN 1.7 of the AIP.*

*Instrument flight procedures designed in application of ICAO document NR 8168 are notified to airspace users through a specific annotation on aeronautical charts.*

*French cartographic rules are set in the following order :*

*https://www.legifrance.gouv.fr/eli/arrete/2018/7/6/TRAA1813148A/jo/texte*

*These rules stem from ICAO Annex 4 and differences are indicated in AIP part GEN 1.7.*

*Finally, it is reminded that the use of aerodromes by aircraft in IFR is subject to the application of the 12th July 2019 order relating to air traffic general procedures applicable to the use of aerodromes by aircraft :*

*https://www.legifrance.gouv.fr/affichTexte.do?cidTexte=JORFTEXT000038864224&categorieLien=id*

### *1.5.1.1 Aircraft categories and associated indicated speeds*

*Aircraft are classified by category ; procedures protection is provided for the categories indicated on each instrument approach chart.*

© Service de l'Information Aéronautique, France

| **Catégorie d'aéronefs** *Aircraft Category* | **Vat +** | **Vitesse d'approche initiale** *Initial approach Speed* | | **Vitesse d'approche finale** *Final approach Speed* | | **Vitesse MAX pour manoeuvres à vue (VPT ou MVL)** *MAX speed for circling manoeuvring (VPT / circling)* | **Vitesse MAX pour approche interrompue** *MAX speed for missed approach* | |
|---|---|---|---|---|---|---|---|---|

| B | 91/120 | 120 | 180 (170*) | 85 | 130 | 135 | 130 | 150 |
| C | 121/140 | 160 | 240 (220*) | 115 | 160 | 180 | 160 | 240 |
| D, DL | 141/165 | 185 | 250 (220*) | 130 | 185 | 205 | 185 | 265 |
| E | 166/210 | 185 | 250 (220*) | 155 | 230 | 240 | 230 | 275 |
| H | S/O | 70 | 120** | 60 | 90 | S/O | 90 | 90 |
| H (PinS) | S/O | 70 | 120 | 60 | 90 | S/O | 70 ou 90 | 70 ou 90 |

+ Vat : vitesse au seuil égale à 1,3 fois la vitesse de décrochage en configuration d'atterrissage à la masse maximale certifiée à l'atterrissage ou à 1,23 VS1 G, suivant le cas.
* : vitesse maximale pour procédures d'inversion ou en hippodrome.

** : la vitesse maximale pour les procédures d'inversion et en hippodrome jusqu'à 6 000 ft inclusivement est de 100 kt, et la vitesse maximale pour les procédures d'inversion et en hippodrome au-dessus de 6 000 ft est de 110 kt.

*+ Vat : (Speed at threshold) : 1.3 times stalling speed in landing configuration at the maximum certificated landing mass.*

** Maximum speed for reversal or racetrack procedure.*

***: maximum speed for reversal or racetrack procedures is 100 kt (at or below 6 000 ft) or 110 kt (above 6000 ft).*

**1.5.1.2 Procédures PBN**

**1.5.1.2.1 Procédures PBN RNP APCH**

Les procédures d'approche PBN publiées sur les cartes IAC sont des approches de non-précision (LNAV), des approches avec guidage vertical (LNAV-VNAV et LPV), ou des approches de précision (LPV 200 ft). Elles se reconnaissent notamment au titre "RNP RWY xx" et au cartouche des minimums associés. Elles sont établies en utilisant des critères conformes à ceux des PANS-OPS de l'OACI.

Pour suivre une procédure d'approche PBN (intermédiaire, finale et approche interrompue), l'aéronef doit être équipé d'un système de navigation certifié conforme à la spécification RNP (APCH) du "Manuel de la navigation fondée sur les performances (PBN)" de l'OACI (Doc 9613).

**1.5.1.2.2 Procédures PBN RNP AR APCH**

Les procédures d'approche RNP AR publiées dans l'AIP, sont des approches avec guidage vertical présentant des éléments de conception plus exigeants au niveau de leur exécution pour les systèmes de bord et les équipages, que les procédures d'approche de type RNP APCH (valeur de la précision de navigation demandée, présence de segment de type RF en finale, longueur potentiellement courte de la trajectoire finale axée sur la piste).

Elles se reconnaissent notamment au titre “RNP RWY xx (AR)” et au cartouche des minimums associés. Elles sont établies en utilisant les critères de conception issus du Doc 9905 de l'OACI.

Pour suivre une procédure d'approche RNP AR, l'aéronef et l'équipage doivent répondre aux exigences de la spécification de navigation RNP AR APCH telle que décrite dans le "Manuel de la navigation fondée sur les performances (PBN)" de l'OACI (Doc 9613).

En complément, l'exécution de ces procédures par un exploitant d'aéronef nécessite la délivrance d'une approbation opérationnelle spécifique conformément à l'annexe 6 de l'OACI.

Il existe deux types d'approbations :

• Une approbation permettant à un exploitant de réaliser toutes les procédures RNP AR qui répondent aux deux critères suivants :

o être publiques (non-privées), et

o être entièrement conformes aux critères de la 3ème édition du document OACI 9905.

→ L' « approbation RNP AR » doit être délivrée par l'autorité de tutelle de l'exploitant, ainsi qu'une attestation indiquant que « l'approbation RNP AR » a été délivrée conformément au doc 9997 de l'OACI.

→ Ce type de procédure fait l'objet sur la carte IAC dans l'AIP français, de la mention : « Réservée aux exploitants munis d'une approbation, voir ENR 1.5 ».

***1.5.1.2 PBN PROCEDURES***

***1.5.1.2.1 RNP APCH PBN procedures***

*The PBN approach procedures published in IAC charts are either non-precision approaches (LNAV), approaches with vertical guidance (LNAV-VNAV and LPV) or precision approaches (LPV 200 ft). They are identified with the "RPN RWY xx" title and with the associated minimum box. They are defined using criteria complying with those of ICAO PANS-OPS.*

*To follow a PBN approach procedure (intermediate, final and missed approach), the aircraft must be equipped with a navigation system certified in compliance with the RNP specification (APCH) of the ICAO Doc 9613, "PBN Manual".*

***1.5.1.2.2 RNP AR APCH PBN Procedures***

*The RNP AR approach procedures published in the AIP are vertically guided approaches with more demanding design elements in their execution for aircraft systems and crews than the usual RNP APCH approach procedures (required navigation accuracy value, presence of RF type segments on final, potentially short length of the final path centered on the runway).*

*They can be identified by the title "RNP RWY xx (AR)" and the associated minimums. They are established using design criteria from ICAO Doc 9905.*

*To fly an RNP AR approach procedure, the aircraft and crew must meet the requirements of the RNP AR APCH navigation specification as described in the ICAO "Performance Based Navigation (PBN) Manual" (Doc 9613).*

*In addition, the execution of these procedures by an aircraft operator requires the issuance of a specific operational approval in accordance with ICAO Annex 6.*

*There are two types of approvals :*

*• An approval allowing an operator to perform all RNP AR procedures that meet the following two criteria :*

*o be public (non-private), and*

*o fully compliant with the criteria of ICAO 9905, 3rd edition.*

*→ The "RNP AR approval" must be issued by the operator's supervisory authority, together with a statement that the "RNP AR approval" has been issued in accordance with ICAO Doc 9997.*

*→ This type of procedure is identified on the IAC chart in the French AIP as "Reserved for approved operators, see ENR 1.5".*

© Service de l'Information Aéronautique, France

• Cette approbation sera complétée d'une approbation spécifique à une procédure, nécessaire à un exploitant pour exécuter toute procédure RNP AR ne répondant pas à au moins l'un des deux critères précédents.

→ Ce type de procédure, si elle est publiée dans l'AIP, fait l'objet sur la carte IAC dans l'AIP français, de la mention : « Réservée aux exploitants munis d'une approbation française, voir AD 2.22 ».
Par ailleurs le caractère « spécifique » de la procédure est explicité dans la partie AD 2.22 de l'aérodrome concerné.

→ L'approbation « spécifique à une procédure » est délivrée par la DSAC / NO de la DGAC-France.
Elle vise à s'assurer que l'exploitant et son autorité de tutelle ont pris en compte les particularités d'exploitation de la procédure.

La demande d'approbation doit être adressée à la DGAC-France DSAC / NO :

50 rue Henry Farman 75720 PARIS CEDEX 15 France,

et par E-mail à : dsac-st-no-bf@aviation-civile.gouv.fr

*• This approval will be supplemented by a procedure-specific approval, required for an operator to perform any RNP AR procedure not meeting at least one of the two previous criteria.*

*→ This type of procedure, if published in the AIP, is identified on the IAC chart in the French AIP as "Reserved for operators with French approval, see AD 2.22".*
*Furthermore, the "specific" nature of the procedure is explained in the AD 2.22 section of the concerned aerodrome.*

*→ The "procedure-specific" approval is issued by the DSAC / NO of the DGAC-France.*
*It is intended to ensure that the operator and his supervisory authority have taken into account the operating characteristics of the procedure.*

*The request for approval should be addressed to DGAC-France DSAC / NO :*

*50 rue Henry Farman 75720 PARIS CEDEX 15 France,*

*and by E-mail to : dsac-st-no-bf@aviation-civile.gouv.fr*

### 1.5.1.23 Procédures RNP (VPT)

### *1.5.1.23 RNP (VPT) procedures*

Les procédures d'approche RNP (VPT) publiées à l'AIP français sont des manœuvres à vue sur trajectoire prescrite avec le support des capacités PBN permettant la tenue du profil latéral et vertical de la trajectoire prédéfinie.

Il s'agit de procédures d'approche aux instruments codées en base de données de navigation et composées :

• d'une trajectoire d'approche aux instruments établie dans le cadre de la navigation fondée sur les performances (PBN), débutant à un IAF et se terminant à un point de cheminement appelé Visual Fix (VF) et incluant une approche interrompue en cas de non-acquisition des références visuelles au VF ; suivie

• d'une manœuvre à vue sur trajectoire prescrite, dont le suivi est réalisé sous l'entière responsabilité du pilote, constituée d'une trajectoire d'approche aux instruments débutant au VF réalisée en conditions de vol à vue et définie à l'aide de points de cheminements (WPT) jusqu'à l'atterrissage. Cette phase inclut une trajectoire de remise de gaz aux instruments réalisée en conditions de vol à vue en cas de nécessité entre le VF et la piste. Cette remise de gaz après le VF constitue la trajectoire conseillée à utiliser car fondée sur la trajectoire latérale d'approche interrompue d'une procédure RNP AR sous-jacente. L'ensemble de la trajectoire réalisée en conditions de vol à vue après le VF (manœuvre à vue sur trajectoire prescrite et remise de gaz) n'a pas fait l'objet d'une évaluation des obstacles pour la détermination des minimums opérationnels.

L'attention des exploitants est attirée sur la responsabilité du pilote pour suivre la trajectoire de manœuvre à vue après le VF et la nécessité de suivre les contraintes de vitesse associées aux terminaisons RF en finale et en approche interrompue.

Ces procédures sont exploitables uniquement en présence d'un service ATC disposant du QNH de l'aérodrome de destination.

La présence d'un PAPI est requise pour la réalisation d'une approche RNP (VPT). La pente de la procédure d'approche RNP (VPT) est calée sur celle du PAPI.

Les procédures d'approche RNP (VPT) sont identifiées notamment par leur titre "RNP RWY xx (VPT)" et par le cartouche spécifique des minimums opérationnels associés définis sur la base des exigences de plafond et de visibilité requises. Elles sont établies en utilisant les critères de conception spécifiés dans la version 1.1 du document intitulé "Critères RNP (VPT)" du 5 avril 2022 publié sur le site Internet du ministère chargé des transports.

Les éléments de phraséologie relatifs aux procédures RNP (VPT) sont définis dans l'édition en vigueur du Manuel de phraséologie à l'usage de la circulation aérienne générale publié sur le site Internet du ministère chargé des transports.

L'exécution des procédures RNP (VPT) publiées à l'AIP français nécessite que l'exploitant y soit autorisé par la direction DSAC / NO de la DGAC.

Pour les exploitants non-français, cette autorisation s'appuie sur l'autorisation primaire de l'autorité de certification de l'exploitant, délivrée conformément aux recommandations de la circulaire OACI N° 359.

La demande d'autorisation doit être adressée à la DGAC, direction DSAC / NO, 50 rue Henry Farman 75720 PARIS CEDEX 15 France par E-mail uniquement à :

dsac-st-no-bf@aviation-civile.gouv.fr

Un délai de 45 jours préalablement à la date souhaitée de mise en œuvre est nécessaire pour le traitement du dossier.

La liste des pièces constitutives du dossier attendu par DSAC / NO est transmise au premier contact.

*The RNP (VPT) approach procedures published in the French AIP are visual manœuvres on prescribed track with the support of PBN capabilities to maintain the lateral and vertical profile of the predefined track.*

*These are instrument approach procedures coded in the navigation database and made up of :*

*• an instrument approach path established within the framework of performance-based navigation (PBN), starting at an IAF and ending at a waypoint called the Visual Fix (VF) and including a missed approach in the event of failure to acquire visual references at the VF ; followed by*

*• a visual manœuvre on prescribed track, which is followed under the sole responsibility of the pilot, consisting of an instrument approach path starting at the VF, flown in visual flight conditions and defined using waypoints (WPT) until landing. This phase includes an instrument go-around path performed under visual flight conditions if necessary between the VF and the runway. This go-around after the VF is the recommended path to use because it is based on the lateral missed approach path of an underlying RNP AR procedure. The entire path flown in visual flight conditions after the VF (visual manoeuvre on prescribed track and go-around) was not subject to an obstacle assessment to determine the operating minima.*

*Operators' attention is drawn to the pilot's responsibility to follow the visual manoeuvre track after the VF and the need to follow the speed constraints associated with RF terminations on final and missed approach.*

*These procedures can only be used in the presence of an ATC service with the QNH of the destination aerodrome.*

*A PAPI must be in place for a RNP (VPT) approach to be made. The descent gradient of the RNP (VPT) approach procedure is based on that of the PAPI.*

*RNP (VPT) approach procedures are identified in particular by their title "RNP RWY xx (VPT)" and by the specific cartouche of associated operating minima defined on the basis of the required ceiling and visibility requirements. They are established using the design criteria specified in version 1.1 of the document entitled "Critères RNP (VPT)" dated 5 April 2022 published on the website of the Ministry of Transport.*

*The phraseology relating to RNP (VPT) procedures is defined in the current edition of the Phraseology Manual for General Air Traffic published on the website of the Ministry of Transport.*

*The execution of RNP (VPT) procedures published in the French AIP requires the operator to be specifically authorised to do so by the DGAC DSAC / NO Directorate.*

*For non-French operators, this authorisation is based on the primary authorisation of the operator's certifying authority, issued in accordance with the recommendations of ICAO circular NR 359.*

*Applications for authorisation should be sent to the DGAC, Direction DSAC / NO, 50 rue Henry Farman 75720 PARIS CEDEX 15 France by E-mail only to :*

*dsac-st-no-bf@aviation-civile.gouv.fr*

*A period of 45 days prior to the desired implementation date is required to process the application.*

*The list of documents making up the file expected by DSAC / NO is sent at the first contact.*

© Service de l'Information Aéronautique, France

**1.5.1.3 Procédures PBN en zone terminale publiées avec la mention"RNAV-1 et P-RNAV"**

Les procédures RNAV en zone terminale publiées avec l'identification "RNAV" et séparément, la mention "RNAV-1 et P-RNAV" sont utilisables par les aéronefs équipés d'un système de navigation conforme à l'une ou l'autre de ces spécifications.

Ces procédures sont protégées DME / DME et / ou GNSS. La procédure PBN publiée peut requérir que la performance du système de navigation soit accomplie à l'aide de capteurs spécifiques (ex : GNSS ou DME / DME / IRU).

Les procédures publiées comme étant utilisables en RNAV1 et en P-RNAV excluent les aéronefs autorisés P-RNAV avec capteur VOR-DME uniquement.

***1.5.1.3 PBN procedures in terminal area published with the "RNAV-1 and P-RNAV" mention***

*RNAV procedures in terminal area published with "RNAV" identification and separately "RNAV-1 and P-RNAV" mention are available for aircraft equipped with a navigation system in compliance with the one or other one of these specifications.*

*These procedures are protected for DME / DME and / or GNSS. The published PBN procedure can require that the performance of the navigation system is realized by means of specific sensors (ex : GNSS or DME / DME / IRU).*

*Procedures published as available for RNAV-1 and for P-RNAV exclude aircraft authorized for P-RNAV with only sensor VOR-DME.*

**1.5.1.4 Procédures PBN en zone terminale publiées avec la mention "RNAV- 5"**

Certains segments de procédures répondant à des conditions particulières peuvent être publiés avec l'identification "RNAV" et séparément, la mention "RNAV5".

Les conditions opérationnelles associées à leur utilisation sont les suivantes :

• Altitude minimale de sécurité radar : Les itinéraires publiés sont établis à l'altitude minimale de sécurité radar ou au-dessus.

• Base de données : Les procédures définies dans la base de données ne doivent pas être modifiées par l'équipage.

→ Absence de la capacité RNAV requise en zone terminale : En l'absence de la capacité RNAV requise, le pilote doit :

• dans le cas d'une arrivée normalisée aux instruments (STAR) ou d'une approche initiale aux instruments, soit :

- suivre ou rejoindre la procédure conventionnelle correspondante publiée, si elle existe ou,

- annoncer "Non RNAV zone terminale" dès le début de la procédure afin de bénéficier du guidage radar ;

• dans le cas d'un départ normalisé aux instruments (SID) :

- annoncer "Non RNAV zone terminale" dès la mise en route afin de bénéficier du guidage radar dès la fin du segment initial conventionnel ou d'être autorisé à suivre un départ normalisé aux instruments.

→ Perte de la capacité RNAV requise en zone terminale

En cas de perte de la capacité RNAV requise, le pilote doit :

• dans le cas d'une arrivée normalisée aux instruments (STAR) ou d'une approche initiale aux instruments, soit :

- suivre ou rejoindre la procédure conventionnelle correspondante publiée, si elle existe ou,

- annoncer "RNAV Impossible [cause (raison)]" dès la perte de la capacité RNAV requise afin de bénéficier du guidage radar ;

• dans le cas d'un départ normalisé aux instruments (SID) :

- annoncer "RNAV Impossible [cause (raison)]" afin de bénéficier du guidage radar ou d'être autorisé à suivre un départ normalisé aux instruments.

***1.5.1.4 PBN procedures in terminal area published with "RNAV-5" mention***

*Some segments of procedures complying with specific conditions can be published with "RNAV" identification and separately "RNAV-5" mention.*

*Operational conditions associated to their using are hereafter :*

*• Minimum radar vector altitude : The published flight routes are set at the minimum radar vector altitude or above.*

*• Data base : The procedures defined in the data base shall not be changed by air crew.*

*→ Absence of RNAV required capacity in terminal area : In absence of RNAV required capacity, the pilot shall :*

*• for a STAR or initial instrument approach, either :*

*- follow or join the appropriate conventional procedure published, when existing or,*

*- report "Non RNAV terminal area" upon starting the procedure in order to get a radar guidance ;*

*• for a SID :*

*- report "Non RNAV terminal area" upon engine starting up in order to get a radar guidance since the end of the conventional initial segment or to be cleared to carry out a SID procedure.*

*→ Loss of RNAV capacity required in terminal area*

*In case of loss of RNAV capacity required, the pilot shall :*

*• for a STAR or initial instrument approach, either :*

*- follow or join the appropriate conventional procedure published, when existing or,*

*- report "Unable RNAV [due (reason)]" upon the loss of RNAV capacity required in order to get a radar guidance ;*

*• for a SID :*

*- report "Unable RNAV [due (reason)]" in order to get a radar guidance or to be cleared to carry out a SID procedure.*

**1.5.2 VOLS A L'ARRIVEE**

***1.5.2 ARRIVING FLIGHTS***

**1.5.2.1 Altitude minimale de secteur (MSA) ou route d'arrivée spécifiée**

L'altitude minimale de secteur est calculée avec une marge de franchissement d'obstacle de 300 m. Toutefois cette marge peut être augmentée d'une valeur pouvant atteindre 300 m en cas de relief important. L'altitude minimale de franchissement d'obstacles sur une route d'arrivée spécifiée est calculée :

• s'il n'existe pas d'espace contrôlé associé à la procédure :

• à partir du dernier repère en route, s'il est situé à moins de 25 NM de l'IAF, sinon du point situé à 25 NM de l'IAF sur la route d'arrivée.

• s'il existe un espace contrôlé associé à la procédure :

- à partir de la limite de cet espace ou du repère le plus proche possible de cette limite.

- à partir de la limite de cet espace ou du repère le plus proche possible de cette limite.

Une contrainte de circulation aérienne (altitude de procédure) peut être, si nécessaire, publiée ; elle précède alors l'altitude minimale de franchissement d'obstacles.

Exemple : "4300* 3000 *si LFR50 active.

***1.5.2.1 Minimum sector altitude (MSA) or specified arrival route***

*Minimum sector altitude is calculated with an obstacle clearance margin of 300 m. However this margin can be increased to 300 m when surface inequalities are considerable. Minimum obstacle clearance altitude is calculated on a specified arrival route :*

*• if no controlled airspace is associated with the procedure :*

*• from the last fix, within a radius of 25 NM from the IAF, if not, from the point located at 25 NM from IAF on the arrival route.*

*• if a controlled airspace is associated with the procedure :*

*- an Air Traffic constraint (procedure altitude) may be published if necessary ; it then precedes the minimum obstacle clearance altitude.*

*- from the limit of this airspace or from the nearest possible fix to this limit.*

*An Air Traffic constraint (procedure altitude) may be published if necessary ; it then precedes the minimum obstacle clearance altitude.*

*Example : "4300* 3000 *if LFR50 active.*

© Service de l'Information Aéronautique, France

**1.5.2.2 Altitudes d'arrivée en région terminale (TAA)**

Des altitudes minimales d'arrivée en TMA (TAA), associées à des aires basées sur le repère d'approche initiale et / ou le repère d'approche intermédiaire peuvent être fournies pour faciliter la descente et l'entrée dans la procédure.

La configuration type prévoit 3 secteurs de TAA : entrée directe, base gauche et base droite.

Les principes de construction et d'utilisation sont similaires à ceux des altitudes minimales de secteur qui figurent sur les cartes d'approche aux instruments des procédures conventionnelles, mais les limites latérales de ces secteurs sont adaptées à l'utilisation des récepteurs GNSS et plus généralement, des systèmes de navigation

***1.5.2.2 Arrival altitude in terminal area (TAA)***

*Terminal arrival altitudes in TMA (TAA), associated with areas based on the initial approach fix and / or the intermediate approach fix, can be provided to ease the descent and the approach procedure entry.*

*The typical configuration provides three TAA sectors : direct entry, left base and right base.*

*The principles for design and operational use are the same to those of minimum sector altitudes included in instrument approach charts for conventional procedures, but the lateral limits of these sectors are adapted to the use of GNSS receivers and more usually, of navigation systems.*

**1.5.2.3 Procédure en hippodrome**

En principe, le ralliement d'un hippodrome s'effectue à l'issue d'un circuit d'attente. Cependant pour permettre à un aéronef, qui n'a pas à attendre, d'entrer directement dans l'hippodrome, les entrées sont étudiées comme pour une attente du même type. Pour un hippodrome basé à la verticale d'une installation VOR, NDB ou sur une intersection de rayons VOR, la durée d'éloignement pour l'entrée est de une minute trente secondes maximum.

En conséquence :

• pour les hippodromes dont le temps d'éloignement et l'altitude minimale sont ceux de l'attente, les entrées dans les hippodromes sont automatiquement protégées ; aucune mention n'est portée sur la carte IAC ;

• pour les hippodromes dont le temps d'éloignement est de une minute trente secondes, les entrées sont étudiées et mention en est faite sur la carte IAC. (Exemple : « les entrées dans l'hippodrome sont protégées » ou « Entrées dans l'hippodrome secteurs 1 et 3 protégées » (les entrées dans le secteur 2 ne sont alors pas possibles) ou « Entrées dans l'hippodrome de une minute trente sont protégées » (lorsque l'hippodrome est de une minute trente pour certaines catégories et supérieur à une minute trente pour d'autres).

• pour un hippodrome basé sur des informations VOR et DME, les entrées sont étudiées comme pour une attente du même type. Mention est faite sur la carte IAC.

Dans certains cas, un seul circuit est utilisé pour représenter, sur la vue en plan des cartes IAC, l'attente et l'hippodrome ; dans ce cas, les entrées en hippodrome sont protégées.

Lorsque l'attente et l'hippodrome sont représentés séparément, les entrées doivent s'effectuer dans l'attente, l'exécution de l'hippodrome ne pouvant être effectuée qu'une fois l'avion stabilisé en attente, à l'altitude minimale de celle-ci ; si, dans ce cas, les entrées en hippodrome sont néanmoins possibles pour certains avions, ceci est mentionné (CAT MAX ou MAX IAS ).

***1.5.2.3 Racetrack procedure***

*In principle, an aircraft enters a racetrack procedure when leaving a holding pattern. However, to allow an aircraft that has not to be kept on hold to directly enter the racetrack procedure, the entries are examined in the same way as if the aircraft had been on hold. When a racetrack is based on a VOR or NDB, or on the intersection of a VOR radial, the outbound time to the entry point is one minute and thirty seconds maximum.*

*Consequently :*

*• in the case of racetrack for which the outbound time and the minimum altitude are those of the holding pattern, entries into the racetrack are automatically protected and no special mention is made on the IAC.*

*• in the case of racetracks with an outbound time of one minute and thirty seconds, entries are defined and detailed on the IAC for example : "entries to racetrack protected" or "entries into the racetrack of sectors 1 or 3 protected" (entries into the sector 2 are then impossible) or "entries into the racetrack of one minute and thirty seconds are protected" (when the racetrack outbound time is one minute and thirty seconds for certain categories, and greater than one minute and thirty seconds for others).*

*• in the case of a racetrack using VOR or DME information, the entries are determined as for a holding pattern of the same type. This is then specified on the IAC.*

*Sometimes only one circuit represents on the IAC the holding pattern and the racetrack. In these cases, the entries in racetrack are protected.*

*When the holding pattern and the racetrack are shown separately, the entries must be done in the holding pattern, the racetrack can be executed only when the ACFT is stabilized at the minimum altitude in the holding pattern. In such a case, entries in racetrack are however possible for certain ACFT, if mentioned on the chart (CAT. MAX or MAX IAS).*

**1.5.2.4 Virages conventionnels 45° / 180°**

Sauf instruction contraire figurant sur la carte, le temps d'éloignement compté à partir du début du virage de 45° est de :

• 1 min pour les aéronefs de catégorie A et B,

• 1 min 15 pour les aéronefs de catégorie C et D.

***1.5.2.4 Procedure turns of 45° / 180°***

*Unless otherwise specified on the chart, flying time from the start of 45° turn is :*

*• one minute for aircraft of categories A and B,*

*• one minute 15 sec, for aircraft of categories C and D.*

**1.5.2.5 Procédures d'approche finale à forte pente**

Afin d'attirer l'attention des pilotes sur les approches finales dont la pente est supérieure à 3,5 % dans le cas d'une approche de précision et à 6,5 % dans le cas d'une approche classique, les cartes d'approche concernées comportent, sur la vue en plan, un cartouche :

• "ILS avec GP calé à plus de 3,5 %" dans le cas d'une approche de précision ILS ou,

• "Angle de descente > à 3,5°" dans le cas d'une approche SBAS,

• "Pente finale supérieure à 6,5 % (CAT A, B) à 6,1 % (CAT C, D) dans le cas d'une approche classique NPA.

Ces mentions signifient que des qualifications appropriées pour l'aéronef et l'équipage de conduite sont nécessaires pour suivre une telle procédure.

Par ailleurs, il convient pour les vols en transport public de se référer au règlement (UE) 965/2012 qui contient des dispositions spécifiques supplémentaires pour les procédures d'approche à forte pente de 4,5 % et plus.

***1.5.2.5 Steep angle final approach procedures***

*In order to draw pilot's attention to final approaches whose glide path angle is more than 3.5 % for a precision approach and more than 6.5 % for a non-precision approach, the appropriate approach charts include a box in the plan view :*

*• "ILS with GP tuned over 3.5 %" for a precision approach or,*

*• "Descent slope angle > 3.5°" for a SBAS approach or,*

*• "Final slope angle > 6.5 % (CAT. A, B) or > 6.1 % (CAT. C, D)" for a non-precision approach.*

*These notes are meaning that appropriate aircraft and fight crew qualifications are required to use the related procedures.*

*In addition, it is required for commercial flights to refer to the European rule (EU) 965/2012 which contains additional specific provisions for steep angle approach procedures whose glide path is equal or more than 4.5 %.*

© Service de l'Information Aéronautique, France

**1.5.2.6 Approche classique : définition du MAPT**

Pour une approche classique de non-précision (NPA), il est défini un MAPT ; ce point est la limite aval à laquelle la procédure d'approche interrompue doit être amorcée afin de garantir la marge minimale de franchissement d'obstacle.

***1.5.2.6 Non precision approach : MAPT***

*For non-precision approaches (NPA), an MAPT is specified, this is the downstream limit at which a missed approach procedure must be started to ensure a minimal obstacle clearance margin.*

**1.5.2.7 Approche interrompue**

En approche interrompue, le franchissement d'obstacle est étudié en se basant sur un calcul de pente de 2,5 % jusqu'à la hauteur minimale d'accélération ; cette valeur n'est pas portée sur les cartes mais les minimums calculés pour cette pente sont systématiquement publiés. Lorsque des minimums supplémentaires sont calculés en prenant en compte des pentes supérieures à 2,5 %, ces pentes sont alors publiées en regard des minimums correspondants.

Cependant, une pente minimale de 3,3 % est prise en compte pour vérifier la séparation avec une autre trajectoire ou espace et pour calculer le dimensionnement des espaces. Cette pente n'est publiée que dans les cas où elle est supérieure à 3,3 %. En conséquence, à défaut de pente supérieure publiée en API, une pente minimale de 3,3 % doit être respectée.

En cas de rejointe d'une attente, l'aire de protection pour la partie du palier située dans l'attente considère notamment les éléments suivants :

• inclinaison : 25° (ou taux de virage de 3°/s si l'inclinaison qui en résulte est inférieure à 25°).

Le palier d'accélération peut ne pas être étudié : la mention "Palier d'accélération non étudié" est alors publiée dans la description de l'API.

Pour les procédures PBN, le segment d'approche interrompue (API) est normalement basé sur la navigation de surface mais peut, dans certains cas, être basé sur une navigation à l'estime ou une navigation effectuée à l'aide de moyens de radio-navigation tels que VOR ou le NDB.

Dans le cas où l'approche est interrompue en raison d'une panne ou d'une perte du guidage du système de navigation GNSS, l'exploitant doit définir et suivre une procédure d'urgence (suivie d'une phase de ralliement).

La phase de ralliement pour effectuer une nouvelle approche PBN ou une approche conventionnelle devra ensuite être réalisée à l'aide des moyens de navigation conventionnels et/ou sous assistance radar.

***1.5.2.7 Missed approach***

*In case of missed approach, the obstacle clearance is check with a climb gradient of 2.5 % up to minimal height of acceleration. This value is not referred on the charts, but the computed minimums for this slope are systematically published. Where supplementary minimums are provided with more than 2.5 % climb gradient, these gradient are published with corresponding minimums.*

*However, minimum slope of 3.3 % is used to verify the separations with another track or airspace and to design airspaces limits. This climb gradient is published, only if it is greater than 3.3 %. Consequently, if no greater slope is published in missed approach, a minimum climb gradient of 3.3 % must be observed.*

*In the case of joining a holding pattern, the protection area for the part of the horizontal segment within the holding pattern takes into consideration the following elements :*

*• bank angle : 25° (or a 3°/s turn rate if the resulting bank angle is less than 25°)*

*The acceleration leg may not be studied : the mention "Acceleration level not studied" is then laid down in the missed approach description.*

*The missed approach segment for PBN procedures is usually based on the area navigation but, sometimes, it may be based on dead reckoning navigation or navigation carried out by conventional radio navigation aids such VOR and NDB.*

*In the case where the missed approach is due to a loss or a failure of the GNSS guidance system, the aircraft operator must define and execute an contingency procedure (followed by a homing phase).*

*The homing phase to execute a new PBN approach or conventional approach shall then be carried out using conventional navigation aids and/or under radar assistance.*

**1.5.2.8 Référence altimétrique**

Les indications de hauteur d'obstacles, de DH ou de MDH sont données par rapport à l'altitude de l'aérodrome, excepté dans les cas suivants :

• pour les approches de précision (ILS ou SBAS CAT I, PAR) et les approches avec guidage vertical (APV SBAS, APV Baro) ; et

• pour les approches classiques, lorsque le seuil de la piste sur laquelle s'effectue l'approche aux instruments est à plus de 2 m (7 ft) au-dessous de l'altitude de l'aérodrome.

Dans ces deux cas, le niveau de référence est alors l'altitude du seuil de la piste.

Lorsqu'un niveau de référence autre que le niveau moyen de la mer est utilisé, il est porté bien en évidence sur la carte.

***1.5.2.8 Altimetric reference***

*Information on obstacle heights, DH or MDH are expressed in relation to the aerodrome elevation, except in the following cases :*

*• for precision approaches (ILS or SBAS CAT I, PAR) and approaches with vertical guidance (APV SBAS, APV Baro) ; and*

*• for non-precision approaches, when the threshold of the runway on which the instrument approach is conducted is located more than 2 m (7 ft) below the aerodrome elevation.*

*In both cases, the reference level is the runway threshold elevation.*

*Where a reference level other than mean sea level is used, it shall be prominently displayed on the chart.*

**1.5.2.9 Représentation du relief et des obstacles**

Le relief est représenté d'une manière schématique par des courbes de niveau et des points cotés pour les points culminants. Des teintes hypsométriques sont utilisées pour souligner le relief. Les obstacles significatifs sont indiqués.

Sur les cartes d'approche autres que les cartes VPT, le relief est représenté à partir d'une courbe de niveau située au moins à 300 m AAL. Au-dessus de ce niveau, l'intervalle entre courbes de niveau est fonction du relief à représenter.

Sur les cartes VPT, la courbe de niveau la plus basse, ainsi que l'intervalle entre courbes de niveau est fonction du relief à représenter. La présentation du relief diffère donc d'une carte à l'autre.

***1.5.2.9 Illustration of relief and obstacles :***

*The relief is illustrated schematically by contour lines and values indicating peaks. Hypsometric tints are used to depict ranges of elevation. Significant obstacles are indicated.*

*On approach charts other than VPT charts, relief is illustrated by a level curve located at least at 300 m AAL. Above this level, the interval between level curves depends on the height to be indicated.*

*On VPT charts, the lowest level curve and the interval between level curves depends on the height to be illustrated. Therefore, the indication of the relief differs on the various charts.*

**1.5.2.10 Utilisation des procédures d'approche aux instruments en l'absence d'organisme de la circulation aérienne sur l'aérodrome**

Les procédures d'approche aux instruments ne sont autorisées que lorsque la diffusion du calage altimétrique QNH est assurée :

• soit via un système de transmission automatique de paramètres (STAP) sur l'aérodrome de destination ;

• soit via une station désignée indiquée sur la carte IAC de l'aérodrome de destination.

***1.5.2.10 Use of instrument procedures without air traffic services at the aerodrome***

*Instruments approach procedures are only permitted when the QNH altimeter setting is transmitted :*

*• either from an automatic parameter transmission system (STAP) at the destination aerodrome ;*

*• or from a designated station indicated on the IAC chart of the destination aerodrome.*

© Service de l'Information Aéronautique, France

Les procédures d'approches sont alors obligatoirement suivies d'une MVL pour laquelle des minimums éventuellement majorés sont publiés. De nuit, pour les opérations de transport public régulier un représentant de l'exploitant devra être présent sur l'aérodrome et devra disposer de consignes approuvées par les services compétents de l'aviation civile lui permettant de déclencher le plan de secours de l'aérodrome ainsi que les phases d'urgence si nécessaire.

Les procédures d'approche aux instruments ne sont pas autorisées lorsque :

• la mention suivante est publiée : "Procédure interdite en dehors des horaires ATS" (cas d'une nécessité de coordination, d'un environnement dangereux interdisant d'une façon définitive de telles manoeuvres).

• aucune procédure d'agrément d'une station n'est publiée, cette dernière n'ayant pas été étudiée et l'aérodrome n'est pas doté d'un système de transmission automatique de paramètres (STAP).

Les règles d'intégration dans le circuit d'aérodrome à l'issue d'une procédure d'approche aux instruments sont fixées par l'arrêté du 12 juillet 2019 relatif aux procédures générales de circulation aérienne pour l'utilisation des aérodromes par les aéronefs.

*The approaches procedures are compulsorily followed with a circling for which minima are possibly increased and published. By night, an operator agent should have to be at the aerodrome to carry out scheduled air public transport operations and should to get approval instructions from the suitable air traffic service enabling him to trig the safety plan of aerodrome and emergency phases if necessary.*

*The instruments approach procedures are not allowed when :*

*• the following sentence is published : "prohibited procedure out of ATS HOR" (on account of necessary coordination, dangerous surroundings which prohibit definitely such manoeuvres) :*

*• no approved station is published, and no STAP (Automatic transmission system of parameters) on the aerodrome.*

*The rules for joining the aerodrome circuit at the end of an instrument approach procedure are set by the Order of 12 July 2019 on air traffic general procedures for the use of aerodromes by aircraft.*

## 1.5.3 VOLS AU DEPART

## *1.5.3 DEPARTURE FLIGHTS*

### 1.5.3.1 Procédures de départ omnidirectionnel

### *1.5.3.1 Omnidirectional departure procedures*

**a) Publication des procédures :**

Des procédures de départ omnidirectionnel sont décrites :

• sur les cartes de départ TMA des aérodromes dotés d'espaces aériens contrôlés pour lesquels une telle documentation est disponible ;

• sur les cartes d'aérodrome IAC pour les aérodromes pour lesquels aucune information n'est disponible en carte TMA (Aérodromes en espace de classe G notamment).

Le recueil pour la conception des procédures de vol aux instruments distingue deux types de départs omnidirectionnels :

Type A : monter depuis le décollage, suivant une route magnétique spécifiée jusqu'à une altitude / hauteur spécifiée à partir de laquelle l'aéronef peut effectuer un départ omnidirectionnel ou par secteur.

Type B : monter, depuis le décollage, vers un repère (en général l'IAF de la procédure d'approche), une altitude à atteindre au repère étant, si nécessaire, spécifiée, puis départ omnidirectionnel ou par secteur.

Les principes généraux relatifs aux procédures de départ s'appliquent : en particulier, la pente théorique de montée n'est publiée que si elle est supérieure à 3,3 %.

Il est important de noter qu'après avoir atteint l'altitude / hauteur permettant une route directe, la protection vis à vis des obstacles a été étudiée, en supposant que l'aéronef poursuit sa montée selon une pente au moins égale à la pente spécifiée ou au moins égale à 3,3 % si aucune pente n'est spécifiée, jusqu'à ce que l'aéronef atteigne l'altitude minimale de sécurité en route. L'obstacle le plus pénalisant ayant servi à déterminer la pente théorique de montée est indiqué ; il ne peut être fait abstraction de cet obstacle sauf lorsque la procédure précise la nouvelle pente en cas d'abstraction, en raison de la présence éventuelle d'autres obstacles non publiés ; la pente publiée peut ne pas prendre en compte des obstacles très proches de la piste et justifiant normalement une pente très élevée ; les informations relatives à ces obstacles sont publiées

**b) Utilisation:**

En espace aérien contrôlé, des clairances pour suivre des départs omnidirectionnels peuvent être délivrées :

• sur demande du pilote,

• à l'initiative de l'organisme de la circulation aérienne lorsque des départs omnidirectionnels sont publiés.

• En espace aérien non contrôlé, ces procédures sont désignées "consignes recommandées pour un départ IFR" ; elles ne sont que des indications destinées à aider l'exploitant à définir une procédure assurant le franchissement des obstacles avec des marges suffisantes.

***a) Publication of the procedures :***

*Omnidirectional departures procedures are discribed :*

*• on TMA departures charts for aerodromes with controlled airspace for which such documents are available ;*

*• on AD IAC charts : for those aerodromes where there is no information in TMA chart (aerodromes in class G airspace, mainly).*

*The manual for the flight procedure design distinguishes two types of omnidirectional departures :*

*A type : initial climb after take-off and follow a specified magnetic track climbing to a specified altitude / height from which the aircraft can make an omnidirectional departure or a departure by sector.*

*B type : initial climb after take-off, to a fix (generally the approach procedure IAF), an altitude to be reached to the fix being defined if necessary, then proceed to an omnidirectional departure or a departure by sector.*

*The general principles relating to departure procedures are applicable : in particular, the theoretical climb gradient is only published when greater than 3.3 %.*

*It is important to note that after reaching the altitude / height that allows to proceed direct to an omnidirectional departure, or a departure by sector, protection against obstacles has been reviewed assuming that the aircraft continues to gain height to a climb gradient at least equal to the gradient specified, or at least 3.3 % when no gradient is specified, until it reaches the minimum safety altitude. The controlling obstacle which has been used to calculate the theoretic climb gradient is indicated. No abstraction of this obstacle may be made except when the procedure specify the new climb gradient, on account of others unpublished obstacles. The published climb gradient may not take into account the very closer obstacles to the runway justifying a very hight climb gradient. Informations related to these obstacles are published*

***b) Utilization***

*In controlled airspace, omnidirectional departures clearances may be ordered :*

*• on pilot request,*

*• from ATC when omnidirectional departures are published.*

*• In uncontrolled airspace, these procedures are called, "Recommanded instruction for IFR departure" ; they are only indications to help the aircraft operator to define a procedure which ensure obstacle clearance with sufficie margins.*

### 1.5.3.2 Confirmation de la clairance de départ normalisé aux instruments (SID) ou du départ omnidirectionnel

### *1.5.3.2 Confirmation of SID clearance or omnidirectional departure clearance*

a) Procédure pilote

Le pilote d'un aéronef en vol IFR, ayant obtenu une clairance de départ comportant le suivi d'un départ normalisé aux instruments (SID) ou d'un départ omnidirectionnel annonce, lors du premier contact radiotéléphonique avec le contrôleur d'approche :

• l'indicatif d'appel de l'aéronef ;

• l'indicatif du SID ou la route ;

• le niveau vers lequel il monte (altitude ou niveau de vol).

*a) Pilot procedure*

*The pilot of an aircraft in IFR flight, with a departure clearance including a SID procedure or omni-directional departure procedure, will report on the first radio contact to the approach controller as follows :*

*• Aircraft call sign ;*

*• SID Identification or Flight Route ;*

*• Level to which aircraft is climbing (altitude or flight level).*

© Service de l'Information Aéronautique, France

b) Procédure contrôleur

Lorsque les éléments annoncés par le pilote sont erronés le contrôleur d'approche utilise la phraséologie "Négatif" suivie des éléments dans leur version correcte.

Lorsque le pilote oublie d'annoncer l'indicatif du SID ou la route et / ou le niveau associé, le contrôleur d'approche rappelle l'élément ou les éléments manquants.

*b) Controller procedure*

*When data from pilot are erroneous, the approach controller use the phraseology "Negative" followed with the data in correct version.*

*When the pilot forgets to report SID identification or Flight route and / or the associated level, the approach controller will recall the missing data.*

## 1.5.4 CIRCUITS D'ATTENTE

## *1.5.4 HOLDING PATTERNS*

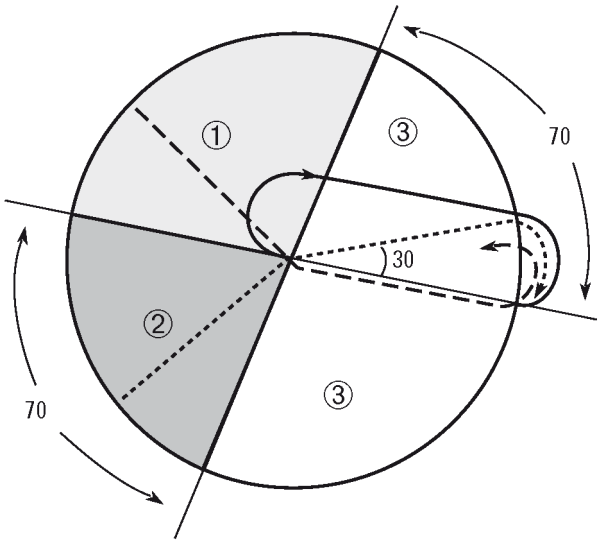
### 1.5.4.1 Procédure d'entrée omnidirectionnelle dans les attentes VOR ou NDB.

### *1.5.4.1 Omnidirectional entry procedure in VOR or NDB holding patterns.*

L'entrée dans l'attente est supposée s'effectuer selon le cas en fonction des trois secteurs d'entrée représentés ci-dessous, en admettant une tolérance de ± 5° par rapport aux limites de secteurs.

*Entry into the holding pattern is assumed to depend on the three entry sectors illustrated below, assuming a tolerance of ± 5° in relation to the entry sector boundaries.*

**SECTEURS D'ENTREE /** *ENTRY SECTORS*



**Note** : cette représentation se rapporte à une attente droite.

• Procédure de secteur (entrée parallèle)

Au survol du repère, tourner pour prendre un cap parallèle et inverse au cap spécifié de la trajectoire de rapprochement et maintenir ce cap pendant la durée d'éloignement spécifiée pour l'attente. Si cette durée est supérieure à une minute et demi, la valeur du temps d'éloignement lors de l'entrée ne doit pas dépasser une minute et demi, ou une distance limite correspondante.

Ensuite tourner à gauche pour rejoindre le parcours de rapprochement ou directement le repère.

Au deuxième passage verticale repère, suivre le circuit d'attente.

• Procédure de secteur (entrée décalée)

Au survol du repère, prendre un cap permettant de suivre une trajectoire faisant un angle de 30° avec le parcours de rapprochement du côté attente et s'éloigner à ce cap pendant un temps égal au temps d'éloignement spécifié. Cette durée peut être limitée dans les mêmes conditions que ci-dessus.

Tourner ensuite à droite pour rejoindre le parcours de rapprochement du circuit d'attente.

• Procédure de secteur (entrée directe).

Au survol du repère, tourner à droite pour suivre le circuit d'attente.

***Note** : this illustration shows a right hand pattern.*

*• Sector procedure (parallel entry)*

*When flying over the reference point (fix), turn to take a heading parallel and opposite to the heading specified for the approach and keep this heading during the flying time specified for holding. Should this time be greater than one minute and a half, the flying time when entering must not be more than one and a half minute, or a corresponding limiting distance.*

*Then turn left to join the inbound track, or the reference fix directly.*

*When passing for the second time overhead above the reference fix, follow the holding pattern.*

*• Sector procedure (offset entry)*

*When flying over the reference fix, take a heading allowing the aircraft to follow a route at an angle of 30° with the approach path on the holding side and leave this heading for a time equal to the specified flying time. This time can be limited under the same conditions as above.*

*Then turn to the right to join the approach path of the holding pattern.*

*• Sector procedure (direct entry).*

*When flying over the reference point (fix), turn to the right to follow the holding pattern.*

### 1.5.4.2 Procédures d'entrée en attente VOR-DME Principes généraux

### *1.5.4.2 Entry procedures in a VOR DME holding pattern General principle*

L'arrivée dans une attente VOR DME peut s'effectuer :

• en suivant l'axe de rapprochement de l'attente.

• en suivant une trajectoire publiée.

En cas de guidage radar, les aéronefs doivent être établis sur des trajectoires réglementaires protégées.

Le point d'entrée est :

• soit le repère d'attente,

*Entries in a VOR DME holding pattern can be done :*

*• by following the inbound track of the holding pattern.*

*• by following a published track.*

*In radar vectoring, aircraft must be established on regulatory protected tracks.*

*The entry point is :*

*• either the holding pattern fix,*

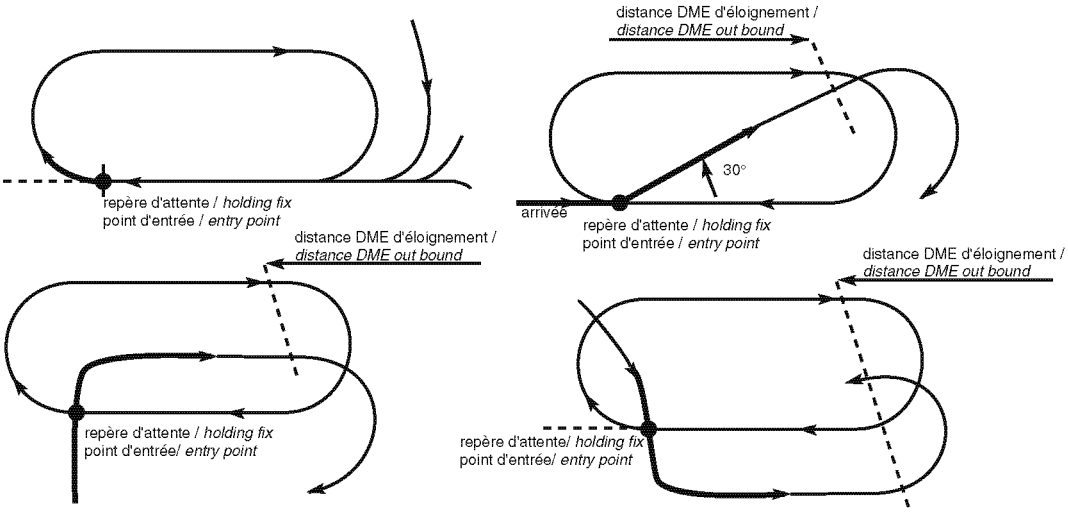
© Service de l'Information Aéronautique, France

• soit le repère de fin d'éloignement.

**Différents types d'arrivées dans une attente VOR-DME et entrées correspondantes**

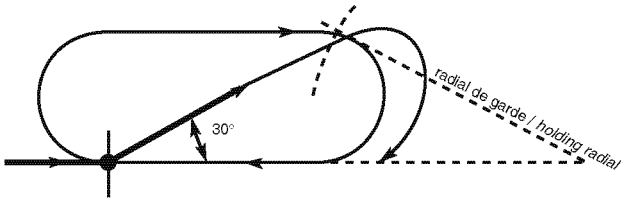
Les procédures d'entrée réglementaires sont décrites sur les schémas suivants :

a) Cas où le point d'entrée est le repère d'attente :

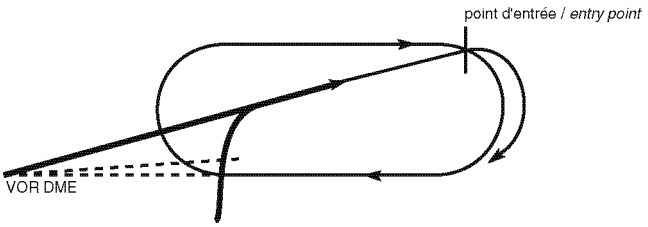


Cas particulier d'une attente VOR DME en éloignement avec entrée nécessitant un radial de garde.

Dans le cas où le radial de garde est atteint avant l'arc DME, l'aéronef est supposé suivre le radial de garde jusqu'à la distance DME limite d'éloignement.



b) Cas où le point d'entrée est le repère de fin d'éloignement de l'attente.



**1.5.4.3 Procédures d'entrée en attente sur intersection de radials VOR**

Les entrées en attente sur intersection de radials VOR s'effectuent à l'issue d'une arrivée le long de l'un des deux radials définissant le repère d'attente.

Les procédures sont les mêmes que pour les entrées omnidirectionnelles selon la position du radial sécant à l'intérieur de chaque secteur.

**1.5.4.5 Attente protégée RNAV / GNSS**

Différentes attentes RNAV / GNSS peuvent être publiées :

• Attente pour les systèmes disposant de la fonction attente.

• Attente pour les systèmes ne disposant pas de la fonction attente.

a) Systèmes disposant de la fonction attente :

Toutes les attentes publiées peuvent être réalisées à l'aide de cette fonction. Elles sont codées et intégrées dans les bases de données des systèmes de navigation.

b) Systèmes ne disposant pas de la fonction attente :

• *or the end of flying distance fix.*

***Types of arrivals into a VOR DME holding pattern and corresponding entries***

*The regulatory entry procedures are illustrated on the diagrams below :*

*a) Entry point is the holding fix :*

*The particular case of a VOR DME holding pattern with entry requiring a limiting bearing.*

*When the limiting radial is reached before the DME arc, the aircraft is assumed to be following the limiting bearing up to the DME leg limit.*

*b) The entry point is the outbound holding pattern fix.*

***1.5.4.3 Procedures for entries into a holding pattern on VOR radial intersections***

*Entries into a holding pattern at VOR bearings intersection are performed when arriving along one of the two bearings defining the holding pattern fix.*

*The procedures are the same as those for omnidirectional entries, depending on the position of the intersecting bearing within each sector.*

***1.5.4.5 RNAV / GNSS protected holding pattern***

*Various RNAV / GNSS holding patterns may be published :*

*• Holding pattern for systems with holding function.*

*• Holding pattern for systems without holding function.*

*a) Systems with holding function :*

*All published holding patterns can be executed, using this function. They are encoded and embedded in data bases of navigation systems.*

*b) Systems without holding function :*

Ces attentes peuvent être réalisées manuellement, sauf publication d'une mention spéciale (fonction attente requise) sur la carte d'approche. Elles ne sont pas intégrées dans les bases de données des systèmes de navigation.

Elles peuvent être exécutées manuellement à l'aide des fonctions de base des systèmes de navigation GNSS (cf. consigne opérationnelle NR F-2012-01).

*These holding patterns can be executed manually, unless a special mention is published (holding function required) on the approach chart. They are not embedded in data bases of navigation systems.*

*They can be manually flown, using basic functions of GNSS navigation systems (refer to operational instruction NR F-2012-01).*

### 1.5.5 PROCEDURES D'APPROCHE PBN

### *1.5.5 PBN APPROACH PROCEDURES*

#### 1.5.5.1 Généralités

Les procédures d'approche PBN publiées sur les cartes IAC peuvent être des approches de non-précision (LNAV), des approches avec guidage vertical (LNAV-VNAV ou LPV) ou des approches de précision (LPV 200 ft). Elles se reconnaissent notamment au titre "RNP RWY xx". Elles sont établies en utilisant des critères conformes à ceux des PANS-OPS de l'OACI.

Ces procédures sont constituées de segments rectilignes généralement disposés suivant une configuration en "T" ou en "Y".

Pour suivre une procédure d'approche PBN (intermédiaire, finale et approche interrompue), l'aéronef doit être équipé d'un système de navigation certifié conforme à la spécification RNP (APCH) du "Manuel de la navigation fondée sur les performances (PBN)" de l'OACI (Doc 9613).

La consigne opérationnelle N° F-2007-01C traite de la réalisation d'approches de non précision au moyen d'équipements embarqués PBN.

#### *1.5.5.1 General*

*The PBN approach procedures published in IAC charts are either non-precision approaches (LNAV), approaches with vertical guidance (LNAV-VNAV or LPV) or precision approaches (LPV 200 ft). They are identified with the "RNP RWY xx" title. They are defined using criteria complying with those of ICAO PANS-OPS.*

*These procedures consist in straight segments generally located according to a "T" or "Y" configuration.*

*To follow a PBN approach procedure (intermediate, final and missed approach), the aircraft must be equipped with a navigation system certified in compliance with the RNP APCH specification of the ICAO "Performance based navigation (PBN) manual" (Doc 9613).*

*The operational instruction NR F-2007-01C deals with the execution of non-precision approaches, using PBN aircraft equipment.*

#### 1.5.5.2 Identification des repères

Chaque repère est déterminé sous forme d'un point de cheminement défini par ses coordonnées géographiques avec une résolution du dixième de seconde (ou du centième de seconde pour les seuils de piste), en référence au système géodésique mondial de 1984 - WGS 84 et représenté sur la carte d'approche aux instruments avec le symbole correspondant à son type (selon le cas : "à survoler" ou "par le travers").

#### *1.5.5.2* Identification of fixes

*Each fix is determined as a waypoint defined by its geographic coordinates with a resolution of a tenth of a second (or a hundredth of a second for runway thresholds), according to the World Geodetic System of 1984 - WGS 84) and shown on the Instrument Approach Chart with the appropriate symbol for its type : "fly over" or "fly by").*

#### 1.5.5.3 Tableau pour les Intégrateurs de données

Avec chaque carte d'approche aux instruments PBN est publié un tableau pour les intégrateurs de données comprenant, pour chaque point : le type de repère (IAF, IF, FAF, MAPT), l'identification, les coordonnées géographiques, le codage proposé (IF, TF, CF, DF, FA), le statut (FLY BY ou FLY OVER).

#### *1.5.5.3 Table for data integrators*

*With every PBN instrument approach chart, a table is published for data integrators including for each waypoint : type of fix (IAF, IF, FAF, MAPT), identification, geographic coordinates, proposed coding (IF, TF, CF, DF, FA), status (FLY BY or FLY OVER).*

#### 1.5.5.4 Concept en "T" ou en "Y"

Une configuration dite en "T" ou en "Y" est adoptée, sauf contraintes particulières, afin de permettre une exécution simple de la procédure, quelle que soit la direction d'arrivée. Dans cette configuration, on dispose :

- d'un segment final aligné sur la piste, en aval d'un segment intermédiaire et de segments initiaux pouvant aller jusqu'au nombre de trois, disposés de part et d'autre du prolongement de la trajectoire d'approche finale, pour constituer un "T" ou un "Y".
- de segments latéraux d'approche initiale, fondés sur des différences de trajectoires de 70° à 90° par rapport à la trajectoire du segment intermédiaire.

#### *1.5.5.4 "T" or "Y" concept*

*A configuration, called "T" or "Y" configuration, is adopted, except in case of special requirements, and in order to ensure a simple conduct of the procedure, irrespective of the arrival direction. In this configuration, we have :*

*- a final segment aligned with the runway, downstream from an intermediate segment and initial segments being three as a maximum, located on both sides of the final approach path extension, to make a "T" or a "Y".*

*- lateral initial approach segments based on path differences by 70° to 90° with respect to the intermediate segment path.*

#### 1.5.5.5 Concept d'altitudes d'arrivée en région terminale (TAA)

Des altitudes minimales d'arrivée en région terminale (TAA), associées à des aires basées sur le repère d'approche initiale et / ou le repère d'approche intermédiaire peuvent être fournies pour faciliter la descente et l'entrée dans la procédure.

La configuration type prévoit trois aires de TAA : entrée directe, base gauche et base droite.

Les principes de construction et d'utilisation sont similaires à ceux des altitudes minimales de secteur qui figurent sur les cartes d'approche aux instruments des procédures conventionnelles, mais les limites latérales de ces secteurs sont adaptées à l'utilisation des récepteurs GNSS de base et plus généralement, des systèmes RNAV.

#### *1.5.5.5 Arrival altitude concept in terminal area (TAA)*

*Minimum arrival altitudes in terminal area (TAA), associated with areas based on the initial approach fix and / or the intermediate approach fix, can be provided to make the descent and the approach procedure entry easier.*

*The typical configuration provides three TAA areas : direct entry, left base and right base.*

*The principles for preparation and operation are identical to those of minimum sector altitudes included in instrument approach charts for conventional procedures, but the lateral limits of these sectors are adapted to the use of basic GNSS receivers and more usually, of RNAV systems.*

© Service de l'Information Aéronautique, France

**1.5.5.6 Approche interrompue**

**1.5.5.6.1** Le segment d'approche interrompue (API) est normalement basé sur la navigation de surface mais peut, dans certains cas, être basé sur une navigation à l'estime ou une navigation effectuée à l'aide de moyens radioélectriques classiques tels que VOR, NDB.

**1.5.5.6.2** Dans le cas où l'approche est interrompue pour une raison indépendante du fonctionnement du système RNAV / GNSS, l'équipage doit continuer à utiliser le guidage RNAV / GNSS pour conduire la procédure d'approche interrompue.

**1.5.5.6.3** Dans le cas où l'approche est interrompue en raison d'une panne ou d'une perte du guidage du système RNAV / GNSS, l'exploitant doit définir et suivre une procédure d'extraction d'urgence (suivie d'une phase de ralliement). Elle consiste à atteindre une altitude suffisante le long d'une trajectoire dégagée d'obstacles. Elle doit prendre en compte la présence des obstacles, les performances de l'aéronef, les caractéristiques de ses systèmes de bords.

La phase de ralliement pour effectuer une nouvelle approche RNAV / GNSS ou un autre type d'approche devra ensuite être réalisée à l'aide des moyens de navigation conventionnels et/ou sous assistance radar

**1.5.5.7 Attente protégée RNAV / GNSS**

Différentes attentes RNAV / GNSS peuvent être publiées :

- Attente pour les systèmes disposant de la fonction attente.
- Attente pour les systèmes ne disposant pas de la fonction attente.

a) Systèmes disposant de la fonction attente :

Toutes les attentes publiées peuvent être réalisées à l'aide de cette fonction. Elles sont codées et intégrées dans les bases de données des systèmes de navigation.

b) Systèmes ne disposant pas de la fonction attente :

Ces attentes peuvent être réalisées manuellement, sauf publication d'une mention spéciale (fonction attente requise) sur la carte d'approche. Elles ne sont pas intégrées dans les bases de données des systèmes de navigation.

Elles peuvent être exécutées manuellement à l'aide des fonctions de base des systèmes RNAV / GNSS (cf consigne opérationnelle N° F- 2007-01).

**1.5.5.8 Phraséologie**

La clairance d'approche PBN est demandée par le pilote après vérification qu'elle peut être entreprise.

Phraséologie de base du pilote, puis du contrôleur :

**Pilote : Lille, Citron Air 32 45. demandons approche R N P piste 0 8.**

Contrôle **: Citron Air 32 45, autorisé approche R N P piste 0 8.**

En cas d'impossibilité de poursuivre l'approche alors que celle-ci a débuté :

**Pilote : Lille, Citron Air 32 45, approche R N P piste 0 8 impossible cause équipement.**

***1.5.5.6 Missed approach***

***1.5.5.6.1*** *The missed approach segment (API) is usually based on the area navigation but, in some cases, may be based on dead reckoning navigation or navigation carried out by means of conventional radioelectric aids such VOR, NDB.*

***1.5.5.6.2*** *In the case when the approach is discontinued for a reason not depending on RNAV / GNSS system operation, the flight crew must continue to use the RNAV / GNSS guidance to execute the missed approach procedure.*

***1.5.5.6.3*** *In the case when the approach is discontinued because of RNAV / GNSS system guidance loss or failure, the operator must define and execute an emergency extraction procedure (followed with a homing phase). It consists in reaching a sufficient altitude along an obstacle-free flight path. It must consider the presence of obstacles, aircraft performance and characteristics of aircraft systems.*

*The homing phase to execute a new RNAV / GNSS approach or another approach, shall then be carried out, using conventional navigation aids and/or under radar assistance.*

***1.5.5.7 RNAV / GNSS protected holding pattern***

*Various RNAV / GNSS holding patterns may be published :*

*- Holding pattern for systems with holding function.*

*- Holding pattern for systems without holding function.*

*a) Systems with holding function :*

*All published holding patterns can be executed, using this function. They are encoded and embedded in data bases of navigation systems.*

*b) Systems without holding function :*

*These holding patterns can be executed manually, unless a special mention is published (holding function required) on the approach chart. They are not embedded in data bases of navigation systems.*

*They can be manually flown, using basic functions of RNAV / GNSS systems (refer to operational instruction NR F-2007-01).*

***1.5.5.8 Phraseology***

*The PBN approach clearance is requested by the pilot after checking that it could be undertaken.*

*Basic phraseology between pilot and controller :*

***Pilot : Lille, Citron AIR 32 45, requesting R N P approach runway 0 8.***

*Controller* ***: Citron Air 32 45 cleared for R N P approach runway 0 8.***

*In case of impossibility to continue the approach when started :*

***Pilot : Lille, Citron Air 32 45, R N P approach runway 0 8 is not possible because of equipment failure.***

# ENR 1.6 SERVICES ET PROCEDURES DE SURVEILLANCE ATS

*ATS SURVEILLANCE SERVICES AND PROCEDURES*

### 1.6.1 RADAR PRIMAIRE DE SURVEILLANCE (PSR)

**1.6.1.0 Fonctions du système de surveillance ATS**

Les fonctions « surveillance » et « assistance » peuvent être assurées par les organismes de la circulation aérienne dotés d'un équipement d'affichage de situation ATS (radar).
La fonction « ''guidage" » peut ne pas être assurée par certains organismes des services de la circulation aérienne disposant d'une détection radar.

**1.6.1.1 Services complémentaires**

Les radars primaires d'approche situés dans les centres de contrôle d'approche permettent de détecter les aéronefs au départ et à l'arrivée d'un aérodrome, notamment ceux qui ne seraient pas équipés de transpondeurs.
Les radars primaires de sol permettent de détecter les véhicules et les aéronefs circulant sur l'aérodrome.
Les radars primaires ne sont pas utilisés pour rendre le service de contrôle en route.

**1.6.1.2 Application d'un service de contrôle radar**

Le radar primaire de surveillance (PSR) est utilisé en combinaison du radar secondaire de surveillance (SSR) pour rendre les services de la circulation aérienne.

**1.6.1.3 Procédures en cas d'échec de communications radar et air-sol**

NIL

**1.6.1.4 Obligations de comptes rendus de position par communications vocales ou CPDLC**

NIL

**1.6.1.5 Représentation graphique de la zone de couverture radar**

La zone de couverture du radar primaire est associée à la zone de couverture du radar secondaire lorsqu'une telle représentation graphique existe.
Les centres de contrôle d'approche suivants sont dotés d'un radar primaire :

- BALE-MULHOUSE
- BORDEAUX-MERIGNAC
- LYON-SAINT EXUPERY
- MARSEILLE-PROVENCE
- NICE-COTE D'AZUR
- PARIS-CHARLES DE GAULLE
- PARIS-ORLY
- STRASBOURG-ENTZHEIM
- TOULOUSE-BLAGNAC

### *1.6.1 PRIMARY SURVEILLANCE RADAR (PSR)*

***1.6.1.0 Functions of the ATS surveillance system***

*The "surveillance" and "assistance" functions may be provided by air traffic services units equipped with ATS situation display equipment (radar).
The "vectoring" function may not be provided by some air traffic services units equipped with radar detection.*

***1.6.1.1 Supplementary services***

*Primary approach radars located in approach control centres are used to detect aircraft departing from and arriving at an aerodrome, including those not equipped with transponders.
Primary ground radar detects vehicles and aircraft on the airport.
The primary radars are not used to provide en route control service.*

***1.6.1.2 The application of radar control service***

*Primary Surveillance Radar (PSR) is used in combination with Secondary Surveillance Radar (SSR) to provide air traffic services.*

***1.6.1.3 Radar and air-ground communication failure procedures***

*NIL*

***1.6.1.4 Voice and controller-pilot data link communications (CPDLC) position reporting requirements***

*NIL*

***1.6.1.5 Graphic portrayal of the area of radar coverage***

*The primary radar coverage area is associated with the secondary radar coverage area, when such a graphic portrayal exists.
The following approach control centres are equipped with primary radar :*

### 1.6.2 RADAR SECONDAIRE DE SURVEILLANCE (SSR)

**1.6.2.0 Fonctions du système de surveillance ATS**

Les fonctions « surveillance » et « assistance » peuvent être assurées par les organismes de la circulation aérienne dotés d'un équipement d'affichage de situation ATS (radar). La fonction « guidage » peut ne pas être assurée par certains organismes de la circulation aérienne disposant d'une détection SSR.

**1.6.2.1 Procédures d'urgence**

Le pilote d'un aéronef sélectionne le code 7700 pour signaler une situation d'urgence sauf si l'ATC l'a préalablement invité à régler le transpondeur sur un code particulier. Dans ce dernier cas, un pilote peut néanmoins sélectionner le code 7700 s'il existe une raison précise de penser que ce serait la meilleure façon de procéder.

**1.6.2.2 Procédures en cas d'échec de communication air-sol et d'interférence illicite**

**1.6.2.2.1 Panne de communication**

Le pilote d'un aéronef sélectionne le code 7600 pour signaler une situation de panne de communication radio. Dans ce cas, le contrôleur doit s'efforcer de déterminer si le récepteur de bord fonctionne, en demandant à l'aéronef, sur la fréquence utilisée, d'accuser réception en effectuant une manœuvre spécifiée, en lui demandant d'utiliser le dispositif d'identification SPI ou en effectuant des changements de codes.
Si le contrôleur a pu établir que le récepteur de bord fonctionne, il continue de contrôler l'aéronef et lui demande d'accuser réception des clairances en utilisant le dispositif SPI (impulsion spéciale d'identification) ou en effectuant des changements de codes.

### *1.6.2 SECONDARY SURVEILLANCE RADAR (SSR)*

***1.6.2.0 Functions of the ATS surveillance system***

*The "surveillance" and "assistance" functions may be provided by air traffic services units equipped with ATS situation display equipment (radar). The "vectoring" function may not be provided by some air traffic services units equipped with SSR radar detection.*

***1.6.2.1 Emergency procedures***

*The pilot of an aircraft selects Code 7700 to indicate a state of emergency unless ATC has previously directed the pilot to operate the transponder on a specified code. In the latter case, a pilot may nevertheless select Code 7700 whenever there is a specific reason to believe that this would be the best course of action.*

***1.6.2.2 Air-ground communication failure and unlawful interference procedures***

***1.6.2.2.1 Communication failure***

*The pilot of an aircraft selects Code 7600 to indicate a state of radio-communication failure. In this case, the controller shall endeavour to determine whether the on-board receiver is functioning by requesting the aircraft, on the frequency in use, to acknowledge by performing a specified manoeuvre or requesting it to use the SPI (Special Pulse Identification) or by performing code changes.
If the controller has been able to establish that the on-board receiver is functioning, he will continue to control the aircraft and request it to acknowledge the clearances by using the SPI device or by making code changes.*

© Service de l'Information Aéronautique, France

**1.6.2.2.2 Intervention illicite**

Le pilote d'un aéronef s'efforce de sélectionner le code 7500 pour signaler une situation d'intervention illicite. Si les circonstances le justifient, le code 7700 est utilisé.

**1.6.2.3 Système d'assignation de codes SSR - procédures d'utilisation des modes et des codes.**

**1.6.2.3.1 Procédures générales pour les vols IFR**

• Mode C : transmission de l'altitude.

Lorsque l'aéronef est doté d'un équipement mode C avec alticodeur en état de fonctionnement, le pilote active la fonction «report d'altitude» pendant tout le vol, sauf instruction contraire de l'organisme de contrôle de la circulation aérienne.

• Mode A : affichage du code 4 chiffres.

Sauf dans les cas spécifiés ci-dessus d'urgence, de panne de communication, ou d'intervention illicite, le pilote affiche le code de 4 chiffres spécifié, par radiotéléphonie ou par liaison de données, par l'organisme de contrôle de la circulation aérienne. Ce code est répété par le pilote dans son accusé de réception.

• Mode S :
Les aéronefs équipés de transpondeurs mode S ayant une fonction d'identification d'aéronef transmettent l'identification d'aéronef comme spécifié dans le point 7 du plan de vol de l'OACI ou, lorsqu'aucun plan de vol n'a été déposé, l'immatriculation de l'aéronef.

• En cas d'absence d'instructions de l'organisme ATS :

Le pilote d'un aéronef évoluant en IFR et entrant dans l'espace aérien français en provenance d'une région ou portion d'espace où l'organisme de contrôle de la circulation aérienne ne lui a pas demandé d'afficher un code transpondeur, ni donné d'instruction en ce sens avant le transfert de communication, sélectionne systématiquement le code 2000 jusqu'à nouvelle instruction de l'organisme de contrôle français.

**1.6.2.3.2 Procédures générales pour les vols VFR**

• Mode A + C

Le pilote d'un aéronef équipé d'un transpondeur mode A+C avec alticodeur évoluant en VFR affiche, en l'absence d'instructions de l'organisme de contrôle de la circulation aérienne, le code 7000 et active la fonction «report d'altitude» durant tout le vol.

Note : Cette mesure ne s'applique pas aux aéronefs effectuant des tours de piste.

• Mode A

Le pilote d'un aéronef équipé d'un transpondeur sans alticodeur évoluant en VFR n'utilise pas son transpondeur, sauf si l'organisme de la circulation aérienne lui assigne un code.

Note : L'utilisation du transpondeur ne dégage en rien les commandants de bord de leur obligation en matière de vigilance visuelle et de prévention des abordages telles que décrites dans les règles de l'air.

**1.6.2.4 Obligations de comptes rendus de position par communications vocales et CPDLC**

Lorsque cela est prescrit, les comptes rendus de position sont communiqués par phonie ou par CPDLC.
La voix reste dans tous les cas le moyen de communication primaire même si des dialogues CPDLC sont ouverts.

**1.6.2.5 Représentation graphique de la zone de couverture SSR**

Les CRNA et certains centres de contrôle d'approche disposent d'une détection multi-senseurs couvrant leur zone de responsabilité.

Les CRNA et l'approche de Paris-Charles-De-Gaulle disposent d'une surveillance enrichie (EHS).

Il n'y a pas de représentation graphique de la zone de couverture SSR.

**1.6.3 SURVEILLANCE DEPENDANTE AUTOMATIQUE EN MODE DIFFUSION (ADS-B)**

La direction des services de la navigation aérienne (DSNA), en tant que prestataire ATS français a mis en œuvre l'ADS-B dans les espaces aériens gérés par les organismes de contrôle de Bastia ainsi que d'Ajaccio pour rendre les services d'information de vol et d'alerte conformément aux modalités précisées dans les sections AD 2.22 de chaque aérodrome concerné.

**1.6.3.0 Dispositions générales**

**1.6.3.0.1 Introduction**

***1.6.2.2.2 Unlawful interference***

*The pilot attempts to select Code 7500 to indicate a state of unlawful interference. If circumstances so warrant, Code 7700 is used.*

***1.6.2.3 The system of SSR code assignment : procedure for using modes and codes.***

***1.6.2.3.1 General procedures for IFR flights***

*• Mode C : transmission of altitudes.*

*When the aircraft is equipped with Mode C equipment with a functioning alticoder, the pilot shall activate the altitude reporting function throughout the flight, unless otherwise instructed by the air traffic control organisation.*

*• Mode A : display of the 4-digit code.*

*Except in the cases specified above of emergency, communication failure, or unlawful interference, the pilot shall display the 4-digit code specified, by radio or data link, by the air traffic control unit. This code will be repeated by the pilot in his acknowledgement .*

*• Mode S :*
*Aircraft equipped with Mode S transponders having an Aircraft Identification function must transmit the aircraft identification as specified in ICAO flight plan item 7 or, where no flight plan has been filled, the aircraft registration.*

*• In case of no instruction from ATS unit :*

*The pilot of an aircraft flying under IFR and entering French airspace from a defined area or portion of airspace where the air traffic control organisation has not asked them to display a transponder code, nor given an instruction to this effect before the transfer of communication, shall systematically select the code 2000 until further instruction from the French control unit.*

***1.6.2.3.2 General procedures for VFR flights***

*• Mode A + C*

*The pilot of an aircraft equipped with an A+C mode transponder with an alticoder flying under VFR shall, in the absence of instructions from the air traffic control unit, display code 7000 and activate the "altitude report" function during the entire flight.*

*Note : This measure does not apply to aircraft performing traffic patterns.*

*• Mode A*

*The pilot of an aircraft equipped with a transponder without an alticoder flying under VFR will not use his transponder unless the air traffic unit assigns him a code.*

*Note : The use of the transponder does not relieve Pilots-In-Command of their obligation of visual vigilance and collision avoidance as described in the Rules of the Air.*

***1.6.2.4 Voice and CPDLC position reporting requirements***

*Where prescribed, position reports are communicated by voice or CPDLC. Voice remains the primary means of communication in all cases, even if CPDLC dialogues are opened.*

***1.6.2.5 Graphic portrayal of the area of SSR coverage***

*CRNAs (ACC) and some approach control centres have multi-sensor detection covering their area of responsibility.*

*CRNAs (ACC) and the Paris-Charles-De-Gaulle approach have enhanced surveillance (EHS).*

There is no graphic portrayal of the SSR coverage area.

***1.6.3 AUTOMATIC DEPENDENT SURVEILLANCE – BROADCAST (ADS-B)***

*The Direction des Services de la Navigation Aérienne (DSNA), ATS provider in France, has implemented ADS-B in the airspace in the airspace managed by the control bodies of Bastia and Ajaccio in order to provide flight information and alerting services in accordance with the modalities specified in sections AD 2.22 of each aerodrome concerned.*

***1.6.3.0 General provisions***

***1.6.3.0.1 Introduction***

© Service de l'Information Aéronautique, France

L'ADS-B émission (OUT) est une fonction à bord d'un aéronef qui transmet périodiquement des données telles que l'identification, la position, la vitesse et d'autres informations. La liaison de données utilisée pour les messages ADS-B en Europe est le squitter étendu 1090 MHz (ADS-B extended squitter (ES)) .
La position ADS-B de l'aéronef est dérivée des systèmes embarqués basés sur le GNSS.

*ADS-B OUT is a function on-board an aircraft that periodically transmits data such as identification, position, velocity and other information. The data link used for ADS-B messages in Cayenne FIR is 1090 MHZ Extended Squitter.*
*The aircraft ADS-B position is derived from onboard GNSS-based systems*

**1.6.3.0.2 Equipement ADS-B et utilisation des données ADS-B**

Les exigences relatives à l'équipement ADS-B OUT se trouvent dans le règlement d'exécution (UE) n ° 1207/2011 modifié de la Commission européenne. Toutes les données fournies, même celles qui dépassent ce qui est spécifié par le règlement, doivent être vérifiées.

Les messages ADS-B diffusés sont traités par des récepteurs ADS-B et des systèmes de surveillance, envoyés aux systèmes ATM et présentés sur l'affichage de situation utilisé par les organismes ATS. Ces données traitées peuvent être utilisées par d'autres aéronefs dotés de la fonctionnalité ADS-B réception (IN) ou ACAS.

Les aéronefs transmettant des données ADS-B peuvent bénéficier de services de la circulation aérienne basés sur la surveillance, cette surveillance étant basée sur les données ADS B. Il faut alors que la qualité des données ADS-B fournies soit conforme aux exigences de qualité des données du service ATC.

***1.6.3.0.2 ADS-B Equipment and ADS-B data usage***

*The requirements for ADS-B OUT equipage can be found in the European Commission Implementing Regulation (EU) No 1207/2011 as amended . All data items provided, even those over and above what is specified by the regulation, shall be verified.*

*The broadcasted ADS-B messages are processed by ADS-B receivers and Surveillance systems, sent to the ATM systems and presented on the Situation Data Display used by ATS providers. These processed data can be used by other aircraft with ADS-B IN or ACAS functionality.*

*Aircraft transmitting ADS-B data may be provided with surveillance-based Air Traffic Services based on the ADS-B data, if the provided data quality is in compliance with the ATC service data quality requirements.*

**1.6.3.0.3 Exigences des systèmes ADS-B**

Pour les aéronefs devant être équipés d'ADS-B OUT conformément au règlement d'exécution (UE) n° 1207/2011 de la Commission européenne, les exigences applicables sont la sous-partie D CS ACNS de l'Agence européenne de la sécurité aérienne (AESA), section 4.

Pour les aéronefs qui ne sont pas tenus de s'équiper d'ADS-B OUT conformément au règlement d'exécution (UE) n ° 1207/2011 de la Commission européenne, les systèmes ADS-B OUT doivent être conformes à l'une des normes ci-dessous :

• AESA CS ACNS, sous-partie D, section 4 ;
• AESA CS -STAN ;
• Federal Aviation Administration (FAA) Title 14 Code of Federal Regulations (14 CFR) section 91.227 or AC No. 20-165B (or replacement) – Airworthiness Approval of ADS-B
• Toute autre norme de certification permettant un niveau de performance au moins équivalent à celles citées ci-dessus et approuvée par une autorité compétente.

Les systèmes ADS-B OUT qui ne peuvent pas répondre aux exigences ci-dessus doivent :

• s'assurer que l'aéronef transmet toujours une valeur de 0 (zéro) pour un ou plusieurs des indicateurs de qualité de position suivants :
NUCp (uniquement pour les unités ADS-B version 0), NIC et / ou SIL, ou
• désactiver la transmission ADS-B.

***1.6.3.0.3 ADS-B system requirements***

*For aircraft required to equip with ADS-B OUT per European Commission Implementing Regulation (EU) No 1207/2011 and subsequent amendments the applicable requirements are European Union Aviation Safety Agency (EASA) CS ACNS Subpart D, Section 4.*

*For aircraft not required to equip with ADS-B OUT per European Commission Implementing Regulation (EU) No 1207/2011 and subsequent amendments the ADS-B OUT systems shall comply with one of the standards below :*

*• EASA CS ACNS Subpart D, Section 4; or*
*• EASA CS-STAN; or*
*• Federal Aviation Administration (FAA) Title 14 Code of Federal Regulations (14 CFR) section 91.227 or AC No. 20-165B (or replacement) – Airworthiness Approval of ADS-B*
*• Any other certification standard that provides a level of performance at least equivalent to the above and is approved by a competent authority.*

*ADS-B OUT systems that are unable to meet the requirements above, must :*

*• ensure that the aircraft always transmits a value of 0 (zero) for one or more of the following position quality indicators :*
*NUCp (only for ADS-B version 0 units), NIC and/or SIL, or*
*• disable ADS-B transmission.*

**1.6.3.1 Procédures d'urgence**

Des messages d'urgence peuvent être envoyés par les équipages : urgence absolue, panne de communications, interférence illicite, carburant minimal, urgence médicale.

Des mesures complémentaires sont indiquées au §1.6.2.1.

***1.6.3.1 Emergency procedures***

*Emergency messages may be sent by the flight crews : absolute emergency, communication failure, unlawful interference, minimum fuel, medical emergency.*

*See additional measures in §1.6.2.1*

**1.6.3.2 Procédures en cas d'échec de communication air-sol et d'interférence illicite**

Pas de mesures spécifiques à l'ADS-B – Voir §1.6.2.2.

***1.6.3.2 Air-ground communication failure and unlawful interference procedures***

*No ADS-B specific measures. See §1.6.2.2.*

**1.6.3.3 Prescriptions concernant l'identification des aéronefs**

Voir la section AD 2.22 des aérodromes concernés.

***1.6.3.3 Aircraft identification requirements***

*See section AD 2.22 of the concerned aerodrome.*

**1.6.3.4 Obligations de comptes rendus de position par communications vocales et CPDLC**

Pas de mesures spécifiques à l'ADS-B – Voir §1.6.2.4.

***1.6.3.4 Voice and CPDLC position reporting requirements***

*No ADS-B specific measures. See §1.6.2.4.*

**1.6.3.5 Représentation graphique de la zone de couverture ADS-B**

Voir AD 2 des aérodromes concernés

***1.6.3.5 Graphic portrayal of the area of ADS-B coverage***

*See section AD 2 of the concerned aerodrome.*

**1.6.4 AUTRES INFORMATIONS ET PROCEDURES APPLICABLES**

***1.6.4 OTHER RELEVANT INFORMATION AND PROCEDURES***

**1.6.4.1 Procédures en cas de panne de transpondeur SSR**

1er cas : La panne est connue avant le départ

En cas de panne de transpondeur détectée avant le départ d'un aérodrome et non réparable sur cet aérodrome de départ, le pilote doit informer les organismes ATS dès que possible et de préférence avant de déposer son plan de vol,

***1.6.4.1 Procedures in case of transponder failure***

*1st case : The failure is known before departure*

*In the case of a transponder failure detected before departure from an aerodrome and not repairable at that departure aerodrome, the pilot shall inform the ATS units as soon as possible and preferably before filling his flight plan.*

Si la panne ne concerne que la transmission de l'altitude (mode C), le pilote doit insérer dans la case 10 du FPL, sous la rubrique SSR, la lettre «A» indiquant qu'il dispose d'un transpondeur répondant sur le mode A 4096 codes, uniquement.

Si la panne est totale, modes A et C, le pilote doit :

- Impérativement obtenir, avant le départ, une exemption délivrée par le premier organisme de contrôle concerné par le vol. L'organisme délivrant exemption, après coordination avec les autres centres français concernés, fixera les contraintes en matière d'heure de départ et d'espace aérien, en particulier de niveau de croisière.
- Insérer dans la case 10 du plan de vol, sous la rubrique SSR, la lettre N et dans la case 18 la mention «RMK/DEROGATION PANNE SSR».

Note : Cette procédure d'exemption n'est utilisable que dans l'espace aérien géré par les organismes ATS français et ne préjuge en rien de la possibilité de poursuite du vol dans des espaces aériens gérés par des organismes étrangers.

2ème cas : La panne intervient lorsque l'aéronef est toujours sous la responsabilité de l'organisme de la circulation aérienne du terrain de départ

Si la panne ne concerne que la transmission de l'altitude (mode C), alors les organismes ATS assurent la poursuite du vol.
Si la panne est totale, modes A et C, alors le premier organisme peut refuser la poursuite du vol pour des raisons de densité ou de complexité du trafic.
Dans ce cas, il peut être demandé au pilote de revenir sur son aérodrome de départ ou tout autre aérodrome acceptable tant par l'exploitant que par les organismes de la circulation aérienne. Si la réparation ne peut y être effectuée, il se conforme aux dispositions du 1er cas.

3ème cas : La panne intervient en route

Si la panne ne concerne que la transmission de l'altitude (mode C), les organismes ATS assurent la poursuite du vol.
Si la panne est totale, modes A et C : les organismes ATS s'efforcent d'assurer la poursuite du vol jusqu'à l'aérodrome de destination. Toutefois, le pilote peut se voir imposer certaines restrictions, voire se faire refuser l'accès à certains espaces. Dans certains cas, il peut être demandé au pilote de revenir sur son aérodrome de départ ou tout autre aérodrome acceptable tant par l'exploitant que par les organismes de la circulation aérienne.

4ème cas : La panne intervient avant l'entrée dans l'espace aérien contrôlé

Si la panne ne concerne que la transmission de l'altitude (mode C), alors les organismes ATS assurent la poursuite du vol conformément au plan de vol.
Si la panne est totale, modes A et C : les organismes ATS peuvent ne pas autoriser la pénétration dans l'espace aérien contrôlé, même si une clairance a été précédemment délivrée.

**1.6.4.2 Procédures en cas de panne du système de surveillance ATS**

En cas de panne du système de surveillance ATS, se conformer aux instructions de l'organisme ATS.

**1.6.4.3 Procédures de surveillance pour les aéronefs d'Etat**

Aux fins du présent paragraphe, les aéronefs d'Etat sont les aéronefs militaires, des services de douane, de sécurité publique et de sécurité civile.
Les aéronefs d'Etat, évoluant en régime de vol CAG IFR, doivent être équipés de transpondeurs mode S répondant au besoin de la surveillance élémentaire. Les aéronefs d'Etat de type transport d'une MTOW>5.7 tonnes ou d'une Vitesse de croisière >250 Kts doivent être équipés de transpondeurs mode S répondant au besoin de la surveillance enrichie et de l'ADS-B OUT.
Par mesures dérogatoires et transitoires, et s'il n'est pas possible de faire tout ou partie du vol en CAM, les procédures particulières relatives à la prise en compte des aéronefs d'État pour le mode S et l'ADS-B OUT sont les suivantes :

• Les aéronefs d'État français et étrangers non équipés :
o de transpondeur mode S répondant au besoin de la surveillance élémentaire ou enrichie sont pris en compte par la DSNA à l'aide des procédures de surveillance utilisant les modes A + C,
o d'ADS-B OUT version 2 sont pris en compte par la DSNA à l'aide des procédures de surveillance utilisant les modes S ou A + C selon leur équipement.

• Les aéronefs d'État français équipés de transpondeur mode S (répondant au besoin de la surveillance élémentaire ou enrichie), avec ou sans ADS-B OUT version 2, pour lesquels l'utilisation de l'ADS-B OUT ou du mode S n'est pas souhaitée par leurs opérateurs pour des vols opérationnels jugés sensibles, sont pris en compte par la DSNA à l'aide des procédures de surveillance utilisant les modes A + C.

Nota 1 : cette disposition dérogatoire a pour conséquence une dégradation des performances de surveillance, le recours à celle-ci doit être exceptionnel et cadré par les autorités d'emploi de l'aéronautique d'État.

*If the failure concerns only the altitude transmission (mode C), the pilot must insert in box 10 of the FPL, under the heading SSR, the letter "A" indicating that he has a transponder responding on mode A 4096 codes, only.*

*In case of a total failure, modes A and C, the pilot shall :*

*- imperatively obtain, before departure, an exemption issued by the first ATS unit concerned by the flight. The unit issuing the exemption, after coordination with the other French centres concerned, will set the constraints in terms of departure time and airspace, in particular the cruise level.*
*- insert in box 10 of the flight plan, under the heading SSR, the letter N and in box 18 the words "RMK/CONCESSION SSR FAILURE".*

*Note : This exemption procedure can only be used in the airspace managed by French ATS units and does not prejudge the possibility of continuing the flight in airspace managed by foreign organisations.*

*2nd case : The failure occurs while the aircraft is still under the responsibility of the ATS unit of the departure airfield*

*If the failure is only in altitude transmission (mode C), then the ATS units will continue the flight.*
*If the failure is total, modes A and C, then the first unit may refuse continuation of the flight for traffic density or complexity reason.*
*In this case, the pilot may be asked to return to his departure aerodrome or any other aerodrome acceptable to both the operator and the air traffic services. If the repair cannot be carried out there, the crew shall comply with the provisions of Case 1.*

*3rd case : The failure occurs en route*

*If the failure is only in altitude transmission (mode C), then the ATS units will continue the flight.*
*If the failure is total, modes A and C, ATS units will endeavour to ensure the flight continues to the destination aerodrome. However, the pilot may be subject to restrictions or even denied access to certain areas. In some cases, the pilot may be required to return to the aerodrome of departure or any other aerodrome acceptable to both the operator and the air traffic control authorities.*

*4th cas : Failure occurs prior to entry into controlled airspace*

*If the failure only affects altitude transmission (Mode C), then ATS units will continue the flight according to the flight plan.*
*If the failure is total, Modes A and C, ATS units may not clear the aircraft into controlled airspace, even if a clearance had previously been issued.*

***1.6.4.2 Procedures in case of failure of the ATS surveillance system***

*In case of a failure of the ATS surveillance system, follow the instructions of the ATS unit.*

***1.6.4.3 Surveillance procedure for state aircraft***

*For the purposes of this paragraph, state aircraft are military, customs, public security and civil security aircraft.*
*State aircraft, operating in the GAT IFR, must be equipped with Mode S transponders meeting the need for elementary surveillance. State aircraft of transport type with MTOW>5.7 tonnes or Cruising Speed >250 Kts must be equipped with Mode S transponders meeting the need for enhanced surveillance and ADS-B OUT.*
*By way of derogation and transitional measures, and if it is not possible to make all or part of the flight in OAT, the specific procedures for the handling of State aircraft for Mode S and ADS-B OUT are as follows :*

*• French and foreign State aircraft not equipped with :*
*o a Mode S transponder meeting the needs of elementary or enhanced surveillance are taken into account by the DSNA with surveillance procedures using Modes A + C,*
*o ADS-B OUT version 2 are taken into account by the DSNA with surveillance procedures using modes S or A + C depending on their equipment.*

*• French State aircraft equipped with mode S transponders (meeting the need for elementary or enhanced surveillance), with or without ADS-B OUT version 2, for which the use of ADS-B OUT or mode S is not desired by their operators for operational flights deemed sensitive, are taken into account by the DSNA with the surveillance procedures using modes A + C.*

*Note 1 : this derogatory provision results in a deterioration of surveillance performance, and its use must be exceptional and framed by the State aviation operations authorities.*

© Service de l'Information Aéronautique, France

Nota 2 : les aéronefs d'État étrangers peuvent bénéficier de cette disposition sous réserve d'exécuter des vols au-dessus du territoire français en vertu d'un accord avec le ministère concerné, à condition que le besoin soit dument justifié et s'inscrive dans le cadre défini pour les aéronefs d'État français du même ministère.

• Lorsque les modes A + C sont utilisés, la totalité du vol est surveillée à l'aide de ces modes.
• Les plans de vol des vols jugés sensibles pour lesquels l'utilisation de l'ADS-B OUT ou du mode S ne sont pas souhaitables sont remplis comme pour les aéronefs non équipés (Cf. AIP ENR 1.10).

**1.6.4.4 Procédures de surveillance pour les aéronefs non équipés (hors aéronefs d'État)**

Les aéronefs se conforment aux obligations d'emports décrites dans le règlement (UE) n°1207/2011 du 22 novembre 2011 modifié fixant les exigences relatives à la performance et à l'interopérabilité des activités de surveillance pour le ciel unique européen ainsi que dans l'arrêté du 21 juin 2001 modifié relatif aux équipements de communication, de navigation, de surveillance et d'anti-abordage installés à bord des aéronefs volant dans les régions d'information de vol de la France métropolitaine.

*Note 2 : foreign State aircraft may benefit from this provision provided that they perform flights over French territory in accordance with an agreement with the Ministry concerned, on condition that the need is duly justified and falls within the framework defined for French State aircraft of the same Ministry.*

*• When modes A + C are used, the entire flight is monitored using these modes.*
*• Flight plans for flights deemed sensitive for which the use of ADS-B OUT or Mode S is not desirable are completed as for non-equipped aircraft (see AIP ENR 1.10).*

***1.6.4.4 procedures for non-equipped aircraft (except state aircraft)***

*Aircraft shall comply with the carriage requirements described in the Regulation (EU) No 1207/2011 of 22nd November 2011 laying down requirements for the performance and the interoperability of surveillance for the single European sky and in the following French CNS regulation : « arrêté du 21 juin 2001 relatif aux équipements de communication, de navigation, de surveillance et d'anti-abordage installés à bord des aéronefs volant dans les espaces aériens d'outre-mer exploités par l'administration française », the amended Order of 21st June 2001 on communication, navigation, surveillance and collision avoidance equipment installed on board aircraft flying in the flight information regions of metropolitan France.*

# ENR 1.7 PROCEDURES DE CALAGE ALTIMETRIQUE

*ALTIMETER SETTING PROCEDURES*

## 1.7 Procédures de calage altimétrique

### 1.7.1 Introduction

#### 1.7.1.1 Généralités

Le règlement d'exécution (UE) N° 923/2012 établissant les règles de l'air communes et des dispositions opérationnelles relatives aux services et procédures de navigation aérienne contient les dispositions applicables en matière de calage altimétrique.

De plus, les règles de calage altimétrique utilisées et les procédures qui en découlent se basent sur les pratiques prévues dans les dispositions de l'OACI contenues dans les documents suivants :

• DOC 8168 – Procédures pour les Services de Navigation Aérienne, volume III « Procédures d'exploitation technique des aéronefs » ;

• DOC 4444 – Chap 4.10 - Procédures pour les Services de circulation aérienne - Règles de l'air et Service de la circulation aérienne ;

• DOC 7030 – Procédures complémentaires régionales.

#### 1.7.1.2 But et application des procédures de calage altimétrique

Les procédures de calage altimétrique sont établies dans le but :

• D'assurer durant toutes les phases du vol, une séparation verticale convenable entre aéronefs ;

• De permettre, durant toutes les phases du vol, le franchissement des obstacles avec les marges applicables.

### 1.7.2 Procédures élémentaires de calage altimétrique

#### 1.7.2.1 Séparation verticale des aéronefs

Sauf pour les opérations d'atterrissage et de décollage, la séparation verticale des aéronefs est basée sur l'utilisation d'un système prédéfini de niveaux de vol.

Le niveau de vol zéro coïncide avec la surface isobare 1013,2 hPa et les niveaux de vol successifs sont séparés par des intervalles de 152,4 m (500 ft) en atmosphère standard.

Suivant la portion d'espace considérée, la séparation verticale est obtenue en utilisant des niveaux de vols distants de 500, 1 000 ou 2 000 ft (en atmosphère standard).

#### 1.7.2.2 En route

Les commandants de bord peuvent vérifier en vol que le niveau de vol utilisé ou prévu assure une marge de franchissement des obstacles convenable, à l'aide des renseignements QNH fournis par le réseau des stations météorologiques.

Les niveaux de croisière auxquels doit être effectué un vol ou une partie d'un vol sont exprimés :

• en niveaux de vol, pour les vols effectués à un niveau égal ou supérieur au niveau de vol le plus bas utilisable ou, le cas échéant, à un niveau supérieur à l'altitude de transition ;

• en altitudes, pour les vols effectués à une altitude inférieure au niveau de vol le plus bas utilisable ou, le cas échéant, à une altitude égale ou inférieure à l'altitude de transition.

#### 1.7.2.3 Opérations d'atterrissage et de décollage

L'altitude de transition est l'altitude à laquelle ou au-dessous de laquelle la position verticale d'un aéronef est donnée par son altitude.

Une altitude de transition est fixée pour chaque région de contrôle terminale (TMA). Elle est publiée sur les cartes de procédures de vol aux instruments des aérodromes situés dans les limites de la TMA ainsi que sur celles des aérodromes situés sous la TMA lorsque l'altitude minimale d'attente est au-dessus du plancher de la TMA. Elle est également publiée sur la carte au 1 : 1 000 000ème à l'attention des vols VFR, lorsque sa valeur est différente de 5 000 ft. L'altitude de transition n'est pas inférieure à 450 m (1 500 ft) au-dessus de l'aérodrome.

## *1.7 Altimeter setting procedures*

### *1.7.1 Introduction*

#### *1.7.1.1 Generalities*

*The implementing regulation (EU) NR 923/2012 laying down the common rules of the air and operational provisions regarding services and procedures in air navigation contains the provisions applicable to altimeter setting.*

*Moreover, the rules for altimeter setting used and the resulting procedures are based on the practices provided in the ICAO provisions contained in the following documents :*

*• DOC 8168 - Procedures for Air Navigation Services, volume III « Aircraft Operating Procedures » ;*

*• DOC 4444 - Chap 4.10 - Procedures for Air Navigation Services – Air traffic Management ;*

*• DOC 7030 - Regional Supplementary Procedures.*

#### *1.7.1.2 Purpose and application of altimeter setting procedures*

*The purpose of altimeter setting procedures is :*

*• To ensure, during all phases of flight, a suitable vertical separation between aircraft ;*

*• To allow, during all phases of flight, the clearance of obstacles with the applicable margins.*

### *1.7.2 Basic altimeter setting procedures*

#### *1.7.2.1 Vertical separation of aircraft*

*Except for landing and take-off operations, vertical separation of aircraft is based on the use of a pre-defined system of flight levels.*

*The flight level zero coincides with the 1013.2 hPa isobaric surface and successive flight levels are separated by intervals of 152.4 m (500 ft) in standard atmosphere.*

*Depending on the portion of airspace considered, vertical separation is obtained by using flight levels 500, 1000 or 2000 ft apart (in standard atmosphere).*

#### *1.7.2.2 En route*

*Pilot-in-command may verify in flight that the flight level used or planned provides adequate obstacle clearance, using QNH information provided by the weather station network.*

*The cruising levels at which a flight or part of a flight must be performed are expressed :*

*• in flight levels, for flights at or above the lowest usable flight level or, where applicable, above the transition altitude ;*

*• in altitudes, for flights below the lowest usable flight level or, where applicable, at or below the transition altitude.*

#### *1.7.2.3 Landing and taking-off operations*

*The transition altitude is the altitude at or below which the vertical position of an aircraft is given by its altitude.*

*A transition altitude is established for each Terminal Control Area (TMA). It is published on the Instrument Approach Chart (IAC) of aerodromes within the TMA boundary and on those of aerodromes below the TMA where the minimum holding altitude is above the TMA base. It is also published on the 1 : 1 000 000 chart for VFR flights, when its value is different from 5 000 ft. The transition altitude is not less than 450 m (1 500 ft) above the aerodrome.*

© Service de l'Information Aéronautique, France

Le niveau de transition est le niveau de vol le plus bas utilisable au-dessus de l'altitude de transition. Le niveau de transition est situé 300 m (1 000 ft) au moins au-dessus de l'altitude de transition.

Les organismes des services de la circulation aérienne déterminent le niveau de transition à utiliser dans les zones où une altitude de transition est établie, pour la période de temps appropriée sur la base des rapports QNH et de la pression prévue au niveau moyen de la mer, si nécessaire.

Le changement de calage altimétrique a lieu au plus tard en traversant :

• le niveau de transition pour les aéronefs en descente,

• l'altitude de transition pour les aéronefs en montée.

Le QNH est fourni :

• par le service automatique d'information de région terminale (ATIS) ; les calages sont alors rappelés par les organismes de la circulation aérienne conformément aux instructions en vigueur ;

• par les organismes habilités à communiquer les paramètres en l'absence d'ATIS.

Le QFE est fourni sur demande du pilote.

Si un aéronef qui a reçu la clairance d'atterrissage termine son approche en utilisant la pression atmosphérique à l'altitude de l'aérodrome (QFE), la position de cet aéronef dans le plan vertical est exprimée en fonction de la hauteur au-dessus du niveau de l'aérodrome pendant la partie du vol pour laquelle le QFE peut être utilisé. La position de l'aéronef est toutefois exprimée en fonction de la hauteur au-dessus du niveau du seuil de la piste :

• pour les pistes aux instruments dont le seuil se trouve à 2 m (7 ft) ou plus au-dessous de l'altitude de l'aérodrome ;

• pour les pistes avec approche de précision.

Le choix des calages altimétriques utilisés pendant la procédure d'approche interrompue est déterminé selon que la procédure peut ou non être effectuée au-dessous de l'altitude de transition.

*The transition level is the lowest flight level available for use above the transition altitude. The transition level is at least 300 m (1 000 ft) above the transition altitude.*

*Air traffic services units shall determine the transition level to be used in areas where a transition altitude is established, for the appropriate period of time on the basis of QNH reports and predicted pressure at the mean sea level, if required.*

*The change of the altimeter setting takes place at the latest when crossing :*

*• the transition level in the case of a descending aircraft,*

*• the transition altitude in the case of an ascending aircraft.*

*The QNH is provided :*

*• by the Automatic Terminal Information Service (ATIS) ; the settings are then repeated by the air traffic services in accordance with the instructions in force ;*

*• by organisations authorised to communicate parameters in the absence of an ATIS.*

*The QFE (aerodrome and / or threshold) is provided upon request of the pilot.*

*If an aircraft that has been cleared to land completes its approach using the atmospheric pressure at the aerodrome elevation (QFE), the position of that aircraft in the vertical plane is expressed as a function of the height above the aerodrome elevation for the portion of the flight for which the QFE may be used. However, the position of the aircraft is expressed as a function of the height above the runway threshold elevation :*

*• for instrument runways where the threshold is 2 m (7 ft) or more below the aerodrome elevation ;*

*• for runways with precision approach.*

*The choice of altimeter settings used during the missed approach procedure is determined by whether or not the procedure can be conducted below the transition altitude.*

**1.7.2.4 Valeurs du QNH et du QFE**

La valeur du QNH et du QFE transmise aux aéronefs dans les instructions de contrôle est arrondie au hPa entier immédiatement inférieur.

***1.7.2.4 QNH and QFE values***

*The QNH and QFE values provided to aircraft in the control instructions are rounded down to the nearest integral hPa.*

**1.7.2.5 Séries de niveaux de vol**

Il est rappelé que dans les voies aériennes et en espace aérien supérieur, seuls sont utilisés les niveaux dont le numéro est un multiple entier de 10, hormis les exceptions mentionnées au paragraphe SERA.5005.d.2 du règlement (UE) N° 923/2012.

Pour faciliter la désignation d'ensemble de niveaux de vol, deux termes sont utilisés :

• Série paire,

• Série impaire.

La série paire désigne, parmi les niveaux de vol, ceux dont le numéro est un multiple pair de 10, c'est à dire : 40, 60, 80, 100, etc.

La série impaire désigne, parmi les niveaux de vol, ceux dont le numéro est un multiple impair de 10, c'est à dire : 50, 70, 90, 110, etc.

Cependant à partir du niveau de vol 410, la séparation verticale étant basée sur un espacement de 600 m (2000 ft), les niveaux suivants sont alors utilisés :

• 470, 510, etc.

• 410, 450, 490, etc.

***1.7.2.5 Flight level series***

*It is reminded that in airways and in upper airspace, only those levels whose number is an integral multiple of 10 shall be used, with the exceptions mentioned in paragraph SERA.5005.d.2 of Regulation (EU) NR 923/2012.*

*To facilitate the designation of flight level sets, two terms are used :*

*• Series Even,*

*• Series Odd.*

*Series Even consists of flight levels whose number is an even multiple of 10 i.e. : 40, 60, 80, 100, etc.*

*Series Odd consists of flight levels whose number is an odd multiple of 10 i.e.: 50, 70, 90, 110, etc.*

*However, as from flight level 410, since the vertical separation is based on a distance of 600 m (2 000 ft), the following levels are used :*

*• 470, 510, etc.*

*• 410, 450, 490, etc.*

**1.7.3 Description des régions de calage altimétrique**

Les stations de QNH suivantes situées sur des aérodromes civils émettent des METAR automatiques toutes les 30 minutes.

***1.7.3 Description of altimeter setting regions***

*The following QNH stations at civil aerodromes issue automatic METARs every 30 minutes.*

L'information QNH est mise à jour toutes les 30 minutes et mise à disposition des usagers et des organises de la circulation aérienne dans les 5 minutes.

Les commandants de bord peuvent en obtenir communication par l'intermédiaire de l'organisme rendant les services ATS à l'intérieur de la région d'information de vol dans laquelle ils se trouvent.

Les centres de contrôle d'approche déterminent les niveaux de vol les plus bas utilisables pour la totalité des régions de contrôle de type CTA/TMA dans lesquels ils assurent les services ATS.

*The QNH information is updated every 30 minutes and made available to users and ATS units within 5 minutes.*

*Pilots-in-command may obtain this information through the organisation providing ATS within the Flight Information Region in which they are located.*

*Approach Control Centres shall determine the lowest usable flight levels for the whole control area (i.e.CTA/TMA) in which they provide ATS.*

© Service de l'Information Aéronautique, France

### 1.7.4 Procédures applicables aux exploitants d'aéronefs

Les niveaux de vol sont spécifiés dans le plan de vol par des numéros alors que les altitudes sont spécifiées par leurs valeurs en mètres ou en pieds.

Le ou les niveaux de vol choisis pour effectuer un vol doivent :

• assurer une marge de franchissement d'obstacles réglementaire et le respect des hauteurs minimales de survol en tous points de la route à parcourir ;

• satisfaire aux exigences du contrôle de la circulation aérienne et particulièrement aux spécifications concernant les niveaux utilisables sur les voies aériennes et les itinéraires prédéterminés ;

• le cas échéant, être compatibles avec les spécifications des tableaux fixant les niveaux de vol utilisables en fonction de la route magnétique en dehors des espaces contrôlés (publié en ENR 1.7.5).

Les données nécessaires pour déterminer le niveau de vol le plus bas qui assure une marge suffisante de franchissement des obstacles peuvent être obtenues du centre météorologique de l'aérodrome de départ qui tient à la disposition des exploitants un ou plusieurs des renseignements suivants :

• derniers QNH des stations désignées ;

• prévisions de pression minimum au niveau moyen de la mer pour chaque tronçon de voie, prévisions de température au sol et en altitude ;

• QNH déduits des cartes synoptiques.

**Note :** lorsque le plancher d'une voie aérienne est défini par un niveau de vol, ce plancher se trouve au minimum à 300 m au-dessus de l'obstacle le plus élevé dans un rayon de 8 km (4,3 NM), tant que le QNH n'est pas inférieur à 960 hPa.

Selon les renseignements utilisés, il convient d'appliquer les méthodes suivantes :

• si l'on utilise les derniers QNH mesurés, il faut tenir compte des corrections de distance vis-à-vis de la dernière station de relèvement du QNH, au moment de l'utilisation et éventuellement des corrections de température.

• si l'on utilise des prévisions de QNH ou des QNH déduits des cartes synoptiques, seule la correction de température doit être éventuellement appliquée.

La correspondance entre les niveaux de croisière et la route magnétique prescrite en ENR 1.7.5 ne s'applique pas lorsque des indications contraires figurent :

• dans la section ENR 3 de l'AIP pour chaque segment de route ATS ; ou

• au RAD (Route Availability Document) pour chaque segment de route directe (DCT) ; ou

• dans les autorisations du contrôle de la circulation aérienne.

### 1.7.5 Tableau des niveaux de croisière

Les niveaux de croisière à respecter sont indiqués ci-après :

**1 - En dessous du FL195 pour toutes les règles de vol.**

### *1.7.4 Procedures applicable to operators*

*Flight levels are specified in the flight plan by numbers while altitudes are specified by their values in metres or feet.*

*The flight level(s) chosen to perform a flight shall:*

*• ensure the regulatory obstacle clearance and compliance with the minimum overflight heights at all points along the route to be flown ;*

*• meet the requirements of air traffic control and in particular the specifications for usable levels on airways and predetermined routes ;*

*• where applicable, be compatible with the specifications in the tables of usable flight levels by magnetic route outside controlled areas (published in ENR 1.7.5).*

*The data necessary to determine the lowest flight level that provides sufficient obstacle clearance may be obtained from the meteorological centre at the departure aerodrome, which puts one or more of the following information at the disposal of operators :*

*• latest QNH of designated stations ;*

*• forecast of minimum pressure at mean sea level for each section of the route, forecast of ground and upper air temperature ;*

*• QNH calculated from synoptic charts.*

***Note :** where the floor of an airway is defined by a flight level, this floor is at least 300 m above the highest obstacle within a radius of 8 km (4.3 NM), as long as the QNH is not below 960 hPa.*

*Depending on the information used, the following methods should be applied :*

*• if the last measured QNH is used, distance corrections to the last QNH reading station at the time of use and possibly temperature corrections must be taken into account,*

*• if QNH forecasts or QNH derived from synoptic charts are used, only the temperature correction may need to be applied.*

*The correspondence between cruising levels and the magnetic route prescribed in ENR 1.7.5 does not apply where contrary indications are given :*

*• to AIP ENR 3 for each ATS route segment ; or*

*• in the RAD (Route Availability Document) for each segment of direct route (DCT) ; or*

*• in the air traffic control clereances.*

### *1.7.5 Table of cruising levels*

*The cruising levels to be respected are indicated below :*

| 450 | 13 700 | 45 000 | | 470 | 14 350 | 47 000 | |
| 490 | 14 950 | 49 000 | | 510 | 15 550 | 51 000 | |
| etc. | | | | etc. | | | |

Il est rappelé que les vols VFR sont interdits au-dessus du niveau 195, sauf autorisation de l'autorité ATS et dans les conditions prescrites par celle-ci, ou dans un espace aérien réservé établi à cet effet, et ce, jusqu'au niveau 285.

*It is reminded that VFR flights are prohibited above level 195, unless authorised by and under the conditions prescribed by the ATS authority, or in restricted airspace established for that purpose, up to level 285.*

**3 – Au-dessus de l'UTA.**

Les mêmes règles de parité s'appliquent qu'en espace aérien inférieur.

***3 – Above the UTA.***

*The same parity rules apply as in lower airspace.*

# ENR 1.8 PROCEDURES COMPLEMENTAIRES REGIONALES (DOC 7030)

*REGIONAL SUPPLEMENTARY PROCEDURES (DOC 7030)*

**1 ESPACE RVSM - Hors zone de transition**

Entre les niveaux de vol 290 et 410 inclus, l'UTA FRANCE décrit dans l'ENR 2.1 fait partie de l'espace EUR RVSM.
Dans cet espace, le minimum de séparation verticale est de :

a) 300 mètres (1000 pieds) entre aéronefs homologués RVSM

b) 600 mètres (2000 pieds) entre :

- **un aéronef d'Etat non homologué RVSM** et tout autre aéronef évoluant dans l'espace EUR RVSM ;

- des aéronefs d'Etat en formation et tout autre aéronef évoluant dans l'espace EUR RVSM ;

***1 RVSM AIRSPACE - Except the transition airspace***

*The airspace UTA FRANCE between FL 290 and FL 410 inclusive, as described in ENR 2.1 is EUR RVSM airspace.*
*Within this airspace, the vertical separation minimum shall be :*

*a) 300 metres (1000 feet) between RVSM approved aircraft*

*b) 600 metres (2000 feet) between :*

*- **non-RVSM approved State aircraft** and any other aircraft operating within the EUR RVSM airspace ;*

*- formation flights of State aircraft and any other aircraft operating within the EUR RVSM airspace ;*

**2 ZONE DE TRANSITION RVSM**

Entre les niveaux de vol 290 et 410 inclus, l'UTA FRANCE zone de transition RVSM décrit dans l'ENR 2.1 fait partie de l'espace de transition EUR RVSM.
Dans cet espace, le minimum de séparation verticale est de :

a) 300 mètres (1000 pieds) entre aéronefs homologués RVSM.

b) 600 mètres (2000 pieds) entre :

- **un aéronef d'Etat non homologué RVSM** et tout autre aéronef évoluant dans l'espace EUR RVSM ;

- des aéronefs d'Etat en formation et tout autre aéronef évoluant dans l'espace EUR RVSM ;

Les autres procédures applicables aux aéronefs civils non homologués RVSM, dans la zone de transition RVSM, sont spécifiées dans les Procédures Complémentaires Régionales de l'OACI pour la Région EUR (Doc 7030/4 - EUR).

***2 RVSM TRANSITION AIRSPACE***

*The airspace "UTA FRANCE zone de transition RVSM" between FL 290 and FL 410 inclusive, as described in ENR 2.1 is EUR RVSM transition airspace.*
*Within this airspace, the vertical separation minimum shall be :*

*a) 300 metres (1000 feet) between RVSM approved aircraft.*

*b) 600 metres (2000 feet) between :*

*- **non-RVSM approved State aircraft** and any other aircraft operating within the EUR RVSM airspace ;*

*- formation flights of State aircraft and any other aircraft operating within the EUR RVSM airspace ;*

*The other procedures applicable to non-RVSM civil aircraft, in RVSM transition area, are specified in the ICAO EUR Regional Supplementary Procedures (Doc 7030/4 - EUR).*

**3 INTERRUPTION DE COMMUNICATION RADIO**

Les procédures applicables en cas d'interruption de communication radio sont conformes à la Doc 7030 EUR (§5.0 révisé), à l'exception des points suivants :

Dans les conditions météorologiques de vol aux instruments (IMC),

- on se réfère au repère d'approche initiale (IAF) et non à l'aide de navigation (voir ENR 1.3.6.3-e et f) car c'est le point de référence de la procédure d'approche publiée qui figure dans le plan de vol.

- si l'interruption de communication se produit durant la phase d'arrivée (STAR), d'approche aux instruments vers un aérodrome, ou durant la phase de départ (SID) d'un aérodrome, le pilote doit se conformer aux consignes particulières publiées, si elles existent.

***3 RADIO FAILURE***

*Procedures to be applied in case of air-ground communication failure are complying with Doc 7030 EUR (revised § 5.0) except following items :*

*In instrument meteorological conditions, IMC*

*- The point to refer is the initial Approach Fix (IAF) instead of "designated navigational aid" (ENR 1.3.6.3 e and f) as this fix is the published approach procedure reference point to be notified in the flight plan.*

*- If communication failure occurred during the arrival phase (STAR), the approach procedure phase to an aerodrome, or the departure phase from an aerodrome (SID), the pilot will comply with the specific procedures published for that aerodrome, if any.*

# ENR 1.9 GESTION DES COURANTS DE TRAFIC AERIEN ET GESTION DE L'ESPACE AERIEN

*AIR TRAFFIC FLOW MANAGEMENT AND AIRSPACE MANAGEMENT*

**1.9 Centre des opérations de gestion de réseau (NMOC)**

Procédures de dialogue entre les usagers, le NMOC et les organismes de la circulation aérienne concernant les mesures de Gestion des Courants de Trafic aérien et de Gestion de l'Espace Aérien (GCTEA).

**1.9.1 Organisation générale et responsabilités**

En vue d'accroître l'efficacité de la gestion des courants de trafic aérien et conformément à l'accord conclu par les Ministres des Transports des Etats membres de la Conférence Européenne de l'Aviation Civile (CEAC) une unité centrale de gestion des courants de trafic appelée NMOC (Network Manager Operations Center) est mise en œuvre par EUROCONTROL.

Cette unité est chargée pour l'ensemble de l'Europe d'assumer la responsabilité exécutive des activités de régulation qui comprend la planification stratégique (saisonnière) et prétactique (l'avant veille et la veille des opérations) ainsi que l'exécution tactique (en temps réel) des mesures de régulation.

En ce qui concerne la France métropolitaine, ces activités sont réalisées par la NMOC en coordination étroite :

- avec la DSNA/DO pour la phase stratégique.

- avec les cinq CRNA (Centre Régional de la Navigation Aérienne) par l'intermédiaire de leur FMP (Flow Management Position) position de régulation implantée dans chacun des centres de contrôle en route, pour les phases prétactique et tactique.

**1.9.1.1** Informations d'ordre général

Le pouvoir général de fourniture des services de gestion des courants de trafic aérien dans les FIR/UIR françaises est délégué au NMOC d'EUROCONTROL.

**1.9.1.2** Attributions du NMOC

Le NMOC est chargé :
a) d'assurer l'adéquation des courants de trafic à la capacité déclarée des secteurs qu'ils traversent,

b) de veiller à ce que les mesures GCTEA , lorsqu'il y a lieu d'en prendre, soient appliquées équitablement et de manière à limiter au maximum les pénalités imposées aux exploitants d'aéronefs.

A cette fin, le NMOC applique les procédures :

c) convenues au niveau international,

d) publiées dans la documentation NMOC correspondante,

e) dotées, dans les FIR énumérées ci-dessus, du même statut que les procédures expressément publiées dans l'AIP.

**1.9.1.3** Attributions des Services de la circulation aérienne

Un poste de gestion des courants de trafic (FMP) est activé dans chaque CCR/UAC afin d'assurer la liaison entre l'ATC, les exploitants d'aéronefs locaux et le NMOC .

Les services ATS installés dans les aérodromes veillent à ce que les vols respectent les créneaux de départ qui leur sont attribués par le NMOC, conformément aux dispositions des Procédures complémentaires régionales applicables à la Région Europe (Document 7030 de l'OACI, Chapitre 13). Les vols qui ne respectent pas leur créneau ne sont pas autorisés à lancer leurs moteurs. Cependant, l'ATC met tous les moyens en œuvre pour permettre aux vols en partance de respecter les créneaux et éviter qu'ils soient empêchés de décoller en raison de légers retards de circulation au sol.

**1.9 Network Manager Operation Center (NMOC)**

Dialog procedure between the users, the NMOC and the air traffic control units as regards the Air Traffic Flow and Capacity Management measures ( ATFCM ).

**1.9.1 General organization and responsibilities**

For the purposes of increasing the air traffic flow management efficiency and as per the agreement made between the Ministries of Transport of the Member States of the European Civil Aviation Conference (ECAC), a central air traffic flow management unit called NMOC (Network Manager Operation Center) is implemented by EUROCONTROL.

This unit is in charge, for entire Europe, of bearing the executive responsibility of the flow management activities which includes strategic (seasonal) and pre-tactical (2 days and 1 day before the operations) planning as well as the tactical execution (in real time) of the flow management measures.

As regards metropolitan France, these activities are performed by the NMOC in close coordination with:

- DSNA/DO (French Directorate for Air Navigation Services - Operations Branch) for the strategic phase,

- the five CRNAs (Regional Air Navigation Centers) through their FMP (Flow Management Position), flow management position located in each en-route flow management center, for the pre-tactical and tactical phases.

**1.9.1.1** General information

The general air traffic flow management service supply power in the French FIRs/UIRs is delegated to the EUROCONTROL NMOC.

**1.9.1.2** NMOC functions

The NMOC is in charge of:
a) providing for adequacy of air traffic flows with the declared capacity of the sectors they go through,

b) ensuring that the ATFCM measures, when required, are applied equitably and so as to limit at the maximum the penalties imposed to the aircraft operators.

For that purpose, the NMOC applies the procedures:

c) which are agreed at international level,

d) which are published in the corresponding NMOC documentation,

e) which have, in the above-mentioned FIRs, the same status as the procedures specifically published in the AIP.

**1.9.1.3** Air traffic services' functions

A traffic flow management position (FMP) is activated in each ACC/UAC so as to provide the link between the ATC, the local aircraft operators and the NMOC.

The ATS services located in the aerodromes ensure that the flights comply with the departure time slots allocated to them by the NMOC, as per the provisions in the Regional supplementary procedures applicable to the Europe region (Document 7030 of ICAO, Chapter 13). The flights that do not comply with their time slot are not authorized to start their engines. However, the ATC implements all means to enable the outbound flights to comply with the time slots and avoid them from not being cleared to take off due to small ground traffic delays.

© Service de l'Information Aéronautique, France

**1.9.1.4** Attributions des exploitants d'aéronefs

Les exploitants d'aéronefs sont chargés de s'informer des procédures et mesures suivantes et de les appliquer :
a) Procédures GCTEA générales, y compris impératifs en matière de dépôt des plans de vol et d'échange de messages,

b) Mesures GCTEA stratégiques (RAD, scenarios),

c) Mesures GCTEA en vigueur.

En particulier, ils doivent respecter les créneaux de départ alloués par le NMOC .

**1.9.1.5** Documentation GCTEA
